We in America accept competition as one of the earmarks by which the American way may be recognized. It represents the one essential difference between an American approach to life and foreign attitudes.

Our forefathers have striven for freedom and we seek the same ideal. In the midst of all the freedoms suggested we seek in general the freedom in thought, word, and deed which enables the American to aspire, initiate, create, produce, and preserve free from superficial obstruction or other unnecessary hindrances and restrained only by the regulations which are prompted by common sense and decency. So long as we observe the spirit and the letter of the law in the rules of the game and respect the umpire we win the freedom of action which comes with personal initiative.

In this objective we are aided by free competition limited only by the American conception of fair play.

We attribute to the element of regulated competition the sharpening of our wits, the toughening of our physiques, the strengthening of our stamina, the establishment of our independence, the stirring of our initiative, the development of our creative spirit, and the increasing of our individual skills.

We are constantly reminded by nature that competition is vital in every phase of life. The pelicans which fed on the bounty of a sardine factory before the war, faced starvation when the factory was closed, and having lost the art of fishing under a superficial aid they starved when they were forced to do their own fishing. The elk in the Jackson Hole country, after years of protection found themselves unable to meet competition and when the hay supplied by human hands failed them they found that they no longer possessed the resistance for a vigorous Northwestern winter. The deer in Canada protected by human ingenuity lost their cunning, became lazy, and were the easy victims of the wolves. Live decoys, wild ducks domesticated, are seldom killed by the hunters as they mingle with the wild birds for the hunter knows they are fat and slow and he adopts the single expedient of shooting the leading birds. So it is in all life. Competition is the essential tonic needed to develop life's cunning.

The American way has thrived on competition, for it is primarily the competitive way. You gentlemen thrive on competition. Every few years you must be alert to the dangers and ward off this competition. It is the American way, and you would not have it otherwise. The opportunity and the will to win with the typical American philosophy, may the best man win.

Our pioneering forefathers competed with the Indians and the elements for their land, their livelihood, and their security, and they won because of their American ingenuity and their hardiness.

American business, supported by American labor, has built the American way on competition. Our famed American standards of living are the direct result of the fact that we have, under the stimulation and pressure of competition, developed brand names for our products through advertising that more of them may be sold, that more may be employed in their production, that mass methods may be employed in their production, that the unit cost of production may be reduced, that an ever-increasing number of people may afford to purchase and consume the products, that more of them may be advertised and sold and produced and so on ad infinitum. That is the American way. The great American circle which awards, protects, and provides for all, stimulated by competition.

In other walks of American life we find the same force of competition building the stanch, unique American spirit. Take our armed forces for instance. It is the friendly competition between corps that has built the famed esprit de corps of the American Army.

The typical attitude of the American soldier or sailor that "my outfit is the best damned outfit in the Army or the Navy" is thoroughly American; in fact, it has made the American doughboy the marvel of the world. His pride in the corps insignia on his collar keeps him constantly striving and the more he strives the more proud he becomes and the keener. We should preserve at all costs this friendly rivalry between corps in our armed forces, this American esprit de corps. It is vitally essential to victory. It is the heart of the valor of the Air Corps. It is basic in the unusual efficiency of the Quartermaster Corps. It is the all-important urge which has established the values of the engineers, the ordnance, the medics, and the many other separate identities in our armed forces. We are strong, smart, efficient collectively because each of our separate component parts vie with each other to attain that strength. Competition is the life and strength of our armed forces.

Take American sports for instance. Calisthenics have never appealed to us even when well organized on a mass physical-fitness program. Under the urge of the will to win, the do or die spirit, we Americans must have competitive sports. Our games, in competition, give us the incentive to exercise and exercise we must have if we are to be strong enough to meet all of our emergencies. Games we must have also for morale in the armed forces and in civil life as well as for physique. That is why our boys play games, almost in the sound of the big guns in Europe, Africa, and Asia. They are keenly interested not only in their own games at the front but also in the national sports program back home. They eagerly seek the sports news. It is the same typical American spirit of never-ending struggle, the competitive spirit. We have found that a well-organized program of competitive sports is vitally essential at the front and at home in toughening our people as well as in keeping their spirits up. Americans will not have it otherwise. For the success of our efforts they need and demand competitive sports.

Even in our religion the same spirit is paramount. We call it the crusading spirit, but it is the same competition applied to the battle of conflicting beliefs. Our forefathers fought and died for the privilege of selecting their own beliefs and we still stand solidly upon our rights to competitive beliefs. Religious freedom we call it, but it is the same essential typical American element working, and undoubtedly the same competitive spirit with its keen vigor has served to bring us nearer to the truth, to the art of proper evaluation, of putting first things first—another good reason why we are strong.

Destroy, unnecessarily restrict, or discourage competition and you strike a blow at the American way. Many of our superficial programs of subsidy aimed at the coddling and protecting of mankind serve to eliminate competition for him and make him soft and lazy. Too much protection will produce a nation of drones and ultimately lead to the destruction of the American way.

Furthermore, competition is our principal weapon for combatting monopolies and all America abhors a monopoly. This is a thought well worth remembering as Congress considers the many suggestions for maintaining the American way in its various intricacies.

If in our attempted social and political reform and if throughout our military emergency we can hold firmly to the conviction that Americans, to be true to their spirit, must have freedom of competition in thought, word, and deed, we will not go very far astray from the element which has made America great.

Views of the News

EXTENSION OF REMARKS

OF

HON. J. PERCY PRIEST

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Saturday, June 19, 1943

Mr. PRIEST. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by John Paschall in the Atlanta Journal of June 9, 1943:

VIEWS OF THE NEWS

(By John Paschall, editor of the Atlanta Journal)

Some weeks ago this broadcast was devoted to a discussion of what I called the anti-Roosevelt, anti-New Deal phobia that has so obsessed some of our best citizens that they have been unable to see any good in anything emanating from this administration. In an effort to show that the country had not gone to the dogs under the Roosevelt administration, I quoted the figures on the national income for the past 10 years. The broadcast inspired an unusual number of letters, some of them from as far away as New England. The critical letters all made the same point: "Why didn't you discuss the national debt?" To all these critics I replied:

"In regard to the national debt, it never occurred to me to mention this, as I was not discussing the Government's solvency, but our national economy. The national debt is of common knowledge, mentioned almost every day in the newspapers. While it was heavily increased under the Roosevelt administration for social and rehabilitation purposes when private enterprise had bogged down, the billions spent for this purpose are small compared to the staggering increase because of the war. The pre-war debt would look pretty good to almost any businessman now. Most businessmen are even willing to cancel $10,000,000,000 of the Nation's assets in taxes. I don't know how we are going to pay the war debt, but I do know we are fortunate to be able to finance a war for our liberty with it."

After further consideration it has seemed to me that perhaps the critics had a good point, and that we cannot get a fair view of our national economy without due consideration of the solvency of the Government. With this thought in mind, I asked our Washington correspondent, Mr. Ralph Smith, to interview Senator WALTER F. GEORGE, chairman of the Senate Finance Committee, and get his views about the national debt. This interview was published in Mr. Smith's Crackerland column in the Journal last week. I hope some of Senator GEORGE's observations may prove interesting and enlightening to this audience.

If any man in public life can speak with some degree of experience and authority, it should be the senior Senator from Georgia, an able lawyer, a student of business, government, and finance, the former chairman of the Senate Foreign Relations Committee, the present chairman of the Finance Committee, and the author of the compromise pay-as-you-go tax plan just adopted by the Congress. Senator GEORGE is not frightened by the prospect of a $300,000,000,000 national debt, which he envisions at the end of the war. He believes the debt can, should, and will be paid, and he scorns the contention of the new school of economists, who look on deficit financing as a blessing in disguise. But the Senator offers no comfort to the Roosevelt haters, who hold the President responsible for the Government's huge unbalanced Budget.

"The Federal Budget was out of balance," says the able Senator, who survived the President's effort to defeat him for reelection, "when Roosevelt entered the White House. During the last year of the Hoover administration Government spending exceeded Government income. The era of deficit financing reached Washington before Roosevelt. The unbalanced Budget was one of the lesser problems confronted by the Democrats."

The Senator recalled that a multitude of pressing problems confronted the Nation, and that while the Democrats were in control of the Government the Republicans very generally supported a program designed to relieve an acute situation. A banking holiday was declared, large appropriations for agriculture, for relief loans for States, cities, counties, benefits and bonuses were voted by Congress, often without a roll call in either branch. But even so, says Senator GEORGE, "There was a brief period along about 1936–37 when the situation showed definite signs of improvement. Unforseen emergencies, however, arose to necessitate continued deficit spending. The net result was that when the war crisis came in 1939 the national debt was $40,000,000,000."

Let us consider these figures. The national debt was $22,000,000,000 in June 1933, the first year of Mr. Roosevelt's incumbency, and by June 1939, when the war had almost enveloped us and there had already been much spending on account of the crisis, the public debt had climbed to $40,000,000,000. Discounting the well-known fact that these funds were voted by heavy majorities, including both Republicans and Democrats, we may figure the cost of the peacetime New Deal at $18,000,000,000. That was a lot of money in those days, but it is just pocket change now, when the Congress is voting two and three times this amount in a single appropriation bill. Only a short time back the House passed a bill appropriating $30,000,000,000 for the Navy Department. The appropriation for the operation and maintenance of the Army this next fiscal year approximates seventy billions. Of course, this is war and we are fighting for the Nation's life, but the crisis that confronted this country when Mr. Roosevelt first took over in 1933 was admittedly one of the gravest ever faced by this democracy. Mr. Roosevelt met it. The cost was large, but who will say that it was not worth every penny that was spent?

Senator GEORGE reminds us that Mr. Roosevelt did not inaugurate deficit spending by the Government. May I remind you that business itself set the precedent for deficit spending? What was the bonded debt of the Nation's greatest industry, the railroads, at the time the New Deal was adding $18,000,000,000 to the national debt? Well, it was just about what it has been for the past 20 years. Moody's Steam Railroads for 1942 informs us that the bonded

indebtedness of the class I railroads of the United States was $10,000,000,000 in 1920, that it was $11,000,000,000 in 1929, and that in 1941 it was still $11,000,000,000. This debt of the railroads, which has gone unpaid for over 20 years, was one-fourth of the national debt at the end of the New Deal's peacetime spending. I cite this not as criticism of the railroads, but as something businessmen may well think about when denouncing so-called New Deal financing. Also, it may be pertinent to remember that the total amount spent on the Work Projects Administration from its inception in 1935 to June 30, 1942, was less than $10,000,000,000, an amount not in excess of the tax assets that would have been canceled under the original Ruml plan, generally favored by business.

With these unorthodox asides, I gladly turn the national debt back to Senator GEORGE for retirement. The able and conservative Senator tells us that the country still is not broke, despite the staggering deficit that confronts us on account of the war.

Notwithstanding the magnitude of the debt, Senator GEORGE foresees its liquidation, provided the executive and legislative branches of the Government chart and pursue a sane and sound course. He believes that the debt can be paid at the rate of $20,000,000,000 a year, without working undue hardship on the people or upsetting the economic structure of the country.

But "there are those in this country," says Senator GEORGE, "who believe the debt makes no difference because it is wholly internal. We owe it to ourselves, they argue, and so we do, but deficit financing continued, as they would continue it, could but result in collapse. The obligation must be satisfied."

It is heartening to know that President Roosevelt also holds to this view. In presenting the 1944 Budget, the President declared that "a debt of $210,000,000,000 can and will be repaid. The Nation is soundly solvent."

Chairman DOUGHTON, of the Ways and Means Committee, also says "the financial integrity of the Nation must be maintained." This sound and traditional point of view was voiced by Secretary of the Treasury Morgenthau in testifying before the Senate Finance Committee in 1941.

"The defense program is an absolute necessity," said he. "It must be paid for. Insofar as possible, it should be paid for now. Borrowing should be kept to a minimum to maintain our fiscal strength. The rise in the federal debt means merely that the taxpayer's burden is being postponed—that both principal and interest must be paid later out of higher taxes collected at a time when they may be harder to pay and less willingly paid than now. * * * An all-out tax program will build public morale in an all-out defense program. By reducing the necessity for borrowing, it will strengthen confidence in the impregnable fiscal position of the Government."

These are words of wisdom. If we will but follow them, the outlook is not disheartening. "The normal, ordinary expenses of the Government amount to around six and one-half billion dollars a year," says Senator George. "These expenses aren't likely to increase materially after the war, if the authorities exercise sound judgment, and adhere to sane policies. We are now raising annually by taxation over $35,000,000,000."

"That pictures the possibility, the probability," continues the senator. "Obviously we could meet post-war regular expenses and apply $20,000,000,000 to the debt annually, yet substantially reduce taxes. No thecrizing is necessary to appreciate the full outlines of the picture. All that is required, all that will be required when peace comes, is for the country to consider the situation calmly and reasonably.

"Given a favorable balance of trade and fair treatment, the commerce and industry of the United States will continue to hum for many, many years, and the national income will support taxes that will take care of the national debt."

The words I have just quoted are not those of an impractical dreamer or a wishful thinker. They express the measured views of a legislator of long experience and great ability, who will have much to do with shaping the Government's future financial policy.

Truly, "It is good news, worthy of all acceptation; and yet not too good to be true."

Food Production in Arkansas by F. S. A. Borrowers

EXTENSION OF REMARKS

OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Saturday, June 19, 1943

Mr. HAYS. Mr. Speaker, under leave to extend my remarks in the Appendix, I include the following letter and summary of Farm Security production figures sent to me by Mr. John G. Pipkin, a highly respected citizen of my State, a former State commander of the American Legion, and at present the commissioner of public welfare:

STATE OF ARKANSAS,
DEPARTMENT OF PUBLIC WELFARE,
Little Rock, June 16, 1943.

Hon. BROOKS HAYS,
Member of Congress,
Washington, D. C.

DEAR BROOKS: I have noted with considerable interest that the Senate recently approved the agricultural appropriation bill which included $160,000,000 for Farm Security Administration, by a vote of 66 to 12.

I believe the next step will be for this bill to go back to a joint committee of the House and Senate in order that any differences might be ironed out.

I am enclosing herewith a brief summary of what the Farm Security Administration has meant to Arkansas the last 2 or 3 years in the way of increased food production and help to the low-income farming population of our State. As a student of the economic and social conditions of Arkansas, and more recently as commissioner of public welfare, I have been in a position to realize the great value the Farm Security Administration has been to our State. No doubt a few mistakes have been made in certain projects but they in no wise should prejudice this fine organization in its main program of rehabilitating the low-income farmer. No agency, in my estimation, has done a more worth-while job in our State. We are enclosing a brief résumé of facts which are very significant. Both the continued welfare of our State and the production of food for the war effort demand that the Farm Security Administration program be maintained and strengthened in every possible way.

We trust that you will be able to support the continuation of this agency.

Very sincerely,

JOHN G. PIPKIN.

During 1943 the Farm Security Administration provided planned supervision for 25,164 families. Up to March 31, 1943, 2,733 original rural rehabilitation loans and 20,415 supplemental rural rehabilitation loans have been made to increase wartime food production. Since 1937 the Farm Security Administration has helped 1,859 tenant farmers and farm laborers to purchase farms, and they are making substantial repayments with the income from the land.

Rural rehabilitation loans cumulative to Mar. 31, 1943

Total sum loaned to individuals through rural rehabilitation loans	$36,121,865.27
Matured principal due on or before Mar. 31, 1943	$24,348,861.18
Total collected against principal, including prepayments	$19,868,405.15
Interest payments to Mar. 31, 1943	$2,341,465.75
Total collected, interest and principal	$22,209,870.90
Percent matured principal and interest collected as of total matured principal	91

Tenant purchase loans cumulative to Mar. 31, 1943

Total number of tenant purchase loans since 1938	1,859
Total loaned to purchasers for farm purchase and development	$7,391,190.59
Total repayments due, interest and principal	$917,134.91
Total collections, interest and principal, Mar. 31, 1943 (prepayments not included)	$914,043.89
Percent of schedule collected Mar. 31, 1943	99.7

1942 production of essential crop and livestock products and increases over 1941 made by Farm Security Administration borrowers in Arkansas

Product	Unit	1941 production	1942 production	Increase	Percent increase
Milk	Gallons	18,444,300	24,433,300	5,989,000	32
Eggs	Dozen	5,637,510	7,579,100	1,941,590	34
Chickens	Pounds	3,622,360	4,835,030	1,213,670	34
Pork	Pounds	12,464,600	16,973,900	4,509,300	36
Beef	Pounds	5,161,420	8,215,950	3,054,530	59
Soybeans	Bushels	71,253	225,116	153,863	216
Peanuts	Pounds	4,815,630	13,114,000	8,298,370	172

These 25,164 families canned an average of 425 quarts of fruit, vegetables, and meat for home use in 1940, and 447 quarts in 1941.

Farm Security Administration borrowers have increased their net worth from an average of $407 per family for the year prior to making their Farm Security Administration loan to an average of $709 per family. The average net family income for each Farm Security Administration borrower amounted to $728 as compared to an average net income of $349 per family before engaging in the Farm Security Administration-supervised loan program.

Report From Washington

EXTENSION OF REMARKS

OF

HON. JOHN P. NEWSOME

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, June 19, 1943

Mr. NEWSOME. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Detroit Free Press of June 1, 1943:

REPORT FROM WASHINGTON

(By Clifford Prevost and Radford Mobley)

WASHINGTON, May 31.—Can Washington be charged with responsibility for the lawlessness that now pervades the Nation? Or must it be laid at the door of unpatriotic strikers, greedy merchants, racketeers, and chiselers? We think Washington must take a great part of the blame.

The situation in the food market can only be described by the word "lawless." The Office of Price Administration admits rather frankly that it cannot control food prices. People are being gouged more and more daily. One official check shows that 80 percent of the stores investigated in 50 large cities were openly selling meat at above legal Office of Price Administration prices in recent weeks. Fuel Administrator Harold L. Ickes made his investigation in the coal-mining towns and found the miners wern't able to touch anything at Office of Price Administration ceiling prices. They would be laughed at if they flashed an Office of Price Administration price list.

Certainly the fault lies to a great extent with administration of the law. The Office of Price Administration statute is not an unpopular prohibition law but a measure to prevent the people from being subject to extortion in wartime. The Office of Price Administration law should be popular, and in every town there should be a demand for compliance. But there isn't.

The consumer voice in most cities has been killed by the Government itself. Consumers' divisions in Federal agencies have been cashiered or rendered impotent. If ever there was a time for a strong consumer voice in what is going on, now is it. But the Office of Price Administration and other agencies aren't making the strong, effective appeal to the consumer that should be made. An aroused consumer public would help tremendously. All the public gets is a confusing, highly technical list of ceiling prices of various grades, brands, and cuts. Only the grocer or the butcher can interpret this stuff, to his own profit. That is all the consumer gets, that and the black market.

The Office of Price Administration is asking for another 1,400 or so investigators to enforce its regulations. If these were turned loose on the black market and the dishonest food merchants, it would be all right. But they probably will be posted on the highway to ask where you are driving and why—as if anybody but a fool wouldn't conserve all the gasoline he could now, as a matter of selfish interest.

The War Labor Board and its policy, at times vacillating, at times unreasonably dogged, are partly responsible for the "flash" strikes that have been occurring. The Board is a bureaucratic group of not-too-strong men attempting to assert authority and expand power. It is waterlogged with paper work and precedent. Give us a strike to settle, and any time of the week we would pick Dr. John R. Steelman, of the United States Conciliation Service, to handle it rather than the Labor Board. If Congress would give Steelman a little authority, he would be the Nation's No. 1 manpower chief. He has the confidence of labor and management. He is a conciliator in the best sense of the word. He can inspire men to work during an emergency. He doesn't give a darn about his own political fortunes.

Washington's chief plaint is the cry-baby talk that the people won't cooperate. They won't go back to work or they won't stamp out the black market. They won't quit asking higher wages or they won't comply with Office of Price Administration price lists. Well, those who have something to gain by encouraging the black market or violating the price lists, and ambitious labor leaders who advance themselves by fomenting strikes after promising not to do so—these people know they will not be hurt in Washington.

In fact, they usually get away with it. They have only to turn loose their powerful lobbies against the administration and Congress if necessary. Their pressure groups will becloud the issue, muddy the water get away with it. Until someone rises up in his wrath and kicks a few of these people and these groups right in the face things will go on in Washington as usual. We shall have inflation, and strikes, and lawlessness of other kinds, and, we are forced to add, continue to muddle along toward a victory that could be much cheaper.

The Lawyers of Nebraska Are Making a Great Record

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Saturday, June 19, 1943

Mr. CURTIS. Mr. Speaker, I have before me a news article from the Nebraska State Journal of June 16, 1943, published at Lincoln, Nebr., which says that one out of every six of the lawyers of Nebraska are now in the armed services of our Nation. That news article is as follows:

Nebraska attorneys have gone to war in a big way. A new directory of members of the Nebraska Bar Association, just issued by Secretary George H. Turner, shows that 505 of them are now part of the armed forces of the Nation.

As there are 2,804 licensed attorneys in the State and members of the association, this means more than 1 in 6 is in the conflict. Some of these are holding commissions that call for duties of a legal nature, such as judge advocates, but the great bulk of them are in the fighting forces.

Membership of the association is divided into active and inactive. Of the total of 2,804, there are 2,090 who have been in active practice and of these 366 are listed as gone to war. There are 714 who retain membership but who are not practitioners, and of these 139 are in service.

Mr. Speaker, I believe that this unusual record merits the attention of this Congress. I am proud of this record of the lawyers in Nebraska. It is true, as stated by the Tennessee poet, John Trotwood Moore, that "The lawyers' blood has been the ink that flowed from freedom's pen." It is also true that great lawyers make great soldiers.

Mr. Speaker, I wish to conclude my remarks by inserting in full the tribute to the lawyers, written by John Trotwood Moore and furnished to me by the gentleman from Tennessee [Mr. JENNINGS]:

We wrote the Magna Carta, we wrote the Bill of Rights,
The path of human progress is lit with legal lights;
We wrote the Declaration with an eagle pinion quill—
It globed the world where force and hate fell powerless and still,
We wrote the Constitution, we codified the page
That made the great Republic the wonder of the age.

Our shrine is loyal service and our reward the flame
That lights the path of knowledge in the temple of our fame,
Say not our fame is nameless, say not our race is won,
Say not our Declaration pales in a setting sun;
Forever, and forever, in God's great code of men
The lawyers' blood has been the ink that flowed from freedom's pen,
And when time's day has ended and midnight hath no star,
We will plead for truth and justice before the judgment bar.

Minnesota Farm Operator Plants Self-Service Victory Gardens for Busy People

EXTENSION OF REMARKS

OF

HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Saturday, June 19, 1943

Mr. HAGEN. Mr. Speaker, during these days of national crisis every American worthy of the name is working harder at his given task than ever before. His hours are longer and when he arrives home he is ready for a few hours of earned rest. The farmer and his wife and son and daughter even work longer hours and have little time for rest or recreation.

The boys and girls in most city families are either in the armed forces or in a factory. Even the mother is working outside her home in many instances.

As a result, many of these families will not have Victory gardens. Many have not the soil to plant a garden.

A friend and constituent of mine has conceived a plan and idea whereby these busy people nevertheless can have their own Victory garden. He is Mr. Henry (Hank) Peterson, vegetable grower, farmer, and member of the City Council of Moorhead, Minn.

The plan is simple. Mr. Peterson made a survey by means of newspaper advertising of the vegetable needs of the people in his community who were not able

to plant gardens and then planted a great garden on his own land.

Just before the vegetables are ready for harvesting, he notifies those fellow citizens who have joined the self-service Victory garden project, and they, with members of their family, bring their own containers and pick as many vegetables as they can use.

This type of self-serve garden has many advantages other than the time and labor saved. The garden is cared for by experts who know their business and get the most out of the seeds. In addition, there is little or no waste, as the participants in this plan pick only what they need in their own baskets and containers, and pay a very reasonable amount for the vegetables they take away.

In my opinion, I think Mr. Peterson has made a splendid contribution to the war effort in his home community. Food is and will continue to be one of our major problems for the duration.

I hope this idea of self-serve Victory gardens spreads throughout the entire country.

Personnel Activities, Army Service Forces

EXTENSION OF REMARKS

OF

HON. ROBERT RAMSPECK

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, June 19, 1943

Mr. RAMSPECK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Lt. Gen. Brehon Somervell, Commanding General, Army Service Forces, before House Committee on the Civil Service, Tuesday, June 15, 1943:

At the outset, I wish to thank the committee for this opportunity to appear before it and discuss the civilian personnel policies and activities of the Army Service Forces. I know that the purpose of this inquiry is to examine into the facts concerning the administration and operation of the civil-service laws, in order that they may be made to function properly and confer the benefits upon Federal employees for which they were designed. With that purpose I am in hearty accord.

No employer, big or little, can expect to obtain loyalty and efficiency from his workers unless he gives them a square deal all around. Right now the Army Service Forces happens to be the largest single employer of civilian workers in the Nation, either within or without war industry. As a Government agency having approximately 1,000,000 civilian employees on its pay rolls, therefore, all of whom are engaged in but one objective—the winning of this war—we have a management responsibility second to none in the Nation. With only 5 percent of this total employed in the Washington area, it is a management obligation as extensive in geographical scope as it is in numbers.

No matter how far short of our aims we may fall, this responsibility for establishing and maintaining good personnel relations and working conditions is recognized and accepted. We all know that our fire power abroad is utterly dependent upon our manpower at home. That means we have got to do better than our enemies on both fronts.

This hearing also gives me the opportunity, equally welcome, of saying something about the Civil Service Commission that has been on my mind for a long time. I am glad of the chance to state for the official record that the Commission has been of inestimable and never-failing help to us in meeting the problems of Government employment brought on by total war.

The principal difference between this war and all others we have fought lies in the vastly increased importance and variety of the services rendered by civilian workers. These war services, of course, have never been merely incidental to military success; obviously, no army can function in the field without being supplied and supported by somebody at home. But never before has it required the services of the entire employable population of America to perform this task. In the present conflict, with virtually the whole economy of the Nation converted to war-making purposes, the role of the civilian worker has assumed a completely new significance.

For the first time in any war it may be said that his responsibilities in the defense of the Nation are comparable to those of the fighting man. By this I do not mean to imply that he undergoes the same hazards or makes the same sacrifices as the man who offers his life for his country on the battlefield. There is a wide difference between a job in a factory and a job in a fox hole; but in this machine age and in this gas-engine type of warfare, both jobs are essential to ultimate victory.

They may vary in the degree of danger but not in dignity. Even this observation regarding physical risk must be made with reservations, for after all it applies only to this continent. We all know what has happened to the war workers and civilian populations of Europe, Asia, Africa, and Australia. Bombs are no respecters of persons, whether you wear a uniform or overalls.

It is against this background of world-wide conflict and an American supply line that encircles the globe that I believe we should weigh the contribution to the war program being made by the civilian personnel of the Army Service Forces. If it were not for their faithful and capable services and those of the millions of civilians employed in other war agencies and activities, our troops would not now be in Tunis and Guadalcanal and Attu, as well as participating in round-the-clock bombing missions over Germany and Italy.

The true worth of their services is not to be gaged entirely by the risks encountered, but also by the results achieved and by the relationship of each individual's efforts to the maximum utilization of the Nation's total manpower. Our task is to see that this maximum utilization is obtained from the civilian workers in the Army Service Forces, through the creation of conditions conducive to the greatest possible continuity of employment and volume of production.

Moreover, we have still got to hurry. The hardest fighting is still ahead of the United States in this great struggle. With thousands of our able-bodied men going into the armed services every day, it becomes more and more imperative that we not only provide replacements for the jobs they are leaving, but obtain more output per worker in order to furnish them with the things they need.

* * * * *

The Army Service Forces came into being March 9, 1942, under the name of the Services of Supply. The Army Service Forces is one of the three main components of the Army, the others being the Army Ground Forces and the Army Air Forces. The reorganization of the Army into these three branches was for the purpose of relieving the Secretary of War and the Chief of Staff and the other officers responsible for military strategy and operation from the details of supply and administration.

All the varied agencies and services of the Army not included in the Army Ground Forces and the Army Air Forces were consolidated under the Army Service Forces. They include several staff divisions, seven technical services, and the nine Service Commands, or former corps areas, into which the Army divides the United States. Last September a tenth, called the Northwest Service Command, was established for the purpose of handling American military and construction activities in the region in Canada traversed by the Alaska-Canadian military highway. This command also reports to the commanding general, Army Service Forces.

Thus, the Army Service Forces, by reason of this grouping of all supply and administrative services under one head, became at once an immense holding company for the War Department, with central control over extensive and diverse activities which formerly reported to scattered authorities. The practical effect, as I have previously indicated, was to transform it overnight into the largest single employer of civilian labor in the United States.

To sum up, the Army Service Forces feeds, fuels, clothes, houses, and equips the Army. It devises and produces many of the weapons of war. It transports the Army and its supplies all over the globe, and operates its communications. It builds the camps, cantonments, munitions factories, bases, roads, and military installations, and maintains and repairs all camp utilities. It manufactures the gases for chemical warfare, pays the Army, provides for its medical needs, supervises its religious observances, carries the Army mail in all its forms, does all the bookkeeping and maintenance of records, furnishes recreation for the troops, sells the soldiers commodities at low prices at post exchanges throughout the world, protects their legal rights, maintains the military police, establishes plant protection, buys and leases all real estate, trains both its own soldiers and civilians, sends them to school, and performs innumerable other tasks designed to make the American Army the best equipped and serviced in the world.

The Army Service Forces also plays a vital part supervising the procurement and handling of military supplies to the British, Russian, Chinese, and all the other armies fighting shoulder to shoulder to defeat the Axis hordes on two hemispheres.

In the performance of its duties, I wish to point out here, the Army Service Forces is not operating wholly behind the lines, by any means. Army Service Forces officers and men are fighting side by side with combat troops in all combat areas. The Army Service Forces services and repairs tanks, guns, and combat vehicles in the battle zones and keeps the supplies moving to the front in a never-ending flow that spells the difference between victory and defeat. Nor are all the members of the Army Service Forces in uniform who undergo the risks of direct enemy fire. In fact, there are more than 12,000 Army Service Forces civilian workers employed on the Army transports that brave the U-boat menace on the five oceans and seven seas, in order to carry men and matériel to the far points of the earth.

Owing to the diverse nature of its duties, virtually all occupations and professions are represented in the activities of the Army Service Forces in the present conflict.

* * * * *

I cite the foregoing facts on organization and duties for two main reasons: First, that the committee may obtain a perspective of the Army Service Forces as a whole; second, to scotch for the record any fallacious idea on the part of the public in general that the civilian personnel of the Army Service Forces is massed in the headquarters offices in Washington and consists of a large group of clerical workers engaged in paper pushing.

We have plenty of paper-pushing in the Army, as is the case in all large organiza-

tions, public or private, but we have been doing something about that from the very beginning and I shall have something to say on the subject a little later. We are trying to push a lot of papers off the desks instead of over the desks, and have made considerable progress. But the popular impression that Washington is the center of all War Department civilian employment is far from being the truth.

The fact is that 95 percent of all civilians in the employ of the Army Service Forces are located outside the Washington metropolitan area. As of May 1, 1943, our total civilian strength for the country as a whole, on the pay roll of the Army Service Forces, stood at 1,026,154 men and women. Of this grand total 974,428, or 95 percent, are employed at more than 3,000 different stations throughout the continental United States.

These stations include service command headquarters, camps, cantonments, Ordnance arsenals and manufacturing plants, Quartermaster depots, Signal Corps depots and plants, various other kinds of depots, staging areas, ports of embarkation, reception centers, reconsignment areas, and other military reservations, posts, and installations. Most of these civilian employees are engaged in production and servicing occupations to supply the men at the front with weapons, ammunition, and matériel of all kinds.

In the departmental service, as of the same date, there were 37,012 civilian employees of the Army Service Forces or 3.6 percent of the grand total. In this area, naturally, the bulk of the work is of an administrative or clerical nature.

The obligation to establish sound personnel policies for such a widespread organization, as I emphasized at the beginning of this statement, was recognized as a responsibility of command and management when the Army Service Forces was created.

As we see the job, it embraces the following six major objectives:

1. The maximum utilization of the highest skill or ability of every employee.

2. The provision of adequate processes for ascertaining the skills of each employee.

3. The improvement of present skills or acquisition of higher skills.

4. The employment of the minimum number necessary.

5. The reduction of the employment of men, otherwise available for military service, by means of substitution of women and older men.

6. Creation of working conditions and relationships which will tend toward the retention of workers and the reduction of unnecessary turn-over.

In the development of the civilian personnel program and the attainment of these objectives I wish to call attention to the fact that constant emphasis has been placed upon the responsibility of command, no matter what the rank, in establishing sound personnel relations throughout the organization.

This is a basic requirement. Energetic leadership and a sympathetic attitude toward the aims in view are essential if we are to be successful in dealing with human beings. For that reason we have sought at all times to make our officers and officials conscious of the importance placed upon good management and good supervision.

* * * * *

Early this year it became evident that the manpower situation was becoming acute. To meet this problem in the Army Service Forces, Maj. Gen. W. D. Styer, Chief of Staff, Army Service Forces, on March 1, 1943, was appointed chairman of a board to institute a program for the more effective utilization of our manpower.

This program has eight basic objectives, as follows:

1. To develop and utilize adequate personnel data.

2. To establish an effective control over the numbers of personnel.

3. To replace certain types of personnel.

4. To expand, refine, and speed up the program for personnel management.

5. To eliminate all nonessential activities.

6. To improve the organizational structure.

7. To decentralize activities and authority to act to the greatest extent possible.

8. To increase the efficiency with which essential activities are performed.

Staff planning on this program has been completed and execution is proceeding throughout the organization, with results which we expect will be highly beneficial in terms of efficiency and production along the lines specified.

Already in fact, much unnecessary activity and red tape have been abolished, with a consequent reduction in the work load and personnel requirements. On the score of simplifying work procedures, for instance, we have scheduled around 4,000 surveys throughout the Army Service Forces. About 40 percent have been completed. They are producing heightened efficiency, better speed in the handling of business and a greater capacity to absorb the ever increasing work load without substantial additional employment. In the work simplification surveys thus far completed, we estimate that we have been able to reduce the number of steps formerly involved about 18 percent and to reduce the personnel requirements an average of approximately 10 percent for the particular procedures involved.

In the project to eliminate nonessential activities and duplication and to decentralize authority to act, we have requested recommendations from all levels of the Army Service Forces organization and from all ranks of officers and civilians. In requesting these recommendations we have gone to great pains to see that no suggestions are "killed" on the way up. Intermediate headquarters were asked simply to express comment on recommendations which passed through their hands and forward the basic suggestions to Washington without change. In this way we made sure that no ideas were suppressed or smothered because some higher officer or executive might not agree with them.

To date, we have received around 3,000 recommendations along these lines, of which approximately 40 percent have been acted upon. In two-thirds of the cases, I am happy to state, the action has been favorable and the suggestions are rapidly being put into effect. The result is a decrease in personnel requirements for the particular activities covered by this survey, further enabling us to absorb the growing volume of business with no material increase in employment.

* * * * *

Red tape, of course, is an enemy we must fight at all times, war or no war. We have been cutting it right and left in the Army Service Forces for over a year now and we are still, as you can see, applying the shears. It masquerades under the imposing name of procedure. A certain amount of systematic procedure, naturally, is necessary in any orderly and well-managed operation, but when it interferes with business, when it fastens the dead hand of obsolete forms and practices upon a living, growing, vital organization, defying the canons of common sense and good judgment, it should not merely be cut, but should be torn out by the roots. That is what we are trying to do in the Army Service Forces through these surveys I have touched upon.

The over-all results I have mentioned show we are making headway, but let me give you a few examples of actual accomplishments.

If I explained that we had revised Army Regulation 58-150, for instance, it would not mean anything. But this revision enabled us to eliminate an Army form which was an acknowledgment to the consignor that a shipment had been received. By this one unscrupulous stroke we effected an annual saving in time and labor involving the preparation of 21,500,000 of these cards.

Formerly, it was necessary to mail two copies of each shipping ticket furnished for auditing purposes to Service Command Headquarters. By knocking this requirement out, the preparation and mailing of 6,000,000 copies of shipping tickets each month have been eliminated.

A year ago one of our agencies required 112 different reports from posts, camps, and stations. Since then we have added 19—but we likewise eliminated 103. By the first of July 1943, the remaining reports will all be reduced or consolidated so that but 2 will remain.

One labor data report has been killed that consumed 30,000 man-hours per month to accomplish. A forage report has been improved so that it is now required from only 12 sources instead of 600. In another instance we have entirely done away with 3,000 individual contractual delinquency reports on one subject. A lot of paper work was discarded when permission was secured from the Comptroller General to permit automatic renewals of real-estate leases for the duration, instead of once a year. We have helped the newspapers by eliminating the necessity of applying to Washington for clearance of unclassified information; now the service commander in his region has authority to approve it.

Examples might be multiplied of the revisions effected in outworn regulations and practices no longer in harmony with the tempo not merely of wartime, but of ordinary modern business procedure. All these improvements in methods have a bearing upon the maximum utilization of manpower by doing away with unnecessary time- and labor-consuming operations.

* * * * *

So much for some of the paper-pushing aspects of our general problem. As this committee is well aware, dealing as it does with all phases of civil-service employment, the problems of personnel and procedure are so closely interlocked as to be inseparable. You cannot get the best out of any individual if he is hopelessly entangled in red tape; neither can you obtain efficiency if he lacks proper supervision. We tackled both these handicaps at the same time just as quickly as the Army Service Forces got under way. I desire to say just a few words on this subject.

The War Department, in the production plants under the Army Service Forces, was faced with the same emergencies in plant and personnel expansion as those which bothered private industry. It was apparent at once that poor or inadequate supervision meant inefficient workmanship and unsatisfactory production schedules. Borrowing the invaluable aid of the Training Within Industry Division of the War Manpower Commission, we inaugurated a program of job instructor training courses for Army Service Forces supervisors, both men and women. Let me say a word of appreciation at this point of the constructive services rendered in this task by the T. W. I. Like 10,000 or so operators in private industry, we were happy to take advantage of it.

The Army Service Forces program began last August. It consisted of a course in job-instructor training, one in job-relations training, and one in job-methods training. The first was designed to train supervisors in instructing employees on new jobs; the second was for the purpose of improving the supervisor's relationship with the people under him; and the third was to instruct supervisors in methods of work simplification and technique.

Up to the present time the Army Service Forces has given the job-instructor course to approximately 75,000 supervisors, as a result of which the breaking-in time for new employees has been appreciably reduced. The

other courses are now being applied. Equally good results are to be expected.

The example of Picatinny Arsenal in New Jersey illustrates the benefits that flow from these training courses. Following the completion of the job-methods course at that ordnance plant, suggestions from workers were received which will effect an estimated saving of 437,500 man-hours of labor and $341,200 in money, when applied at that installation alone.

It was a genuine pleasure for Major General Campbell, Chief of Ordnance, and myself to write letters of praise and congratulation to the employees of Picatinny. They are helping to solve this manpower problem right in their own back yard. It is proof that the time and money spent on in-service training of this sort pays big dividends.

These courses are by no means restricted to civilians, although most of them are taught by civilians. At the Seattle port of embarkation recently, the commanding general and 11 colonels enrolled in the job-relations training course and are "going to school" regularly with second lieutenants and civilian supervisors and foremen. I say with utmost sincerity, democracy is working in this Army. Moreover, none of us is too old or too important to learn.

I have stated also that both men and women receive this training program. I cannot tell you what proportion of the supervisory force is composed of women but I can tell you what proportion of our entire civilian personnel is made up of women. It is a figure that gives us much pride, a figure that we are going to increase by a well-defined and coordinated program to recruit more women in our war industries.

Of our entire country-wide civilian personnel, 379,300 are women. That number represents 37 percent. It makes the Army Service Forces the largest employer of women labor in the Nation. Outside the Washington metropolitan area, women constitute 33.6 percent of the total field strength.

These women, may I stress, are performing important and essential manual labor that men used to do. I know that the committee has seen some of them at work at the Frankford Arsenal and the quartermaster depot in Philadelphia. It is an inspiring sight. We are proud of them, just as we are proud of the women who make up approximately 67 percent of the Army Service Forces civilian personnel in the Washington metropolitan area.

When you see women running lathes and drill presses and stamping machines, or repairing automobiles and tires and shoes, at Army plants or installations, you begin to appreciate the magnificent contribution they are making to the winning of this war. Every woman who relieves an able-bodied man for combat duty is in this war by proxy; and in addition, she keeps up production in the job he left.

The Army Service Forces honors its women workers, no matter in what capacity they may serve.

It is unnecessary to state before this committee, familiar as it is with our employment conditions in Washington and at some of the installations it has visited, that the Army Service Forces has made real use of minority groups and handicapped workers in its war program. Strict adherence has been followed to the policy laid down by the Secretary of War that there shall be no discrimination whatsoever with respect to race, sex, color, religion, creed, national origin, or political or other affiliation, except as may be required by law. At the present time, Negroes make up 13.7 percent of the total civilian personnel of the Army Service Forces and 22.1 percent of its Washington departmental civilian personnel.

* * * * *

By this recital of examples of action taken by the Army Service Forces to improve personnel conditions and work methods, either on the broad front of general policy or in the effort to streamline procedure, I do not wish to imply that we have even measurably attained all our goals or created satisfactory conditions everywhere. We have succeeded in some instances; we are still far short in others, but we are trying all the time. The general picture will at least serve to apprise the committee of the extent and magnitude of the problem and the sincerity of our efforts.

We in the Army Service Forces are intensely proud of the accomplishments of our civilian personnel. It should be remembered that top-ranking civilians, drawn from the field of experienced industry, business, public administration and professional life, share with commissioned officers the leadership and guidance of this large army of workers.

In a democracy, as I have stated before other congressional groups, we in the Army itself are but civilians in uniform. There is no room in this country for a militaristic philosophy. That is one of the ideologies against which we are fighting, as well as that of the superrace and its domination of the world. Except for the demarcation between chains of command and authority, there are no distinctions in the rank and file of the Army Service Forces between men in khaki and men in coveralls. We are all working at the same job.

After all, we are in a desperate struggle, with time still our most relentless foe. The real test is whether or not we deliver the goods on time, every time, everywhere.

Last February I returned from a trip to the theaters of operation in north Africa, the Middle East, and India. I saw at first hand what the element of supply means to our fighting troops who are now distributed all around the world and whose lives depend upon the kind of job we do here at home. I was happy to report that they had the supplies; that the essential articles for combat turned out by our civilian workers were being delivered where they were needed; and that the equipment they were getting was the best in the world. But we have to do even better. We have a gigantic war on our hands, we and our allies, and we have a gigantic job to do in fulfilling the virtually insatiable needs of total warfare.

You do not indulge in any rationalizing or fine-spun theories on absenteeism, work stoppages, or jurisdictional disputes on the home front, when you crouch in a slit trench in Tunisia or crawl through a Japanese-infested jungle in Burma. You know without anybody's telling you that the assembly line is the life line to the firing line.

Supreme Test

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, June 19, 1943

Mr. REED of New York. Mr. Speaker, press releases indicate that those Members of Congress who voted for the Connally-Smith bill to prevent strikes in defense industries and to keep a steady flow of war materials going to our fighting forces overseas are now marked for political slaughter by that element of irresponsible labor leadership which is now fomenting strikes in those industries vital to the success of our Army and Navy and to the safety of our Nation as a whole.

The people who have sons in our armed forces, whose lives depend upon the prompt and continuous production and delivery of implements of war on many fronts will settle this issue, raised against those who voted for the legislation in an endeavor to stop strikes in war plants.

Under leave to extend, I am including an editorial which appeared in the Washington Post of July 19, 1943, entitled "Supreme Test":

SUPREME TEST

President Roosevelt is about to make one of the most momentous decisions of his long career in the public service. He must veto the Connally-Smith bill or permit it to become law. He must assert the determination of the Government to move forward with the war effort in spite of minority obstructionists, or he must yield to the sophistry of professional labor leaders who would deny the Government the means of dealing effectively with saboteurs on the home front. Only the blind can fail to see that the fate of the Nation will be greatly influenced by the way in which the President meets this test.

It would be idle to pretend that this is not a Gethsemane for the President. The union leaders who are begging for a veto of the so-called antistrike bill are his friends and political associates. Apparently they are applying every known pressure to prevent the Government from asserting its power to carry on the war without further interference from little dictators like John L. Lewis. They are slandering as a "slave labor bill" a measure which specifically reserves to workingmen their right to work or to leave their jobs, even in wartime. They are threatening to withdraw from the War Labor Board if the bill becomes law. No President who has stood for the cause of labor as stanchly as has Mr. Roosevelt could be unimpressed by this importuning.

But the clamor of organized labor for a veto is not the only stir in the land resulting from passage of this bill to suppress uprisings against the authority of the Government to carry on the war. The voice of the people is also being heard. Millions of workingmen who are making airplanes, tanks, munitions, clothing, and other equipment for the armed forces are sick of the treasonable conduct of John L. Lewis and his ilk. They are crying out to their Government to end this cat-and-mouse game with obstructionists who lay greater store upon raises of $2 a day than upon the blood of American boys fighting in Europe and Asia. With firm determination to win the war and only contempt for those who try to provoke industrial war on our own home front, they are looking to the President to prove that he is leader of the Nation and not of any one faction.

In their fox holes, at their gun stations on land, sea, and in the air, several million American men in uniform are also waiting to see whether the President will let them down. These men cannot understand why any group that is safe at home, holding good jobs at high wages should slow down war production by going on strike. And as for a traitor who would lead an industrial revolt to prevent operation of a plant or mine which the Government has been forced to take over, a mere fine or jail sentence such as the Connally-Smith bill provides seems much less than he deserves. The men at the front know that they will be helpless unless the Government keeps a constant stream of weapons and supplies flowing to them, and that these supplies cannot possibly be forthcoming unless coal is mined, steel is made, and finished products are turned out from thousands of plants. So it is not surprising that the mere thought of leaving the operation of our military machinery at home at the mercy of ruthless fanatics of the John Lewis type is incomprehensible to them.

In short, these men in soiled and often bloody uniforms expect their Commander in Chief to do his duty with the same selfless

devotion to the national welfare that he asks of them. They expect their Commander in Chief not only to accept the weapon Congress has given him against obstructionists but also to use it whenever the authority of the Government to carry on the war is challenged. These men will be heartened by the courageous decision of the War Labor Board in the coal case. But that gain and much more would be lost if the President should yield to the tornado of propaganda designed to keep the Government weak and helpless in facing the demands and the threats of reckless labor minorities.

It is true, of course, that the War Labor Board may have to be revamped as a result of the Connally-Smith bill. Heretofore it has been an instrument of the White House in carrying out the agreement between labor, employers, and the President. With the Connally-Smith bill on the books, it will become a statutory body that ought to represent the public rather than special-interest groups. Basically that is an argument in favor of the bill.

More important than anything else, however, is this bill's assertion of governmental power to fight the war to a successful close regardless of minority obstruction. For the President to throw down that principle would be nothing short of a calamity. We do not believe that he will do so. We believe that his sense of responsibility to the men and women who are fighting and working to bring this war to a successful close will guide him to the right decision. It is true that he needs the strength of Hercules. But the loyal devotion of millions of Americans who expect the Commander in Chief to do his duty regardless of how painful it may be can and will give him that strength if he leads the way.

National Youth Administration

EXTENSION OF REMARKS

OF

HON. JAMES M. FITZPATRICK

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, June 19, 1943

Mr. FITZPATRICK. Mr. Speaker, under leave to revise and extend my remarks, I include a number of communications I have received from educational institutions throughout the country favoring the continuance of the National Youth Administration:

PIEDMONT COLLEGE,
Demorest, Ga., June 18, 1943.

Hon. JAMES M. FITZPATRICK,
House of Representatives,
Washington, D. C.

DEAR MR. FITZPATRICK: It is impossible for me to overemphasize the value of the National Youth Administration student aid program. May I urge you to do all that you can to preserve and extend this vital program. I trust that you will vote to reconsider and to reverse the recent action of the House of Representatives.

Very sincerely,
MALCOLM BOYD DANA,
President.

THE CAZENOVIA JUNIOR COLLEGE,
Cazenovia, N. Y., June 15, 1943.

Mr. JAMES M. FITZPATRICK,
House of Representatives,
Washington, D. C.

DEAR SIR: May we make clear to you the fact that we are very interested in having the National Youth Administration assistance continued to college students as a means of helping them continue their education in the college in which they are enrolled.

We are not interested in having the National Youth Administration become a separate educational system run by the Federal Government but rather as an agency to help students secure their education in colleges already established, by giving them direct aid.

Sincerely yours,
ISABEL D. PHISTERER,
Dean.

CALVIN COLLEGE,
Grand Rapids, Mich., June 15, 1943.

The Honorable JAMES M. FITZPATRICK,
The House of Representatives,
Washington, D. C.

DEAR SIR: We have been informed that there is a possibility that direct aid to students via the National Youth Administration may be eliminated and that student aid grants may be allotted directly to the institutions.

Calvin College hereby wishes to express its disapproval of any such method of fund distribution. It will mean in all probability that the liberal arts college, already hard hit by the exigencies of the war, will be discriminated against.

Liberal arts colleges are making vital contributions to the war effort and to the plans for reconstruction after the war. Unlimited millions are spent for the military training on college campuses equipped for such education. The war situation should not be allowed to interfere too seriously with the training of civilian students whose services are equally needed by our Government today and in the reconstruction period after the war.

Any contribution that you may make in distributing available aids directly to the needy student will be in line with the spirit of democracy, will be a distinct service to your country, and will be highly appreciated by the church-related colleges.

Sincerely yours,
HENRY SCHULTZE,
President.

LUTHER COLLEGE,
Decorah, Iowa, June 15, 1943.

Hon. JAMES M. FITZPATRICK,
House Office Building,
Washington, D. C.

DEAR SIR: Attempts are being made, it seems, to destroy direct aid to students through the National Youth Administration.

In my opinion this aid to college students is in many instances more necessary than ever, because the students on accelerated programs cannot earn money during summers and parents have a hard time assisting them on account of the high cost of living.

The liberal arts colleges are making an important contribution to the war effort as well as to the post-war problems. The plight of their students must not be overlooked. Where we are necessarily spending millions in training men and women in military organizations on college campuses we should not deny a mere pittance, in comparison, for the training of civilian students in colleges, whose services will be equally needed by our country both now and in the future.

Direct grants to institutions have been proposed. I take for granted that we are all in favor of equal educational opportunities for our boys, everywhere. This equalization of opportunities does not come through institutions. It comes through aid given to the individual student worthy of assistance.

If students want an education they should be free to seek this in institutions of their choice. Some will choose a church related college. But if grants are to be made to institutions it is reasonable to suppose that church related colleges will be out of the picture. Hence the student worthy of and in need of aid is compelled to go to an institution of a different type for his college training, if he wants to benefit by the grant. This is not the democratic way. The National Youth Administration, or direct aid to college students, is democratic. It has not worked out 100 percent, but it has, as I see it, by and large, worked out more perfectly than most programs of that magnitude. I can point to many a worthy student to whom it has been a godsend, a means of keeping him in college and of making him a real leader in our own America where our national strength and real greatness rest largely on the education of the masses and a liberal education of a large reservoir of potential leaders, men of Christian character, keen minds, broad training, good judgment, clear vision, and unswerving loyalty to American ideals.

It seems to me that no boy who has the capacity and the ambition to profit by educational opportunities should be denied the privilege because he is poor. National Youth Administration has been the hand that lifted up many a boy who was sinking in despair. I want to speak for such boys in writing you this letter and asking you to continue the National Youth Administration.

Sincerely yours,
O. J. H. PREUS,
President.

THE COLLEGE OF THE OZARKS,
Clarksville, Ark., June 14, 1943.

MR. JAMES J. FITZPATRICK,
House Office Building,
Washington, D. C.

DEAR MR. FITZPATRICK: I am writing you in behalf of the continuation of the National Youth Administration program on such foundation as to make it helpful to the individual students rather than to the colleges and universities. In other words, it seems to me that there are thousands of boys and girls who would like to enter college or continue their studies in college if they could finance their education. Under the accelerated program, these students are urged to attend school 12 months in the year. This deprives them of the 3-month period which they formerly had in which to earn money to supplement such help as comes to them from their parents.

Again, these students are between two urgent appeals. One is for some type of military service and the other is for war-industry work, which pays very high wages. Doubtless many should go into both of the services mentioned above. On the other hand, there are many who cannot qualify for military service and who might better spend a few more years in college rather than being lured into industry because of wages. We are going to need as many trained men and women as possible in the post-war period. If the youth of the land are lured away from college in order to earn high wages, the Nation will pay for this in a lack of leadership in the future. My hope, therefore, is that our Government, which is rightfully spending so many billions to train men and women for the Army and Navy, may lso spend a lesser amount to make it possible for these other young people who cannot serve in the Army and Navy to prepare themselves for positions of leadership in a post-war world.

There are hundreds of boys and girls who should be in college but who lack the money with which to pay their expenses. They are among the finest youth in the land, and if trained would be efficient leaders tomorrow. It seems to me that a revitalized National Youth Administration program where the money is given to the individual students for study purposes in such institutions as can serve them would be very important reconstruction legislation.

Some of our colleges do not have Army and Navy programs. If the students who want to attend college could in some way secure

the funds with which to complete their training they would enroll in increasing numbers. The colleges which are not overrun with candidates for the Army and Navy have their faculties and equipment intact and can give young people the training which is so vital for tomorrow. If your judgment convinces you that it is proper to give National Youth Administration assistance direct to students for their adequate training, I hope you will use your influence to this end.

Yours very sincerely,

WILEY LIN HURIE,
President.

Farmer McGregor's Wheat

EXTENSION OF REMARKS

OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Saturday, June 19, 1943

Mr. REES of Kansas. Mr. Speaker, I am enclosing, as a part of my remarks, an article that recently appeared in the editorial columns of R. A. Clymer, editor of the El Dorado Times, El Dorado, Kans., entitled "Farmer McGregor's Wheat." The article, I believe, is rather timely. It reads as follows:

FARMER M'GREGOR'S WHEAT

Despite the optimistic view in Washington of the farm manpower situation, hired hands remain almost as scarce as hen's teeth on the farms, and the average farmer over the Nation is apt to find himself in pretty much the same situation as John Gould says, in the New York Times, exists in his part of the country, when Farmer McGregor, after many difficulties, gets his wheat planted and ready for the harvest. Priorities kept McGregor from getting a binder, so he decided to look about for a hired man to help him cradle it by hand. From here on we quote the Gould article:

"Who will get me a hired hand?" asked McGregor.

"Not I," said the Employment Service. "We are having trouble locating welders at $140 a week, and precision-tool jiggers at $23 a day, and we don't know a soul that can cradle wheat."

"Not I," said the local draft board. "You better find a school kid."

"Not I," said the high-school principal. "This week we're helping the grocery stores paste ration coupons."

"Not I," said the county agent. "We are busy now teaching women to make plum jam without sugar, sirup, molasses, or plums."

"Not I," said the local defense plant. "We are on a cost-plus basis, and absenteeism costs $10,000 a minute."

"Not I," said the Manpower Commission. "We are working on your problem, but just at present there is a shortage of stenographers."

"Not I," said the War Production Board. "You haven't made the proper applications."

"Not I," said the Food Coordinator. "I will issue a directive soon."

"Not I," said the Lend-Lease authority; "we are powerless to act under existing regulations."

"Not I," said the congressional delegation. "Without fear of successful contradiction, we may infer that democracy is at the crossroads, and the flag of freedom must be unfurled from the pinnacle of the globe with sweat, blood, and tears until man can again bask in the freedom we fought so valiantly to perpetuate."

"Not I," said the neighbors; "we are working in the shipyards."

So Farmer McGregor, with the assistance of his grandmother, harvested his wheat.

"Now," said Farmer McGregor, "who will help me eat this nice clean wheat?"

"I will," said the county chairman, the dealers, the machinery people, the employment service, the draft board, the county agent, the defense workers, the school teachers, the Manpower Commission, the War Production Board, the Food Administration, the welders, the shipfitters, the Lend-Lease authority, the neighbors, the Army, the Navy, Coast Guard, marines, airplane spotters, WAAC's, WAVES, SPARS, WAAF's, Russians, British, Chinese, South Americans, Hindus, Eskimos, Mrs. Roosevelt, Congress, the Maritime Commission, the United Service Organizations, the National Association of Manufacturers, Secretary Ickes, the American Federation of Labor, the Congress of Industrial Organizations, and everybody else from Sitka to Casablanca, from Istanbul to Vladivostok, from Maine to California, until the hubbub was unanimous.

The Antistrike Bill

EXTENSION OF REMARKS

OF

HON. SAM M. RUSSELL

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Saturday, June 19, 1943

Mr. RUSSELL. Mr. Speaker, all America is directly interested in eliminating the atrocities of racketeers on our labor front. The people of America are also interested in the antistrike bill that has recently passed the Congress and is now lying on the President's desk, awaiting his approval or disapproval. It is the hope and desire of all patriotic Americans that the President will do what they see as his duty and what is his duty as I see it, and courageously approve that bill.

A former Member of this House on June 3 addressed a letter to our President, explaining fully this situation and showing the necessity for action to be taken immediately in order to stop the un-American activities on our labor front. To my mind, the Honorable Thomas L. Blanton, who served as a Member of Congress from the Seventeenth District of Texas for many years, clearly portrayed the desires of patroitic Americans at this time in his letter of June 3 to the President, and for that reason I have asked unanimous consent that a copy of his letter be printed in the RECORD:

BLANTON & BLANTON,
Albany, Tex., June 3, 1943.

Hon. FRANKLIN D. ROOSEVELT,
President of the United States,
The White House, Washington, D. C.

DEAR MR. PRESIDENT: I am completely out of politics. I aspire to no public office. What I say comes from my heart, hoping to suggest something constructive.

During this great emergency every loyal, patriotic American will support and stand behind you 100 percent in efforts to win this war. Any man who throws a monkey wrench into the machinery is a dirty, infamous traitor more despicable than Benedict Arnold or Judas Iscariot.

The people are impatiently tired of having John L. Lewis and other selfish, avaricious labor leaders shut down vital factories, stop mining needed coal, stagnate production of necessary war munitions, defy our institutions, flaunt to the winds the orders of our Commander in Chief, and twist a stranglehold tourniquet around the throat of our Government to force compliance with every kind of unreasonable demand.

I have recently returned from the west coast and have talked with people in all walks of life from New York to Los Angeles, and they vehemently state that they are sick and tired of it, and that unless Congress promptly passes a law that will prevent all strikes during this emergency, they will never vote again for any Member of the present Congress.

What is there so sacrosanct about labor unions? Are they more sacred than the rights and conveniences of our men in the service? Are they more sacred than the lives of our several million Americans in our military forces who daily risk their lives for their Government? If any man in the service even murmured he would be shot at sunrise. If any man in the service made a demand for higher pay or better treatment, he would be shot.

The people can't forget that there were 6,000 strikes against the Government during World War No. 1. They can't forget that when President Wilson asked Congress to pass his work-or-fight amendment to the Draft Act, labor unions finally forced it to be thrown into the wastebasket under threat that 50,000 would march upon the Capitol.

The people can't forget that the railroad brotherhoods threatened that unless they were paid increases of $754,000,000, with the raises dated back 6 months, they "would tie up every railroad in the United States so tight not a train could run," and Director General McAdoo was forced to pay them increases of $754,000,000 and date them back 6 months. Then as soon as he was succeeded by Mr. Hines as Director General of Railroads for the United States, these same railroad brotherhoods under a similar demand forced Director General Hines to pay them additional increases of $67,000,000.

For their own selfish protection Congress passed a law preventing the members of the Metropolitan Police Department and the Washington Fire Department from striking or belonging to any labor union that had the right to strike. And for 25 years no policemen or fireman in Washington has had the right to strike, or to belong to any organization that strikes. If, for the protection of Washington, Congress prevents policemen and firemen from striking at any time, peace or war, why can't Congress, for the protection of all American people, prevent strikes during war?

In view of the fact that both Madam Perkins, Secretary of Labor, and Mr. Secretary Ickes, are friendly to, and sympathetic with, labor unions and their right to strike, may we respectfully ask on behalf of the American people, that when taking over any industry, which is just what John L. Lewis and his kind of selfish labor leaders are trying to force the Government to do, that others who will stand firmly for the rights of the people be placed in charge of such businesses.

With great respect and sympathy, Mr. President, I am,

Very sincerely yours,

THOMAS L. BLANTON.

Food Facts

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, June 19, 1943

Mr. REED of New York. Mr. Speaker, if Adolf Hitler had been permitted to set up the O. P. A. as a means of creating confusion and frustration among the producers of our Nation, he could not have done a better job.

Every attempt of our loyal farmers to meet their full responsibility in producing the food necessary for our fighting forces and for our civilian population has been thwarted by a mass of uncoordinated and, in most cases, senseless regulations of the O. P. A., the ultimate effect of which has been to weaken our war effort, and, if continued, will prolong the war and result in unnecessary suffering and loss of lives.

The stubborn resistance of the O. P. A. to any change in its destructive program is heading this Nation for a major disaster in the field of food and of fuel production.

The New Deal's program of scarcity by means of subsidies for not producing food may have served its partisan political purpose in times of peace, but a continuation of such a program of wholesale political bribery through subsidies in time of war is only adding fuel to the flame of inflation.

The historical evidence is overwhelming that when a Government initiates a program that reduces the production of food, and then attempts either by penalties or by subsidies, or both, to hold down the price of foods to the consumers the prices, nevertheless, have continued to soar. There goes with such a program also an ever-increasing drastic governmental control over the farmers in the use of their farms.

Even when the death penalty was imposed in times past by some countries in an effort to keep the price of food at or below the ceiling price fixed by dictatorial edict, there was no noticeable compliance with the law. It is a matter of recorded history, also, that with every flash of the bright blade of the guillotine by which the heads of violators of price ceilings were severed, the price of the ever-diminishing food supply increased. No law has ever been drastic enough to overcome price inflation where food production has been curtailed and subsidies applied. I ask the crystal gazers and political manipulators how or where in all history a government subsidy has reduced the cost of living or has in any way prevented price inflation?

Can it be successfully denied that when the people are taxed to provide the funds for food subsidies they are indirectly paying higher prices for their food?

But the most vicious aspect of the New Deal subsidy plan is the political control over the producers and processors of foods. Under such a system of economic dependence, imposed by the will of government, the farmer and processor of his products find themselves driven to surrender their rights as sovereign, independent citizens, and, instead, forced to become the abject slaves of a totalitarian bureaucracy. It is a sad spectacle to see the farmers of this country, upon whom rests the burden of feeding our armed forces, our civilians, and who, moreover, are also expected to feed the world, made the victims of the stupidity and folly of men in the O. P. A. who have long since demonstrated their unfitness to fill any office of responsibility in time of war.

This global war in which our boys are fighting cannot be won without the aid of the farmers. Every farm is a war industry. The food supply in this war bears the same vital relationship to the effectiveness of our armed forces in the field as ammunition bears to the effectiveness of our artillery at the front; a shortage of either can lose the war. It is important for the people to see to it that no bureaucratic stubbornness or inefficiency sacrifices the lives of our fighting forces or endangers the winning of the cause to which our Nation is committed.

It is because of the failure of the Office of Price Administration to act that the farmer has been deprived of the gas to operate his farm machinery. The quota system has developed into a National scandal. Such gas as has been allotted to the farmers has, in many instances, been used up in driving to and from the regulatory bodies to get the gas. Gas coupons have been stolen by hundreds of thousands, so that no accurate record has been available to show to what extent there has been a fraudulent consumption of gasoline. Both gasoline and rubber have been needlessly sacrificed because farmers have been forced, in some instances, to drive more than a hundred miles in an effort to get spare parts for their tractor or truck and other essential farm machinery.

A shortage of gas and oil is claimed by the O. P. A. as an excuse, especially in New York State and in the East generally for their rationing system. Yet the O. P. A. has refused to grant the request of the Petroleum Administrator, Hon. Harold Ickes, for an increase in the price of crude oil to insure the production of more oil in district No. 1, which comprises western New York State, Pennsylvania, and West Virginia, an oil-producing field within easy access to the area in the East where the people are desperately in need of gas and fuel oil. Every day that O. P. A. refuses to grant this demand, vast quantities of gasoline and oil in New York and Pennsylvania are being lost, not temporarily but forever, because producing wells have to be abandoned by their owners.

At this point, under leave to extend, I insert an editorial which appeared in the Herald Tribune of New York, June 19, 1943, entitled "Food Facts":

FOOD FACTS

Governmental policies over a period of 10 years created artificial scarcities. The Agricultural Adjustment Agency crop-reduction program threw three and one-half million tillers of the soil off their jobs. There was no longer room for them. They produced too much. Yet our people have never had enough to eat.

In 1929, when our farmers produced the most food until 1942 (approximately 10 percent higher), we still needed 77,000,000,000 pounds of milk, especially for our children. We still needed 2,300,000,000 pounds of butter. We still needed 7,000,000,000 pounds of vegetables and 20,000,000,000 pounds of fresh fruit. We still needed 13,000,000,000 eggs and 2,000,000,000 pounds of beef. We needed all this for simple health. We needed all of it, and we did not have it. The figures given above are based on the Department of Agriculture's famous minimum adequate circular No. 296.

Yet our Government adopted a policy of scarcity. The first of the United Nations food conferences brought forth this ironic note: "It was the sense of the conference that it was untenable in the future to permit the plowing under of crops or the slaughter of little pigs." Reference to this in the declaration of principle was eliminated because it might reflect on the Roosevelt administration, which initiated the conference.

More than 2 years ago experts advocated a rapid expansion of food production. They advocated rationing of food after Pearl Harbor. Yet our Government haggled and boggled as it did on our arms program; and now we are faced with crop prospects less promising than in any time during the last 3 years. To add to the woe of mother, trying to figure out the points for the family, there is the mess and muddle of the Office of Price Administration.

May we suggest clear-cut action. First, the Nation must make more use of Mother Earth, known from the time of Abraham as the mother of wealth, the mother of life. There must be more acres put into production. Second, the country needs centralized authority, a food administrator with power. This centralized authority should control the decentralized operations of pricing and distribution. The farmers themselves know what they can produce on their land. They need little guidance if the needs of the Nation are explained to them. Let us have the leadership of the President on food. Let's stop mouthing words and move into action. Again, with due humility, we ask the President to move at once for the good of the country.

National Youth Administration

EXTENSION OF REMARKS

OF

HON. ZEBULON WEAVER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Saturday, June 19, 1943

Mr. WEAVER. Mr. Speaker, under leave to extend my remarks, I include three short editorials, one from the Asheville Times of May 28; one from the Charlotte News of Wednesday, June 16, 1943; and one from the Durham Sun of Tuesday, June 15, 1943.

These editorials call attention to the valuable work which has been done, and is being done, by the National Youth Administration. In view of my own great interest in the continuation of an adequate appropriation for this agency, I

wish to bring the attention of the House to these decided expressions indicating the views of the people of North Carolina.

The editorials follow:

[From the Asheville Times of May 28, 1943]

LET NATIONAL YOUTH ADMINISTRATION ALONE

Senator BYRD and his committee acting as watchdogs of the United States Treasury against nonessential expenditures have accomplished much good; but there are exceptions. The committee's present effort to abolish the National Youth Administration and transfer its war work to other Government agencies, is a splendid illustration of a supposed reform that would miss its goal.

The most easily available evidence with regard to National Youth Administration's work in the Nation is a statement from the records of what it has done and is doing in North Carolina, and, more particularly, at the Asheville National Youth Administration War Production Training Project located at Newbridge.

Since July 1, 1942, and through May 15, 1943, 2,174 boys and girls (of both races) between the ages of 16 and 25, were trained in the National Youth Administration training centers of this State. Of this number 1,112 received training at the Asheville center and placed as skilled workers in war industries, chiefly aircraft and shipbuilding. The 2,174 trainees came from 17 western North Carolina counties.

The Asheville projects operates with three 8-hour shifts a day in machine shop, aircraft woodworking, radio shop, sheet metal, welding shop, and others.

That National Youth Administration is doing essential war work Senator BYRD's committee does not deny. The committee simply proposes to demobilize a trained personnel, shift its activities to other agencies, or would try to persuade overworked war plant managers with no training schools of their own to take over the National Youth Administration classes.

Who knows that this plan would save money? It seems more probable that it would, in the midst of the war effort, disrupt a going concern with effective results to its credit since last July.

National Youth Administration has been the answer to the question, asked by hundreds of western North Carolina youth not called by the draft, "How can I best serve the Nation in the war against the Axis?"

[From the Charlotte News of June 16, 1943]

AN ERROR—HOUSE COMMITTEE SPURNS NATIONAL YOUTH ADMINISTRATION BECAUSE IT KNOWS NO BETTER

When the House Appropriations Committee, by a one-vote margin, turned thumbs down on the National Youth Administration and threw it to an uncertain fate on the floor, the national war effort suffered a definite setback. The result of ignorance of National Youth Administration's present program and blind partisan politics may well be that a most valuable New Deal agency will go out of existence at the end of the month.

If that comes to pass, the committee will have been guilty of a national disservice (by a vote of 17 to 16) merely because it disdained to investigate. The committee doubtless has the same outdated idea of National Youth Administration as that held by the general public; it was, in fact, clearly stated by Representative GRANT, a Republican from Indiana, who declared: "National Youth Administration is an agency that has outlived its usefulness and become another tool in the hands of New Deal social experimenters."

We believe no man can be certain of the actual value of a sprawling agency like National Youth Administration to the Nation, but we are morally certain that the House committee had it all wrong, that it dealt with the problem carelessly. Investigation would have shown, for example, that some 450,000 highly trained boys and girls (welders, woodworkers, metal workers, smiths, machine operators) have gone or will go to war industry this year.

National Youth Administration has not been a relief agency since war came, not at all. It has been, of its own volition, a war agency, and has operated as such. If Representative GRANT can picture the pouring of some 800 trained young workers into war industry every day as social experiment, he's too much for us. Even if the cost of training and placing workers from National Youth Administration is high (estimated at $200 per trainee) it must be recognized that to halt the program now and turn it over to busy industry itself would cost far more.

[From the Durham Sun of June 15, 1943]

NOT SO SMART

Among the measures taken by the House Appropriations Committee in framing its version of the Labor-Federal Security-War Manpower Commission money bill, was the elimination of the National Youth Administration. The committee has ordered its liquidation not later than January 1, 1944.

The committee may endeavor to justify the action on the ground of economy. The truth seems to be that there is a great deal of clamor against Federal aid for youth from those who fear socialistic tendencies will be created. The proponents of the move and the established critics of the Roosevelt administration, who seized on the National Youth Administration just as they seize on anything else that lends itself to their purpose as politicians hostile to the Democratic leadership or tories hostile to anything which seems to smack of paternalism are quite smug about it and are smirkingly pointing to themselves and saying, "Look what we did to F. D. R."

They may not be so smart, after all. We doubt they have done Franklin Delano Roosevelt any harm. The public will not be in the least doubt who killed cock robin. That, however, is the trivial aspect. The significant question which Congress must ask itself before it accepts or rejects the committee's proposal is, What effect will this provision scuttling the National Youth Administration have on the development of our American young people?

It may be worth something to recall that the might of Nazi Germany, misused though it is, has its roots in the development of German youth. Russia's amazing strength today is the direct outgrowth of the elaborately comprehensive program of physical and mental education for all Russian youth.

The National Youth Administration has given thousands of young men and women technical training for war production jobs. That is an important work, not only for the war emergency but for the future, since it fits a portion of our youth for recognized trades and gives them stable places in life.

Among other things, the National Youth Administration has assisted many intelligent and promising young people who were willing to work for their schooling, an opportunity for higher education. That is important, too, since it is a step in the direction of educating youth in accordance with diligence and aptitude rather than simply sending to college those who happen to have the money to go, regardless of whether they possess the brains.

There are other activities of the National Youth Administration which are not performed by any agency yet which probably should be provided by some organization. If there is any field of activity in which Federal intervention might be accepted and approved, it would seem to be the field of youth guidance and training. That is something Congress may want to consider more receptively than the House committee seems to have done.

New York Times Analyzes the Part of the House in Post-War Declarations

---

EXTENSION OF REMARKS

OF

HON. J. W. FULBRIGHT

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Saturday, June 19, 1943

Mr. FULBRIGHT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times of June 18, 1943:

IN THE NATION—THE HOUSE'S PART IN POST-WAR DECLARATIONS

(By Arthur Krock)

WASHINGTON, June 17.—Senators were quick to point out, after the post-war resolution by Representative FULBRIGHT, of Arkansas, was adopted by the House Committee on Foreign Affairs, that the Senate alone has the power to approve or disapprove treaties. This is the constitutional fact. But the senatorial comment revealed no consideration of these other elements which will make much more binding and important a declaration of the post-war policy of the United States in which the House is associated:

1. To carry out numerous aspects of the pledge proposed by the House committee—the creation of appropriate international machinery with power adequate to establish and maintain a just and lasting peace among the nations of the world in the making and operating of which machinery the United States will play its full part—agreements as well as treaties will be required.

2. The nature of these agreements will be such as to require action by the House as well as by the Senate, since they will involve the appropriation of funds, the disposition of air forces, and so forth, in all of which the House has authority equal to that of the Senate.

3. The House is the popular legislative body in this country, and every Member of it is obliged to face the voters every two years. Only one-third of the Senate is elected at the same poll, and those chosen have terms of 6 years instead of 2.

A STRONGER ASSURANCE

4. To convince our allies in this war that the United States will do what is outlined in the Fulbright proposal, a concurrent resolution by both branches of Congress is desirable. It does not require the President's signature, being purely a congressional act.

5. A full congressional expression to this end carries more assurance than one by the Senate alone for the further reasons that (a) House resentment over being disregarded would quickly be reflected in the Senate, since House Members are on more constant terms of familiarity with the voting public, and (b) the House has numerous powers with which to block the carrying out of treaties accepted by the Senate.

These are among the reasons which induced advocates of such a simple declaration as that offered by Mr. FULBRIGHT to urge it be made concurrent and that, unlike the leap-before-you-look proposal of Senators Ball, Burton, Hatch, and Hill, it be simple and undetailed. There will be time enough later to fill in details. Events and conditions

in each country will fix their terms and their limits.

It is also obvious that a simple declaration will not arouse the volume and character of opposition in Congress which the Ball-Burton-Hatch-Hill resolution would be sure to produce if it should reach the floor stage. All the Hollywood tactics which the four Senators and their families were foolishly persuaded to adopt to publicize their product have not and cannot change this fact.

The type of opposition that would be provoked by an effort to pass a resolution offering to the world a blank mortgage on an unknown future, and signed by this Nation, would surely embitter the debate and probably range more than a third of the Senate against the expression. To have the desired and necessary effect abroad any pledge of post-war cooperation must carry by two-thirds or more because it requires a two-thirds Senate vote to ratify treaties, and the mustering of less than that majority in the House would encourage Senate fence sitters to vote "no."

MR. CHURCHILL'S VIEW

The Fulbright resolution takes these considerations into full account. The folly of the Ball-Burton-Hatch-Hill declaration is that it ignores them all. Furthermore, there are more than a dozen declarations before the Senate Committee on Foreign Relations, addressed to the common end, and the attempt to ballyhoo one of them as unique has been a threat to achieving that common end. The only really unique aspect of the resolution by the four Senators is that it is a political amateur in a professional performance.

The Senate committee has been very slow in coming to a conclusion on the resolutions before it, but there are good reasons for this. The administration, Chairman CONNALLY, Senator GEORGE, and others concerned earnestly desire a sound post-war system of collective security to which the American people can be induced to adhere. They do not want to stir up a destructive controversy and muster less than a two-thirds vote because the effect of that abroad would be worse than to have no resolution at all.

This is the consensus of informed and responsible opinion. When Prime Minister Churchill was here he said as much, in response to questions by Senators, and urged that nothing be attempted that could in any way be used to break the anti-Axis front. The effort would quickly be made by Berlin, Rome, and Tokyo if less than two-thirds of Congress should affirm a pledge of post-war cooperation by the United States. The Fulbright resolution, or something like it, has the best chance of avoiding that perilous result.

Elmer Davis Spanked

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, June 18, 1943

Mr. SHAFER. Mr. Speaker, under permission to extend my remarks, I include a well-deserved reportorial spanking administered to Elmer Davis of O. W. I. by Malcolm W. Bingay of the Detroit Free Press in his column Good Morning of June 17. It is worth reading:

GOOD MORNING

(By Malcolm W. Bingay)

MORE ABOUT ELMER

The more I think of that attack by Elmer Davis on the Washington newspaper correspondents as incompetent the more irked I get. And, when it comes to Elmer Davis, I irk easy.

Davis, at the Newspaper Guild Convention, charged that the Washington reporters were inadequate to cover such news as the war, that they were more interested in reporting rows between various administrators than they were in telling of battles between American and Japanese Navies.

The only answer to this puerile vaporing is that under the voluntary censorship of the American press—never once violated—military news cannot be printed unless O. K.'d by the censor. We print the news when it is officially handed us, even if it is from 6 months to a year old.

In all the annals of a free press there never has been displayed such a sense of responsibility and fidelity to a pledge as has been offered by the American newspapers.

Elmer ignores all that.

Charlie Michelson has moved back into the picture to prepare for the Presidential campaign of 1944. Machiavellian Charlie has won for himself the dubious reputation of being the most cunning smear artist in the history of American politics. His job is to rob men of their reputations if they dare oppose Roosevelt—no matter how honorably. It begins to look as though he had taken over Elmer's funnily named "Office of War Information" as an adjunct to his activities.

The Office of War Information seems more interested in winning an election than it is in winning a war.

I see where Senator STYLES BRIDGES has answered Elmer's onslaught on the American press on the floor of the Senate and suggested a congressional investigation of the whole weird set-up of that organization.

"Perhaps," he said, "Davis' real objection is that the reporters have uncovered news in Washington that does not look well outside of Washington."

Last February I went down to Washington to attend the convention of the American Society of Newspaper Editors. We were told by Elmer Davis that we would be given the real inside low-down on the war and all other matters pertaining to its progress, in a series of off-the-record meetings. The only lasting impressions we got were those left by the cane-seated chairs.

We were told nothing. And every day in every way our intelligence was insulted by a parade of brass hats in carefully deleted speeches, going through the motions of pretending to tell us. All direct questions were evaded. But we got something out of the convention. We learned what the reporters on the Washington firing line are up against in trying to get the truth.

The gist of the whole matter is that American newspapers through their correspondents have refused to surrender their independence to the politicians.

This, Elmer Davis naturally resents.

The Administration does not want the public to know how it has fallen down on the job.

It wants all the silly disputes between the quarreling factions of the Government suppressed.

It does not want the people to know that it is because of these fights for power, because of utter lack of any organization sense, because of playing politics, we are not further along with the war effort.

It was these hard-headed reporters who kept harping on the derelictions and mismanagement for war production under Office of Production Management, the Manpower Commission, the Office of Price Administration—and all the other dizzy outfits—that brought about such reforms as have been accomplished.

By their barrage of exposure they made it possible for such efficient groups as the Tolan committee to move and make official factual reports on what was going on.

These reporters first called attention to the way contracts were being piled up in regions where there were critical shortages of both housing and manpower; they let the world know that the handling of agricultural and industrial manpower was being bungled; they exposed the fact that small business was being crushed to the wall.

They have shouted from the housetops that there has been no over-all planning for the mobilization of our resources to fight a war. And they are still yelling. Only 3 weeks ago—after 18 months of fighting—did the administration get around to the creation of a mobilization board.

Those reporters called attention to the fact that Barney Baruch has been telling the new dealers for 2 years what to do. Every move they have made since has been along the lines he laid down and the only element of order in Washington has come about as a result of that.

And now Elmer Davis has the gall to suggest that they are not competent!

Listen, kid, they'll be there on the job when you are back on the radio, rolling your r's and telling the world what you've just read from their dispatches.

Anniversary in Russia

EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 21, 1943

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of Sunday, June 20, 1943, entitled "Anniversary in Russia":

Although the actual anniversary date is still 2 days off, it was on the corresponding Sunday morning in June 2 years ago that Adolf Hitler and his armed hordes broke forth like thieves in the night to launch their assault on Russia. At the time they thought that this assault would bring a quick end of the war and make the German "master race" the master of the earth. Two years are a short period in history, yet what a change 2 short years have wrought. Today, Hitler's hopes for victory lie buried under the Russian steppes, and the voice of retribution is thundering into the Nazis' ears as Allied bombs crash in their midst and Allied armies prepare to storm the ramparts of their fortress. That this is so is due to many factors. Among them are British steadfastness, the American production miracle, and the unexampled heroism of the Russian armies and the Russian people, which surpassed all Nazi calculations and all expectations of the world.

It has often been said that in attacking Russia Hitler made his great mistake. He did make a mistake in calculating Russian strength, but the attack on Russia was a mistake only in the sense that his whole scheme of world conquest was a mistake. For in that scheme, Russia, France, the British Empire, the United States, and Hitler's own allies, Italy and Japan, were all his prospective

victims, to be conquered by guile if possible, by force if necessary. A greatly different story would have been written if the grand alliance of the United Nations had confronted Hitler before the war. The division of these nations, carefully nurtured by Nazi propaganda, presented Hitler with his opportunity. It permitted him in the beginning to crush the continental nations one by one, and at such a small cost that it merely whetted Nazi appetities. And Russia was to be the main prize. For Russia was the "heartland" of Nazi geopoliticians, and the control of its natural riches and vast land masses by a conquering land power was to wipe sea power off the face of the earth and initiate the Germanic age under the domination of the Third Reich. Once Hitler began his war he became prisoner of the dynamics of the system he had built up. He might wish to end the war with any one power as quickly as possible, but he could never end his war until his ultimate objective of world conquest was attained.

The miscalculation Hitler made, therefore, was not the attack on Russia itself, which was part of his original plan, but his belief that he could beat Russia quickly before Britain and America could either aid Russia or rise as a menace in the west. Yet in the beginning his scheme seemed to be working out as planned. German military experts expected to crush Russia in 2 months. That proved too optimistic, yet by October the Germans were before Moscow, and on October 3, 1941, Hitler announced that Russia "is already broken and will never rise again." Then came the miraculous turn. Not only did the Russians save Moscow; they launched a winter counteroffensive of their own and unhinged the whole German plan of conquering Russia by conquering the Bolshevist capital. Yet Hitler's confidence was still such that he did not shrink from following Japan, in declaring war against the United States, for he still counted on knocking out Russia before American aid could become effective—by a smaller but even more intensive drive against the Russian oil fields, whose capture would stall the Russian armies and the whole Russian economy. That drive led him to Stalingrad, and on September 30 last year he announced that the Germans were there to stay and "that no human being shall ever push us away from that spot." But it was at Stalingrad that German hopes died, and only by a supreme effort did the German armies escape a complete catastrophe. Hitler's bid for victory had failed, and now Great Britain and America are on the battlefield with armies and air forces that are making Hitler dizzier than ever as to where the "military idiots"—as he called them—will strike.

Many reasons have been ascribed for the German defeats in Russia. The Russians themselves have credited their victories to Hitler's own "military idiocy," and so have the German generals. American and British aid in the hour of direst need helped much. But the main credit will ever go to the heroic Russian armies and the Russian people. They rose as a united nation in arms and thereby earned the gratitude and the respect of the civilized world.

Bank of America

REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 21, 1943

Mr. VOORHIS of California. Mr. Speaker, already by far the major portion of the banking business in the State of California and some adjoining States is controlled by the Bank of America. One by one the independent banks of our State have been bought out and absorbed by it. We now find that the Bank of America has very frankly and avowedly embarked upon a program of acquiring 124,000 shares of the stock of the Citizens National Bank out of a total outstanding issue of 250,000 shares of that banking institution.

And the Citizens Bank is one of the very few substantial competitors which the Bank of America still has in the southern part of California.

Not only does the Bank of America control a major portion of the banking business of our State but it has also, in conjunction with the holding company, Trans-America, branched out in recent years and acquired vast industrial properties, and constitutes one of the greatest financial empires in the whole Nation.

The method now being employed to attempt to get control of the Citizens Bank is, briefly, to offer $33 per share for its stock, which is quoted on the market at only $23 per share. Stockholders naturally hesitate to refuse an opportunity of this kind, but one cannot help wondering what arguments are used in attempting to induce the stockholders of the Citizens Bank to sell their stock. Resources of the Bank of America are so great that if $33 a share does not do the trick it can start offering $43, or even more.

There are laws on the statute books which require one bank to get the permission of governmental agencies before it can establish a branch bank. Certainly this is as it should be. But where a bank holding company is carrying on the operation of eliminating competition, there is nothing, I am informed, that any governmental agency can do until after actual control has been acquired and has become an accomplished fact.

It would appear to me that this is a matter not only to cause deep concern among all those who still believe in the healthy influences of competition and who fear monopoly but also to call for consideration by the Congress of some legislative action which would make it possible to do something to prevent an unhealthy expansion of bank holding companies to at least the same extent that action can now be taken with regard to branch banking. We ought to be able to lock the stable before, not after, the horse has been stolen.

Office of War Information

REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 21, 1943

Mr. GAVIN. Mr. Speaker, according to the Sunday Times-Herald of June 20, Director of War Information Elmer Davis, refers to Dr. Joseph Goebbels, Propaganda Minister, as follows:

> That is one of the major differences between myself and my distinguished colleague.

I conclude he means Goebbels.

So, when Director Elmer refers to Goebbels as colleague, I want to arise on this occasion as Representative of the State of Pennsylvania with its 11,000,000 of people and over a million men in the armed forces of the United States, to offer my sincere congratulations and applaud the remarks given last Friday, the 18th, by my distinguished colleague, JOE STARNES, of Alabama, on the Office of War Information and to say that I know if these million boys from Pennsylvania who are in the service now were with me they, too, would applaud JOE STARNES' efforts.

I certainly think that Director Elmer Davis left himself out on a limb when he referred to Goebbels as his distinguished colleague, because the only thing that Goebbels is distinguished for is his madman characteristics, his slaughtering of innocent people, his criminal and scurrilous treatment of God's unfortunate people. So if Elmer Davis wants him for a colleague, he can take him, and we should throw in a few crackpot bureaucrats such as this Doxey A. Wilkerson, former associate professor at Howard University who, according to the Washington Post, resigned his position as educational specialist with the O. P. A. yesterday to become the Communist Party organizer here in Washington.

He remained in the O. P. A. a few weeks past his thirty-eighth birthday. He had waited until he passed the present maximum age limit for military service to resign and seek employment with the Communist Party. So much for that.

Now along comes Director Davis and he threatens to resign unless Congress restores the funds to the Domestic Branch of the Office of War Information. If he wants to resign, he can resign, and I know that the press will be only too pleased to record it under the heading of "Public improvements."

At this point permit me to compliment the men and women of the press here in Washington and everywhere else throughout the Nation. We should be thankful to God for the courageous and fearless group and the work they are doing. It deserves the heartiest commendations of the Congress and the people of the country for their honest, impartial treatment of the news.

In this press ball game I would rather have the representatives of the press here in Washington calling the strikes on me rather than the Office of War Information. These men and women represent one of the bulwarks of democracy, doing a great job in an honest, fearless manner, keeping the public informed. With this competent group on the alert there is no further need for the Domestic Branch of the Office of War Information.

Our Alabama friend and colleague, JOE STARNES, deserves our wholehearted thanks for so ably bringing it to the attention of the Congress.

Broadcast by Edward R. Murrow

EXTENSION OF REMARKS

OF

HON. WALTER K. GRANGER

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Monday, June 21, 1943

Mr. GRANGER. Mr. Speaker, we are all familiar with the radio voice of Edward R. Murrow, who has been one of our outstanding radio reporters from Great Britain. On yesterday at 6 o'clock over the Columbia network from Philadelphia Mr. Murrow delivered the broadcast that I desire to insert in the RECORD. It is such a forthright statement and so timely that I think it deserves being made a part of the RECORD.

A few weeks ago I heard two Englishmen talking about anti-British sentiment in this country. One of them remarked: "We really shouldn't be disturbed when the Americans say harsh things about the British. After all, they say some quite frightful things about each other." For the last week I've been listening to voices and looking at faces in Washington and here in Philadelphia. We certainly haven't lost our habit of plain talk. And we're a friendlier people than we were—riding in crowded busses, sharing taxicabs, doing without several things we thought were essentials, but which we discovered were, in fact, luxuries. It doesn't seem to me that we're complaining very much about rationing, but some of the talk you hear in Washington is a little confusing. The first couple of times I heard someone say "We'll win this in 1944" I thought they were talking about the war. Anyone who does a little listening in Washington these days is liable to get the impression that we're fighting two wars. No one who has seen what's happened to Europe, even before the shooting war began, could deplore the continuation of political discussion, but, whatever our domestic political differences may be, there can be no doubt that the enemy of this people is to be found on foreign soil—not in Washington.

That city is a bewildering place, all right. There is some border warfare in the uncharted "no man's land" between administrative agencies. There are people who will tell you that the whole thing is a mess—no clear-cut definition of function or authority—three agencies trying to do the same job. A lot of personal jealousies in high places. Some of those things may be true, but they can't all be true. It just isn't possible. For, if Congress is stupid and our administrators incompetent, then how is it that we've trained and equipped huge armies, whipped the Axis at their favorite game of economic warfare, and geared our whole economy to war production? I've seen some of the things we've done abroad—the flood of weapons and supplies pouring into north Africa, the great military establishments in Britain and Iceland and Newfoundland. It is the outpouring of a great, strong Nation and at the end of the day it will produce victory, but that victory may be delayed, its fruits soured, if our domestic political war takes precedence over the war against our enemies.

That city of Washington is filled with hard-working people. To this reporter it's the hardest working capital in the world. They tell me there are a lot of bureaucrats down there. That's probably true but bureaus are needed to run a war and men and women are required to man the bureaus and that's how they become bureaucrats. Whatever name we choose to call them, they're a lot of hard-working Americans down there trying to help win this war.

The House of Representatives has decided to abolish the domestic activities of the Office of War Information. If the Senate concurs, that organization will fold up. Maybe it should—but there ought to be a reason, and claiming that Elmer Davis is another Goebbels isn't a reason—it's ludicrous. As I understand it, the Office of War Information was established to help win this war. Its success or failure at that job ought to determine its future. No one can be sure what part propaganda and psychological warfare has played so far, but there can be little doubt that the time is coming—and soon—when the Germans will be vulnerable to a sustained campaign designed to weaken their will to fight. If that job is done well, it might shorten the war by months and shortening the war by months means the saving of a great many American lives.

Next winter in Europe will be a terrible winter. As it closes in the German people will be weary and wondering. If we have anything to say to them that will be the time to say it. Optimism and courage are pretty hard to hold on to when you're cold.

I'm not competent to speak of the domestic activities of the Office of War Information, but I can tell you that if that organization is wrecked our campaign of political warfare against the enemy will suffer, and I can report that in the opinion of every competent observer, military and civilian, that I have seen in the course of considerable traveling we are not so near to winning this war as to be justified in discarding anything that might help win it.

There are those in Washington who see in this effort to fragmentate the Office of War Information the opening gun in the 1944 campaign, the Presidential campaign. It's difficult, almost impossible, for one recently returned from the fighting fronts to accept that explanation. Healthy political controversy is one of the safeguards of democracy, but it just can't be that any of us are confused about the relative importance of the 1944 campaign and the bloody, bitter campaigns of the winter of 1943.

In Britain, ministers of information came and went with surprising speed. They once talked of forming a club for ex-ministers of information, but the principle of political warfare was never seriously questioned, because it was agreed that it might help win the war. If the Office of War Information can't do anything to help win the war, then we would all agree that it should be abolished, but if it can, then those who destroy it for reasons of politics or personalities are assuming a considerable responsibility.

Yesterday Mr. Robert P. Patterson, the Under Secretary of War, said that Army production was considerably below schedule for the month of May and the first 10 days of June weren't much better. Mr. Patterson was worried about complacency and overconfidence—the belief that the war is as good as won. It's part of the Office of War Information's job to combat such complacency. Maybe what they need is more money, more time to get on with the job—free from threats of liquidation.

There's been a fair amount of optimism noticeable during the past week. The closing of the Syrian frontier has served to remind us of the existence of the well equipped Ninth and Tenth British Armies, but their use depends upon Turkey's actions and, while the opening of the western Mediterranean has encouraged the Turks, there is no reason to think that they are any nearer to active participation in the war. The problem that confronts them is one of timing. Their interests demand that they insure their peace, their place in the post-war settlement. Their interests also demand that they enter the war at a time when they can achieve their objective at the smallest cost. And one of their main objectives must be to make it unnecessary for the Russians to come too far into the Balkans.

There have been reports, reeking with optimism, coming out of Stockholm—one of the most unreliable news centers of the world. There have been more stories of Italian peace feelers, but they originated in Algiers, and the climate there seems to be peculiarly suited to the growth of rumors.

The time may come when the Allies can settle with Italy, if they are prepared to accept a fascism that would be favorable to us instead of favorable to Germany, but that time has not yet arrived. When it does we shall see the second great test of Allied policy. The prospects * * * so far as one can judge them from talking with responsible people in London and in Washington * * * seem to be encouraging. I have heard many assurances that we will have no dealings with Badoglio, the House of Savoy, or Grandi, or anyone else who is a good Fascist so long as he thought it would pay.

Today the Berlin correspondent of the Swiss newspaper Baseler Nachrichten was permitted to send an interesting dispatch out of Berlin. He says the Germans have altered their basic strategy and will not now attempt a major campaign in Russia * * * that they have decided to conserve their strength to repel an Allied invasion from the west. It's just possible that that is what's happened. Certainly most military observers in London expected the German attack to get under way something like 3 weeks ago, but, then, London military men have not always been correct in their assessment of the position in Russia. I remember when Germany first attacked Russia the estimate was generally given as 6 weeks.

We are engaged in a campaign of nerve warfare against the Axis, and in a campaign of that kind, attempting to mislead them, we're in some danger of misleading ourselves and the conquered people of the continent. If the Germans have in fact decided to follow a purely defensive strategy it is certain that they hope to hold us off until the Allies fall to quarreling amongst themselves. Exaggerated hopes * * * optimism about an early and cheap victory * * * might form good ground for quarrels and disappointments later on. I don't know any more than you do about how long this war will last, but I have had the opportunity of talking with a lot of men who will be in charge of the fighting and every last one of them talked in pretty solemn terms about the price we shall have to pay and the time it will take to do the job. I have yet to meet one who expects the conquest of Europe to be either easy or quick.

One of the problems that confronts the British and ourselves is the simple one of communications. Consider the present labor crisis here. The other day I noticed a story by an able journalist, Raymond Clapper, he was writing from London, and he reported that it was quite impossible to explain the coal dispute to British people. That's certainly true. But that isn't because the British journalists here have done a bad job in reporting it. Their dispatches have been good reporting.

There are plenty of people in Britain disposed to sympathize with the claims of the miners. The record in Britain has been one of prolonged bitterness between miners and management. But the principle of collective bargaining and industrial arbitration has long been accepted. There is wartime labor legislation in Britain, and I suppose it would be called restrictive. It simply

gives the Government the right to tell all workers in essential industries where they shall work, and for how much and for how many hours. They can't quit—they can't be fired unless the representative of the Minister of Labor agrees.

Labor is under the control of Ernest Bevin, an old-time trade-union leader who enjoys the respect of the workers, and labor is conscripted, and that includes women. Single women may be called up and sent from the south to the north. They may be taken out of textile factories and directed to go and work in ammunition factories. These regulations are sweeping and they tie the worker to his job. Persistent absenteeism is punished by fines or imprisonment, and some of the fines and some of the terms of imprisonment are heavy, indeed.

But it was realized at the beginning that legislation to control only labor simply would not work. So along with the labor legislation went what was called the excess profits tax, which just meant that business profits above the pre-war level would be taxed 100 percent. Then, if prices of food and essential goods were not the force of demand for higher wages, something had to be done about that. So there was established a system of government subsidies designed to keep prices down. The system doesn't work perfectly. Much of it probably wouldn't work at all here, for our problems are different and in many ways more complex, but it is based on one principle and that is that sacrifices, whether of money or personal liberty, must be made as equal and as universal as possible. And it was based on something else, too—the realization that unless labor and business gave up some of their freedom of action they stood in mortal danger of losing it all. In those days the danger was apparent. It came down out of the night sky. You could go down to Dover and look across the Channel and see it. Our danger may not be so apparent, but that doesn't make it less real.

Seven Million, Eight Hundred and Twenty-Nine Thousand, Seven Hundred and Thirty-Seven Workers Will Receive Training in 1943 Through Some Government Agency, Not Including N. Y. A.

EXTENSION OF REMARKS

OF

HON. ALBERT J. ENGEL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Saturday, June 19, 1943

Mr. ENGEL. Mr. Speaker, when the Labor-Federal Security Agency subcommittee reported the appropriation bill providing appropriations for the Labor Department, Federal Security Agency, War Manpower Commission and other departments to the full committee, it contained an appropriation in the sum of $44,000,000 for the continuation of the National Youth Administration. $40,000,000 of this sum, including a reappropriation of $5,000,000 from the unexpended balance, was for youth work and the remainder of $4,000,000, including a reappropriation of $1,000,000, was for student aid.

As stated by my colleague the gentleman from Georgia [Mr. TARVER], the bill was reported by the subcommittee to the full committee by a vote of 5 to 2, my motion to strike from the bill having been defeated in the subcommittee. When the bill came before the full committee I made a motion to strike the item from the bill, reappropriating $3,000,000 of the unexpended balance to liquidate the National Youth Administration and providing that the liquidation must be completed by January 1, 1944. As stated by the gentleman from Georgia on the floor of this House, this motion carried in the full committee by a vote of 17 to 16.

I desire at this time to give some of the reasons which impelled me to make this motion. In doing so, I shall refer briefly to the testimony on this subject, which is rather lengthy, covering 110 pages of the hearings. See pages 297 to 408 of part 3 of the hearings.

While there is undoubtedly a great deal of duplication of effort between the National Youth Administration and the Office of Education, which has been pointed out by numerous educators, departments of public instruction, and people in charge of public-school vocational training, I did not base my opposition upon the question of duplication of effort and shall not discuss that question. The following are pertinent facts:

First. The number of workers that have to be trained during the fiscal year ending June 30, 1943, to meet the needs of war industry.

Second. The number of such workers who will be trained by and through Government agencies.

Third. The number of workers who will be trained under this bill by Government agencies, excluding the N. Y. A.

Fourth. The number of trainees the N. Y. A. would have trained had the appropriation remained in the bill.

Fifth. The actual cost of training under the N. Y. A. last year.

I expect to make further observations pertaining to the subject matter.

NEED FOR TRAINEES

Governor McNutt testified briefly to the following facts:

First. We will have 63,200,000 men and women in industry by July 1, 1943.

Second. We will require 64,400,000 men and women in industry by July 1, 1944.

Third. The difference of 1,200,000 workers will have to be added to the working force to meet this requirement.

Fourth. The armed forces on July 1, 1943, will stand at 9,200,000.

Fifth. To reach the officially announced net strength of 10,900,000 by December 31, 1943, a total of 1,700,000 men must be inducted into the Army.

Sixth. No figures regarding the requirements of the Army beyond December 31, 1943, have been issued, but Governor McNutt estimates that it will require 700,000 more persons to represent necessary replacements for attrition and such increase in the net strength as may be approved to July 1, 1944.

Seventh. According to the above, 2,400,000 persons will be taken from the labor forces of the country for military and naval purposes.

Eighth. Our labor requirements according to Governor McNutt for the fiscal year ending June 30, 1944, will be 1,200,000 persons required to increase the force from 63,200,000 to 64,400,000 workers plus 2,400,000 to replace the number which will be taken from the workers' column and inducted into the armed forces during the fiscal year, or a total requirement for the fiscal year ending June 30, 1944, of 3,600,000 workers.

This number of 3,600,000 workers includes skilled, semiskilled, and unskilled workers on the farm, cities, and elsewhere. They can be classified as follows:

First. Straight labor such as sweepers, janitors, and day workers. This class, I believe, will constitute the larger part of the above and will require no training.

Second. Skilled workers such as tool makers, tool designers, electricians, carpenters, expert machinists, skilled farmers, and so forth. It is conceded, by both the N. Y. A. and the Office of Education, that it is impossible to train such skilled workers in a 7 weeks' course by the N. Y. A.

Third. The third group and also a part of the 3,600,000 workers are semiskilled workers such as riveters, welders, one-operation machine workers, and so forth. This class can be trained in a period covering from 2 to 6 or 7 weeks.

Fourth. Workers to be trained for agriculture. While a farmer has to be a well-informed worker, it is impossible to train that kind of a worker in 7 weeks.

While it is true, common farm labor requires some sort of training, this training can best be given on the farm by the farmer. The farm worker has to have a real cow to learn how to milk. No one has, as yet, suggested that the N. Y. A. or the Office of Education should go into the cow or dairy business. Neither has any New Deal farm labor educational professor as yet suggested a synthetic cow with a tin udder and rubber teats upon which a synthetic farm laborer can practice synthetic milking. To those of us who have lived and worked on a farm, any attempt to teach people how to milk cows, plow, husk corn, build fences or do any other similar unskilled or semiskilled farm labor anywhere else except on the farm is a joke. Give the farmer a good class of labor at a price which he can pay and he will look after the training.

Fifth. It is my considerate judgment that the major part of the 3,600,000 workers which Governor McNutt says must be added to the working force to bring it up to the required strength, will be either farm labor, common labor, or of a skilled character of a class that cannot be trained by any N. Y. A. training.

This leaves only a part of the 3,600,000 workers to be trained.

Sixth. In addition to the above, we will, of course, continue training workers within plants as we always have done and are doing now either by plant management itself, through the Office of Education or jointly.

HOW MANY WORKERS ARE WE TRAINING NOW?

Before we continue any training agencies we should take inventory of our training facilities and determine just how many we are training now and how many people we expect to train during the fiscal year ending June 30, 1944. The

following shows the number of trainees who will be trained for industry in 1944 and the cost. Labor is doing a magnificent job of production, and it is my conviction that our present method of training workers is entirely adequate and will fill every industrial need without the N. Y. A.

OFFICE OF EDUCATION

I. Defense training program:	
Number of trainees furnished:	
(a) Through preemployment training	800,000
(b) Supplemental training	2,000,000
Cost	$90,000,000
II. Rural training program:	
Number of trainees	600,000
Cost	$12,500,000
III. (a) Engineering, science, management training in technical and professional fields: Number of trainees	800,000
(b) Cost	$25,000,000
(c) Visual aid training	$2,000,000
(d) Salaries and expenses—national defense	$1,100,000
IV. Vocational rehabilitation:	
(a) Cooperative program	$3,200,000
(b) Vocational rehabilitation of persons in Hawaii	$5,000
(c) Vocational rehabilitation, District of Columbia	$25,000
(d) Administrative expenses	$95,000
V. Vocational education: Number of trainees	[1] 2,629,737
(a) Vocational education, further development	$14,200,000
(b) Hawaii	$30,000
(c) Puerto Rico	$105,000
(d) Salaries and expenses	$362,680
Total vocational education and rehabilitation appropriation in this bill for the fiscal year ending June 30, 1944	$148,622,680
VI. In addition to the above this bill provides for training within industry:	
Number of trainees (estimated)	1,000,000
Amount appropriated	[2] $2,091,000

[1] This number was enrolled in June 1942, p. 157 of hearings.

[2] This is an increase of $946,000 over this year's appropriation.

Five hundred thousand supervisors will have been trained during this fiscal year at a cost of $1,145,000. The increased amount allowed over 1943 should train 1,000,000 persons.

In addition to all of the above, this bill contains for apprentice-training service $465,500, and for apprentice training—national defense—$550,000. This makes a total appropriation for training in this bill, excluding the N. Y. A., of $151,739,380.

SEVEN MILLION EIGHT HUNDRED AND TWENTY-NINE THOUSAND SEVEN HUNDRED AND THIRTY-SEVEN WORKERS TO BE TRAINED NEXT YEAR BY GOVERNMENT AGENCIES, NOT INCLUDING THE N. Y. A.

Thus we find that Government agencies of various types will train during the fiscal year ending June 30, 1944, not less than 7,829,737 people. This number does not include the vocational-rehabilitation program set forth hereinbefore in paragraph IV. It does not include the regular apprentice training program for which we are spending over a million dollars this year. It does not include the workers who are being trained in Army arsenals by the Army, in navy yards by the Navy, nor by the Maritime Commission. Neither does it include the tremendous number of workers who are being trained by private industry without any Government agencies whatsoever. Hundreds of thousands of workers are being trained by industry without the help of anyone. I personally found 7,000 workers being trained at Willow Run alone, and General Motors trained more than 15,000 in the Detroit area.

Army officials testified before the War Department subcommittee of the Appropriations Committee that they were training 105,000 workers in Army arsenals this year and expect to train 80,000 more workers this year. The Navy informs me that they have trained so far this year 50,000 workers in the navy yard. While some of these workers were trained with the assistance of the Office of Education, I was informed that none of them were trained through the N. Y. A. Thus we find that 7,829,737 workers, or more than 12 percent of the 64,400,000 workers Mr. McNutt says will be required at the end of the fiscal year 1944, will have received some sort of work training by some sort of Government agency by the end of the coming fiscal year.

WHAT THE NATIONAL YOUTH ADMINISTRATION PROPOSES TO DO

Let us see what Mr. Aubrey Williams with his National Youth Administration proposes to do. Mr. Williams testified that if he were given this $55,304,000 appropriation he could train on an average of 1,000 workers a day. If we credit him with 1,000 a day for every day in the year including Sundays and holidays, Mr. Williams would have trained at the end of the year 365,000 workers. Mr. Williams further testified that he made a check and that 350 trainees out of every 1,000 trained got into industry. This would be 35 percent. He thought 150 more out of every thousand would find their way into industry.

If we take the percentage that Mr. Williams says he can actually trace into industry, industry would then benefit to the extent of 127,750 trained through the N. Y. A. If we add the 150 out of every thousand synthetically trained workers that Mr. Williams thinks get into industry and credit him with 50 percent, then approximately 182,500 trainees will get into industry. Mr. Williams said he could do all this if we gave him the full appropriation of $55,304,000. The subcommittee, however, cut him to $40,000,000 for actual war training not including student aid. This would be a cut of $15,000,000 or approximately 27 percent. So if the bill were passed as drafted by the committee, we would have to deduct 27 percent from the above number of trainees. Using last year's experience as a basis, this would cut the actual number of trainees who got into industry from 127,500 to 93,075. If we add the 15 percent synthetic trainees that Mr. Williams thinks we got into industry, we would have to increase the number of trainees to 134,225 at a cost of $40,000,000.

The number the N. Y. A. might add to this 7,829,737 trainees which will be trained in 1944 by other Government agencies would not help the defense program to any extent. From all indications that program is passing its peak. Certainly it would not justify asking the public to buy $55,000,000 or even $40,000,000 worth of bonds to continue that agency.

ACTUAL COST PER TRAINEE

Mr. Williams testified that it costs $66.91 per month per trainee; that the average trainee stays 7 weeks; therefore it costs $108.44 per trainee for a 7 weeks' course. Let us see just how near this is right. On page 300 of the hearings, Mr. Williams testified as follows:

With the $53,000,000 we received for war-production training, we were able to train 303,000 separate trainees in 1943, July to February.

He further testified that they trained last year approximately 1,000 per day. As stated hereinbefore, if we counted 1,000 for every day in the year, including Sundays and holidays, this $53,000,000 trained 365,000 during the fiscal year ending June 30, 1943. I think you and I will have to agree that only those trained who actually got into war industry can produce. Synthetic or hypothetic trainees do not turn out war material.

If, according to Mr. Williams' testimony—page 342 of the hearings—only 350 out of every thousand can be traced to industry, then only 127,750 trainees actually got into industry at a cost of $53,000,000, or $410 per trainee, for a 7-week course. If we include the 150 out of every 1,000 synthetic or hypothetic trainees that Mr. Williams thinks got into industry, then, as stated heretofore, 182,500 actually got into industry last year at a cost of $290 per trainee. It doesn't take any certified public accountant to figure that one out.

N. Y. A. EMPLOYEES IN 1943

To get these 127,500 trainees into industry this year Mr. Williams had 11,201 employees. To spend the $55,000,000 in 1944 Mr. Williams wants a total of 12,250 civilian employees whose pay roll will aggregate, according to his statement, $23,331,000. The total pay of the trainees would be $22,848,000 under the program as presented by Mr. Williams for 1944. These are not civil-service employees and will make up a nice little patronage list. The N. Y. A. now has a total of 11,201 employees, including 669 regional office employees, 213 in the Washington office, 4,215 supervisors, 2,000 employees at resident work centers, 3,119 project managers at work centers, 985 in property and transportation work. On May 5, 1943, they had 51,454 trainees, so they actually had one employee for every 4.6 trainees.

AGE OF ENROLLEES

According to a table furnished by Mr. Williams giving the entire summary as of April 14, 1943, he had 51,576 enrollees as of that date, 27,133 males and 24,443

females. Of the males, 67.2 percent were under 18 years of age, while 40 percent of the females trained were under 18 years of age. In fact, Mr. Williams admitted that, as far as the National Youth Administration training youth was concerned, they were out of the picture unless an amendment is inserted which would permit the training by the National Youth Administration of persons regardless of their age. I quote from page 301 of the testimony:

Mr. TARVER. I note you are requesting that the age limit be removed to include persons possibly 40, 50, or 60 years of age. Is that correct?

Mr. WILLIAMS. It would permit that, provided the Chairman of the War Manpower Commission should grant an exemption based upon a critical shortage area in which it would be desirable for us to train such older persons.

If the National Youth Administration is going into training infants of 16 years of age and then take people off the old-age pension list who are 60 years of age or older, we ought to change the name. We should not sail under false colors. We should call it the N. I. and O. P. A.—the National Infants and Old Peoples Administration.

NATIONAL YOUTH ADMINISTRATION TESTIMONIALS

I want to apologize humbly to the N. Y. A. Administrator. I almost made a fatal error and committed a grievous sin. I forgot to mention the many, many letters of endorsement which Mr. Williams has submitted to the committee. I have considered these endorsements carefully. The N. Y. A. apparently does have many of these testimonials, but so has Lydia Pinkham's Vegetable Compound, and the N. Y. A. endorsements, like Lydia Pinkham's Vegetable Compound testimonials, have undoubtedly been solicited, and in all probability for some sort of consideration. To be real frank, I was disappointed. I expected to see some sort of endorsement by Queen Marie, of Roumania, who had been in the habit of endorsing rouge, face powder, lipstick, and any other commodity if the consideration was large enough. I was disappointed until I happened to remember that the Queen was dead. I use the phrase "for a consideration," because I have in mind an instance where an N. Y. A. administrator offered a chamber of commerce an N. Y. A. concession if it could get its Congressman to support the N. Y. A. If Aubrey Williams' field men worked and lobbied as hard in the field—and apparently they did—as he himself lobbied on Capitol Hill during the past 2 weeks, he ought to be able to have a few endorsements and telegrams sent down here. I, myself, have discussed N. Y. A. training personally with the plant managers and superintendents of practically every one of the 47 plants I visited during the past 4 months. I found no "Castoria" baby cry for the N. Y. A.

CONCLUSION

In view of the fact that we will train during the fiscal year ending June 30, 1944, by various Government agencies more than 7,829,000 workers for various purposes, the result of adding or deducting the N. Y. A. proposed trainee would not cause a ripple. For instance, if we added the whole 365,000 that N. Y. A. proposes to train, 65 percent of whom never get into industry, at a cost of $55,000,000, we would be adding 4.6 percent. If we added the 182,500 trainees that he thinks might get into industry, we would be adding just half that number or 2.3 percent. If we added the 127,500 which with a 27 percent cut in the appropriation would have to be cut to 93,000, we would only be adding approximately a little over 1 percent of the total number of 7,829,000 that will be trained. A year ago when the supporters of the Civilian Conservation Corps opposed continuance of that agency, they argued we could not get along without it. The agency was discontinued. I wonder just how many Members of both Houses of Congress would vote today to reinstate it. With the attempted discontinuance of the N. Y. A. we can again hear, "We can't get along without it," slogan. In view of the above facts, I am wondering just how many votes the N. Y. A. would get in either House of Congress a year hence if it were abolished as it is proposed to do. This is a good chance to save $44,000,000 that will have to be raised by taxes levied on taxpayers whose exemptions we have lowered in some instances to $500; $44,000,000 less to be raised either by taxes or bond purchases.

Lack of Confidence

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 21, 1943

Mr. HOFFMAN. Mr. Speaker, throughout the country there is a growing lack of confidence in this administration, its plans, and its policy makers. The following letter is a typical one. It comes from a man I know personally. He is a good, sound, patriotic American but he is growing weary, he is becoming indignant at the foolish, arbitrary actions of our bureaucrats. The letter reads:

I had occasion to mention a few of enclosed arguments against subsidies to members and Co-op managers in a Berrien County meeting of Farm Bureau at Benton Harbor last week. The president of the organization stressed the point that 3,000,000 of 12,000,000 agricultural workers were in army and war plants—and these the best—that it took two or three replacements to fill each vacant spot. As a canner, I was asked to comment on certain labor problems. At the conclusion of my remarks, I stated that we could somehow get by if markets were free, but that we would lose our form of Government if we allowed such rank injustices as subsidies to be fastened on us. I stated that one-third of the war was being paid for—two-thirds left for these same tough soldier sons to pay for in the future, after their present sacrifices—that weekly factory wages up 68 percent, with cost of living up 24 percent did not fully account for fact that in many families, three are now working 48 hours or better, where one worked 40 hours in 1939—over a 300-percent family increase. Boys and girls from 12 to 17 are making 40 to 85 cents an hour, where 35 cents paid for many tough workers producing two and three times as much work in 1939. The remarks of members of this group of some 40 intelligent farmers were enlightening. They see the dangers, and I believe over half of labor is not sold on hypocritical demands of their leaders. In their hearts they know their real weekly income per family has completely outrun many times over any cost of living raise. My final statement that subsidies were 10 times more dangerous than court-packing bill was heartily applauded.

These facts should be publicized through Congress, radio commentators, the press. We small businessmen do not dare to speak out the facts we know. There are too many ways of penalizing us with Government snoopers of one kind or another.

As canners, we dropped canning green beans, another nearby canner dropped spinach, another 100,000 cases of lima beans, etc., all because of a one-half to 1½ cents a can to be saved by O. P. A. at the expense of less food—a gradual cut-down on the hard to produce canned items to bring an eventual creeping cut-down of 20 percent or more over all. A swell reform theory to have low-cost operators produce everything. Only thing wrong is that we need more than all can produce—even with marginal producers at top speed. Some more of us will drop out completely next year. Asparagus prices were supposed to be named on December 13—none yet. Our costs for May were above indicated prices, account more loss from tough material (the weather), and using 14-year girls and old women, many of whom produce only 50 percent of the work of our tough, active younger women who last year had an incentive to work. Factory labor slow-downs are encouraging a 20-percent less work attitude or move on to another job.

The effect of putting the canners out of business is, of course, to make surpluses greater seasonally—prices lower, and encourage consumption, and higher prices in the winter, with less fresh, and when canned good are not then available.

I am a member of the American Legion, was wounded in both legs in the Argonne in 1918, 14 months in the hospital. I say to you that what I fought for, and what these 11,000,000 fighting men are supposedly fighting for will be lost if our Representatives in Congress don't break this subsidy program now, and by investigations, publicity, and withholding of appropriations, methodically kill one useless department after another. You in Washington have a more important job than soldiers or food producers. You are fighting to hold our freedom, the soldiers for the world's—guess United States better come first because most of the world don't want freedom anyhow—we do. Glory will be reflected by overwhelming votes to our Representatives who are most vocal now in killing the bureaucrats and subsidies who are the effective tools of the union labor minority that is trying to enslave this country, and coming damn close to doing it. Please do not mention my name.

Sincerely.

Another worker expresses his ideas as follows:

DEAR SIR: In April 1942 I went to work for the Kingsbury Ordance Plant and was employed by Todd & Brown, Inc., of La Porte, Ind., who operate the plant. In August of 1942 the union organizer represented that there was going to be a closed shop at the plant and if we did not join the union we would be out of a job. I joined the union under such representations. We were supposed to get a chance to vote on the question of the union on the assembly line where I worked, but we never got a chance to vote whether we wanted the union or not.

About June 3, 1943, Merle Thomas, steward for the American Federation of Labor union, called me off the assembly line and told me that if I did not pay up $18 dues in 5 days I would be discharged. Soon thereafter I was again called off the assembly line by Fred M. Kasler, Jr., who is connected with the management of the plant and I was told the same thing and that I was not able to quit the union. I do not believe that half of the employees belong to the union.

On the 14th day of June 1943 I was discharged by the Kingsbury Ordnance Plant for the reason that I did not pay union dues. At the time I was discharged I was working on the assembly line loading shells on a defense job. At the present time they are short of help at the Kingsbury Ordnance Plant and they are in need of men on the assembly line to load the shells for our boys who are fighting on the battle fronts. I am 53 years of age at the present time and I want to help out all I can with the war effort, and it looks to me that such a course of action is sabotaging the war effort for private advantages and is treason to my country and, if it is so, Congress should pass a law to put a stop to it.

Respectfully yours.

Throughout the country knowledge of the practices of certain union leaders, of their demand that no man shall work until he pays tribute to them, is spreading and the individual workers are becoming more and more determined that the day of a soldier's return will be a day of reckoning; when after the battle is won abroad, freedom from want and freedom from fear will be restored here in America.

A copy of a wire from a constituent reads as follows:

Fifteen months ago I left a good job to work at Kingsbury Ordnance Plant, La Porte, Ind., when they were asking for experienced help. I am being terminated June 26, 1943, because they are cutting down the force. Is it fair to terminate World War veterans and keep inexperienced help who are able to get selective-service deferments on account of essential war work? There are no marks against my record or will they take into consideration seniority or experience. This whole thing stinks. As long as we have to play politics in order to help in our small way to win this war, will you please give this matter your immediate attention. Letter follows.

Congress can sit tight until it is too late to take effective action.

The Roll-Back and Subsidy Payments

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 21, 1943

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

COUNCIL BLUFFS SAVINGS BANK,
Council Bluffs, Iowa, June 19, 1943.

Hon. BEN F. JENSEN,
House of Representatives,
Washington, D. C.

FRIEND BEN: * * *

There is a real serious situation out in this country that needs attention. That is the way the livestock markets are being handled. Since winter the hog prices have been dropped 2½ cents a pound or more and are now below the Government guaranteed ceiling bottom of $13.75. The cattle market is absolutely demoralized. The stockyards people are advising everybody to hold their cattle back until something is done to clear the situation. The roll-back prices has been more than met by the sharp decline of the prices the packers are offering. In fact, the offering prices are a full 10 percent on cattle and more than that on hogs; less than they were 2 weeks ago, and their talk is still lower prices. It is impossible for a man to get anywhere near the ceiling price out of corn, based on the fat-cattle prices now and the feeder-cattle prices. The farmers are just not taking out feeders.

This subsidy deal is all bunk, as the workers' wages are being raised to meet the increased cost of living, and then they say they are not going to charge the fellows who eat the meat as much as he has been paying for it, but you are going to pay the processors a subsidy. The packers have already cut down the price more than enough to offset any subsidy that be paid them, and if they are then paid a subsidy in addition, they will be paid twice for it or more. This is sure a muddle that has to be straightened out. Kindly give this a thought.

Very truly yours,

B. A. GRONSTAL, *President.*

National Youth Administration

EXTENSION OF REMARKS

OF

HON. JOHN H. KERR

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 21, 1943

Mr. KERR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

WAR MANPOWER COMMISSION,
NATIONAL YOUTH ADMINISTRATION,
Washington, D. C., June 21, 1943.

The Honorable JOHN H. KERR,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN KERR: Pursuant to your inqury, I am attaching hereto a partial list of firms engaged in essential war production for the armed services, which have written letters commending the work of the National Youth Administration in training persons for employment in their war production work, and who ask for the continuation of the National Youth Administration in order to further the war effort.

Sincerely yours,

AUBREY WILLIAMS,
Administrator.

Stedman, Oyster Bay, N. Y.; Tirrell Silk

Co., Phillipsburg, N. J.; West Duluth Business Men's Club, Duluth, Minn.

PARTIAL LIST OF LETTERS RECEIVED BY THE NATIONAL YOUTH ADMINISTRATION FROM COMPANIES ENGAGED IN WAR PRODUCTION

We wish to take this opportunity of congratulating you on the fine work that the National Youth Administration has been doing to the training of girls. The girls we have employed whom you sent up here, have worked out excellently and we only wish, if it were possible, that you expand your operations so that you might be able to give us more girls between the ages of 18 and 30 of the same caliber as those whom we have received.—American Locomotive Co., Auburn, N. Y.

We have hired and are continuing to hire a large number of young women who have been trained by the National Youth Administration and feel that this is one of our best sources of supply.—Consolidated Aircraft Corporation, Fort Worth, Tex.

We have received 726 who have come to us as trained welders, machinists, and sheet-metal workers. I would like to take this opportunity to congratulate you on this fact and express the appreciation of this company for the splendid work the National Youth Administration is doing in the war effort.

I would like to inform you that we have a greater need for welders, electricians, and sheet-metal workers than we do for machinists. I am quite sure that we can use all of the trainees in the first three crafts that you can send us.—Gulf Shipbuilding Corporation, Mobile, Ala.

This is to advise you that the Richmond shipyards will employ all the sheet-metal, coppersmith, machinist, and welder trainees you can train.

We have found a definite shortage in skilled men within these crafts and, with the anticipation that we will hire approximately 20,000 additional employees within the next 3 to 4 months, we believe the shortage will become still more acute. This figure might also be enlarged by the inroads made on our personnel because of Selective Service, enlistments in the armed forces, etc.—Richmond shipyard, No. 1, Richmond, Calif.

This National Youth Administration training has fitted these employees for duties much more advanced than is usually the case with inexperienced help.

I feel that any extension of training similar to the National Youth Administration, particularly for women or for older men, will be very beneficial to the industry and war effort of this country and should be encouraged.—Westinghouse Electric & Manufacturing Co., Wilkes-Barre, Pa.

Since September of last year we have at various times earmarked trainees for training in the National Youth Administration machine shop, and have today four or five of them in our plant. We feel that you might be interested to know that although we have made use of various other training sources, the girls whom we secured from your school were trained to a much greater degree than those secured from other sources.

While for some time we have had under consideration a training program within our plant, we feel that continued operation of the National Youth Administration Training Center as well as continued efficiency therein would save us the headaches and trouble that any within-the-plant training program would entail.—Alfred Hofmann & Co., West New York, N. J.

National Youth Administration trainees are enabling us to do a good job in the war effort as the enclosed photostats show.

Demands upon us are increasing and we have taken contracts based upon receiving National Youth Administration trainees when needed.

It is therefore essential to our program that National Youth Administration be kept in operation. Your assistance to this end is very respectfully requested.—Research & Engineering Co., Agawam, Mass.

Rehearsal for V-Day

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 21, 1943

Mr. SHAFER. Mr. Speaker, under permission to extend my remarks, I include a speech by Mr. Richard H. Stout, president of the Morris Plan Bankers Association, at St. Louis, Mo., June 15, 1943. It is well worth reading and preserving:

REHEARSAL FOR V-DAY

You must learn to make your bed. And, you must learn to dust beneath it. You must know how to wash a window, and iron a shirt, and turn out a meal. I am not speaking to you in parables or riddles. I am stating plain, hard, unvarnished truths, unpleasant as they may be to bay-windowed businessmen who have come to associate calluses with golf clubs and to expect to tuck cares and minor irritants into a folder and leave them on the office desk. You might just as well face it and make the most of it; in the world of the post-war tomorrow you will be as vulnerable to house-maid's knee as you are now to ailments of the heart, stomach, and liver.

Furthermore, I am not talking to you about any social revolution, any coming of communism, any rapid flourishing of super New Dealism. You are not going to be driven into the kitchen and under the bed by a man in the White House, or a man at the head of a labor party, or a march of embattled racial minority. You are coming to this state of affairs which will make you feel as much at home in an apron as in a waistcoat, through your own scheming, your own planning, and your own prayers. If this metamorphosis of the tired businessmen does not take place, you will be one of those most disappointed and undeniably the one worst hurt.

No wonder you look at me as though you think I am crazy. Yet the point is probable and prove it I will. A few of you have domestic servants left, but darn few of you. More of you have a wife or daughter left on whom you can wish the chores for which domestic servants can no longer be obtained, but the number of you who are in this position is on the decrease and just starting. On the other hand, take a look at England. Domestic servants are not to be had for love and the money is not available for bidding against war plants and war activities.

The sweet little homemaker has put on overalls and gone into a welding job. She did it because of patriotism. She will stay with it as long as she can because she has found it good, good to have a pay check of her own, good to see a different set of faces and hear a different set of tales in the daytime from those she hears at night, good to know that she can stand on her own two feet if need be, good to get away from single-handed drudgery with the household chores. She does not do them alone any more. The old man and all the members of the family have to pitch in when the day is done to do their shares. When mama went into daytime overalls, papa was elected to the night-time mop bucket. It's amusing to think of the bemonocled Limey in that predicament, but, like most of his plagues, the thing is spreading to this country and spreading fast. We will be with him when we have reached the same production tempo, and with that will come these same aches, pains and embarrassments of his.

And they will stay on in the post-war world. They must stay on and we might as well take off the rose-colored glasses with which we have viewed that period after V-day. It is not going to be the unsullied land of milk and honey, of ease and unbridled security, or freedom from everything unpleasant except death that we are leading ourselves to visualize. It will be a better world for more people. But it will still be a human world, with human ills and frailties and shortcomings.

And again I say, you as business men, are primarily interested in seeing that it is a world in which you bear your share of the drudgery. There has been much talk about "must" legislation in the past 10 long years. When we look toward the peacetime tomorrow, there is a must on which even greater emphasis has to be placed. It is an economic must. We must have continued full employment and full production.

The alternative; there is none. We cannot go back to a $35,000,000,000 annual income and to fractional employment, bread lines, and doles. This is not 1919 or even 1932. This is the enlightened fifth decade of the twentieth century. Alert, educated, socially conscious, articulate masses have had adequate demonstration in the past 2 years that full employment is a possibility, not just an economist's dream.

They have seen that it can be materialized when there exists the decree of self-abnegation for the common good which hitherto has been a phenomenon of war, and usually of defensive war. They will demand of someone that, if these accomplishments can be thrown onto the altar of Moloch, they be produced for the more worthy purpose of enriching man's happier years of peace. Business, you as businessmen, the American enterprise system, capitalism—all survivors of the yesterday which will be brooked no more—shall find yourselves in the position of either producing full employment and full production and distribution or being wiped off the slate by the powerful surge of tomorrow's society.

Youth, which has been put into the harness of gainful employment during this war before it was old enough to be off the playground, will not again be told that it must emerge from the halls of education to find a world of enforced idleness and deprivation. Women will not again be returned to dependence and domestic drudgery. Domestic servants and others in the low-paid categories will not topple from the pedestal of wartime pay without violent struggle. The soldier and the sailor and the marine know what they want; they know they have the power to demand and get it, and they intend to do just that. The cash bonus will not satisfy them this time; they intend to have a job and a living wage. Business, the consumer, government will confront a united movement, will not be saved by a struggle between the returning soldier and the war worker for the same job, the one to get it, the owner to retain it. They move as one and they are irresistible. It is abundantly obvious that full production and distribution are a necessary concomitant of such a measure of full employment as the fulfillment of these demands requires.

But there is another, a financial reason, why you as businessmen must take the position which I have been emphasizing. We have a national debt which is climbing into astronomical figures. The present guess is that it will be $300,000,000,000 by the end of

1945, with another $50,000,000,000 to be added for tapering off. It is generally conceded that this would be nothing about which to get hysterical if we could maintain the $130,000,000,000 annual income which we expect to chalk up this year. It will require that much to service the huge national debt which is our heritage from social experiment and war; that is, if we are not to levy such a tax on business and enterprise that it must be killed by the tax poison alone. Now, it follows that you and your business and your property are jeopardized unless this problem is met. You lose out if the tax is heavier than your business can bear. Nonetheless, certainly you lose out if the debt is not serviced and if some default occurs. In other words, we must have approximately $130,000,000,000 annual income in the post-war years to get by. In order to have $130,000,000,000 annual income we must have employment, production, and distribution at the hitherto unprecedented level which it has reached in this year of conflict and lend-lease.

That this objective can be realized is no idle dream. There is altogether too much disposition in this country to dismiss this logical solution of our problem with the cry of "impossibility," based on the argument that such income could have come in this year only under the spur of war. I want to say to you that this income and the national wealth to support it would shortly have been realized in spite of the war. In substantiation of that statement I want to show you a chart which projects our national wealth and income on the basis of the scale of growth achieved in the period from 1850 to 1930.

Time does not permit of my going into great detail about this most interesting chart, for which I am indebted to Mr. T. C. Boushall, President of Consumer Banking Institute. I would only call your attention to two points: first, that that income historically grows at a far faster rate proportionately than national wealth and that both wealth and income multiplied far faster than population; and, second, these figures do not even give credit to the vast stimulus of the war effort and they cannot, of course, reflect the as yet unrealized upward recoil in relief from the repressing influences of the 1929–33 depression and the 10-year effort to impose a false philosophy of a static American economy. Even so, this graph proves the point that the national income and the level of employment which are necessary for the post-war years are obtainable and retainable. So, we shall not be stumped by a trite "can't be done."

The next question becomes, "Who shall take the lead in seeing that this primary must is fulfilled?" There are two perfectly obvious possibilities. One is government, the other is business. Though there are elements in the government of today that would like to undertake the job whether or not business is willing and able to do it, they seem to be minority elements. I think we can take it for granted that there is still enough sanity, enough dislike of government interference, in this country to insure that if business is prompt, determined, capable, and successful in carrying out the job, government will lay off, in so far as it can, and will fall in with any intelligent pattern laid down by business. But unless it is an intelligent and comprehensive plan, be sure that government must and will step in. That, from our standpoint, would be tragic. It would mark further surrender of the system which has made America great; further leveling of the ambitious and energetic and thrifty with the incapable and shiftless; further surrender of our liberty to the political yoke.

But, I do not need to catalog all of the things it would mean to you. You know them all too well. Suffice it to say that all for which you have worked and all that you have accumulated would be lost if Government stepped in, set the pattern which it would have to set to insure full post-war employment, and followed the line of development which such a pattern would encourage. Business must not and shall not, through its failure to plan and to provide, thus put the noose about its own neck.

So, we say the job will be done by business and Government will be relegated to its proper role, the minimum possible role. And next, we must ask ourselves, "What does it take to do this tremendous job?" And there again I would look to the past, not into the rambling mind of some brain truster for the answer. You will note that I agree with Paul Hoffman when he says that the motto of post-war planners should be: "Take your hat off to the past, and your coat off to the future." Looking back, we find that American business has demonstrated that it knows the answer to the problem of production. It has given an overwhelming answer to that, this very year. It can and does produce when it has the demand and it can and does give the requisite employment when it sees about producing. The weakness, the sore spot in the American economy, has been that there is too much production at times, in other words, that production outstrips the market, which is another way of saying that the distributive system is at fault and that, given the answer to the riddle of distribution, the solution to the economic outrage of want in the midst of abundance, business can maintain full employment and all that it implies.

It is at this very point of the break-down in the distributive machinery that consumer credit, the consumer lender, the consumer vendor step into the picture. Here is their responsibility to the purified and Nazi-less world. This is the groove into which they must fit in the post-war planning, this is the point at which they must focus with concentration in looking toward and beyond V-Day America. The nearest answer to the riddle of distribution is consumer credit.

Let me make myself clear. I do not concede that it has ever been demonstrated that consumer credit has any appreciable effect on cyclical trends. But, through cooperative planning with other elements in the economy it can be implemented in setting the tempo for the trends. Consumer credit may then become the powerful factor which government now seems to think it, a catalyst of production and employment, the important key to the distribution bottleneck.

The necessary full employment calls for the purchase of goods by individuals and corporations, or by government. It has been demonstrated that you cannot put cash on the counter to buy such expensive items as homes, automobiles, extensive modernization, airplanes, refrigerators, air conditioning, television, bathrooms, dairy barns, farm machinery, etc. There are exceptions but, as a rule, we do not accumulate enough money in advance to pay for any of these articles. If it were not for installment credit, we would not have them; the men who make them would not have the employment; those who supply the men who make them with the materials from which to make them would not have the demand, and so on down the line. You have only to look at what has happened within the span of our lives to prove that point.

In the country town in which I was raised there were in the year of the demise of Mark Twain and Edward VII about four snazzy privately owned carriages, "glass fronts" as we called them. There were 300 or 400 other vehicles, including a half dozen wheezing EMF's. The rest of the 5,000 inhabitants rode Shank's mare. Now look at the place. With population just about where it was then, you can't get a parking space on the main drag. There are fully three thousand automobiles, every one of them costing more than the vehicles and the whole succession of horses which wore themselves out pulling them. Why? Didn't the Edwardians want vehicles or were they restrained because of the limited range of Dobbin's activities? They did want them, and they felt that his range was super. The answer is that the buggy and the horse required cash on the barrel head; the cars can be bought on credit. The horse breeder had a limited market, and the buggy maker the same, simply because the distribution system could not be adequately developed without the proper type of credit. You got distribution in automobiles, not only at home but abroad. You got distribution in sewing machines, but only in the make that provided installment credit. You got saturation in radios. Why? Because they were fitted to the chariot of consumer credit. The sensational rise in the volume of consumer credit which came in the few years leading up to 1941 was accompanied by the greatest progress in the distributive system that the country has ever known. All these things make the answer too obvious. If consumer credit is not the answer to the distribution problem, it comes close to being the chief stone of the arch.

No study is required to realize that if consumer credit is the key to the distribution bottleneck, a prime responsibility for planning an orderly business aftermath to the war devolves upon those to whom the public has entrusted the business through its patronage, the consumer vendors and the consumer lenders. Insofar as the consumer lenders are concerned, we are witnessing an awakening realization of that responsibility, though they have been slow in moving, by comparison to many trades.

It has been reasoned by some that there is plenty of time, that there is ample reason why consumer credit need not hurry with its post-war planning as manufacturers, for instance, need to hasten. These people take two tacks. Some of them argue that the end of the war will find us with a lengthy lag in which the shift from war manufacture to those of peace must take place. These dilly-dalliers say that there will be plenty of time for planning then, without the need for the continual change in the plans which is a necessary counterpart to early planning. This too is an unlikely eventuality. This global war will not end all at once. The gap between the close of the European engagement and the close of the Asiatic one will permit the American economy to move back into peace-time production gradually and to be about ready to shoot when peace returns to the Pacific and the boys start mustering out.

The other group who would postpone the making of plans by the consumer credit trades now point out to you that we are building up such a vast backlog of pent-up buying power in the form of war savings bonds that there will be no need for consumption credit until long after the struggle ends and the country has returned to peacetime pursuits and peacetime business. It is true that the people of the United States are saving more now than they have ever saved. There are abundant reasons. Incomes are at a new high, the purchasable goods are near a low, and there is the tremendous patriotic appeal to save, to mention only a few. Much of this present saving is enforced by conditions. Most assuredly its volume will decline when peace is restored and there will be some buying from accumulated surplus for the purpose of satisfying pent-up demand.

Some War bonds will be presented for redemption prior to maturity, but there is every reason to believe that the great majority of bondholders will hold on to them. That has been the finding of the United States Chamber of Commerce survey even among the people who are most enthusiastic planners for a post-war buying spree in heavy durables. Reason supports this finding. If the post-war period is characterized

by full employment, the War bonds will constitute that measure of protection which people have always sought through saving. It is our observation that people have always saved for a definite purpose. Usually that purpose has been security. All the people have wanted this security backlog, but only a comparatively small segment had been able to attain it up until the present time. Now that they have it, they will want to swing with it. Even if the post-war period should bring reduced industrial activity (which we must not permit it to do), bondholders will hold them to the last extremity. They then become the last margin of safety in a dissolving economic structure and the painful experiences of the depression decade are still vivid in the public mind.

Most certainly, it is to be devoutly hoped that the public will hold onto its bonds. They overhand the markets in such quantity as to be the greatest inflationary threat of all. Then, too, a run on the Treasury for these demand deposits would throw the country's credit and the whole economy out of gear. Consumer credit interests should join in whatever Treasury propaganda is directed against widespread cashing.

So common sense tells us that the post-war activity which we have visualized as a necessity must have credit to give it life, must have consumer credit.

Furthermore, all the signs point to the time being ripe for consumer credit trades to be about the business of drawing the blueprints of how they will do their share toward insuring full post-war employment through putting their shoulders to the breaking of the distribution problem. That problem will be aggravated by the need to shift from one big customer to the millions that make up the consumer public.

But, important as its role is to be, that of consumer credit is only one of those in the play. Furthermore, it is a role which will put the actor under such searching lights that all flaws must be eradicated before he takes the stage. This means that all the abuses which abounded in the 1920's must disappear. Such things as kick-backs, rebates, and exploitable tricks between the distributor and the finance agency will not be brooked by the enlightened consumer public of the late 1940's, and they are certainly no foundation on which to build super effort to save free enterprise from the yawning maws of bureaucracy, socialism, and communism.

It will not profit this actor of ours to take the stage alone. He cannot pull it off alone and he must know how his role fits that of others who must be in and of it. These are the manufacturer or producer, the merchant or distributor, and the grantors of commercial credit. All of them must plan together and they must rest assured that, though they cannot safely permit Government to have the leading role, it must have a major one. The national finances have reached such shape that Government must henceforth inevitably collect, direct, and control 25-percent, more or less, of the national income. Thus it will hold the balance of power and will undeniably influence the whole pattern of both production and distribution to such an extent that no plan can be made without it.

If these parties which I have mentioned do not get together and lay their plans cooperatively, there can be no hope of success in the major premise. For instance, the manufacturer, not knowing that credit will be available or that sales will be pushed, may plan to produce only 30 percent of maximum output in the year following the war's end, to play on the safe side. Hearing of this, the merchant may decide to reduce sales force and likewise "play 'em close to his tummy." The consumer lender, hearing of what these two have done, may put or keep the bulk of his credits in governments, leaving it to utilize them as it sees fit. Thus we have manufactured depression and unemployment.

On the other hand, if they sit down together now to compare notes, the picture can be reversed. Hearing that abundant credits will be available and that finance forecasts great things for the morrow, the manufacturer will be inclined to go whole hog and plan for production at peak level, absorbing more workers. Hearing of what the manufacturer plans, the merchant will plan new store outlets, increased sales force, all in tempo. Thus we have full employment, prosperity, the victory of the home front.

Without this type of rehearsal of the actors, they may be called on the stage to perform, will fail for lack of coordination and will have the Government step forward to confiscate all the parts to please an impatient audience.

Now, that it may not be said that this is talk and no action, I am going to make an announcement and throw out a challenge to the trades. The Consumer Banking Institute plans to call such a conference, to sponsor a meeting of the top-flight thinkers in this field, to pool the knowledge of all and correlate the planning of all. Such a conference, such a shoulder-to-shoulder march of the manufacturers, the merchants, the bankers, and the Government is, I firmly believe, the lifeline to all and to the country itself. The institute will urge each group in the cast to study its part and to meet again and again for rehearsal until we shall find ourselves ready when the curtain goes up on the post-war world. We must be sure to please the audience or when we pass from the stage we shall take with us all hope for capitalism, the system of free enterprise, the American way of life.

Resolution of Fremont (Nebr.) Livestock Producers and Feeders

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 21, 1943

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

JUNE 19, 1943.

DEAR SIR: For your information the following wire was sent to President Franklin D. Roosevelt June 18, 1943:

"The following resolution was passed in Fremont, Nebr., June 17, 1943, at a meeting of 700 livestock producers and feeders, representing many thousands more: 'In order to guarantee an adequate supply of pork, beef, and lamb for (1) armed forces, (2) the civilian population, and (3) lend-lease, that they demand that James Byrnes, Director of Office of War Mobilization, rescind his order, which is effective Monday, June 14, 1943, rolling back wholesale prices and ordering subsidies to be paid on beef, pork, and lamb, and if it is not immediately rescinded, the producers and feeders of the Corn Belt States will request all feeders and producers to withhold the marketing of slaughter animals effective Monday, June 28, pending compliance with their demand; and further, that the feeders of the Corn Belt States demand that the reflected price on meat animals be sufficient to cover the cost of production.'

"During the last week, because of the break in prices of live animals marketed, the producers and feeders have lost hundreds of thousands of dollars. The request to withhold the marketing of slaughter livestock would be made to save the producers from these losses during this period of uncertainties. Further, the Corn Belt producers and feeders of livestock stated in a resolution: 'We, the livestock feeders and producers from 28 counties in Nebraska and 9 in Iowa, oppose the roll-back and subsidy program on meat, butter, and coffee as un-American, inflationary, and discriminatory.' The livestock producers and feeders of the country, at the request of the proper authorities in charge and at your personal request, have increased the production and marketing of livestock to the highest levels in the history of this country. The decision to keep slaughter livestock off the market would not mean a strike in production because the production of meat tonnage would continue on animals now in feed lots. Many feed-lot operators, however, already have been discouraged from buying additional livestock and have ceased making replacement purchases with the result that thousands of feed lots already are empty or are rapidly being emptied. In this they are influenced not only by price roll-backs recently announced but also by the fear of further price reductions by the same method in the future.

"The apparent lack of understanding on the part of people in Washington as to the seriousness of the food situation and their unwillingness to request and accept the counsel and advice of people with knowledge and practical suggestions for solution, gives them no choice but to take drastic action and insist that this whole problem have your personal, immediate attention.

"HARRY GARDNER,
"Oakland, Iowa,
"HERMAN DINKLAGE,
"Wisner, Nebr.,
"Resolution Committee."

Fly, Uncle Elmer, Now

EXTENSION OF REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 21, 1943

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Frank C. Waldrop from the Washington Times-Herald:

FLY, UNCLE ELMER, NOW

(By Frank C. Waldrop)

It is just a matter of brief time until Uncle Elmer Davis, our kindly, white-haired Director of War Information, retires to the shadows in company with other such former brilliants as Archibald MacLeish, Lowell Mellett, and Robert Sherwood. Herewith a friendly effort to get Uncle Elmer away peacefully without the usual outcry and shattered feelings.

The House of Representatives has just taken a vote of positively no confidence in Uncle Elmer. Friday night, it ended the domestic activities of the Office of War Information following a debate in which one of the leading Democrats in the Congress and a master of the Office of War Information's appropriation declared we "want no Goebbels here." That kind of talk is fatal to continued success for Uncle Elmer, even though he seems still to hope that the Senate will force restoration of the money taken from him by the House.

True, the House action is not a final decision to kill off the domestic activities of the Office of War Information, but an experienced Washington reporter will be glad to explain to Uncle Elmer that it is an absolutely final verdict in his own personal case.

Uncle Elmer said recently that the corps of Washington correspondents does not cover the real news of this city. In a wishy-washy way he almost called the Washington correspondents incompetents and crooks, but didn't quite have that much nerve.

Well, if Uncle Elmer now had any friends left in said corps, they would firmly advise him to start packing away his autographed pictures of famous men and begin a quiet, but steady, clearing out of private papers in his public office.

Uncle Elmer, the time has come to say get going, old pard. You're through around this town.

Away, Uncle Elmer, away. The House of Representatives never forgets. If it has socked a bureaucrat your size once it will sock him again and again and again, until he is liquidated. Having voted no confidence it cannot retract, or it would lose face with itself. And you've been socked, Uncle Elmer.

So now save yourself from being sacked, too. After all, you've got to live tomorrow as well as today. Don't stick around here after you've been trampled on or you'll be worthless to everybody, including yourself.

The downfall of Uncle Elmer was inevitable, come to think about it. The public's fear that an American Goebbels would be fixed on us in the name of war security has been inflamed by not only his own conduct in office, but by many provocations from a series of characters like him in spirit and behavior.

First, there was the Office of Government Reports, commanded by the afore-mentioned Lowell Mellett. Office of Government Reports was founded by Executive order in November 1933, and did heavy duty propagandizing for New Deal domestic planning.

In July 1939 it was established by act of Congress and was the first foghorn of the administration in the critical pre-war years.

By its nature and character it was bound to draw the fire of all who fear an American Goebbels, and so in time Mellett was no longer a useful front man, having been shot through with too many arrows of public condemnation, therefore he was retired to the shadows as Uncle Elmer will be if he doesn't fly, now, while there is yet time.

Following Office of Government Reports, there came a glittering moment which called itself the Office of Facts and Figures, commanded by none other than Archibald (the Poet) MacLeish.

Office of Facts and Figures was created by Executive order of the President on October 24, 1941. It brought to town a strange and wonderful stable of poets, novelists, political theorizers, and plain Communist Party-line hacks, who proceeded to embroil it at once in all kinds of trouble.

Archibald, the poet, was no man to master this weird company. In fact, he was the worst of the lot at wanting to use the war to make America over.

And so, under the fire of public condemnation, he, too, was chased away. Then, on June 13, 1942, there came into being this famed Office of War Information, headed by our wonderful Uncle Elmer.

Uncle Elmer pledged in a rich, rolling basso that he would keep out of politics, leave propaganda alone, and devote himself to giving the public all the truth about the war effort that military security would allow.

Well, Uncle Elmer, you're a flop. The House of Representatives says so. The public distaste for your services says so. Your record says so. Uncle Elmer, get going, now.

Future of the Missouri Valley

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 21, 1943

Mr. CASE. Mr. Speaker, under leave granted by the House, I place in the RECORD this statement on the Future of the Missouri Valley, by M. Q. Sharpe, Governor of South Dakota and chairman of the Missouri River States Committee, before the American Planning and Civic Association Citizens' Conference on Planning, at Omaha, Nebr., June 16, 1943:

The future of the Missouri Valley can be predicted with some accuracy by reference to its past.

Like many of the great river valleys in the temperate zones, the Missouri furnished the natural highway and also the security of water, fuel, and food, which caused pioneer settlement to extend gradually from its mouth to its source; and likewise from the mouth to the source of its many large tributaries. As a result of this you find throughout its entire length from its headwaters in Colorado, Wyoming, and Montana, to its confluence with the Mississippi at St. Louis, and along its tributaries, many fine cities of various sizes, with industrial, educational, and cultural establishments and organizations of all kinds. None of these has ever reached the size nor the development which its geographic location, climate, and natural resource conditions indicate that it could reach; nor has the surrounding country and trade territory reached such development.

It is a conservative statement at this time to say that the Missouri Valley today would support, on a high plane of living conditions, and without crowding, at least twice the population it now has.

The natural environment of the Missouri Valley corroborates the above statement. It is one of the largest valleys in the world.

Its length and its general northerly direction are such that there is a perceptible change in its climatic conditions as you proceed to the upper latitude. In the Dakotas, Montana, and Wyoming, the latitude is such that during the growing season of the year sunlight is visible from 16 to 18 hours per day. This produces remarkable growth of vegetation of all kinds when moisture conditions are sufficient.

With a uniform fall of about 1 foot to the mile the altitude rises greatly from St. Louis to the headwaters. The climate of the valley is salubrious and energizing.

In the lower river States of Missouri, Kansas, Iowa, and Nebraska, is found one of the richest loam soils known anywhere in the world. Yields of 100 bushels of corn to the acre, and other grains in proportion, are not uncommon.

In parts of the upper States, the two Dakotas, Montana, and Wyoming, is found a much heavier soil, commonly called gumbo. While the name gumbo is thought by some to indicate a rather poor quality of soil, the fact is that the soil is one of the most potent known anywhere in the world; and with proper moisture conditions it produces year after year, without requirement of fertilization, abundant yields of the finest milling wheat in the world, and like yields of other grains, corn, and feed crops. Native grasses from this same soil, upon the ranges and prairies, were long ago classified by the United States Department of Agriculture, as being among the most nutritious wild grasses and hay found any place in the world.

The valley is a natural habitat for livestock, and from the earliest times when it was literally teeming with numerous herds of buffalo, to the present when it is teeming with herds of cattle, sheep, hogs, horses, poultry, and useful animals of all kinds, it has produced a wealth of food and clothing raw materials.

An attempt to enumerate the various food, clothing, and industrial materials of all kinds which the valley produces today would extend this address considerably, and would in fact be merely a catalog of most of the raw materials of animal and vegetable origin which make up the bulk of the industry and commerce of the whole Nation.

The valley is a natural habitat for timber and some of the finest forests of the Nation lie within its watershed. Since the prairie fire has been largely eliminated by settlement, fine groves of timber are gradually forming in most of the ravines and low spots, and in the valley bends of the river.

Within the watershed are found coal, oil, iron, aluminum, tin, manganese, feldspar, mica, bentonite, gold, silver; and in fact practically all the useful and precious metals in substantial quantities. The sum and substance of it is that the Missouri valley comes as near to offering all the elements of a self-contained industrial economy as any place in the world.

With the foregoing general description in mind it seems reasonable to predict that the valley will eventually be developed into one of the great population and industrial areas of the world. To this date very little development of the river for the purpose of utilizing all its available benefits has been made.

The Fort Peck development in Montana and the navigation improvement and some flood control structures from Sioux City to St. Louis have been the only important development. These present developments, however, furnish visible proof of the great possibilities of the future. The Fort Peck development alone shows that control of the river flow may be maintained by properly constructed and located storage reservoirs.

The geography of the river, with its narrow flood plain and high banks in the upper States, gradually changing to a broad flood plain with low banks in the lower States, shows plainly that utilization of the numerous reservoir sites in the upper river can furnish the benefits of flood control, irrigation, navigation, and power development for the entire valley.

Twice in each year—once during the spring break-up and run-off, and again during the June run-off from melting snow in the mountains—the river rises to flood proportions and literally oceans of water run off into the Mississippi and the Gulf of Mexico, swelling an already dangerous flood problem. Such water, after accomplishing its biannual damage to life and property along the river, is lost forever so far as benefit to the valley is concerned.

With such natural and geographic conditions, coupled with the already existing occupation and development of the valley, it is reasonable to predict that the American propensity for development and expansion and the opportunity for post-war readjustment will carry out a plan of large-scale development of the entire river valley. This could produce a future condition approximately as hereinafter next described.

A series of dams in the upper reaches of the river could be so spaced as to impound all the water which now runs off and is lost during flood stages. Each of these dams could be

adapted to the multiple purposes of aiding navigation, flood control, irrigation, and power development.

They could impound enough water so that during the entire navigation season the channel could be kept constantly at the desired depth.

They could be so connected with other streams and lake-bed sites in the valley that sufficient water could be diverted to insure flood control, and at the same time benefit the sites now lacking sufficient water, and always insure to the main river system all its natural water condition, with a surplus for navigation and irrigation.

Each of the dams could also contain a power development installation.

Each could also be adapted to irrigation of lower lands by gravity and also, when practicable, to irrigation of higher lands from water raised to the necessary height by electrical energy furnished by the dam. All these are entirely feasible and practicable. Most of the engineering data have already been gathered and most of the plans have been drawn by capable engineers.

The results of such a plan are of national importance. Soon it should be submitted to the Congress of the Nation for consideration and execution. The developments in the Tennessee Valley, the Colorado River Valley, the Columbia River Valley, and elsewhere are all existing evidence of the feasibility and benefit of such development. The prospects of its being self-liquidating are plain.

The impressive possibilities of economic and sociologic results from such a plan are so great that one is prone to exaggeration in considering them. It seems reasonably plain, however, that the pouring into the national economic pool of the vast quantity of electric energy which the dams would provide would tend to raise the standards of agriculture and industry at all places within reach of the transmission lines. It would simply add that much new-found power to the national total, and thereby should decrease the cost of the total. To a considerable extent it would be a conservation movement, saving coal, gas, and other fuels now used for power purposes.

So much available power would attract industry to process and manufacture from the abundance of raw materials which the valley can produce. The cities now along the river and its tributaries would all grow and improve.

The irrigation possibilities would provide numerous new home sites, each with a dependable production. They would furnish some available land vent for an increasing population and for a population returning from war industries and military service.

The navigation possibilities would furnish a supplemental transportation system, adaptable especially to slow-moving freight, and would connect practically all the industrial regions along the Tennessee and Ohio and other rivers with those of the Northwest, thereby aiding in the interchange of the different kinds of agricultural products of the Southern States and the Northwest States.

The flood-control possibilities are a very important item and can be calculated with reasonable accuracy. The security afforded to the large cities and the valuable farm lands of the lower river States would add greatly to their future development and would save property losses running into millions of dollars annually. This item alone would contribute substantially to the liquidation of the construction and maintenance costs.

These results are all possible and practicable.

Therefore, it can reasonably be expected that they will be obtained. They should not be expected immediately. A project so vast must come methodically and conservatively. As it does come, the conditions in the valley will be always ascending. The population, standards of living, education, economic, and sociologic conditions will all grow and improve. These are the grand and attractive possibilities.

It is time to start working for their accomplishment.

The Chinese Exclusion Act

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Saturday, June 19, 1943

Mr. WHITE. Mr. Speaker, some sentimental and thoughtless people are endeavoring to secure the repeal of the Chinese Exclusion Act—a law that has proven to be the greatest bulwark in protecting our American way of life, and particularly the welfare of the people of our Pacific Coast States.

I have recently had occasion to explain the need for and defend this law in a letter I have addressed to a lady in New York, which is inserted herewith for the consideration of my colleagues:

JUNE 21, 1943.

Miss ROWLAND,
New York City, N. Y.

DEAR MISS ROWLAND: The issue of Chinese exclusion raised in your letter of June 17 gives food for thought. No doubt you have some knowledge of long and sustained fight of the people of our Pacific Coast States to secure the passage of legislation to prevent the importation of cheap Asiatic labor and must know something of the reasons presented at the time in support of this legislation. We can best judge the future by the records of the past.

In formulating and maintaining our national policy, we should be guided by past experience.

In considering the effect of Asiatic immigration, I am sure you will be interested in a few quotations from the book of Brooks Adams entitled "Law of Civilization and Decay," describing the effect of Asiatic immigration on the stability of the Roman Empire presented herewith.

"When the Romans first emerged from the mist of fable."

"The husbandmen who tilled this land were of the martial type."

"Rome's strength did not lie in her generals, but in her farmers, who could not be crushed by defeat."

"The vigorous mind and the robust frame which made him victorious in battle were his weakness when at peace. He needed costly nutriment, and when brought into free economic competition with Africans and Asiatics he starved."

"By conquest the countries inhabited by races of a low vitality and great tenacity of life were opened both for trade and slaving, and their cheap labor exterminated the husbandmen of Italy."

"The great estates stocked by capitalists with eastern slaves, who, at Rome, undersold all competitors."

"Competition grew sharper among the Italians (Romans) themselves. As capital accumulated in the hands of the strongest, the poor grew poorer and pauperism spread."

"By the year 400 distintegration was far advanced; the empire was crumbling, not because it was corrupt or degenerate, but because the most martial and energetic race the world had ever seen had been so thoroughly exterminated."

"In the seventh century Asiatic competition devoured the Europeans in the Levant, as 300 years before it had devoured the husbandmen of Italy."

"The population sank fast, and by 717 the western blood had run so low that an Asiatic dynasty reigned supreme."

In view of the demonstrated effect of Asiatic competition on the well-being of our race in the past, it is apparent that the people of the Pacific coast, in securing the passage of the Chinese Exclusion Act, were right and we cannot now afford to open our gates to Chinese immigration.

Sincerely yours,

COMPTON I. WHITE,
Member of Congress.

Strikes

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 21, 1943

Mr. HOFFMAN. Mr. Speaker, from the United States News of June 25, page 44, comes the following:

Strikes: Significant facts that stand out from a study of final figures of the Bureau of Labor Statistics on strikes that occurred in 1942:

The first year of war brought a 31 percent decline in number of strikes compared with 1941, a preparedness year. In number of workers involved, the decline was 64 percent from 1941, and, in man-days of work lost, the drop was 82 percent.

Also: Strikes in 1942 were concentrated largely in highly industrial States; the average number of workers involved in each strike was small; most strikes were settled without much delay; about one-half of the strikes affected war work; wage increases were the principal issues; Government agencies played a more important part in settling strikes than in previous years.

Preliminary figures for 1943 show that, in every one of the first 4 months, the number of strikes was greater than in comparable months of 1942. The following figures show the trend:

Month and year	Strikes	Workers involved	Man-days of idleness
January 1943	195	90, 000	450, 000
January 1942	156	26, 929	330, 567
February 1943	210	42, 000	170, 000
February 1942	181	58, 122	357, 333
March 1943	260	72, 000	230, 000
March 1942	234	67, 292	401, 739
April 1943	395	200, 000	675, 000
April 1942	277	56, 038	367, 400

An even sharper increase will be shown for May 1943, when the Bureau of Labor Statistics gets the figures compiled. This increase was due to the coal strike and large walkouts in the rubber and other war industries.

Papal Pronouncements on Peace

EXTENSION OF REMARKS

OF

HON. WILLIAM A. ROWAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 21, 1943

Mr. ROWAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Chicago Sun of June 21, 1943:

PAPAL PRONOUNCEMENTS ON PEACE PUT IN BOOK—LAST 5 POPES COVERED IN 894-PAGE VOLUME PREPARED BY BISHOPS' COMMITTEE

Dedicated to Pope Pius XII with the prayer that "peace, the work of justice, may be realized in our time," an 894-page volume containing the pronouncements of the last 5 Popes on peace, war, and human rights will be released today, Archbishop Samuel A. Stritch announced yesterday.

The volume, entitled "Principles of Peace," was prepared by the Bishops' Committee on the Popes' Peace Points, of which Archbishop Stritch is chairman. It contains Vatican documents dating back to 1878, which were collected for more than 3 years and compiled during the last year.

FIVE POPES INCLUDED

The peace pronouncements of Popes Leo XIII, Pius X, Benedict XV, Pius XI, and Pius XII are included in the work.

Archbishop Stritch contributed a preface to the book and the Reverend Harry C. Koenig, librarian at St. Mary of the Lake Seminary, Mundelein, who acted as editor, has written an introduction. The National Catholic Welfare Council published the book.

The keynote of the volume—that the next peace must be a lasting peace—is struck by Archbishop Stritch in his preface.

LASTING SECURITY URGED

"This time," the archbishop writes, "we must make a peace that will give lasting security to all nations and peoples. It is hard to contemplate what would be the consequences of a failure at the peace table when victory comes."

Quoting the statement of Pipe Pius XII after the first aggression of the Axis Powers that "the international problems involved were by no means insoluble," he continues:

"Despite all efforts to preserve peace, the Nazi party went to war. It did not conceal its objective of setting up by force a new world order in which a single nation would dominate and the other nations would be mere tributaries to its wealth and power.

"FOUR FREEDOMS" CITED

"Let any student in full calmness and impartiality examine the proposal of the Axis and study the philosophy which inspires it and he will be compelled to conclude that it holds no promise of world peace."

Contrasting Axis aims with the peace objectives of our own country, namely, "defense of the 'four freedoms' and the making of them the basis for neighborly international collaboration," Archbishop Stritch observes that this is "the language of honest peacemakers."

"History has bestowed on us a great, grave world responsibility," he says. "We shall be a mighty force at the peace table. Men everywhere are looking to us to give them a good peace. We dare not fail. Even in the midst of war we are trying to make the plan of a peace which will offer lasting security. To us men look for a genuine peace and we must leave no stone unturned to give it to them when victory comes to our arms. * * *

"There must be a deep understanding of the ills which afflict our world, a right evaluation of the problems of nations and peoples, a frank admission of past mistakes, a willingness to sacrifice seeming national advantages beyond even the limits of justice. Antecedent to all this there must be a deep humility in the nations, particularly the powerful nations, a humility which is inconsistent with sordid national interests and frees the mind to discover reality in its full proportions. * * *

"Nowhere," he adds, "do we find a clearer statement of the truths, facts, and principles which are postulates in the making of a good peace than in the statements of the Popes of our times. * * *

"These statements strongly defend native human rights, assert the dignity of man, inculcate the social derivations from human personality, defend against racists and tribalists the unity of the human race, vindicate the moral law in all human relations, social, political, and international; denounce the usurpation by the state of authority to dominate all human behavior under the tyrannical claim that it is the sole source of all rights, call for the freedom and dignity of the family, and postulate Christian brotherhood in our dealings with all peoples."

Jap Propaganda

EXTENSION OF REMARKS

OF

HON. JOHN LESINSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 21, 1943

Mr. LESINSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article written by Robert L. Norton, which appeared in the Boston Post on June 16, 1943:

ROBERT L. NORTON COMMENTS

The most effective way of countering enemy propaganda is to recognize its essential truth, if and when the truth is apparent; then do something about it. There isn't any doubt but that the Japs have a powerful weapon at their command in fomenting discord between this country and China, when they emphasize the Chinese Exclusion Act in our immigration laws.

JAP PROPAGANDA

Typical of the propaganda which the Japs are using in the Orient is this widely distributed leaflet which reads:

"America is China's ally. Americans say they love and admire the Chinese. But can you go to America, can you become citizens? No. Americans do not want you. They just want you to do their fighting. Their Exclusion Act names you and says you are unfit for American citizenship. If Generalissimo Chiang really has influence in America, why has he not had this stigma erased from American law? There will be no such discrimination against you in the greater east Asia coprosperity sphere."

No sound argument has been offered in Congress against the repeal of the Chinese Exclusion Act.

All that is sought under the present proposal is to amend the laws so that China shall be given a yearly quota of 107.

The figure of 107 for China is arrived at by exactly the same formula as the figure of 65,000 for England is arrived at, based on the Census of 1890. China does not care how small her quota is as long as the stigma against her is removed.

It is of the highest importance to strengthen the determination of China and her people to keep fighting until the United Nations, and more particularly the United States, are able to provide decisive military assistance.

As Admiral H. E. Yarnell, retired, cogently points out, the main attack on Japan must come from the mainland of Asia. This area is the only one from which air power adequate to inflict serious or decisive damage to Japanese arsenals and munitions plants can operate and from which forces for the invasion of the main Japanese islands can be based.

Russian bases cannot be relied upon since these would probably be occupied by Japanese troops very soon after war between Russia and Japan began. This is due to the exposed position of the Vladivostok area with reference to the position of the powerful Japanese army in Manchuria, which renders the successful defense of this area a very difficult operation.

TEST OF SINCERITY

The repeal of the Chinese exclusion laws would supplement the annulment of treaties affecting extra territoriality and special privilege. Taking this action would benefit the Allied cause just as did the dissolution of the Third Internationale.

There can be no peace in the post-war world unless there is a strong and stable democratic government in China and unless the traditional friendship of that country with the United States is maintained.

This friendship will not survive if the exclusion laws are not removed. And if for no other reason, they should be removed in recognition of the splendid bravery and endurance of this great people who for six years have fought America's most dangerous enemy.

Old Glory and the New

EXTENSION OF REMARKS

OF

HON. THOMAS E. MARTIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 21, 1943

Mr. MARTIN of Iowa. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following poem by Harold J. Wilson, of Burlington, Iowa:

OLD GLORY AND THE NEW

Today "Old Glory" still is flying,
Proud in ancient story,
But with every soldier's dying,
There must come new glory.

Then we'll see a league of nations,
World police and courts of law
Based on global-war relations,
Things our fathers never saw.

Youth is young, but we are aging,
Youth will lead this future stride
Forward through new law and order,
Casting selfishness aside.

Freedom then from desolation,
Freedom from all war and fear,
Freedom—where men work together,
Freedom—which all men revere.

So I shout this ringing challenge,
With a pledge of consecration,
Down with future wars forever!
Down with futile isolation!

—*Harold J. Wilson.*

Free Speech and a Free Press

EXTENSION OF REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 21, 1943

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Oil City (Pa.) Derrick of June 18, 1943:

FREE SPEECH AND A FREE PRESS

"The Supreme Court of the United States, on May 10, 1943, gave to the Federal Communications Commission full authority to determine what shall be broadcast over any radio station, whether it be news, drama, music, comedy, or politics. The result is that a Government agency may now abolish freedom of speech for radio.

"Whether or not freedom of the press shall be endangered by radio's loss of freedom of speech is a matter for the press to decide."

The above paragraphs are taken from a letter addressed to the newspaper editors of America by the National Association of Broadcasters, which seems to be of the opinion that this decision endangers freedom of the press and freedom of speech.

We do not think the Supreme Court had such intention. There is nothing in the Bill of Rights that guarantees freedom of radio.

The broadcasters of America have received from the Government, or the people, priceless privileges which should be used with the utmost discretion. Having granted those privileges, the Government has every right to supervise their use and to protect the public from their abuse. The air does not belong to the broadcasters. It belongs to the people of the United States. The right to use it is not inherent in any individual or group. It is a license granted by the Government.

Once an individual or group becomes the owner of such license it begins to capitalize this public monopoly. In the dissemination of news the broadcasters have brazenly commercialized a field filled by responsible newspapers since the birth of the Nation. Until this court decision was handed down there was little if any consideration by the broadcasters for the freedom of the press.

The Government, which is the people, has every reason to be jealous of the radio power it grants. It is a right to use the facilities of the American people to reach the ears of millions. The possibilities of radio for good or evil are tremendous. The Government has every right to know that the news being broadcast is true or false. It has a right to make sure that the music, comedy, or drama is clean and constructive instead of filthy or destructive. Radio should play no favorites in politics. It should be as legally responsible in cases of slander as newspapers and magazines are in cases of libel. The Government is simply protecting the public from what, if willfully used, could be capable of untold damage. This is a commission function.

It is the absolute right of any individual or group to publish a newspaper. It is the absolute right of any individual or group to address the public indoors or outdoors. We do not think the Federal Communications Commission, acting in the interest of the public, has any urge or intention to limit free speech or a free press. This is a fundamental American right. But when the Government grants a radio license to one individual or group and denies it to other individuals and groups who may seek it, it creates a property right in that license which the licensee proceeds to exploit for his own benefit and profit.

In Great Britain and Canada this power of exploitation is granted sparingly. Only a small portion of their radio time is permitted to be commercialized. In the United States the broadcasters, unless the Government needs its radio facilities for the time being, do as they please with them. It is high time the Government protected its own rights, which are those of the people. It has created tremendously valuable public privileges with no charge. If these privileges are to be granted to a few and denied to the millions of people who really own the air, the licensees have no right to question the public regulations to which these privileges are put.

In fact, commercialization of these privileges should be severely curtailed and fairly and intelligently regulated. In pursuance of this it is not the freedom of speech or freedom of the press which is jeopardized but freedom of the air, which is owned by the public but exploited by a few licensees.

Destruction of Narcotic Ring Accomplished by Bureau of Narcotics

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSI OF REPRESENTATIVES

Monday, June 21, 1943

Mr. COCHRAN. Mr. Speaker, under leave granted me to extend my remarks, I include the following statement by the Treasury Department relative to activities of the Bureau of Narcotics:

Commissioner of Narcotics H. J. Anslinger today called the conviction of George and Elias Eliopoulos in Federal court in the eastern district of New York a significant accomplishment in the world-wide fight against illicit traffic in narcotics.

Mr. Anslinger branded the brothers, who are Greek nationals, the No. 1 narcotics smuggling combination of all time. He expressed gratification that the Treasury's Bureau of Narcotics and Customs had been able to assemble conclusive evidence against the pair when at last they came into United States jurisdiction, more than a decade after their international crime empire began to crumble.

The Eliopoulos brothers were convicted late last night by a jury in the court of Judge Mathew Abrusso in Brooklyn on an indictment growing out of a large seizure of morphine landed from the steamship *Alesia* in 1930. The shipment consisted of 25 cases labeled "furs," but actually containing 17,500 cans of narcotics, worth a substantial fortune in the traffic of that day; and, at prices prevailing in the underworld of today, millions of dollars.

The prosecution was directed by United States Attorney Harold Maurice Kennedy and his assistant, James G. Scileppi.

International police annals contain no more fantastic story than that of the rise and fall of the Eliopoulos brothers. The "drug barons of Europe" reached a position of virtual world monopoly in illicit narcotics traffic during the years 1929, 1930, and 1931.

Mr. Anslinger says:

"The resurrection of this case from the comparatively distant past is particularly interesting in that it affords a striking contrast between the prodigious quantities of narcotic drugs at that time readily available to the illicit traffic as compared with the relative scarcity which has existed during the past several years.

"It is an eloquent testimonial to the marked progress which, up to the outbreak of the present World War, had been made through international cooperation in the suppression of this traffic."

In volume and extent of operations, the Eliopoulos brothers have never been approached, in the opinion of Treasury narcotics officers. Veritable tons of opium were smuggled into China from their European factories, in addition to the vast traffic directed at the United States through the machinations of the pair, who maintained a "front" as businessmen and bankers.

By the expedient of sending to prison one after another of the Eliopoulos agents and distributors in this country, and by seizure after seizure of costly contraband by customs, the Treasury officers undermined the foundation of the smuggling conspiracy; but the two principals remained far from the jurisdiction of American courts.

In the meantime, world public opinion was crystallizing into a crusade against this nefarious business, and international cooperation in its suppression was developing through the medium of the League of Nations with the United States taking a leading part.

The drug barons, who boasted of the friendship of kings and princes, finally felt the heat. They began a flight across international boundaries, at first attempting to take their drug factories and their smuggling technique with them. Finally their hegira became a quest for sanctuary only, and as World War No. 2 spread across Europe their plight became desperate.

The Eliopoulos brothers had been too closely associated with European politics, as well as crime, to feel any emotion except terror as the German hordes swept over most of the continent.

Their trail had led from France to Germany, from Germany to the Balkans and Greece, and finally from Greece to north Africa. There they found an unfriendly haven, and the then potent Afrika Korps made it a hazardous one. Apparently the possibility of prosecution on almost forgotten charges in United States courts held less terror for them than the uncertainties of war-torn Europe and Africa. They fled to the United States in 1941; and the Treasury officers promptly learned of their presence and proceeded to assemble their evidence against them.

Treasury officers said the list of American associates, distributors and connections for the Eliopoulos brothers constitutes a substantial "directory" of American criminals. Included are such notorious figures as the Newman (Neiditch) brothers; Louis "Lepke" Buchalter, Samuel Bernstein, August Del Gracio, "Legs" Diamond, Arthur Flegenheimer ("Dutch" Schultz), and many others.

Bernstein, now serving a 10-year narcotics sentence and facing another 7-year term at the conclusion of his present imprisonment, was a major witness for the Government in the current trial, and several other convicted traffickers also testified. Bernstein testified in detail as to how the conspirators used trans-Atlantic steamers to transport their contraband cargoes, through such devices as false-bottomed trunks and falsely marked packing boxes. He told of various trips to Europe on which he conferred personally with the Eliopoulos brothers, and was entertained at lavish dinners.

Treasury officers said evidence obtained in the Eliopoulos and related cases disclosed numerous instances of double-dealing, double-crossing, and even blackmail among the principals of the narcotics traffic of the early thirties. The Greek brothers did not hesitate

to see that authorities were tipped off on shipments projected by American traffickers who appeared to be growing too powerful in the trade, even when the Eliopoulos combine itself had sold them the drugs.

Both brothers testified in their own defense in the trial just concluded, George denying any part in the narcotics trade, while Elias contended he dealt only with the Orient, which, he contended, was not illegal. An interesting point in the case was the successful contention of the Government that the statute of limitations did not prevent the long-delayed prosecution of the pair, since they had remained outside the United States.

Tribunals of justice are no novelty to the brothers. They were expelled from France following lengthy hearings more than a decade ago, and Elias had another brush, subsequently, with the law in Germany, when a large narcotics seizure seemed to point to him. Significant of the potency of international cooperation was the work of French, British, Netherlands, and German authorities in keeping Elias Eliopoulos under surveillance during a journey from Paris to London, thence to Rotterdam and on to Mannheim, Germany, where he was arrested in March 1932. Released on bail, Elias skipped to Athens.

There, late in 1932, apparently feeling secure from prosecution so far beyond the jurisdiction of United States courts, and wishing to clear George of the charges in France, Elias made voluntarily to Egyptian and American officers an amazingly frank disclosure of his operations. He told of making a trip to China with an associate in 1928 to make a survey of the narcotics traffic; of learning that there were large profits to be made; and of drawing up a business agreement with a confederate in Tientsin. He returned to Paris, expanded operations and amassed a fortune in a few years. This statement was introduced as evidence in the Brooklyn trial.

It remained for a second World War to force the brothers into the jurisdiction of the country whose laws they had flouted, and last night's verdict in Federal court in Brooklyn suggests that the amazing story of the Eliopoulos brothers may have its finis written within United States prison walls.

The Federal jury, after hearing evidence for 2 weeks, returned its verdict at 11 o'clock last night. Both brothers were found guilty of violating the Harrison Act on two counts, and in addition, Elias was convicted of conspiracy.

Sentencing of the pair probably will be delayed pending disposition of defense motions.

Our Relations With Russia

EXTENSION OF REMARKS

OF

HON. CHRISTIAN A. HERTER

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 21, 1943

Mr. HERTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Rev. Stephen H. Fritchman from the Boston Herald of May 30, 1943:

Any article on the Soviet Union published today in American books or magazines aids or injures the cause of Allied victory. For this reason the cavalier canard, the careless half-truth, or the deliberate effort to divide the existing friendship between our people and those of Russia can as surely play into enemy hands as sabotage in the factory or black markets in our commerce.

Today we as a people know that the American newspaper can speed the day of victory for all the democratic nations united against aggression and fascism. It can also, by the circulation of prejudice, distrust, and fear of our own allies impair our unity, weaken our morale and if not stopped by public opinion lose us the war.

In order to live with any success in a world of international relations, millions of Americans are learning that you can gain an appreciation of other countries without diminishing in the slightest your loyalty to your own traditions. This problem appears in all its sharpness in our relations with China, with Britain, with Latin America, and Russia. Rooted in the tradition of Jefferson and Tom Paine, we are planning to cooperate wholeheartedly with other nations in war and peace as an essential condition for citizenship in the new world which will replace the old one of primitive savagery, war, and suspicion.

To deny the reality of the alliance we have with Russia, to weaken our sense of fraternity with her millions of proven heroes on battle front and behind the line is to play the game of Goebbels, even though we do it unconsciously.

Those of us who have traveled across America and seen her power in factories, on farms and timberlands, who talk and live in friendship with her common people in shops, in union halls and churches, have no need to fear another democratic nation and her growing might. One reason, it seems to me, that the people of the United States in recent months have stripped themselves of long-cherished prejudices about Russia has been the sense of natural friendship we can afford to have with a nation of 193,000,000 people stretching across one-sixth of the globe and speaking 150 languages and dialects; a nation efficient in her industry, united in her domestic will, firm in her pursuit of people's institutions for the common good. Not just Mr. Joseph Davies and Mr. Wendell Willkie have discovered the vigor and youthfulness of the Soviet peoples, but millions of Americans in Kansas, California, New England, and elsewhere who through their newspapers, their radios, and their personal contributions of medical supplies and clothing to the Russian citizens feel a new bond of unity and good will. Happily, to most of us in this country it is not self-abasing to admit and rejoice in such an ally. It is the mark of maturity as a people that we Americans can correct yesterday's misinformation and rejoice in truth long withheld.

I have seen the recent movie Mission to Moscow. The picture is controversial because it deviates from a previous impression which had become fixed in our minds at a time when far fewer of the facts were known. Ambassador Davies recorded at the time of his residence in our Embassy in Moscow that the trials had established the guilt of the defendants beyond reasonable doubt, and he recorded at that time how a foreign ambassador in Moscow, equally convinced that the trials were genuine, nevertheless told him that it would be just as well if they could be considered spurious abroad. It was the "just as well" version of the foreign ambassador which was published abroad so effectively that a film embodying Mr. Davies' original recorded observations now seems so surprising that it is considered controversial. The controversy followed a familiar pattern. The simple utterances of Soviet leaders, the simple act of the fifth-column activities terminated by the trials do not appear sophisticated enough for some foreign observers. Hidden meanings have to be imagined. Riddles must be manufactured. Unlike other countries, Russia cannot have had ordinary Quislings. Similarly, today Russia cannot be thought to have reasonable statesmen making considered statements of policy.

When Stalin says "The policy of bestial hatred is alien to the Soviet people," he must not be thought to mean what he says. That would be too simple. We must seek a secret meaning in his words until Stalin becomes no longer a responsible political leader of an Allied nation, but, rather, an oriental sphinx simmering in an inscrutable hatred.

It is a sign of growing maturity that we are getting away from the twin evils of spineless appeasement and unreasoning hatred. Some of our American columnists on alternate days still credit Russia with a desire to make peace with Germany and a desire to slaughter all Germans. After all, we in our own country not long ago alternated between a feeling that we could do business with Hitler and that all Germans should be sterilized. Both of these extremes are too foolish to be adopted by either Russians or Americans, but on a reasonable middle road there are two points that stand firm.

First, crimes remain crimes and are not covered nor excused by the wearing of a Nazi uniform. The demand that punishment be visited on war criminals is common not only to the Russians but to all the people of Europe and America who have suffered Axis cruelties from the massacre of Rostov to the execution of American airmen in Tokyo. It is not a demand for revenge but for implacable and indispensable justice.

Second, the Fascist policy of plunder has seen to it that the destruction of food, clothing, medicines, and shelter have been concentrated outside of Germany. Our armies of liberation will meet shivering multitudes whose food and blankets have been taken for the service of the German Reich. They will demand physical restitution of the stolen goods, of the ruined homes and factories from France to Russia, not as a demand of revenge but of survival and justice. It is just and right for Christians to plan for the relief of German populations. We must never forget after the war our moral obligation to send for every ton of goods going to Germany several tons to the areas of German devastation. These are world problems calling for the strengthening of world good will on a basis of justice. Discussing them in terms of hatred and revenge ascribed to our allies, or in secret designs imputed either to the people of Britain or Russia would weaken our pursuit of the goal.

For all our differences in politics, in economic practice, and in social custom we talk a common language of democracy. Americans have long since learned the need for give and take within our own Nation between sharply divergent social and economic habits represented in the different sections of the United States.

Nothing is more of a disservice to United Nations unity and swift victory, to say nothing of post-war understanding, than perpetuating the myth of Russia's secret war aims, often described as "the Oriental enigma of Josef Stalin." Many Americans today profoundly wish our own war aims had been as clearly stated as the Soviet Union's. For those who choose to find them with but a modicum of searching, they stand clear and bold. Probably the clearest is Stalin's order of the day in 1941: "We have not nor can we have such war aims as the seizure of foreign territories or the conquest of other peoples, irrespective of whether European peoples and territories or Asiatic peoples and territories, including Iran, are concerned. Our first aim is to liberate our territories and our peoples from the German Nazi yoke.

"We have not nor can we have such war aims as the imposition of our will and our regime on the Slavic and other enslaved peoples of Europe who are waiting for our help. Our aim is to help these people in their struggle for liberation from Hitler's tyranny,

and then to accord them the possibility of arranging their lives on their own land as they think fit, with absolute freedom. No interference of any kind with the domestic affairs of other nations.

"Russia's first aim is to free her own territory, and the second aim is to free the enslaved peoples of Europe and then allow them to decide their own fate without any outside interference in their internal affairs." National survival and integrity, the right to order their internal society as they choose to do under their own constitution, is their basic war aim for him who runs to read at will.

It has been said that hatred is the key to Russia today. Hatred of the Fascist invader there is in Europe today—not only in Stalingrad, but in Antwerp, Prague, Paris, and The Hague. It is the inevitable creation of a total war and only the swift cessation of this war in democratic victory can possibly end its growth. Division between allies postpones and jeopardizes this victory. A failure to build now confidence and normal international relations with Russia will bring the war to our own shores where the same pestilence of hatred will infect us—and to the same degree. Hatred is one key to Russia, Greece, France, Britain—but to none more than another. War breeds hate as every front-line soldier knows, and it is for this reason that our President and the other leaders of the United Nations seek by every possible device the termination of the war in unconditional surrender as soon as flesh and blood can bring this end to pass.

Premier Stalin has stated very pointedly, "Occasionally the foreign press engages in prattle to the effect that the Red Army's aim is to exterminate the German people and destroy the German state. This is, of course, a stupid lie and a witless slander against the Red Army. The Red Army has not and cannot have such idiotic aims. The Red Army's aims are to drive out the German occupants from our country and liberate Soviet soil from the German Fascist invaders.

"It is very likely that the war for the liberation of the Soviet land will result in ousting or destroying Hitler's clique. We should welcome such an outcome. But it would be ridiculous to identify Hitler's clique with the German people and the German state. History shows that Hitlers come and go, but the German people and the German state remain."

There is no clear reason for interpreting this into meaning the opposite than there would be for interpreting the clear statements of our leaders at the Atlantic Charter and Casablanca conferences.

In the United Nations today, and after the war also, religion will serve as a bond or a barrier according to our own use of intelligence and imagination. The day of religious monopolies is over if the eleven living religions in the world are to exist side by side without strife and bloodshed. The second freedom, that of religion, includes the freedom to define and practice religion in a great variety of ways. I for one agree with Dr. Frederick May Eliot, president of the American Unitarian Association, in his judgment that in Russia "what we failed to understand was that religion is a much bigger thing than any of its particular manifestations, and that a people could reject all the ideas, theories, customs, and forms of organization which either they or we had associated with religion without rejecting religion itself. All men tend to identify religion with their particular forms through which their own religion has been transmitted and nurtured, and it is true that religion necessarily has to make use of such particular forms. But it is erroneous to let ourselves believe that any forms have a monopoly of religion." But whether he be correct or not, the Russian people must share the same right we in America possess, that of taking or leaving religion according to our private judgment and to keep it out of statecraft. The Russians learned this rule from our own Thomas Jefferson. In an open encounter Christianity can take care of itself and the testimony of Miss Bourke-White, Miss Curie, Mr. Albert Rhys Williams, Mr. Davies, and many others is united: Russians are free to practice their religion without interference so long as it does not encroach upon the freedom of others to reject it.

The World's Largest Appropriation Bill

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 21, 1943

Mr. DONDERO. Mr. Speaker, the bill now before the House of Representatives, H. R. 2996, is, without doubt, the largest single appropriation bill ever presented to a legislative body in the history of the world. It is an astronomical sum, so colossal as to be beyond human comprehension. We are asked to appropriate $72,000,000,000 for the Military Establishment of the Nation for the fiscal year ending June 30, 1944. This gigantic sum is four times the total expended by the War Department for all purposes in World War No. 1. It represents approximately one-quarter of the assessed valuation of all property in the United States in 1938. It is nearly three times the amount of all invested capital in the railroads of the country. The figures are almost unbelievable. They stagger the imagination and forecast the heavy burden which this and succeeding generations must bear. The cause for the major part of this enormous expenditure is the relentless god of war.

It is estimated that the national debt at the end of this war will be $350,000,000,000—an all-time world's record. This is equivalent to and more than the entire national wealth in 1940. In this year of 1943 we expect 62 percent of our national income will be spent for war. We are engaged in a global war as colossal as the sums of money we appropriate to wage it. It is a life-and-death struggle. The destiny of our country is at stake. The effort of mankind to be and remain free is in issue. All for which we stand as a nation will survive if we win and perish if we lose this terrible conflict. We must not lose, we will not lose, the war. United we stand and united we shall win no matter what the cost may be. Stupendous as this sum is, I shall support it and vote for the passage of the bill, and I believe that it will have the unanimous support of the entire membership of this House. Let our enemies understand that the American people are united and determined to preserve, protect, and defend home and country and every sacred principle of justice and freedom under which we live.

What a contrast our day and age presents in the financial history of the Nation. Fifty years after the Revolutionary War and the birth of the Nation, the Federal Government paid a dividend to the States out of a surplus in the National Treasury. Every man, woman, and child will owe $2,650 to the Federal Treasury as his or her share of the anticipated national debt. This means that the average American family of four will owe $10,600 as its proportionate share of such debt.

Be that as it may, the statement of the Committee on Appropriations appearing on page 4 of the report on this bill, I believe, represents the unanimous opinion of the membership of the House and the people of the country, namely—

> Everyone is determined that the armed services shall have every dollar essential for the early attainment of an unconditional surrender of all of the Axis Powers.

In 2 years the Army has had an unprecedented growth from 1,350,000 men on June 30, 1941, to 6,500,000 in June 1943. Before the end of this year it is expected to reach 7,500,000 men. This represents but one arm of our monstrous war machine, but it also indicates the vast sums of money required to support the war effort of the Nation.

Let us pass this bill today and give Rome, Berlin, and Tokyo to understand that the people of the United States are ready and willing to make any sacrifice necessary to maintain our country, our institutions, and our American way of life.

Our Soldiers and the Sporting News

EXTENSION OF REMARKS

OF

HON. SAMUEL A. WEISS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 21, 1943

Mr. WEISS. Mr. Speaker, we all know that most of our men in the armed forces of our country love sports, and they yearn for news about American sporting events. The War Department states that our boys overseas have made a demand for short wave broadcasts of baseball and football contests back home, and for more news publications relating to sporting events. This is a great morale builder for our servicemen. To accommodate our boys overseas and still comply with postal regulations, Mr. J. G. Taylor Spink, manager of The Sporting News, an international sports weekly of St. Louis, Mo., has compiled an overseas edition that is distributed by the Special Service Division A. S. F., War Department, to our boys in all parts of the globe, and from various polls taken, we find our boys digest every word of The Sporting News. We salute Mr. J. G. Taylor Spink and The Sporting News for the splendid contribution in time of war. This is another boost for sports and helps prove that it is a vital factor in our all-out war effort.

Finland

EXTENSION OF REMARKS

OF

HON. JOHN B. BENNETT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 21, 1943

Mr. BENNETT of Michigan. Mr. Speaker, last week the Government of Finland paid another installment of its World War No. 1 debt to the United States. This might be construed as a gesture of wartime expediency were it not for the fact that it is and has been the consistent and established policy of Finland to pay up this debt ever since the date it was incurred. A policy, incidentally, which has made the position of Finland unique among the World War No. 1 debtors of the United States.

The American Finns are outstanding in their loyalty and patriotism to the United States but at the same time they have every reason and justification for being proud of the honesty and integrity of their mother country. Finland, through no fault of its own, has been in a desperate situation all through this war, besieged as she has been from all sides by forces determined to destroy her national existence. She has been the innocent victim of European political intrigue.

It is sincerely to be hoped by the people of this country who have such basic admiration for the people of Finland that our mutually friendly relationship will continue; and that time will enhance the historic friendliness which has always existed between our Governments.

I think I voice the opinion of the great majority of Americans, Mr. Speaker, when I say that Finland is entitled to a fair and just peace. And I think it is the moral duty of our Government to intercede in Finland's behalf at the peace table to the end that her democratic government may remain free of encroachment at the hands of any other nation.

As evidence of the loyal and patriotic feeling of the Finnish people of this country, I include in my remarks a statement received from the Suomi Synod Conference of Michigan, recently held at Marquette, Mich.:

SUOMI SYNOD, CONFERENCE OF MICHIGAN,
Ishpeming, Mich., June 7, 1943.

Hon. JOHN B. BENNETT,
Congressman, United States
House of Representatives,
Washington, D. C.

DEAR SIR: Delegates assembled at the annual convention of the Michigan district of the Suomi Synod (also known as the Finnish Evangelical Lutheran Church of America) at Marquette, Mich., May 28-30, 1943, representing 65 congregations with a total membership of approximately 13,000, decided to send you an expression of their sincere satisfaction concerning the sympathetic and friendly relations of our country with the Republic of Finland in these trying times, and, further, an expression of their deep desire and humble prayer that, in spite of the difficult present situation and much agitation to the contrary, our country would continue to retain peaceful relations with this little democracy of the North, which has been forced into the position in which it now is through circumstances beyond its control. We will appreciate your efforts and influence in this matter.

CARL J. TAMMINEN,
President.
JOHN E. HATTULA,
Vice President.
ALEXANDER G. TAMMINEN,
Secretary.

Legislation by Hysteria

EXTENSION OF REMARKS

OF

HON. ROBERT RAMSPECK

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 21, 1943

Mr. RAMSPECK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Herald Tribune of June 21, 1943:

LEGISLATION BY HYSTERIA

Because Mr. Elmer Davis made some ill-considered remarks in a speech last Monday was certainly no adequate reason why the House, in its long and superheated session on Friday, should vote impetuously to smash the domestic division of the Office of War Information and so go far to wreck the whole machinery painfully created to bring some kind of sense and order into news and publication policies in wartime. This is legislation by hysteria, not headwork. The gentlemen seemed to have only a very confused idea of what they were doing. "The American press needs no Dr. Goebbels," one of them exclaimed; another hotly declared that Mr. Davis is "not the man to coordinate the press and radio of the United States if he has come to the conclusion that they are incompetent." But Mr. Davis is not even remotely a Dr. Goebbels; it is not his function to coordinate or control the press of this country, and he would certainly not succeed if he should try it. The American press can very well take care of itself. But it cannot regard without dismay some of the other consequences of this drastic destruction of his Office.

The domestic division of the Office of War Information has done some foolish things, it has made some mistakes and it has manifested some tendencies which may lend color to the congressional suspicions and hostilities. It has also done valuable work in damming the former floods of unregulated Government press-agentry, in controlling the outpourings of conflicting and confusing speeches by vocal public officials, in generally reducing the original information chaos. Its field offices have avoided duplication and more local confusion among the clashing governmental agencies. It has an essential function in providing domestic news for its own overseas branch. And, most important of all, it has by patience and good sense done a great deal to inculcate into the military services an understanding of the vital importance of keeping the public informed and a better idea of how to do it. The steady improvement in the news policies of the services is largely the result of the fact that the Office of Price Administration was created and a man of Mr. Davis' integrity and knowledge placed at its head.

Most of the press supported the establishment of the Office of War Information because the need for these things was so urgent. For the same reason, to kick this all out of the window in an afternoon can scarcely be regarded as an act of statesmanship. Neither, perhaps, can one so regard some of Mr. Davis' irritated replies to the preemptoriness of the House. Ultimately, the Office of War Information and its head must stand or fall by their ability to retain the country's confidence in their impartiality and common sense. But that is no reason for treating this very important aspect of our organization for war as if it were a piece of hot-weather politics. The whole episode is only another example of that impatience, ill temper, pettiness, and inability to keep the great ends clear from which the country seems, in this moment of comparative pause upon the battle fronts, to be suffering. It is an unworthy example, and the Senate should by all means rescue the House from its haste. If the Office of War Information needs amendment it should be done with far more care than this.

Office of Price Administration Removes Pleasure-Driving Restriction for Kingston Trip

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 21, 1943

Mr. REED of New York. Mr. Speaker, I was amazed when I picked up the Saugerties (N. Y.) Daily Post under date of Friday, June 11, 1943, to see published therein this notice:

RESTRICTION REMOVED FOR TRIP TO KINGSTON

The Office of Price Administration has issued an order removing the pleasure driving restrictions for those from Saugerties desiring to attend the ceremonies at Kingston on Saturday afternoon. The removal of the ban applies for the occasion only, and the Office of Price Administration instructs those using cars to go to Kingston Saturday, to carry as many passengers as their car will accommodate. Secretary of the Treasury Morgenthau and other dignitaries will be at Kingston tomorrow to deliver an address at the unveiling of the Kingston Treasury flag.

I know that Ulster County is one of the important agricultural counties and one where the farmers have been terrifically hit by the gasoline restrictions. The fact is that it is one of the counties where the failure to get sufficient gasoline for farm machinery is greatly handicapping the farmers in their effort to produce for the war. The employees in the defense industries have been held to strict accountability for every ounce of gasoline used by them in going to and from work. Yet it appears from this article in the Post that the O. P. A. does not hesitate to lift the restrictions when, by so doing, it will serve a political purpose.

I am not surprised that indignation on the part of the public should rise to white heat at such a display of New Deal arrogance in the improper use of its dictatorial power through the O. P. A. The citizens of this country may not be

saying much, but they are doing a powerful lot of thinking, and sooner or later they will demand an accounting from the new dealers, who feel that they are the masters, and not the agents, of a free people.

I resent the charge constantly made by the administration that the honor system will not work, so far as the American public is concerned. I maintain that the honor system will work in every demand that is made to prosecute this war to a quick and final conclusion if, and when, this administration will set the example.

Civil Aviation

EXTENSION OF REMARKS

OF

HON. EVAN HOWELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 21, 1943

Mr. HOWELL. Mr. Speaker, the pending civil aeronautics bill, now being considered by the Committee on Interstate and Foreign Commerce, contains many provisions of extreme importance to the post-war welfare of America's civil aviation.

It is to be hoped that the bill may be speedily adopted in order that the industry may know as soon as possible what will be the legal conditions in accordance with which it must make its post-war plans.

With each day in the development of our wartime aviation it becomes clearer that civil aviation will grow to be one of our largest and most important industries after the war. Whatever its size, however its significance in terms of both national defense and commercial prosperity will be far in excess of the numbers of people employed or the capital invested in the industry.

Beyond any question, civil aviation will open a new domain having an effect upon our national habits and way of life just as important as were the effects flowing from the opening of the West in the days of the pioneers.

Whether the full development of the industry takes ten or twenty or a hundred years, the domain which it will open is, in physical terms alone, far greater than the area laid open to our forefathers by Lewis and Clark or any other of the great explorers. For that domain literally is as broad as the continent itself and reaches higher into the heavens than the eyes of man can see even in a cloudless sky. The domain is nothing less than the entire air space, three dimensional in measure, limitless in extent.

For all that we now know there may one day be great floating hotels between which commerce can be conducted without ever setting foot on earth. Such a possibility is no more fantastic today than the possibility of floating airdromes in the ocean may have seemed a decade ago. Within the last few weeks we have seen seriously proposed a trans-Atlantic air line based upon great floating seadromes at convenient points in mid-Atlantic. We may not, in our lifetime, see air terminals in the air space, but the possibilities of aviation's development are so limitless that we need not close our eyes even to figments of the imagination.

In civil aeronautics legislation it has been the habit of the Congress to act with an eye to the future. It is true that we cannot now hope to formulate a body of law which we may be sure will fit conditions a hundred years hence. But we can and should look forward to the extent of our humble ability. We did so in 1926 with extraordinary success. We did so again in 1938 with even more success. But at no time than the present has it been more important and more timely that we take another look forward for civil aviation. Aviation is moving so rapidly that unless we make necessary revisions in our legislation today for the industry's immediate future this body may suddenly find that it has lagged behind the forward march of the art.

Furthermore we owe it to our country to take steps promptly to provide for aviation the necessary legislative adjustments. As I said, the industry must be informed at the earliest possible moment concerning the legislative conditions to be laid down for it in order that it may proceed to plan with confidence for its post-war expansion. We cannot wait until the end of the war—we cannot wait until next year—we must do our part now so that the administrative agencies of government on the one hand, and private management on the other, can begin immediately to lay their plans for the task ahead of them.

There is no question but that after the last war our Government lagged in the development of aviation. An enemy nation, vanquished and seemingly prostrate, blessed with none of the resources of our own people, was able by our inaction, to leap ahead of us. Hardly had the armistice been signed in 1918 than eager and scheming minds beyond the Rhine set to work to find in civil aviation an outlet for their national aspirations. Through glider clubs and other similar organizations, private flying was encouraged and grew rapidly in Germany as early as 1920. Commercial aviation ventures were immediately projected with reverberations which soon were felt in South America. We must never forget that the extremely strong place which had been won by Axis aviation interests in South America by the time this war broke out was the result of foresight and diligent, persistent work on the part of the Germans which began almost before the Versailles conference had been assembled.

In the post-war world to come we cannot afford to lag. We must be ready to move forward purposefully and energetically without delaying for a single instant.

But our economy based on American principles calls for initiative on the part of private management. In the last analysis, as long as we adhere to the cherished principles of our forefathers, it must be private enterprise which develops our civil aviation. The role of government is to provide the conditions under which the job of private management can be done most effectively.

That is why the Congress must act and act soon to provide the necessary legislation. That is why private management must be enabled soon to make its plans for the days to come. If after this war America is not to be guilty of the delay and the vacillation occurring after the last war, private management must be afforded at this session of the Congress with the legislative foundation upon which it is to build.

I do not now have the time to review all the provisions of the pending civil aeronautics bill. But illustrative of the foresight which has gone into its preparation is the very important provision for airport zoning. No problem cries more loudly for foresighted action than does that of assuring the proper protection to airport approaches. Unless means are afforded to assure that the aerial approaches to airports will not be unreasonably obstructed by adjacent structures, and unless those means are provided now, we may very well find that a few years hence we will be faced with a problem of such staggering proportions as to be well nigh bankrupting. For if we continue to leave unregulated the erection of structures in the vicinity of airports throughout the land we may soon have a condition which it will cost billions to correct. Prudent action today, moreover, will not only save us the expenditure of staggering sums in the future but will also protect the life and limb of you and me and of our children who in the air age of tomorrow will be using aviation as an ordinary means of travel.

There recently occurred, near the great Chicago airport, a tragic accident, horrible in its proportions. An Army bomber coming in to land at the airport ran squarely into a huge gas tank rising nearly 500 feet into the air on the approach pathway. That bodies were burned beyond recognition as a result of the fearful explosion is only a gruesome detail which underlines the urgent need for preventing any such senseless tragedy in the future.

Prior to this accident the Committee on Interstate and Foreign Commerce had already inquired into this very condition and had drafted the provision for airport zoning which will be included in the bill soon to be offered for the consideration of this House.

In the testimony before our committee one witness predicted the happening of this very accident under the very conditions which did in fact occur. In rereading the testimony before our committee in the light of what happened, one is struck by the coincidence between

the prophecy made and the horrible event. At the end of my remarks I am inserting a newspaper item telling of the accident and quoting from the testimony I have referred to.

This unfortunate tragedy illustrates the point I wish to make, the need for speedy adoption of legislation looking forward to building constructively for the future of civil aviation. With each new load of bombs transported through the flak-pierced night over German cities, new developments occur which will be applied when the destructive force of aviation is harnessed in the furtherance of peacetime commerce. Our airmen and our aviation industry are learning fast the lessons which they will be ready to utilize in the cause of America's commercial prosperity when peace returns. There remains only one thing to assure America's future in the air. There remains only action by the Congress to provide the legislation necessary for aviation's growth.

The article referred to follows:

[From the Chicago Sun of May 24, 1943]

FLIERS SEEK END OF DEATH TRAPS—GAS TANK IN CRASH THAT KILLED 12 CITED

WASHINGTON, May 23.—Commercial aviation officials today offered the deaths of 12 Army fliers in a bomber crash last week as an argument for action by Congress on the Lea-Bailey bill. This bill would amend the Civil Aeronautics Act of 1938 to provide for Federal regulation of flight and zoning in the vicinity of airports.

The huge gas tank against which the Army B-24 bomber was wrecked was 2 miles from the Chicago Airport. Its location had been referred to with apprehension by Col. Edgar S. Gorrell, president of the Air Transport Association of America, before the House Interstate Commerce Committee more than 2 months previous to the accident.

PAINT HAS LOW VISIBILITY

Colonel Gorrell said:

"There is a gas tank about 2 miles from the Chicago Airport. It is repainted every 5 years. The people who own the gas tank have just recently repainted it and spent $18,000 to do so. Yet, it has been painted in a way that does not help the pilots properly to see it.

"Were there some method of handling this situation, the rules and regulations might possibly specify the color of the paint or some other marking to help the pilots avoid the object."

Representative CARL HINSHAW, Republican, California, pointed out at that time:

"The tank extends into the overcast when the overcast is down to a minimum. It is absolutely impossible for any pilot to see it until he first comes out under the overcast."

PREDICTED IT WOULD BE HIT

Colonel Gorrell added that commercial pilots' fear of hitting the tank had kept them from "closing in" in its vicinity during overcasts, as if foreseeing last Wednesday's tragedy. He said:

"That is a hazard, adjacent to one of the most important airports in the United States, and, as I understand it, it is largely the fear the pilots have of closing in in the vicinity that has kept them clear of the tank, and thus aided them in avoiding accidents. Some military pilot coming in there who does not know about that hazard may very easily run right into it. That could happen to military pilots or private flyers who are not in and out of that port frequently."

Halibut Fishing in the North Pacific

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, June 21, 1943

Mr. MAGNUSON. Mr. Speaker, I recently received an inquiry regarding the increasing of quotas of halibut fishing in the north Pacific. This query was referred to the International Fisheries Commission which, in a letter to me, set forth a very sound policy relative to halibut propagation and fishing. Inasmuch as this is one of our most important food supplies, I deem it advisable to place in the RECORD for the benefit of the Members a complete outline of this policy as given to me by Edward W. Allen, chairman of the International Fisheries Commission. I am sure that after the Members read the enumeration of these principles by the Commission, they will be convinced that the halibut fishing industry as between Canada and the United States is in sound hands, and that the preservation of the halibut fisheries of the north Pacific are being adequately watched and taken care of. Following is Mr. Allen's statement on behalf of the Commission:

INTERNATIONAL FISHERIES COMMISSION,
June 9, 1943.

Hon. WARREN G. MAGNUSON,
House of Representatives,
House Office Building,
Washington, D. C.

DEAR WARREN: Through various references, there has come to me your letter of March 25, 1943, concerning the letter of the Fishing Vessel Owners' Association (of Seattle) to the War Production Board, urging that the quota of halibut which may legally be caught this year in the North Pacific Ocean be increased.

Many years ago, halibut was very abundant along the coast and in the salt water channels (including Puget Sound). The halibut is a slow-growing fish, not reaching maturity until the tenth to twelfth years. They are to be found in abundance only where the water temperatures on the bottom are from 3° to 8° C., and the depth of water is not too great (they inhabit the continental shelf of our North Pacific Coast). Because of slowness of growth and limited habitat, halibut are easily susceptible to serious depletion, and once the supply is badly depleted, restoration may require many years.

Because much of the halibut fishery is located more than 3 miles offshore, many of the grounds were frequented by both Canadian and United States vessels. In the absence of regulation, international or national, overfishing took place until the supply of fish upon the banks had become so scarce that fishing became unprofitable. At last, at the urgent solicitation of everybody involved, fishermen, vessel owners, and dealers, Canada and the United States agreed upon a treaty creating the International Fisheries Commission, first to investigate the situation and then to provide regulations which, when approved by the Governor General of Canada and the President of the United States, have the force of law as to Canadian and United States fishermen and vessels, both in national and international waters.

In 10 years of regulation these north Pacific banks have been transformed from a state of sad depletion to the finest halibut fishing grounds in the world. And this has been done, not only without closing the banks for any fishing season but without even reducing the annual catch below that being taken the year before regulation commenced. Not only that, the authorized catch has gradually been increased until it is now 9,000,000 pounds more than when the Commission took hold. And the fishermen are catching this increased amount of poundage with 31 percent less of fishing effort than was required for the smaller amount 10 years ago. Moreover, the price has gone up so that, in spite of short seasons, the fishermen are doing very well.

The accomplishments of the Commission have been hailed throughout the fishery world as an outstanding exhibition of practical conservation—incidentally, the first in its field.

From the outset it has been the practice of the Commission to act in closest cooperation with the fleet. After each season representatives of the unions and vessel owners from Washington, British Columbia, and Alaska assemble to discuss the situation in an informal and friendly manner. The Commission never makes any substantial change in the regulations without taking into consideration the sentiment of the fleets toward such modifications.

Last December, after thorough discussion with the fleet and with its scientific experts—and I may say that the Commission is very proud of its staff, both those who have left to join our military forces and those whom it is desperately trying to retain—the Commission increased the catch limits 1,000,000 pounds. This increase was granted with some apprehension, but because the Commission felt that the need for the wholesome food was so great that the Commission should not be too conservative, but should go just as far as possible without impairing the basic stock and again imperiling the perpetuation of a recurring supply. The Commission recognized that the increase would delay the attainment of its final objective, the rebuilding of the supply of halibut to the point where the greatest yield that the banks are capable of producing will be obtained each year.

In addition, the Commission liberalized the regulations with reference to halibut taken in fishing for other species of fish. This action was taken to encourage fishing for such other species and will increase the catch of halibut as well as of such other fish. This step was also taken in an effort to increase the war supply of food as well as to make fishing more attractive to the fishermen.

Past history has repeatedly shown that to permit the catch to become greater than replacement by spawning and growth immediately starts the banks downward toward depletion. The temporary gain by such overfishing is followed by reduced catches obtained with increased effort and consequent waste of manpower and fishing gear, as well as reduction in food supply.

In view of the present acute manpower shortage and the greater and recurring need for food as long as war lasts, the Commission believes that the best interests of Canada and the United States are served by authorizing a catch at the highest level (but no higher) which it believes can safely be maintained from year to year. Adherence to this policy will assure obtaining the largest overall production in the next few years.

When the request for a greater increase was considered at the Commission meeting,

the Commission was of the opinion that the increases requested would be detrimental to the public interest as well as to the fishermen themselves and should not be granted.

Very truly yours,

EDWARD W. ALLEN,
Chairman.

Flag Day Address

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 21, 1943

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following Flag Day address by William E. Leahy at exercises conducted by Washington (D. C.) Lodge No. 15, B. P. O. Elks, on June 13, 1943:

This is a thought-impelling occasion upon which we gather. The significance of this celebration is heavy with present import. The dedication of a day to honor the flag of our country is an appropriate demonstration of our American patriotism. It serves to stimulate and perpetuate those mighty, spiritual principles for which the founding fathers fought and upon which they built so solidly the massive edifice of our republican form of government. It constitutes the visible expression of the consecration of a united people and of their devotion to the ideals that emblem represents.

Today it is America's way of hurling back into the teeth of an embattled and maniacal enemy the assurance of the truth that God still reigns in His heaven and that, out of this holocaust and this agony, peace will come again, a just peace, a good peace, under the Stars and Stripes of that banner, that men and women may be free once more and children play in laughter. It is America's way of thundering to despotic and unprincipled aggressors that over the hiss of their shells, the crash of their bombs, and the shriek of the dying, there still screams defiant our eagle of liberty, that eagle which has flown triumphant over a thousand fights and over the ruins of a thousand battlefields, always symbolic of victory—victory in honor, victory in justice. It is America's way of once more fitting the bayonet to the rifle, the grenade to the hand, of sacrificing, upon the land and on the sea and in the air, the flower of her young manhood and her young womanhood, if need there be, that posterity may drink again out of pure fountains and breathe anew in the righteous happiness of living as freemen in a world of decency and of honor. It is America's way of girding herself once more to the frightful task of war, this time to the end and in the deadly earnestness of this awful carnage, that the purity of those ideals in which her institutions were conceived may continue on under the God of our fathers as they came down to us, a blessed heritage of inspired freedom in a land of plenty and a haven of peace.

Old Glory is our flag. We love it. We cherish it. It is the grandest flag that ever flew over a nation or a people. Not a drop of blood, spilled in an unholy cause, has ever incarnadined the red or splotched a stain or stigma of disgrace upon the white of its stripes, and the blue of its field is still ethereal in hope as its stars shine gloriously in the pride of their unsullied firmament. Let us here and now, in the murmur of its folds as it flaps in the breeze or languidly falls lazily around the standard which supports it, swear again our firm allegiance to the country, our country, which it represents and to the ideals for which it stands, and let that oath be without reservation or restraint so that it shall never be said of us that, when our country called in its hour of sorest need, we proved unworthy to bequeath to our children the greatest gift of life, which we received without struggle from those who went before.

The obligation is a serious one. The past is secure. The future lies with us. For a century and a half that flag has watched over the destiny of this Nation. It has seen strong men and courageous women dare the rigors of the cold to drive deep into the trunk of the forest the axe of civilization to build the log cabin and the school and struggle through savannahs of disease and heat that plantations might grow green where swamps once languished. It has guided the vigor of sinew and brawn to build in sweat and toil bridges across our rivers and ships upon our lakes and seas, to span our continent with roads and lay gently upon its breast the weight of many towns and great cities. It has protected a sturdy people while they grew big in their franchise to speak freely and of right within the law their thoughts of good government and the proper way of life, or to drop piously to their knees in the sorrow of supplication or the gratitude of thanks, to pray to their God, each as he in his conscience believed he should. It has encouraged industry and thrift, individualism and individuality. Under it factories and mills have risen to manufacture what an enlightened people needed and farms have produced in the heavy heads of their bountiful harvests food for a strong and a gracious Nation.

That flag has fostered the growth of our universities and colleges, the fine arts and education, that freemen might know the true value of liberty and in the enjoyment of its blessings not be forgetful of the responsibilities of its possession. It has drooped in sorrow over the wounds of its sons and daughters and hung at half mast over its dead done unfortunately to death in the gallant defense of those principles which its colors have always proclaimed. From the dawn of our independent freedom to this, our hour of the present crisis, that flag has flown, always in honor. Today all civilization looks to it for deliverance and preservation. If we stand to its defense, it will continue to fly. Should we fail, history will record it as the last flag that ever flew over a free people or nation.

It is not an easy task to become or remain a free people. Liberty is not a gift graciously presented by man to his fellow man. Liberty is for the strong, the determined, for those trained to esteem the value of its worth and who have become experienced in its exercise. It can be lost as easily as it is won, often only in travail. Freedom is the consummation of life which a liberty-loving people prize so highly that they are willing to die to attain it and then die to maintain it. The blood and suffering of 8 long years, the hunger, defeat, discouragement, but the unsurpassed resolution which our forefathers displayed proved to us the pricelessness they placed upon the vindication of those heroic and resplendent campaigns which they won for us in order to set up this form of government under which we have been privileged to live. They knew in the mandate of its denial the sweetness of liberty as the leaven which makes living rise to the worthiness of living at all. They willingly laid their lives and all their earthly possessions upon the common altar of a common sacrifice, knowing full well that, if the sacrifice were in vain, then life itself would become of small avail. But if a benign heaven saw fit to accept the offering which they made, then they foresaw a new expanse of satisfying happiness spread before them, for themselves, their children and their children's children, in the dignity of life as God ordained it should be lived but which the greed and ambition of man so often prevent or destroy in his selfish avarice or lust for power.

Of all peoples of this earth we Americans should treasure our liberty most. Most of all should we have that thorough comprehension of the extreme and almost unsurmountable barriers which they were compelled to overcome from Lexington to Yorktown in order to achieve its fruition. Ours is the duty of an unceasing and jealous vigilance. That alone will guarantee the preservation of its enjoyment. There is not a stream or river in this country, as it flows on its way to the sea, which does not re-echo the ripple of Runnymede. Every American boy and girl know that Magna Carta was wrung from the unwilling and resisting beneficence of a tyrannical John only in the spear ring of a stubbornly persistent and courageously uncompromising soldiery. Only he who is unafraid to look into the mouth of the cannon can see the grandeur of freedom beyond its breech. Only such can taste of the efficacy of that sacrifice so great but of which the right to be free is so worthy. The crown of freedom was never wrought to fit the head of the craven or the armor of liberty the body of the weak.

Heavy then is the obligation resting upon us today. That flag can never be kept flying by the utterance of sweet sounding phrases or the singing of patriotic songs alone. Action is demanded. North Africa was not just won by wishing. America will never be saved by dreaming. Overconfidence and inaction never passed on to future generations anything but despair and regret.

If we on this home front desire to see come out of this war a continuation of the way of life we have known; if we wish that our children may enjoy that way of life in the days of their maturity; if we desire that those who are now giving their lives to protect that way of life may still have it on their return, then we must become a bit more realistic; we must begin to think in terms not only of a full and complete appreciation of what our freedom means to us but what it takes in us and out of us to keep it. It is no idle terrorism to assert that every one of the liberties which we now enjoy, which too often we think are ours without possibility of loss, are marked for destruction by our enemies in this critical conflict.

The clash of ideals is so direct and absolute in this global war that annihilation of the one must follow the survival of the other. This world cannot be both slave and free at the same time. And it is going to be free But in that battle to make it free each and every one of us must do his part. Each and every one of us must make of himself a guard at the portal of every one of our freedoms. Each and every one of us must always be on the alert. Each and every one of us must fight and fight, ever and always, on and on, must give, contribute, in every way and in whatever way, fight—till we have cleaned from the face of this earth, in the peace of God and man, this despicable and disreputable scum of crazed and infamous men who would make of this world a shambles and destroy everything which good men and women hold worth while or beautiful or holy.

The tremendous impact of Bunker Hill or the blood upon the snows of Valley Forge shall not fade in our memories. America is moving on. Uncle Sam has his jaw set. His will has been forged, held in the vise of a righteous anger. His eye is hot with a burning, insuperable, invincible wrath. The command has gone down Our men are moving on every front, in every land, on every sea, and in the air. We of the home front! Fall in

behind. The dead of Wake and Bataan must not have died in vain. The ships of the Coral and Gilbert Seas must not have sunk ingloriously. The planes over Guadalcanal, the South Pacific and Alaskan waters must not have crashed unnoticed. Already, out of the East the rim of a new sun is rising, not the hideous segment of the perimeter of that rising sun of our enemy, but the bright, pure rim of a newer sun, of freedom and of liberation, and, rising in grandeur, it will take on the fullness of the glorious orb of justice and liberty to light again the darkness of these awful years and brighten a world made sad by the madness of gross ambition and deluded lust. And over that brighter and newer world our flag will fly.

In the forefront of the peace, as in the battle, the hands of brave men will again hold high and aloft the stars and stripes of the hope of humanity now, the promise of freedom always. May God, in his omniscient pity and justice, hasten that day in order that once again we may know that Government of the people, for the people and by the people has not perished from this earth, but rather, moving on in majestic victory, has once again taken its place among the people of this earth, that they, in the quiet of peace and the security of freedom, may live once more in the happiness which all men love and pray their eternal God to attain.

Resignation of John K. Westberg from the O. P. A.

EXTENSION OF REMARKS

OF

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, June 21, 1943

Mr. BROWN of Ohio. Mr. Speaker, under leave to extend my remarks, I include a news story from the Washington Evening Star of June 9, 1943, relative to the resignation of John K. Westberg, a price executive in the Office of Price Administration:

CINCINNATI, June 9.—John K. Westberg, a price executive of the Office of Price Administration, said yesterday he was resigning, effective July 3, "because I was not permitted to do a fair, honest, and complete job."

In a speech before the Ohio Grain and Feed Dealers' Association, Mr. Westberg said:

"Office of Price Administration was forced to do many things we knew were not right, because somebody at the top did not have guts enough to cross a political bridge. I have resigned and am leaving Washington July 3 because I was not permitted to do a fair, honest, and complete job, which means fixing equitable ceiling prices at every level of production and distribution."

Mr. Westberg halted consideration of a proffered resolution which sought to have him reconsider.

The association then adopted another which commended him and put members on record as saying the Office of Price Administration needed more men of Mr. Westberg's type.

Asserting that "price control has received less support than anything in this war," Mr. Westberg said, "People are ready to criticize hell out of it. In such control there should be no listening to pressure groups, to John L. Lewis and his gang, and not even to the farm bloc."

Weekly Report to the People of My District

EXTENSION OF REMARKS

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 21, 1943

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address made by me over station WNBF, Binghamton, N. Y., on June 19, 1943.

Men, women, and young people of Binghamton, Johnson City, Endicott, and the Thirty-fourth Congressional District, since returning to Washington after a crowded week end of speaking engagements, I took up my duties once more in the Capitol with a much better idea of conditions at home. I talked with several hundred people, and I can assure those in authority in the executive agencies of our Government that the public is becoming more and more dissatisfied with the gasoline situation.

In the first place, there isn't a person back home who wouldn't gladly put up his car for the duration if it should become necessary to do so in order to win the war. There isn't a person back home who wouldn't gladly dispose of his car if victory depended upon his so doing.

But I find the public is a bit skeptical of all these drastic measures to curtail private automobile driving. They are asking themselves if all this rough treatment the Office of Price Administration is giving them is necessary. They are wondering why, all of a sudden, thousands of snoopers came from nowhere and started spying on them while they are busy contributing to the war effort. They tell me they do not think this action is helping morale at all. They feel that Office of Price Administration snoopers would be helping win the war a great deal more if they took jobs in defense plants and began turning out weapons of war.

The American people do not need to have their patriotism questioned or their honor besmirched. For my part, I am indignant that the folks I represent are submitted to petty insults from those who should be their servants instead of their masters. I don't believe the people are deserving of such treatment. They are straining every fiber, exerting all their strength, and making great sacrifices. They are winning this war by backing up their sons and brothers and fathers on the fighting front. They are only too willing to do everything they can to win the war.

But we in the East who have undergone the strictest supervision from the Office of Price Administration for over a year, cannot help but wonder why we should be picked on while the rest of the country rides comparatively unchecked. We want to know why we have to account for the use of every gallon of gasoline allotted to us. We feel that the Office of Price Administration is transgressing upon our American rights by demanding to know how we use our meager gas allowance. I will say to the high officials in Washington I don't know how much longer the people back home will take this arbitrary attitude lying down.

Let me repeat the suggestion I made on my program last week. Let Washington treat us all alike, whether we come from the East or West, North or South. We all need gasoline to keep on wheels. To keep on wheels is to win the war. To be kept off wheels and deprived of cars unless it is absolutely necessary is to retard the war effort—retard it by wasting our people's valuable time, retard it by diverting their attention from winning the war. Efficiency is the real secret of war production. To aid efficiency, let the people retain their cars, their rubber, their gas. They will not forget there is a war on if things are made a little easier for them. God knows they realize there's a war on only too well, by the toll it has already taken of them of blood and sweat and tears.

The way to win this war, and I hope the Government finds it out before it is too late, is through cooperation instead of compulsion. One would think our citizens did not realize what it will mean if we lose. No; you will find the rank and file are the ones who are awake to the dangers.

Probably the most persistent complaint I received on the gasoline subject was about the high-handed method the Office of Price Administration is using in taking away gasoline ration books and coupons as penalties for pleasure driving. I have never condoned pleasure driving, but I abominate a ruthless act of this kind. There is far less pleasure driving than these bureaucrats would have you believe. The streets of the Triple Cities are practically deserted of traffic except for trucks and war workers. The average driver is not abusing his privilege or going back on his patriotic duty of saving all the gas he can.

Since I talked about the gasoline question last week, I have received a number of letters commending my statement. The writers felt that I should repeat what I said about the penalty subject. I will gladly do so.

I say the Office of Price Administration is proceeding illegally and without any authority whatsoever when it takes away gasoline ration books from drivers as a means of punishing them. Congress created Office of Price Administration. Congress never gave Office of Price Administration authority to sit as a judge and jury to condemn its victims for breaking the laws set up by Office of Price Administration. This whole procedure is unconstitutional. It resembles a government by edict; not by legislation passed by representatives duly elected by the people. Congress falls down on the job when it allows the people to be kicked around in this manner. If an army of Government officials can get away with illegal enforcement of the gasoline ban, it will extend this authority, which it has usurped from Congress, to every other line until the people are entirely subjected to dictatorial control. This isn't what they are working, striving, bleeding, and dying for. They are fighting to preserve America, the American flag, the freedom and liberty which their forefathers established. By God's will, they are going to be victorious.

While the turmoil and strife goes on here at home, with elements of our society alining themselves against each other, capital against labor, bureau against bureau, section against section, the boys in our armed forces struggle on against our real foes. These soldiers, sailors, and marines, are out there in the Pacific, in Africa, in the Aleutians, everywhere there is real danger to America's wellbeing. They are the ones we are letting down if we let our internal bickering get serious. These men are making more genuine sacrifices for our great cause than anyone else.

We must not fail them. We must look out for their welfare by supplying the fighters with weapons, by succoring the wounded, honoring the dead. We must go further. Their loved ones back home—their wives, mothers, fathers, and children—will have to be provided for. As your Representative, I have tried to promote legislation to raise

the allotments of dependent parents to $50 a month. I have urged Congress to double the allowances for servicemen's children from $12 to $24 a month. Our consciences will be clear if we take such action. I don't know of a soldier or sailor or a marine who won't be able to fight a lot harder when he knows his wife and children are being taken care of while he gives up all he has for his country. The elderly people also deserve consideration. Now is the time to press for pensions and social security because jobs are plentiful, and after the average American buys his quota of War bonds he wants to put away a little for later years. Why not take out a small percentage for a reasonable pay-as-you-go old-age pension?

As you know, I have devoted a great amount of time lately to the task of straightening out allotment matters for soldiers' wives and parents and children. This service is one which I have insisted be performed by my Washington office even though doing it keeps my already overworked staff busy practically every evening in the week. I consider it as important as any duty I perform. It is sad, indeed, to find so many people back home who haven't been successful in contacting the proper sources in order to obtain their allotments.

This is no reflection upon the Office of Dependency Benefits. They are doing a magnificent job. My good friend, Gen. H. N. Gilbert, recently advanced from the rank of colonel to his present high post, is deserving of the highest praise for his prompt, efficient work in handling one of the toughest jobs ever assigned to anybody. He has been of particular aid to me by taking immediate action upon all requests I have made of his department.

Therefore, I suggest to you people in my district who are dependent upon any man in the armed forces and who are encountering any difficulty in receiving your allotments that you please let me know about it. I can and will help you. You are doubtless entitled to money from Uncle Sam. Don't let anyone tell you differently until you have written to me to determine this. Remember, we are living in America, one of the last great strongholds of human liberty and fair treatment in the world. We shall survive to show the rest of the nations that such a country is able to continue.

Early this week, there was held an important gathering in Binghamton by the Eastern Feed Dealers Association. As you know, this influential group consists of feed distributors all over the States of New York, New Jersey, and Pennsylvania. They gathered in what they appropriately called a feed-shortage conference. These men represent the backbone of American private enterprise and it is my belief the Government should give ear to their demands.

I was greatly honored by an inviation to speak at the Arlington Hotel before these feed merchants, which I accepted. I was introduced by their president, Mr. Austin Carpenter, of Sherburne, who obviously understands what we are all up against.

Several standing votes during this conference convinced me that the majority of feed distributors in the East find their granaries empty of more than 2 weeks' supply of corn and wheat. Such a condition is serious, indeed, but it is in line with the prophecy I made last winter. Chickens are now coming home to roost. The disastrous policy of drafting everybody off the farms, of refusing farmers adequate machinery, and of imposing asinine regulations upon him, are bound to bring about chaotic conditions. They are here, and now we must try to see what can be done to save the pieces.

All of which makes it most timely at this moment for me to read from a fine poem submitted to me some time ago by an American mother of a boy at the front.

"AMERICA, TO YOUR KNEES

"America, to your knees!
Your only hope is prayer.
The world is filled with strife,
Confusion, and despair.

But God is still in heaven,
His power is over all.
America, to your knees!
In supplication call.

"America, to your knees!
Night shadows lengthen fast:
Soon judgment will descend,
The day of mercy past.
Our only hope is God,
In Him we must rely,
America, to your knees!
He still will hear our cry.

"America, to your knees!
Your forefathers of old,
Loved God and served Him faithfully,
For righteousness were bold;
They read and lived God's word,
Honored the Sabbath Day.
America, to your knees!
Confess your sins and pray.

"America, to your knees!
Now is no time for pride;
In humble pleadings call,
'O God, be on our side,
We've sinned and disobeyed,
We've wandered far astray.'
America, to your knees!
Return to Christ today."

The Moving Finger Writes, and Writes Again

EXTENSION OF REMARKS

OF

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, June 21, 1943

Mr. HORAN. Mr. Speaker, the Office of Price Administration misses the bus when it regulates production out of existence.

The following news story from the Spokane Spokesman-Review should give us reason for real concern:

PACKING FIRMS FORCED TO CLOSE—CHAOS OF OFFICE OF PRICE ADMINISTRATION RULES CAUSES NORTHWEST PLANTS TO QUIT

YAKIMA, June 14.—Unable to carry on business in what he calls the chaos of rules and regulations announced by the Office of Price Administration, the Gibson Packing Co. closed today at least temporarily, President Henry Coffin announced. The company has been a business factor here for 40 years and employs 80 people to aid its task of sending about 10,000,000 pounds of meat and meat products to market annually.

PACKERS PUZZLED

"We are closing," President Coffin says, "and I do not see how any packer in the State can operate during the present muddle. Dealers in the city have a supply of fresh meat for about 12 hours. After that I do not know what will happen. No packer knows where he is at present.

"The meat industry of the Nation has tried to cooperate to the fullest extent with the Government, but it cannot operate under present chaotic conditions."

Coffin said the plant would stay closed "until Office of Price Administration rulings are clarified or the Government takes over. We will not operate under present conditions." He added employees would be paid for a time.

AT ELLENSBURG, TOO

ELLENSBURG, WASH., June 14.—Ed Schaake, president of the Schaake Packing Co., announced the closing of the company's plant here "pending clarification of the price roll-back and subsidy program" which was put into effect today.

Asserting that packers have been given no guaranty that the subsidy will be paid and pointing to the current fight in Congress over the program, Schaake said the plant already is operating at a loss in some operations and that the roll-back would result in a "terrific loss" if the plant were unable to collect the subsidy.

He said that the plant's 40 employees would be retained for a week or so, but if the program were not clarified satisfactorily within that time, the men would be released. Such an action, he said, probably would mean permanent closing of the plant.

OTHERS SUSPEND

Other Washington State packing companies announced suspension of slaughtering, and their officials said the action resulted from confusion over prices, subsidies, and roll-backs. The Acme and James Henry Packing Cos., at Seattle, reported they would stop slaughtering.

In Spokane meat packers continued operation, but Roy Hathaway, of the Lewis Packing Co., said: "We don't like the situation and are not clear on Office of Price Administration regulations."

President Morris Gordon, of the Acme Packing & Provision Co., said: "We'll wait a day or 2 and then liquidate. We just can't operate this way." O. B. Joseph, of the James Henry Co., said future plans were uncertain.

Henry B. Owen, Seattle, assistant regional Office of Price Administration director, said he was informed subsidy payments were to be made on the basis of forms obtained from the Defense Supplies Corporation, a Reconstruction Finance Corporation subsidiary, for livestock slaughtered after June 7.

Let us hope that the House action on O. P. A. last Friday will cause our productive American to regain faith in government.

American Labor Unitedly Petitions the President To Veto the Smith-Connally Antilabor Bill

EXTENSION OF REMARKS

OF

HON. VITO MARCANTONIO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 21, 1943

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks, I include a copy of a joint memorandum submitted to the President of the United States by President Philip Murray of the Congress of Industrial Organizations, President William Green of the American Federation of Labor, and President David B. Robertson of the Brotherhood of Locomotive Firemen and Enginemen in sup-

port of their request that the Smith-Connally bill, S. 796, be vetoed:

The following memorandum was today submitted to the President of the United States by President Philip Murray, of the Congress of Industrial Organizations, President William Green, of the American Federation of Labor, and President David B. Robertson, of the Brotherhood of Locomotive Firemen and Enginemen, in support of their request that the Smith-Connally bill (S. 796) be vetoed:

The War Labor Dispute Act is a wicked, vicious bill. It is the worst antilabor bill passed by Congress in the last hundred years. It is born of revenge and malice. It is the very essence of fascism. It destroys the philosophy of voluntarism on which free trade unionism is founded.

Its enactment follows the tactics of the Fascists who, as a forerunner to totalitarianism, first attacked and destroyed free trade unions in Germany and Italy.

It does more—it destroys the foundation on which the principles of collective bargaining rest. In the last 10 years the Government has caused to be enacted a number of measures, all of which were designed directly or indirectly to establish and maintain the principle of collective bargaining through representatives chosen by workers.

All that has been built up during these past 10 years is now being rendered ineffective and virtually destroyed by limiting, circumscribing, and prohibiting the normal functioning of trade-unions through this vicious enactment.

Compulsion, civil damage, and criminal penalties are the unholy trinity by which this act accomplishes its evil purpose.

It is not necessary to direct attention to all of the evil effects of all of the provisions contained in this bill. It will suffice to point out the gross injustices contained in the more important sections.

(A) Section 5 denies to minorities the fundamental right of applying to the National War Labor Board for a change in wages or other terms or conditions of employment in plants, mines, etc., of which possession is taken under the act. This section permits the "Government agency operating such plant, mine, or facility, or a majority of the employees of such plant, mine, or facility, or their representatives (to) apply to the National War Labor Board for a change in wages or other terms or conditions of employment."

It is highly unjust, unfair, and discriminatory to deny to a minority group of workers or their representatives the right to make such application when such workers have a just grievance respecting employment conditions.

The right accorded the majority and denied to the minority will inevitably produce unrest and dissatisfaction. The National Labor Relations Act specifically permits an individual employee to present any grievance he has to his employer, and this is not considered an interference with the rights of the exclusive representative to bargain collectively and enter into an agreement on behalf of all the employees.

It may well be that there is no exclusive bargaining agent, and in such circumstances minority groups, under the National Labor Relations Act, have the right to present grievances and bargain with the employer respecting wages, hours, and working conditions.

But, under section 5 of the bill, only majority groups of employees, or their representative, may apply to the War Labor Board, and unless the Government agency operating such plant, etc., makes application on behalf of minority groups such minority groups have no way of presenting their grievances or having them considered by the Board.

(B) Section 6 is highly offensive. It reestablishes the reprehensible doctrine of conspiracy which employers and antilabor judges used for 50 years prior to enactment of section 20 of the Clayton Act to curtail and prohibit labor unions in their efforts to organize and to obtain the right to bargain collectively.

Both section 20 of the Clayton Act and the Norris-LaGuardia Act removed the doctrine of conspiracy in labor cases. Government by injunction was possible only under this doctrine.

Section 6 of the present act reestablishes the doctrine by providing that "whenever any plant, mine, or facility is in the possession of the United States, it shall be unlawful for any person (1) to coerce, instigate, induce, conspire with, or encourage any person, to interfere by lockout, strike, slow-down, or other interruption, with the operation of such plant, mine, or facility."

The law does not stop with the above-quoted broad provision. It goes further and provides that it shall be illegal "to aid in such lock-out, strike, slow-down, or other interruption interfering with the operation of such plant, mine, or facility by giving direction or guidance in the conduct of such interruption, or by providing funds for the conduct or direction thereof, or for the payment of strike, unemployment, or other benefits to those participating therein."

A Machiavellian twist is given to the section by providing that "no individual shall be deemed to have violated the provisions of this section by reason only of his having ceased work or having refused to continue to work or accept employment."

With the doctrine of conspiracy reestablished it requires little imagination to perceive the total worthlessness of this guarantee. Individuals having just grievances do not cease work singly. Even if they did, the fact that two or more quit at the same time would be evidence of a conspiracy upon which a conviction could be had.

The provision, viewed as a whole, establishes involuntary servitude so forcefully condemned by Justice Brandeis in his famous dissent in *Bedford Cut Stone Co.* v. *Journeymen Stone Cutters' Association*, 274 U. S. 412. Justice Brandeis said:

"If, on the undisputed facts of this case, refusal to work can be enjoined, Congress created by the Sherman law and the Clayton Act an instrument for imposing restraints upon labor which reminds of involuntary servitude."

Significant, too, is the broad language used by which many innocent persons may be caught in the dragnet of conspiracy. The words "induce," "encourage," "interfere," and so forth, words which were productive of so much mischief in the days when government by injunction flourished, are likewise reestablished and made the basis of criminal conviction.

Indeed, a discussion of grievances at a union meeting or, for that matter, a discussion of them in the public press can, under the terminology of this section, constitute crimes. Likewise, giving direction or guidance is susceptible to broad construction so as to convict one who is indeed endeavoring to be helpful in avoiding labor strife.

If a union voted to grant relief, such as the furnishing of food, to wives and children of workers who ceased employment, the officers and members of the union could be sent to prison. The section clearly violates the constitutional guarantee of freedom of speech, because a union worker or, for that matter, any citizen is prohibited from even stating that the demands or grievances of the union are just.

(C) Section 7 (4) (e) provides that—

"No member of the Board shall be permitted to participate in any decision in which such member has a direct interest as an officer, employee, or representative of either party to the dispute."

We are of the opinion that under this section officers and representatives of the American Federation of Labor cannot participate in any decision involving a dispute between an American Federation of Labor affiliate and an employer. Officers and representatives of the Congress of Industrial Organizations cannot sit upon and decide any dispute of a Congress of Industrial Organizations affiliate. Certainly, these officers have a direct interest in the decisions affecting their affiliates. When sitting on the Board these officers are true representatives of the affiliates who are parties to the dispute.

Although no criminal penalties are provided for a violation of this provision, nevertheless the decision will be subject to challenge by anyone adversely affected by it because the labor union's officers or representative participated in the case and in the making of the decision.

It affords a splendid opportunity to hamstring the functioning of the Board by attacking decisions in which union officials participated. We seriously question whether the American Federation of Labor or Congress of Industrial Organizations officials can remain on the Board, since they could not participate in any case involving one of their affiliated organizations.

By remaining on the Board and participating in these decisions, the labor representatives will merely encourage court attacks upon the decisions and encourage disobedience on the part of employers, on the claim that the decision of the Board is a nullity.

(D) Despite the fact that the sponsors of the bill vociferously proclaimed against strikes in wartime, the bill expressly encourages strikes. Comparison should be made between section 8 of the bill and the no-strike pledge given by labor. The no-strike pledge on the part of labor holds good throughout the war, and in all plants and under all circumstances.

This bill, however, with the exception of plants taken over or possessed by the Government, permits striking, provided a notice is given the war contractor with whom the workers are in dispute, and to the Secretary of Labor, the National War Labor Board and the National Labor Relations Board, and provided 30 days are permitted to elapse from the time of the giving of the notice, and that a secret ballot is promptly taken by the National Labor Relations Board.

Thus here is substituted for the no-strike pledge for the duration of the war a brief cooling-off period, after which a strike may be called.

Note the fact that a majority vote against the strike does not prohibit striking. The 30-day notice and the ballot are merely conditions precedent to striking; it does not provide that in the event the ballot is negative as to striking a strike may not be called.

(E) The principal features to be found in legislation seeking to destroy collective bargaining consist of interference with the internal affairs of labor unions, the necessity to conduct ballots as a condition precedent to striking, and the recovery of damages from unions and their members in civil suits. The last two are contained in section 8.

Not only does this section provide for the ballot as a condition precedent to striking, but it provides that any person who violates this section "shall be liable for damages resulting from such failure or refusal to any person injured thereby, and to the United States if so injured."

It must be remembered that this provision is applicable to any strike or stoppage of work in any plant other than those taken over or possessed by the Government. It imposes a tremendous civil penalty which can destroy the treasury of any union in the United States, provided the plant is a large one and involves a large number of workers. Even one-half

day's stoppage of work may bring about a penalty of hundreds of thousands of dollars, and it may be imposed upon individuals as well as upon their union.

One need but recall the testimony brought out before the La Follette committee investigating activities of employers in labor disputes to know that some employers are not averse to the employment of agents-provocateurs to stir up strife, and this bill certainly encourages such employer activities.

(F) Section 9 makes it unlawful for a labor organization to make a political contribution. Labor unions are put in the same class with national banks and corporations. No similar prohibition is provided as to fraternal organizations, church organizations, farm organizations and other nonprofit organizations.

Recent history in connection with antilabor legislation establishes conclusively that employers have been able to induce reactionary farm organizations to foster and promote antilabor legislation and antilabor candidates. Thus these farm organizations would willingly act as stooges for other corporations and would find ways and means of making political contributions since they are not prohibited from doing so by law.

But it is a well-known fact that large and wealthy individuals and their families, the major source of whose income is from corporate dividends, do make political contributions, the purpose of which is to influence favoritism for the corporations which they control.

To permit these individuals to make political contributions and to deny the same right to organizations of workers is highly discriminatory, unjust, and unfair.

This provision most eloquently presents the true purpose behind the bill, namely, to weaken and destroy trade-unions, for it is not conceivable that prohibition of political contributions has any relation to production for war.

(G) It was contended by the sponsors of the bill during debate that by section 7 (2), which provides that "In making such decision the Board shall conform to the provisions of the * * * National Labor Relations Act," the War Labor Board is prohibited from granting a maintenance of membership or closed shop to any group of workers or their organization in dispute with an employer.

Because of the ambiguity created by the language of the section and the statements made by the sponsors of the bill in debate, it is quite likely that reactionary judges will so hold. If the War Labor Board should take a different view of the provision, it will open up court attack upon the War Labor Board's orders and decisions.

Although it is difficult to foretell what the courts will finally hold in such cases, nevertheless it affords an excellent opportunity for employers to "hamstring" the Board by involving it in considerable litigation respecting orders granting maintenance of membership.

We are of the opinion that many district judges who are opposed to labor will take jurisdiction and grant injunctive decrees against labor decisions granting maintenance of membership.

Thus, we will again witness the spectacle of a concerted legal attack upon the War Labor Board similar to that which was launched against the National Labor Relations Board when it was first created, and which hampered its functions for a period of 2 years.

The United States Gypsum Co., whose leading official is Mr. Sewell Avery, also the head of the Montgomery Ward & Co., in a Nationwide advertisement this week advised the National War Labor Board that it will not accept a decision of the Board directing the company to incorporate in its collective-bargaining agreement with the union, a maintenance-of-membership provision.

This must be marked as the opening gun in the attack that will be initiated by those antilabor companies against the Board and its operations as a result of the new legislation.

(H) We have specifically refrained from discussing the constitutionality of the provisions contained in this bill. Many of them are patently unconstitutional in that they deny to workers freedom of speech and impose upon them involuntary servitude. However, the foregoing discussion demonstrates quite clearly that this bill, instead of promoting the war effort, will be conducive to hampering and restricting the war effort. If any person believes that war production would be increased by passage of the bill, or that the morale of the American worker would thereby be raised, he is seriously mistaken.

Existing procedures have not only proved sufficient but have operated to make possible the greatest production record in the history of this or any other country. The American worker neither expects nor merits legislation such as this for his reward.

We therefore most earnestly request that the Smith-Connally bill be vetoed.

Respectfully submitted.

WILLIAM GREEN,
President, American Federation of Labor.

PHILIP MURRAY,
President, Congress of Industrial Organizations.

DAVID B. ROBERTSON,
President, Brotherhood of Locomotive Firemen and Enginemen.

Co-ops and the World's Food Problem

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 21, 1943

Mr. VOORHIS of California. Mr. Speaker, on June 15 of this year I was privileged to deliver the following address, which I ask to include in the RECORD, before the Food Forum, sponsored by the Dairymen's League Cooperative Association at the Hotel New Yorker in New York City:

The principle of cooperation is as old as the first family, as old as the first group of primitive people who gathered around a fire and agreed—by sign language, no doubt—that instead of fighting one another they would work together at keeping that precious fire going.

The cooperative method of doing business stands today as a tried and tested means of solving the problems of modern men and women. And that method constitutes in my opinion the most solid single hope we have for a better future world after this war is won.

But the particular subject I am to deal with is how cooperatives can aid in the solution of the world's food problem. Perhaps it will help if we start out with a quick glance at what co-ops have done to help solve this problem in the nation where their greatest progress has been made, namely, in Sweden. In a recent article about Sweden, Marquis Childs had these things to say:

"But it is the cooperatives that have made the most important contribution. With 750,000 consumer families they have a close-knit organization that extends into every phase of wholesale and retail trade. Nearly half of Sweden's 6,500,000 people are a part of an organization dealing directly with consumption. Almost without exception Sweden's farmers belong to marketing cooperatives. This is a big reason why almost no black market exists.

"As early as 1933 Albin Johansson, head of the cooperative movement, had begun to warn of the coming war and the need to lay in reserves of strategic materials. At his urging a special commission was formed to prepare the country for the coming crisis. The entire policy of the cooperative movement was altered to meet the threat.

"Until that time the cooperators had bought in the smallest possible amounts, in order to take advantage of price changes. Large-scale buying was a new order. Thousands of tons of rubber were bought and put in reserve, which has helped carry Sweden through the present crisis. Working with the Government, all-important cattle fodder was acquired and stored in special silos built by cooperatives. Faced with a German-dominated vegetable fat industry, cooperatives had built a refinery which has been a salvation in the face of the present blockade.

"In 1939 cooperatives bought an additional $12,000,000 worth of strategic war materials on the world market. Also they bought foods that could not be obtained after the start of the war. The irony has been that under wartime laws, they have had to share these reserves with private retailers. Of the cooperative reserve of coffee, one-half was turned over to private merchants. Likewise a warning against the coming storm and the necessity to prepare for it was made by venerable Prof. Gustav Cassel. This dean of world economists never ceased stressing the peril of world economic domination by Germany. This, incidentally, is a feature of Swedish life. Professors are listened to respectfully and often make their own way actively in politics.

"Cooperatives made an equally important contribution in experts loaned to the Government to handle food rationing and widespread controls over economy. Minister of Supply Axel Gjores is one of the cooperative leaders. He has pioneered in working out a food supply that keeps the consumption level comparatively high. Under this system the butterfat content is reduced in milk, cheese, and butter consumption is greatly reduced, and cream is forbidden. As a result, milk production is increased 100 percent and milk is unrationed. The great increase in milk consumption supplies essential minerals and vitamins."

Here then is the sort of thing that can be done by the people and for the people in a country where the cooperative movement is big enough to be an important factor in the economy.

But what about our own country? Well I wonder what would have happened here had there been no farm cooperatives when the war came. In the first place we would have had an agriculture so distressed, so at the mercy of the middleman that few of our farmers would have been in a position to produce abundantly. We would have had the Department of Agriculture organizations, such as those set up under Agricultural Adjustment Agency. But the fact is that the best and most vital thing about Agricultural Adjustment Agency consists of the fact that it has enabled farmers to act together in certain respects. Without the example and pattern of our true cooperative organizations, the best things about the agriculture program of the Government would have been impossible. And anyway the real strength of American agriculture is to be found not in the pattern of organization fostered by the Government, but in the cooperatives built without Government aid, assistance, or direction by the farmers themselves. For there we find

the true economic expression of the spirit of a free and democratic people.

Without the cooperatives it would have been necessary for every individual farm producer to have been individually contacted in order to get our war food production program going. But where farm cooperatives existed; where men had already learned to work together for the common welfare of their own group—there it was possible not only to reach the whole producing group through one organization, but it was possible to draw upon their training and experience of mutual loyalty and to bring it to bear for the benefit of our country's cause and through it for the benefit of all the future of mankind.

The fundamental economic importance of a cooperative is this: It can protect people who act generously, who do their duty well. What I mean is this: To the extent that all the farmers producing a given commodity are organized into a cooperative they need have no fear of abundant production, no fear of supplying completely the demand for their product. For they are in a position to prevent that abundance from driving prices down and ruining the very producers who have made the abundance possible for others. Without the cooperative, every producer must fear abundance. For being at the mercy of a few people controlling a narrow bottleneck to the market, they know that the greater the supply the lower the price will be. I need not go into detail. All the history of American agriculture proves what I have just said.

It is true, I think, that only true cooperatives can be consistently relied upon to seek abundance for their fellow men. This is my first point and I believe it is probably the most important one. Cooperatives can help solve the world's food problem because through them producers of food can and will produce an abundance and still and at the same time be in a position by means of loyalty to one another, to prevent that abundance from harming the men who brought it forth.

Monopoly power stands at the very opposite pole from cooperatives. Already we have seen, in connection with our attempt to fight an all-out war against our enemies, that monopoly power standing firm and unfortunately all too successfully against the development of sponge iron to increase our steel production against the expansion of magnesium production, and at least until very recently indeed, against the expansion of any copper production except that controlled by the Big Three copper companies upon whom we are now dependent for 85 percent of our total supply of that all-important material. Likewise we have seen monopoly interests gaining more and more of a strangle hold on the avenues of trade through which the farmer's crops must pass to the consumer. Farmers have had to do the best they could to combat the fertilizer trust. They have been up against overcharges for the oil they have bought from the oil monopoly and they have been told through the years by the power trust that it was just not possible to get electricity into rural areas at a cost of less than somewhere in the neighborhood of 36 cents or 50 cents per kilowatt-hour.

So far only cooperatives have succeeded in meeting monopoly power on its own ground and defeating it. Only cooperatives—with all due respect to the vast importance of a vigorous enforcement of the antitrust laws—can break the grip of monopoly on our economy and keep it broken. And monopoly power is the one most important obstacle to a truly free world and to abundant production. This is true in the field of food distribution as it is in any other field.

I call your attention briefly to the fact that cooperatives are now producing, refining, and selling to their members gasoline and other oil products at substantial savings. I call your attention to the fact that through the Rural Electrification Administration cooperatives, farmers actually are getting electricity at reasonable cost, electricity without which our present farm labor shortage would have been completely disastrous, instead of only severely crippling. I call your attention also to the highly beneficial results which have been achieved by such farm cooperatives as those existing in Ohio, Virginia, and Vermont in producing their own fertilizer and other necessary products for the farmers and compelling the monopolistic forces formerly controlling the supplies of these products to themselves reduce their prices. Most important of all, however, is the fact that through cooperatives of farmers as producers it becomes for the first time possible for them to increase their production to the limit of human need without running the risk of facing financial ruin themselves because of their very efficiency in the bounty of nature.

And so as we look forward to meeting the food problem of the world, both now and after this war—a problem far greater than any the world has ever faced before in this field—our one most solid hope, as I have said before, lies in the cooperatives.

There is another phase of this matter upon which I shall touch but briefly. In the quotation from Marquis Childs it was pointed out how effective the cooperatives of Sweden had been in preventing black markets. I should like simply to suggest that if consumer cooperatives in any country were in control of even as much as 25 percent of the distribution of food products, you would have a means of price control as well as control of quality of products far more effective and far better than any government agency can supply.

Finally, as we view the world problem as a whole and consider what must be done in devastated nations after peace is finally restored, where are we to turn? What means are to be taken for the fair and just distribution of medical supplies and food? What form of organization is to be employed to enable the people of those nations to get back on their feet economically and to become once again self-sustaining? Are we to rely upon military dictators? Or upon those who have betrayed their fellow men to the conqueror? Or upon those who have entered into business relationships with him? I trust not. On the other hand, in most of the nations that have been overrun by Hitler there were before the war at least, cooperatives existing among the people of those countries including the farmers thereof.

Through these cooperatives it would be altogether possible to provide both a fair and just solution of the problem of administration in the true public interest of productive properties title to which will be in complete confusion but also to bring about the rehabilitation of the economies of those nations with a minimum of distribution of necessary things on a basis of pure charity. For the cooperatives could be supplied with necessary food and medical supplies and all able-bodied people, at least, could receive these things not on the basis of charity but as payment for constructive labor which they might do in the rehabilitation of their own countries. For the sick or distressed, of course, outright help would be necessary. Over a period of time these cooperatives could by such a method not only rehabilitate their own lands, but also make repayment of a considerable amount of what had been given to them. This suggestion I realize has only been briefly sketched. But I know no other kind of group of people than the cooperatives through whom such a constructive program could be carried on.

There are other things we need to do, of course. One of them which in my judgment is a central need is outlined rather carefully in my own book entitled "Out of Debt, Out of Danger," which was recently published by the Devin-Adair Co., of New York City. In this book I set forth what ought to be the answer to the problem of our national debt and certain constructive changes which in my opinion should be made in the monetary system of this Nation, so that we may achieve a truly stable price level through the years. My appeal is that instead of the present system of borrowing every dollar of the medium of exchange into circulation at interest to private creators of money, the Constitution of the United States should govern this field and Congress should create the money of this Nation and effectively regulate the value thereof.

A sound monetary system coupled with a strong and vigorous cooperative movement cannot only be the key to a solution of the world food problem but can open the door to a future world in which abundant production will be possible, full employment reasonably assured, and in which these things can be achieved without increases in governmental power or authority over the people but by the free exercise of the genius of the people themselves.

Now, why do I believe so strongly in cooperation?

I believe in them because I know the economic problems that have been destroying democracy and freedom in other countries must be solved. Because I know free government cannot live where there are no free farmers. Because I know that the unemployment problem has not been solved in any fundamental sense and that it must be solved before constitutional democracy as a form of government will be safe. Because I know that men, in an age that they know could be an age of plenty, are not for long going to endure the misery and humiliation of joblessness again; especially not when they have just returned from defending their Nation in the front lines of war. Because I know that private monopoly in industry and especially in finance means the end of free enterprise and has been the very basis upon which dictatorships have been built in other countries. Because I know that the solution of all evil things must ultimately be found in methods that are good, in methods that partake to a considerable extent at least of eternal laws of God.

Therefore, I believe I am interested in cooperatives because they can and they have restored to farmers in this country and in many other countries the control over their own economic destiny. I believe in them because they offer a way to make the dollar of the workingman buy more of the products he and his fellows produce. I believe in them because they can and they have met more than one entrenched monopoly on its own ground and beaten it. I believe in them because the more business they do the better they prosper, because never can they be successful by a restriction on production or distribution or exchange. I believe in them because they are the only means I know of whereby these problems, which must be worked out if democracy is to live, can be solved without a vast control over the lives of men by government. I believe in them because they can only succeed as they increase the welfare of others besides themselves or their own members; because the success of a cooperative therefore accords perfectly with the eternal principle of the Golden Rule.

I believe in cooperatives because they are the one means that I know of whereby I am sure our problem of poverty in the midst of plenty can be solved—and what is more, solved without resort to governmental dictatorship or to the development of a dependence of millions of people upon governmental support. Cooperatives are true democracy

in the practical field of economic life because each member has one vote whether his financial contribution be large or small. If we believe in democracy sincerely we just have to believe in cooperatives.

And last of all I believe in them because they offer to the common people something they can do for themselves now with their small resources, a great and sound idea, a willingness to study and to work, and a deep and abiding loyalty. These resources every group of people in all the world possesses. And therefore the message of the cooperatives to a distressed world is more fundamentally a message of hope than any other message I know.

Address of Dr. James Burnette Eskridge

EXTENSION OF REMARKS

OF

HON. JIM McCORD

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, June 21, 1943

Mr. McCORD. Mr. Speaker, under leave to extend my remarks in the Appendix, I include the address delivered by Dr. James Burnette Eskridge, Ph. D., prominent educator and author, to the graduating class of Cumberland University, Lebanon, Tenn., on June 7, 1943.

At one time in the history of this Nation it is said that there were more representatives in Congress who were graduates of Cumberland University than of any other university in the land. I do not know that this statement is correct, but I do know that there is not a finer university anywhere in the world than Cumberland University and I am glad, therefore, to submit the baccalaureate address of Dr. Eskridge delivered on that occasion.

Education, both general and specific, has for its objective the welfare and uplift of the human race. Society long ago came to the conclusion that a trained mind was more useful than an untrained one, and that the happiness of humanity depends, in a large measure, upon an enlightened mind and a sensitive conscience. The earliest civilizations were established upon this conception, in part at least, especially that part which affects the intellectual development of mankind, if not the moral and spiritual. Moreover, whatever intellectual or moral, social or political lines the world has established, were due to the force of that doctrine which demands that whatever is good for the individual should be apportioned, as much as possible, to the entire human race.

In remote times only a very small class, favored and select, had access to what little higher knowledge or skill there was in existence; simple and elementary, as it may now appear to have been. This class or fraternity guarded it jealously in order to retain whatever power or influence its possession might command. Present day civilization, on the other hand, is demanding that education, and the consequent skill developing therefrom should be as universal as possible, and, furthermore, that it ought to be of such type and character as will insure civilization's own protection.

It is almost axiomatic that education and liberty are companions and that ignorance and slavery are equally inseparable.

When der Fuehrer endeavored to enslave the world, he induced and ordered the destruction of great libraries and millions of books, retaining only those which portrayed his doctrines. Ignorance and superstition almost inevitably lead to slavery. Suppression of information or news leads to ignorance. However wrong our opponents may be, we should stand firmly for their right to freedom of expression lest ours, in turn, be taken from us.

The safeguarding of civilization or society means the perpetuity of government. The higher and nobler the form of society or civilization, the more stable and enduring government is likely to be. The rise or fall of nations is nothing more nor less than the rise or fall of their respective societies, for they stand or fall together.

Now, the state has long recognized the value of public education and it has made astounding progress therein. Institutions of all kinds, for the dissemination of knowledge, have been established in all parts of the civilized world. They have been maintained at colossal public expense. Furthermore, the state understands that for government to endure, and democracy to abide, all the people must be educated, for "we must educate or we perish by our own prosperity."

Enlightened public opinion, also, is awake to the fact that it is of the first importance to safeguard our institutions, both of State and Nation, and to protect our fanes and firesides from the enemies who would pollute and destroy. The time was, and that not very long ago, when education was confined almost exclusively to those who could afford it. Now we see on every hand educational institutions of every conceivable kind and character, for the training of the youths of the land, and it is the sacred mission of those who would construct well for posterity to pass these ideals forward, strengthened and solidified for all time. Our public schools, colleges, and universities, schools of law and medicine, technical and vocational schools of all kinds, bear eloquent testimony, not only to the demands of human aspiration and its longings for knowledge and understanding, but to society and Government, which recognize the fact that the most splendid achievements of humanity consist of these finer and nobler accomplishments. All this, too, in the name, and for the sake, of a great democracy, to the end that it "shall not perish from the earth."

Nations have risen, flourished, and fallen; civilization, whose contributions to the race are amongst the most valuable possessions of mankind, has in the end perished; all because they had departed from the traditions of the fathers and the noble intuitions of the human heart.

The lover of history revels not only through the realms of noble achievements of dead centuries, but through their charnel houses as well; and seared indeed must his conscience be, if he be not brought to bay by the terrible realization of a terrible truism, that nations, like individuals, reap as they sow, and that "where there is no vision, the people perish."

It has always been true, and shall ever be, that nations, like individuals, that "walk uprightly, walk surely." It seems to be high time, in these days of laxness and growing contempt for law and order, together with the recognized rights of well ordered society, that institutions, secular as well as religious, should take their bearings and sound their waters, in order to ascertain whether it is in the direction of danger, or safety, that they are sailing.

Reverence for law, order, and properly constituted authority, a chivalrous regard for the virtue and personal purity of the race, an undying devotion to the sanctity of our fireside altars, a cheerful willingness to give our lives, if need be, to uphold the standards of righteousness, and the flag of our country, should be inculcated in our children from the time they leave their cradles until they receive the most august degrees from our greatest colleges and universities.

Immediately before you lies the real adventure of life. That which has gone before was merely preparation for a real and absorbing venture. You now enter an adult life under conditions which never before confronted young men and women.

There have been other wars. There have been others who went from universities into battle lines. But not into such a war: world aflame; liberty, civilization, and the future of humanity all at stake; the efforts of all humanity devoted to war—some to preserve freedom, others to destroy; with the means of destroying life many times greater than ever before.

With the world in turmoil, the old order is gone. The new order is forming, but has not arrived. As someone has said: It may appear that we are "wandering between two worlds—one dead, the other powerless to be born."

In the world which you enter today you will need all that you have learned here and more. Except for training in exact sciences, all that a university can do for us is to teach us how to learn. With that exception, what we have received here is not all that there is.

If all human reactions were identical in given circumstances, life could be made an exact science. Such, however, is not the case. In real life reactions are as varied as faces are individually different; yet to a degree they are of the same general character.

Today, with the world aflame, the individual needs and requires more than at any other time in modern history, the ability to analyze and reason to logical conclusions. Only this ability will enable us to see beyond barriers, beneath appearances, and through clouds which surround today's problems. For the art of living, all that this or any other university can give to us is the ability to learn from experience to think clearly and logically.

This is not a day for fear or pessimism. Cowardice is unbecoming. "In quiet and confidence shall be their strength," but to these, one must add the discerning and thoughtful mind. We must think through the complications and the details of these extraordinary and anxious days. Understanding and comprehension must have as many facets as a diamond in order to meet as many varying circumstances.

A thinker must not neglect any significant factor or influencing circumstances; such neglect might render invalid any conclusion. To see what may come in the future may be accomplished, in part, by a thorough knowledge of the past.

Prejudice hampers judgment and destroys the power of analysis. One of the purposes of education is to enable one to lay aside natural prejudices and to weigh all factors fairly. In a world crazed with war, this becomes difficult for all of us.

If one has acquired the ability to reason, to analyze, and to weigh with care, to lay aside prejudice in passing judgment, university training is a great success. Therefore, as to a university course, one cannot hope or expect to learn a great volume of facts, as compared with those required in life; but if you have these abilities, which we have mentioned, you will discover the facts. Even though you may not yet have acquired that ability in full, if you have only learned how to know yourself, education is nevertheless a success.

The hard and sometimes bitter facts of life are soon to meet you, face to face. You may be due to have a rude awakening in some of your theoretical conclusions. Practical everyday life will, in the years to come, become your real university—if you have made the most of your training here; and if you are prepared to encounter, analyze and benefit by new experiences.

No university can furnish a curriculum in the short period of 2, 3, or 4 years, which

will actually finish the education of an individual. It may remove the rough places. It may open long vistas with light in the distance. It may till the ground or even plant and sow the seed, but it is you who must cultivate, remove the weeds, help the growth, and harvest the crop.

It is not unusual for young graduates, under the influence of youthful energy, to feel that they have become very wise and that they have found the open sesame of life. He is wise who knows what he does not know. Knowledge is infinite, and experience is the great master. Theories often fail, for life has a rude way of crushing theories, and following practical lines.

There is something more which we hope that you have gained from your university life: Friends and the ability to make more of them. Many lives are changed entirely by associations. On your highway through life you will find that the way is often made smoother, stones are often removed from your path, and opportunities cast in your way by friends. We have known many such circumstances in life. At the moment we are thinking particularly of one man, who is now past 60 years of age. He has served Tennessee as a Senator, a colonel in World War No. 1, and has been prominent in civic affairs. Since the day of his graduation he has never lost an opportunity to make a friend, or to serve one. The list of his small, and sometimes insignificant, favors to others would be long, indeed. He never lost an opportunity to perform a friendly act. Do not understand us to say that he was careless with his money, or profligate with gifts. Life is not made of such paltry things. It is composed of finer stuff. Most of these friendly acts cost him nothing, but they brought much to him. Today, his friends are legion. They are to be found in many places. All of this he obtained for himself. Incidentally, this man is a native of your State, but that is not the crux of our story. Life is made up of humanity. The great adventure is living; and we cannot venture alone.

John Stuart Mill had a great knowledge of human society, probably most greatly contributed, as he himself admits by the education and training which he received in early years from his father, who believed that education was the science of human life and living, which required understanding and sympathy for human frailities. Mill commenced his education under the care of his father, at the age of 3, when he began to learn Greek, quickly followed by other languages. He was trained to think when others were only beginning to learn. His greatness was due in large part to this rigorous training. However, he noticed one weakness in himself. He had an inclination to lean upon his father, whose senses and mental faculties were always alert. His training was too much on the mental side. He was not taught physical or manual dexterity, which eventually led to slackness and inattention. He later realized that he had not been provided with the practical view of life. This he had to acquire from experience. The point is that he succeeded because he learned how to learn.

Life is to be learned day by day. Perhaps we may call it a play, one where there are rules, as in any sport, which one must follow if one expects to receive the most benefit therefrom. This is true whether in sports or in actual life. One may violate these rules at times and not be punished for the infraction, but the penalty is there although one may not be conscious of it at the beginning.

The greatest obstacles which face us now, in the days of our years, are the changing rules of a whirling world. When the roll of this war has ended, the results of the development of science in wartime will call for astounding changes. Changed economic conditions will force greater changes in the mode of living. Principles of government will be revised until they shall have become almost beyond recognition. The new order will come into being; new standards will be adopted and old ones abandoned. The world moves on. Omar Khayyam has said:

"The moving finger writes, and having writ
Moves on: nor all your piety nor wit
Shall lure it back to cancel half a line;
Nor all your tears wash out a word of it."

With new modes of living, new principles, new standards, your ability to learn and to stand squarely on the ground will be your compass through life. Education is like a vaccination: It must "take or it is worthless." You must know how to apply it in the practical affairs of life. You cannot recapture the past. The days of slavery are gone. Feudalism is dead, and both are forever in the past so long as the world remains educated, and her stalwarts alert.

We must confess that we were very near to the brink. One Der Fuehrer for the moment appeared to be driving the world back to slavery and to the Dark Ages; but the inexorable law of life is overtaking him, and will in the end crush this monster. The end is certain, though the time is not. No one can ever succeed in turning back a wise and educated world. Thus the pen is mightier than the sword.

The greatest example of inability to read, analyze, and appreciate the scope and effect of the written word is the failure of civilization to appraise properly Der Fuehrer and his Mein Kampf, in which he outlined, step by step, and promised to accomplish the very thing that he has been doing. His only mistake was his inability to appraise and understand an educated world with a fixed and unalterable determination to remain free, and his failure to establish a proper value on the strength of a free pepole.

Leaving this university, you will assume, gradually, as the years advance, the responsibility, along with others of your class, to safeguard the future of our country; to help retain our American freedom, and to rededicate this Nation to the principles upon which it was founded by our forefathers. When you shall have done all this, you should give thanks to the university that taught you how to live by showing you how to learn from experience.

The Office of Price Administration

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 18, 1943

Mr. BURDICK. Mr. Speaker, the result of what has been attempted by the Office of Price Administration has not been satisfactory to the consuming public, although some move was necessary to stop the skyrocketing of the price of food. The talk is now going around the Capitol, and I presume in the country at large, that the O. P. A. should be scrapped. In this debate there is no secret about what cuts in the appropriation are intended to do.

To scrap the O. P. A. would be a mistake, but the correction of its mistakes is imperative. Here are some of the mistakes that have been made and must be stopped.

First, a ceiling price was placed on the retailer, and in many cases the retailer could make nothing on the set prices and in some instances, many instances, could not afford to handle the particular article of food. Potatoes are one of this class. When the consumer kicked on the price he was compelled to pay the retailer, the producer was blamed, and the public along the eastern seaboard took to this slogan and spread it to such an extent that the farmer is blamed for everything.

Let me give you the steps from production to consumption in a few of the staple necessaries. Beef will be the first article.

The steps are: Growing of the cattle, shipping of the cattle to the packers, packers handling, shipping from the packer to the wholesaler, handling by the wholesaler, shipping to the retailer, and finally the retail distribution to the consumer.

When the consumer pays 68 cents for steak the farmer is condemned. But there is quite a spread between 14 cents per pound to the grower and 68 cents to the consumer. Instead of putting a ceiling price only on the retailer, the O. P. A. should have put a ceiling all along the line from the farmer to consumer. There is a bolt loose somewhere in this long line of business. The following are facts:

The farmer is not getting too much for his cattle.

The railroads have been carrying freight and express without any sudden and overnecessary rise in rates. There is left therefore the following stations, who must answer to the charge of the unnecessary rise of prices to the consumer. The processor—in this case the packers—the wholesaler, and the retailer.

The conclusion, therefore, is unescapable that the O. P. A. erred in fixing a price for the retailer only.

Instead of scrapping the organization it should be strengthened and absolutely fix the price all along the line from the pastures to the restaurant table.

Where we have abundance of any article like sugar, it should not be rationed, but on all articles of which there is a scarcity rationing should be put into operation.

I have traced the history of the handling of beef, but this example can be carried in the same way as applying to butter, cheese, eggs, poultry, pork, wheat, rice, mutton, fruits. In these cases we shall find the same situation as applies to beef.

The rolling back of prices is not justified. It will not help the producer, and a subsidy will not make up the loss, for in case of beef the farmer helps pay the tax exacted to generate a subsidy. The rolling back process will go to the middleman just as the tax on hogs went to him. The packers admitted they benefited by millions from this tax, but claimed they did not know to whom to pay it. You can wager one thing—that

in any rolling back of prices, the growers will be injured because the transaction is the rolling-back process which assumes that the producer, the railroads, the processor, the wholesaler, and the retailer are all benefiting alike from present prices. They are not now benefiting alike. The middlemen are getting the best of it, and in the rolling-back process he will still be getting more for his efforts. In this rolling back program, it is proposed to give the producer just enough to keep him quiet—a subsidy, which he himself pays in part. It is taking money out of one pocket and putting it into the other pocket of the same individual.

I do not believe the growers want a subsidy. They want a fair price and that fair price can be fixed and the trouble will be over if fixed clear down the line. It cannot be fixed by merely stopping up the ends. It cannot be fixed by fixing a price for food which the farmer cannot meet; it cannot be remedied by fixing the retail price, for the retailer has not a chance when all elements of cost attached to the product he sells have not been fixed as well as his price.

The Army is not rationed with points and those who work in factories and the mines should not be rationed either. A miner cannot operate under the food point system set in motion by the O. P. A., and that food situation has much to do with our labor troubles.

You can imagine a miner coming up out of the ground at night and getting meat to the extent only of those who have been sitting around an office or sitting in Congress. To make everyone alike in the purchase of meat without regard to the kind of work in which the consumer is engaged is a stupendous blunder, and it should be corrected at once.

Mr. Speaker, I am opposed to scrapping the O. P. A., but I am in favor of our giving it more power as soon as it demonstrates that it knows what it is doing. The job can be done—it has been done. It must be done now. Herbert Hoover did a pretty good job as Food Administrator in the First World War and his experience should be called into action now.

The attack on this bill by way of cutting appropriations was intended to cripple the O. P. A. or put it out of business. No substitute was offered for O. P. A. Nothing was said as to correcting mistakes of the O. P. A. There was nothing in the arguments except the magnifying of mistakes alleged to have been made by college professors who happen to work in this organization.

I was not in sympathy with this attack on the organization. Those who are so certain O. P. A. does not know what it is doing ought to outline a better plan and give us the benefit of their superior wisdom. Knockers are plentiful—a bumper crop, right here in Congress—but builders are few. Criticism is a good thing, but the critic should submit a constructive program to replace what he asserts to be a wrong solution.

A man who operates the best plan available to him in an emergency is doing an admirable job as compared to the man who says the plan is no good but has no ideas of his own to substitute for that which he would destroy.

Ulysses Samuel Guyer

EXTENSION OF REMARKS

OF

HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 21, 1943

Mr. HOPE. Mr. Speaker, under leave to extend my remarks, I include a copy of the eulogy delivered by Hon. CLYDE M. REED, United States Senator from Kansas, at the funeral services for our late colleague, Ulysses S. Guyer, at St. John, Kans., on Tuesday, June 8, 1943:

Senator REED. It is the custom of the Congress of the United States to do honor to those of its Members who die while in service, and the custom is that Members of both Houses shall accompany the mortal remains of the departed Member to the place of his final interment. And so, I come here in company with your own Congressman, CLIFFORD HOPE; with the Congressman from the Emporia district, Mr. REES; the Congressman from Oklahoma, to the south of you, Mr. RIZLEY; the Congressman from Colorado, Mr. CHENOWETH; and my colleague, Senator BUTLER, of Nebraska. We brought back the remains of your friend, who was once your close neighbor.

There must be a something about communities as there is about individuals. Communities have individuality and characteristics as like and as unlike each other as humans are like and unlike each other. Judged by appearance and contact, and our knowledge of Mr. GUYER, St. John must be an unusual place, a community with its own individuality. In all of the years that I have known him I can't recall a conversation with him of more than, we'll say, 10 minutes, but that he mentioned St. John and his years here in St. John. I think that is a common experience among his friends. He didn't live here many years, yet the years that he did live here seem to have left a deeper impression upon his character and personality, and certainly upon his thoughts, than the years he lived in any other place.

It must be an unusual community that can do that to any man.

I believe this town was named after a former Governor of Kansas, John P. St. John. Governor St. John came to fame and remained in memory principally because of his vigorous advocacy of that one principle in Kansas from which there has never been any formal and official variation in the last 60 years. That is the principle of prohibition. It was his favorite subject. As the town of St. John was the favorite conversation piece for Mr. Guyer, prohibition, perhaps, was his favorite subject for public addresses. I don't think he ever missed an opportunity to talk about prohibition. So, again I think of Mr. Guyer in his career, in his individuality, coming back to Kansas, to St. John, and to the individuality of a different community.

We brought back your friend, a kindly man. I should say kindliness and friendliness and sincerity were his distinguishing characteristic. There are those of us who may have been, and are, impelled by motives of combat or self-interest or ambition, but here was a man whose guiding qualities of life were friendly services. He never was too busy to be friendly. He never forgot to be kind. These qualities are, I think, rather distinguishing characteristics of the community of which he was so fond, and of which he so proudly claimed to be a part.

In the last two days, his colleagues, including myself, have traveled half across a continent to bring him back to you. We left a pulsing crowd, a tense city, the Capital of this country, and by virtue of that, the Capital of the World. The Capital of this country is the stage on which there is being hammered out the destiny of the world. It is a crowded, tense, forum across whose steges are walking the most powerful characters in current history. In these two days, my colleagues and myself, with what is mortally left of Ulysses Samuel Guyer, have come to this peaceful place; quiet and lovely; a land of far horizons where the landscape continually unrolls until it meets the bending sky, a contrast in every way, mentally, spiritually, and in the physical aspect, from those scenes we left two days ago. A modern master of English has described that contrast in language, which so well befits the occasion, and the man we brought back to you, and the difference between these two worlds, that I shall repeat these words of Kipling:

"The tumult and the shouting dies;
The captains and the kings depart:
Still stands Thine ancient sacrifice,
An humble and a contrite heart.
Lord God of Hosts, be with us yet,
Lest we forget, lest we forget."

Elmer Davis

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 21, 1943

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following articles by Malcolm W. Bingay, from the Detroit Free Press of June 16 and 17, 1943:

[From the Detroit Free Press of June 16, 1943]

GOOD MORNING

(By Malcolm W. Bingay)

WHERE'S ELMER?

Elmer's popping off again! Yeah, Elmer Davis, Elmer, the dead-pan study in chiaroscuroistic physiognomy with his white hair, gray face, bootblack eyebrows and long black bow tie to synchronize the movements of his Adam's apple with his thought processes. Yeah, boy! Elmer was born to be an actor and that is the role he is playing now—with plenty of ham.

Elmer, as you know, is the chief of that weird hydra-headed monstrosity of governmental mismanagement known as the Office of War Information. No organization was ever so completely misnamed. Information is what you don't get from Elmer's vast army of heterogeneous press agents—the greatest collection of intellectual curiosities ever gathered under one roof.

Last month 14 of the best known and fully accredited newspaper and magazine writers in America resigned in a body from the Office of War Information because, they publicly

proclaimed, it was impossible for them to write the truth.

Well, Elmer at Boston Monday told the Newspaper Guild that Washington news is "less adequately covered than any other news in the world." What he really meant is that the hard-boiled, altogether objective reporters covering the Washington assignment refuse to take hand-outs from the bureau heads as the voice of God coming from Mount Sinai.

What they want are the plain unvarnished facts—as in that international food conference—and they refuse to act as mere messengers for the "bunk" peddlers.

Elmer said: "The war has suddenly compelled these reporters to cover an immensely complicated story quite outside their familiar field. * * * It is not surprising some of them still feel that a battle between a couple of administrators is bigger news than a battle between the American and Japanese Navies."

All right, Elmer. Be specific. When did any American newspaper consider a battle between your chums down there more important than a battle between the American and Japanese Navies? When was any such story made secondary to bureaucratic rows?

The answer, of course, is never. Why, the newspapers even played up the story of Pearl Harbor after you kept it bottled up for 1 whole year to spring it on "the anniversary." We had to wait 365 days for the facts that the Japs already knew—like little children not quite bright in the head.

Elmer continues: "A row between two administrators would have been big news in 1938, but it is conceivably of smaller relative importance in 1943."

Elmer, have you forgotten how you got your job?

As a radio commentator—not as a reporter out on the firing line getting the information which radio commentators read in the papers—you yourself dwelt on the mad muddle in Washington, with Cabinet officers openly contradicting each other on important war news, with every bureau stacked with press agents boosting the ambitions of their little czars. Don't you remember?

There was your chum, the starry-eyed poet, Archibald MacLeish, running the Office of Facts and Figures, and Lowell Mellett's Office of Government Reports, which became familiarly known as Mellett's Bug House. Your criticism was so sharp and sound that F. D. R. blithely merged them—as he does so many other bureaus when they become a laughingstock—and put you in charge of the merged mess.

Your job, we were told, was to clean house and to make sure that the newspapers got information about the war.

Well, where is it?

You were going to be absolute and all the boys and girls in key positions in the administration were to submit to you all the speeches written for them. There would be no more contradictions because everything was to funnel through your office.

Yes, the reporters have been dwelling on the rows between administrators. That is news from the home front.

It was this very reporting—cold, hard, accurate journalism—which forced the administration to reorganize the whole war production program—from the Office of Production Management to the Supply Priorities and Allocations Board to the War Production Board and now to the latest alphabetical shake-up of the same old gang: The O. W. M., which means the Office of War Mobilization.

If all these other bureaus were running right, why, then, all these changes? Why 18 months after the war has started, do we finally get a "war mobilization board"? Because the nasty, mean, unkind newspaper reporters of Washington have kept on the job night and day—never letting up in keeping the American people informed as to the blunders and stupidities of it all.

They have forced, by the power of public opinion, some slow emergence of a semblance of order on the home front.

The newspaper reporters have been winning the war at Washington.

And they are not devoting their time, as so many in your Office of War Information seem to be, in forgetting the war and boosting that fourth term.

[From the Detroit Free Press of June 17, 1943]

GOOD MORNING

(By Malcolm W. Bingay)

MORE ABOUT ELMER

The more I think of that attack by Elmer Davis on the Washington newspaper correspondents as incompetent the more irked I get. And, when it comes to Elmer Davis, I irk easy.

Davis, at the Newspaper Guild Convention, charged that the Washington reporters were "inadequate" to cover such news as the war, that they were more interested in reporting rows between various administrators than they were in telling of battles between American and Japanese navies.

The only answer to this puerile vaporing is that under the voluntary censorship of the American press—never once violated—military news cannot be printed unless O.K.'d by the censor. We print the news when it is officially handed us, even if it is from 6 months to a year old.

In all the annals of a free press there never has been displayed such a sense of responsibility and fidelity to a pledge as has been offered by the American newspapers.

Elmer ignores all that.

Charlie Michelson has moved back into the picture to prepare for the Presidential campaign of 1944. Machiavellian Charlie has won for himself the dubious reputation of being the most cunning smear artist in the history of American politics. His job is to rob men of their reputations if they dare oppose Roosevelt—no matter how honorably. It begins to look as though he had taken over Elmer's funnily named Office of War Information as an adjunct to his activities.

The Office of War Information seems more interested in winning an election than it is in winning a war.

I see where Senator Styles Bridges has answered Elmer's onslaught on the American press on the floor of the Senate and suggested a congressional investigation of the whole weird set-up of that organization.

"Perhaps," he said, "Davis' real objection is that the reporters have uncovered news in Washington that does not look well outside of Washington."

Last February I went down to Washington to attend the convention of the American Society of Newspaper Editors. We were told by Elmer Davis that we would be given the real inside low-down on the war and all other matters pertaining to its progress, in a series of off-the-record meetings. The only lasting impressions we got were those left by the cane-seated chairs.

We were told nothing! And every day in every way our intelligence was insulted by a parade of brass hats in carefully deleted speeches going through the motions of pretending to tell us. All direct questions were evaded. But we got something out of the convention. We learned what the reporters on the Washington firing line are up against in trying to get the truth.

The gist of the whole matter is that American newspapers through their correspondents have refused to surrender their independence to the politicians.

This, Elmer Davis naturally resents.

The administration does not want the public to know how it has fallen down on the job.

It wants all the silly disputes between the quarreling factions of the Government suppressed.

It does not want the people to know that it is because of these fights for power, because of utter lack of any organization sense, because of playing politics, we are not further along with the war effort.

It was these hard-headed reporters who kept harping on the derelictions and mismanagement for war production under Office of Production Management, the Manpower Commission, the Office of Price Administration—and all the other dizzy outfits—that brought about such reforms as have been accomplished.

By their barrage of exposure they made it possible for such efficient groups as the Tolan committee to move and make official factual reports on what was going on.

These reporters first called attention to the way contracts were being piled up in regions where there were critical shortages of both housing and manpower; they let the world know that the handling of agricultural and industrial manpower was being bungled; they exposed the fact that small business was being crushed to the wall.

They have shouted from the housetops that there has been no over-all planning for the mobilization of our resources to fight a war. And they are still yelling. Only 3 weeks ago—after 18 months of fighting—did the administration get around to the creation of a mobilization board.

Those reporters called attention to the fact that Barney Baruch has been telling the New Dealers for 2 years what to do. Every move they have made since has been along the lines he laid down and the only element of order in Washington has come about as a result of that.

And now Elmer Davis has the gall to suggest that they are not competent!

Listen, kid, they'll be there on the job when you are back on the radio, rolling your r's and telling the world what you've just read from their dispatches.

Commencement Day Address of Hon. James J. Davis, of Pennsylvania, at Mooseheart School

---

EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 22 (legislative day of Monday, May 24), 1943

Mr. DAVIS. Mr. President, on Saturday, June 12, 1943, I had the distinct privilege of delivering the commencement address at Mooseheart School, in Mooseheart, Ill.

It was an occasion of great pride and reborn confidence to learn with what faith, with what preparation, and with what determination the youth of this school and the youth of our land go forward to meet the problems of the hour. The fate of America is dependent upon the spirit and ability of its youth; and every indication is that the youth

of America will not falter in these hours of doubt and trial.

Graduates of Mooseheart have, over the years, gone forward into virtually every walk of life. Today the graduates of this school are serving in our centers of war production, in our armed forces, on our farms, and in that vast number of other activities concerned with the successful prosecution of the war.

During my visit at Mooseheart, I learned of the heroic exploits of one of its graduates, Seaman (1st cl.) James Birtcher, who, having seen his ship torpedoed and sunk in the broad Atlantic, was cast adrift on a life raft for 42 long and trying days.

Mr. President, it is such courage and stamina as this, reflected by the youth of our land in all quarters of the globe, which will insure the day of our final victory, for victories are fashioned not by weapons alone, but by the hearts of men. The heart of America is sound and indomitable. It shall prevail.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, as a part of my remarks, the address of commencement which I delivered at Mooseheart School on June 12, 1943, and a brief article which appeared in the Aurora Beacon News on Thursday, May 13, 1943, which describes the harrowing experiences of Seaman Birtcher while he was adrift in the Atlantic, his ship the victim of a submarine attack.

There being no objection, the address and article were ordered to be printed in the RECORD, as follows:

Commencement day has again come to Mooseheart—that proud and sad day when, with a task well done, we turn our eyes upon a waiting world and leave behind us, for a time, the ties, the contacts, and the friendships we have nurtured here.

Those who leave this school go forward into a world which needs the preparation and ability they possess. Today the world is troubled; it needs all the ability, the preparation, and the strength of youth that it can muster. The problems of the hour loom large and menacing. Somewhere in the depth of him each youth must come forward with the right, the enduring answer if this world of man and God is to go forward.

You who leave this school today take with you the best of training, the best of culture, and the best of character that it lies within our province here to offer you. You have seen and known the community life of the city, the town, and the farm. You have performed almost every manner of productive work with hand and brain. You have known the friendship and the guidance of wise and helpful teachers. You have learned many of the lessons of life, not only those that are written in the books for all men to see, but those other lessons which come only to those who labor with their hands, either at the sowing and cultivation of crops, or at the learning and application of an honored trade. Those of you who leave here today have mastered both of these, and they will serve you well throughout all the years of your lives.

Here at Mooseheart your welfare and development have always been uppermost in the minds of those who were around you. You have had—as all young people should have—the essential benefits of good, wholesome food; skillful and effective medical care; exercises to develop the body and the brain. You have been taught respect and social responsibility. You have learned the honor and humility of honest toil—of a task well done. Each of you has been reared in the religious teachings of your father. You have learned reverence toward and sincerity in the works and teachings of Almighty God.

You have learned the principles of brotherhood. These are such teachings as all men must have if they are to go forward into a full and successful life with their fellows. These are such teachings as all men must have if the values in the world are to be sustained, and the evil mockeries of wayward men destroyed. You go forth into the world equipped to live and prosper as freemen. You understand the word of God. You understand the functioning of our modern life—both in its political and economic span. You have learned the rich heritage of American history, and of the men and principles which made it great. You know the honor and the need of labor. And each of you possesses the skill to work productively and well.

In a word then you are equipped to take up your station in life; you are equipped to go forward, and to make your contribution to society and the world. Your paths may be divergent and take you far afield, but no matter where you are or what your position may be in this world, your thoughts at divers times will turn back to Mooseheart, and the many things which you knew and learned here. Indeed it is quite probable that the older in years you become the more vivid and touching your memories of this place will become.

And in your travels through life, many of you will no doubt want to see this institution enlarged and provision made for the establishment of a junior college here, so that a beginning might be made toward training for the various professional fields which are increasing at a rapid rate and offering extensive opportunities to young people throughout the land. Indeed, it seems that some such development as this will not be long in coming, for the real import of such training will be brought home to us all with new and accelerating force at the war's end.

But now you stand ready to make your own way in the world, to plot your own journey on the highways of life. Here at Mooseheart we have done everything possible to fit you for a successful life's journey. It remains for you to apply the teachings and experiences you have received here to make that journey a successful one in fact.

Many there are who will tell you that the way is harsh and inhospitable. Many there are who will tell you that the doors to opportunity and progress are seldom opened. Many there are, indeed, who will tell you that honest work brings with it no reward. They are the dissenters, they are the shiftless, they are the wreckers. I know that you will find no company in such a lot as that.

You are freemen, and the progress of freemen never dies. Here in America, here in her very mills, industries, and her vastness, there is and shall always be work for every American generation. And every individual is free to say just what type of work he shall do. Freedom is the greatest single blessing that can come to any man or any people; and here in America the growth of freedom has been encompassing and strong. The possession of freedom must never be lightly regarded or cast aside. It is such a possession that no man can really live without it. It is such a possession as requires the eternal vigilance of every man to hold it inviolate and sure.

You are a part of a new American generation. You were born and reared in a free society. The freedom you have is yours to destroy or strengthen as you see fit. I cannot say how you might live. I can only say that if you live in accordance with the principles of God and Americanism your freedom will remain unsullied. If you will but abide by these principles of Americanism—of constitutional government, of divided powers, of individual privilege and responsibility, and of the lives of those honored dead who made this society possible, and of the enduring principles which they propounded and gave to the world—you will have lived the life of a truly great American.

And if you but abide by the principles of free enterprise in America—of the worth and dignity of honest toil, of individual initiative, of ever-widening horizons of human growth, and of the truth that productive effort is the only effort worthy of the name—you will have sustained yourselves and protected all your followers from the black pits of slavery, where peoples of all races and all creeds now grovel in other lands across the seas.

In such emergencies as this, when war or the threat of war looms up to plague the Nation, we must all stand as one to beat back the challenge. Those whom we have made our leaders must have our undivided support, until the hour of peril is past. We must not dissipate our energies or becloud the issue with private, petty ills. We must wait until the proper time to vent our wrath and disillusionment—if any there remain with the hours of crisis past.

The necessity for such a procedure has already been recognized in this our own organization. In the periods between conventions we have learned to trust the Supreme Governor in his exercise of power. We have watched the developments, and brought our complaints and suggestions to the convention floor. There the policy was adjusted in accordance with popular demand, and the organization strengthened and empowered to carry on. From the mechanics of our own organization, we must realize that support of our leaders is essential to the successful prosecution of any policy—especially in times of emergency and war.

Today our country is engaged in a great struggle, the fronts of which extend to all the ramparts of the world. Many millions of young Americans have been called to the service of their country. Among these gallant souls are a number who have come from Mooseheart. Possibly before the battles have ended some of you will be called into the fray. This war represents the greatest effort at human decency and justice that this Nation and the world have ever been called upon to make. As such, that effort is worthy of your constant and continuing support. No real American will let any issue, any question, or any doubt allay his support from that effort—even for a split second. In every task you are called upon to do, give it the fullest possible attention, for there is scarcely a task left in the world today that does not bear some definite relation to the war in which we are now engaged. It remains for us to be resolute in purpose, unified in undertaking, and unrelenting in effort until the day of our complete and final victory is at hand. And that victory, lest we forget, will not be ours until our troops are quartered in Rome, Tokyo, and Berlin.

The peace that shall follow upon this war must be built of the most durable material and the most enduring principles known to man. It must be such a peace as will, in part at least, compensate for the suffering, the sacrifice, and the sorrow that shall be spent in its pursuit.

No peace, however valid its economic and political bases, can possibly endure unless it is cemented together with the spirit of kindredness and brotherhood. Brotherhood not only among the individual members of one nation, but among all the individual members of all nations, and among all those nations themselves. This does not mean that the aggressors shall not be punished, nor that the oppressor shall not be called to account.

The tenets of civilized procedure demand that this be done.

But when the vermin which carry and infect the world with the awful malady which is war, have been isolated and dispatched, we must turn toward the tremendous task of rebuilding the world along those lines which will bring to all men the maximum of good and the minimum of evil. These are such steps as men must take if the world is to survive this destructive ordeal in which it is now engulfed. These are such steps as must be taken if man is to remain a creature of dignity and growth, persevering always to that higher plane. This is such a task as will be realized if we but abide by the principles of brotherhood and fraternity which—as they have served us nobly and well within our own circle—shall serve all men no less nobly and no less well in that fateful epoch which lies ahead.

TELLS STORY OF 42 DAYS ABOARD LIFEBOAT AT SEA—JAMES BIRTCHER, SEAMAN, FIRST CLASS, AND MOOSEHEART BOY, LUCKY HE'S ALIVE

There was a gold star beside the name of James Birtcher on Mooseheart's honor roll of former student wards with the colors until yesterday.

As Birtcher, seaman first class, stood before the illumined panel with Supt. W. L. Leinweber of the Moose City of Childhood, he said simply: "I'd like to have that star when you take it off," and pinched himself as he grinned, all 6 feet 2 inches of him. And well he might.

For Birtcher had come back from Davy Jones' locker, a nautical way of saying he had been snatched from the dead, after a living hell of 42 days and nights with 22 shipmates aboard a 22-foot lifeboat which sailed more than 2,600 miles across the vast expanse of the south Atlantic.

NEVER LOST HOPE

It was an epochal voyage in which gnawing hunger and parching thirst faded into a numbing ache. But before the endless panorama of sea and sky and an eternity of battling storm-tossed waves, and broiling in tropical calm the men never quite lost hope.

When it seemed at last that their prayers would never be answered, the morning of the forty-second day Birtcher sighted land on the distant horizon. It appeared as a mirage of cloud lying low on the wide stretches of the ocean.

The 26 men huddled into the cockleshell of the boat cheered lustily, a few malted milk tablets conserved against a greater need were broken out and oars were dipped for the pull to the haven of port—which meant, first, full bellies and, second, clean sheets and soft beds.

PICKED UP BY STEAMER

A Brazilian steamer not long after picked up the starved crewmen and their boat and put them into refuge of a South American port. Some went berserk when it was all over and babbled in delirium or wanted to fight or cry in anguish lest it be but another dream turned nightmare.

As Seaman Birtcher, big and blond, and looking rather fit in navy blues told his story quietly in the office of Superintendent Leinweber yesterday, it seemed as far away as the Robinson Crusoe fables of childhood, or perhaps a movie seen and almost forgotten. But Birtcher won't forget it until his dying day.

The deep pain of remembering was reflected in his eyes as he narrated how his Liberty ship had been torpedoed and sunk on its way home with an empty bottom from delivering vital war supplies to the Near East, which helped the Allies drive the Nazis and their Italian satellites from north Africa in the first great victory of the war.

SHIP'S NAME SECRET

Since the Navy has not yet officially reported the loss of the vessel, he was admonished not to reveal its name, destination, or the port to which he and his shipmates were taken after their rescue.

But these are but unimportant fringe in the rich tapestry of a tale woven by another to go down to the sea in ships.

Hell-May-Care Attitude of People at Home Flayed by Flier

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 22, 1943

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article appearing in the Mobile Press Register, Mobile, Ala., under date of May 16, 1943. This article contains a letter from Lt. James M. Nettles, Jr., of Butler, Ala., to his father. Lieutenant Nettles is a fighter pilot in the United States Marine Air Corps stationed in the Pacific theater of war. I also include an affidavit of Mrs. M. F. George, sister of Lieutenant Nettles, that the letter referred to is a true and correct copy of the original received from the soldier by his father:

"DEAR POP: I'm still at a rest camp with nothing much to do but lie around. However, we go back into the combat area shortly and I've been doing some leisure thinking. So I thought I'd drop you a line and tell you some of my thoughts since there's no news at present.

"I read an article in a 2-month-old magazine that discussed things back in the States. That's one thing that started me thinking. When we out here read things and hear news about strikes and the likes back home, it gives us a sort of sick feeling in the pits of our stomachs."

JAPS ARE BEASTLY

"I don't believe the average American knows what we're up against. The Japs are just as beastly, if not more so, than painted. They're ruthless and cunning, not men, but animals. When they shoot a marine through the elbows and leave him in the jungle for insects to kill, then you have a small example of what they are capable of.

"The news, I know, sounds encouraging. But I'm here to tell you that this war isn't even beginning to be won. I'll tell you this: We'll never, and I repeat, never, win this war until every last American works and suffers plenty. We hate the Japs more than you can imagine, and we'll beat hell out of them if the home folks will back us up."

NO FRESH MEAT

"I don't believe there's a man here who won't give up his life, so it seems to me, that the damn strikers and few others would give up something. They think they're suffering hardships. Bull. One day out here would change some of that. We don't get fresh meat, even three times a week. We get canned food—and fight on it. The very thought of the way some people in the States are acting burns me up. We should give those people to the damn Japs—and good riddance, I'd say.

"I'm willing to fight and, if necessary, die. But I'd like to know that I'd accomplished some object. We can't win without all-out effort at home. If I do get killed I'd like to know it wasn't in vain. So I say, damn the slackers and the sooner they're drafted and made to work the better.

"We had an incident out here that I'd like to tell the folks at home. We were in combat area. We hadn't had fresh food for weeks and the Japs raided us some. A ship came into the harbor with supplies. Well, the seamen on the ship (men from civilian life and union members) refused to work overtime unloading. They quit promptly after an 8-hour shift. Marines had to do the unloading. Marines worked all night—men who had slept in foxholes the night before—such sleep as they could get. Some of these men had seen the most terrible part of the fighting. And they made less than $100 per month. The seamen get much more, plus a juicy bonus for sailing into combat areas. If that's not a hell of a note, tell me what it is."

WE HATE THE JAPS

"Well, enough of this. I just wanted you to know a few of the things I'm thinking. Just remember this: I know the kind of family I have and I'll fight to the last to keep you safe. I'll do what little I can. All of these boys are the same way and we hate Japs.

"Tell Aunt Rosa I'll send her some Jap teeth if I can. That's the only thing good about them. We're all well and healthy.

"Lots of love,

"JAMES."

Lieutenant Nettles enlisted in the Navy in July 1941, at Atlanta, and was stationed at Pensacola before enlisting in the marines in the fall of 1942 at Miami, Fla., being stationed next at Quantico, Va., then at San Diego, Calif., before being sent overseas. He was commissioned while at Miami.

He is a graduate of the University of Alabama Law School, and practiced law in Butler and Linden. He is unmarried and is the son of J. M. Nettles, ex-lumberman of Butler and Linden. He is known as Jimmie. Two brothers-in-law are in the service. They are Capt. W. G. Little, Linden, who is in charge of medical supplies in Karachi, India, and M. F. George, club director of the American Red Cross, stationed in north Africa.

A sister, Miss Fabrice Nettles, is employed in Mobile.

I, Shirley George (Mrs. M. F. George), do hereby certify that the copy of letter hereto attached is a true and correct copy of the letter written by my brother, First Lt. James M. Nettles, Jr., Marine Air Corps (fighter pilot), in Guadalcanal, and received by his father on May 6, 1943.

SHIRLEY GEORGE.

Sworn to and signed before me this the 7th day of May 1943.

GENE THOMPSON,
Notary Public, Choctaw County, Ala.

The Food Problem

REMARKS

OF

HON. HUGH D. SCOTT, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 22, 1943

Mr. SCOTT. Mr. Speaker, an article in today's New York Times suggests

that Chester C. Davis, War Food Administrator, must be given the authority he needs if the food problem is to be brought under control. He has asked for control over food-price policies and food-rationing policies now lodged with the Secretary of Agriculture and the O. P. A. He has asked to be put on a level whereon he can settle his problems with the President directly instead of filtering them through the Office of Economic Stabilization. I agree that it is obvious that Mr. Davis cannot do the task assigned to him unless price and rationing policies are made in his office or in the office of a single administrator and that direct contact with the President is also essential.

The food situation is ominous. Under normal conditions the average per capita consumption of meat in this country was 131 pounds annually. Under rationing it is 104 pounds annually. Actual statistics showing the real consumption under rationing, quota, and zoning, is 87 pounds annually. In the Philadelphia area, our cupboard is bare, and our consumption does not even compare with the average minimum in the rest of the country. It is certainly true that under present policies, supplies will continue to diminish, not because of Army and Navy needs, but because of gross misadministration; black markets will increase and turbulence will arise in the seaboard States within a year unless the food problem is firmly coordinated and competently handled.

Under leave to extend my remarks, I include the following article by Arthur Krock in the New York Times of June 22, 1943:

IN THE NATION—MR. C. C. DAVIS MAKES THE INEVITABLE DISCOVERY

(By Arthur Krock)

WASHINGTON, June 21.—On good authority, Mr. Bledsoe of this newspaper's Washington staff has reported to its readers that Chester C. Davis, War Food Administrator, plans to resign soon unless he is given essential authority to deal effectively with the serious food situation which he was directed to improve. Mr. Davis found—as so many other administrators and "czars" have found, and as it was freely predicted he would find—that he was given a paper sword to fight a dragon.

As always in the New Deal dispensation, the paper sword was tricked with gilt to make it appear strong and keen. As always, it revealed its flimsiness as soon as it was put in play. This has happened so often under the President as to justify the fear that the procedure is congenital and incurable.

When Mr. Davis was appointed as part of a diffused authority over food it was written in this space:

"How the great difficulties affecting food production and distribution can be overcome by setting up another subdepartmental agency with limited powers and many bosses was not explained today in the Executive order that put Chester C. Davis in charge of these matters in the Department of Agriculture. * * * What most men who are informed on the food situation have been calling for is a statutory administrator of Cabinet rank—but not the Secretary of Agriculture (Mr. Wickard)—sitting in a War Cabinet, with the President settling jurisdictional quarrels on the spot or before they arise. Neither in form nor in substance has this recommendation been followed."

SURPRISE AT ACCEPTANCE

Mr. Davis' appointment came at a time when Congress seemed bent on passing the Pace and Bankhead bills which would have pushed up the price cycle again, starting with agricultural products. It was taken as a device to dissuade Congress from taking that action, and, if that is true, it was temporarily successful. But general surprise was expressed that the Food Administrator, an able and sincere man who was deeply familiar with the problem placed in his hands, would consent to serve under so limiting a grant of authority. And some belief existed that he must have had with the President a private understanding that the conflicting powers of Secretary Wickard and the Office of Price Administration would soon be assigned to him.

This has not been done, however, and now Mr. Davis is reliably reported to be insisting that it must be if he is to remain at his post. He has asked for control over food-price policies and food-rationing policies, now lodged with the Secretary and the Office of Price Administration. And he has asked to be put on a level whereon he can settle his problems with the President directly instead of filtering them through the Director of the Office of Economic Stabilization.

It is obvious that Mr. Davis cannot do the task assigned to him unless price and rationing policies are made in his office. Direct contact with the President is also essential, though doubtless the Food Administrator would be content to join the board of the Office of War Mobilization headed by Chairman James F. Byrnes if he could periodically deal with the President as a member of a war cabinet made up of that board and others.

The deft hands of Mr. Byrnes and of his official adviser, B. M. Baruch, are now reported to be engaged in working out a solution that will be satisfactory to Mr. Davis. His reputation is such that, unless this solution is one that will enable him to perform the task to which he has been assigned—if it merely produces another stick with which to beat the devil around a stump—Mr. Davis will have none of it. That remains to be seen, and it is less certain since the Food Administrator accepted responsibility in the first place on faulty terms which should have been as plain to him as they were to numerous observers.

SETTLEMENT BY COMPROMISE

Under Mr. Roosevelt solutions of difficulties such as this one nearly always disclose the same old devil being beaten around the same old stump, with some doubt as to which is the pursuer. That repetition was indicated at the President's last press conference when he discussed the plight of Mr. Davis. He said that to delegate to the Administrator complete powers over food would enable him, for example, to give vegetables priority over munitions in transportation. Since Mr. Davis has not and does not seek control of food transportation, or for power to allocate critical materials for the production of food, it seemed probable that the President was knocking down a straw man to divert attention from a very suspicious inhabitant of the woodpile. This induces the conclusion that he does not intend to police the woodpile, which is unfavorable to the kind of solution Mr. Davis has insisted on.

But events crowd the most determined of public men into courses they have long opposed, and events on the food front are ominous in fact and in prospect. Disinterested experts predict that supplies will continue to diminish, black markets will increase, and that turbulence will arise in the seaboard cities within a year, unless the food problem is firmly coordinated and ably dealt with. Mr. Davis, given the authority, can do both things.

The Reformers Get Results

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 22, 1943

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the May 27, 1943, issue of the Clarke County Democrat, published at Grove Hill, Ala.:

THE REFORMERS GET RESULTS

From Mobile comes reports of a clash between the races. Without knowing any of the causes leading to such a clash, we want to counsel moderation and cool-headedness on the part of our people, white and colored. There is no reason for, no excuse for, ill feeling or violence between the races in this country. A spirit of understanding and friendly cooperation has been built up here by patient and intelligent leadership on the part of both races. It would be little short of tragic if we should allow these relations to be upset by a hot-headed or foolish act by a member of either race.

It is extremely unfortunate that at a time of national stress, strain, and high tension, professional reformers and political opportunists should be making capital of the race situation in the South. However, the fact that they are dabbling in and helping to agitate and aggravate an already tense situation is all the more reason why southerners must keep cool and not allow these selfish factors and self-seeking individuals to disrupt the friendly and sympathetic relations which we have so painstakingly built up.

We, for one, look forward to the day when the political intermeddlers can be retired to the oblivion which they so richly deserve and we of the South—leaders of both the white and colored races—can take up without outside interference the solution of the many complex problems with which the races are confronted.

A Soldier's Letter

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 22, 1943

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks, I include herein a copy of a splendid, inspiring letter sent by Lt. J. R. McLean, Boston, Mass., a veteran of the battle of New Guinea, to his father, Frank C. McLean. This letter was carried in a prominent newspaper in Boston, Mass., and properly entitled "Soldier Finds God":

The Good Lord, when He made this jungle country and ordained that white men must fight in it, was not entirely merciless.

He realized that war is an unpleasant game and that the combination of long combat, punishing climate and barbaric living conditions could cause men to lose interest in life as a worth-while possession.

As a result, when the world seems sunken in hell; when humanity takes on the drab colors of a lost cause, and life doesn't seem worth "ha'penny" a dozen, He, in His quietly dramatic way, sets us back on our feet.

There have been days when disaster frolicked in our midst, food was scant and lacking in appeal, irritations in mass had beset our bodies, minds, and souls.

The world seemed black; hope and desire to meet the future had gone.

We were sorry creatures, viewing the end of the world.

Then, when hope, faith, and our hearts had deserted us, we would look up of an evening, look up and stand speechless, struck dumb by the beauty of the sky. All our past worries, frets, and fears would bleach before that blazing panorama that a jungle sunset often displays.

Colors in harmonious riot would chant soothing hymns into our souls. Slowly, timidly, and then strongly, smiles would ease the tension of our faces.

Our eyes would open before that heart-warming, God-painted sky; open, once again, and see the world as if for the first time as a glorious place in which to be.

Blood would flow again to the newly awakened heartbeat; life would return and straighten weary bodies; again we were ready to go on.

Then, His work done, God would dim His sign of hope and faith; slowly, so as not to shatter the illusion, He would lay His blanket of night over us and allow us to ponder in quiet His works.

At other times, we would labor and sweat all day in the searing sun, drive ourselves to further effort when human endurance had long been surpassed. Those flaying rays would crucify our flesh, melt our bones to liquid and leave us lying helpless in their wake. Our eyes would ache, our heads swim far above our bodies and our feet drag with the weight of death.

Toward the day's end we would shuffle to the river.

"This is our last day," we would think, "our strength is gone. We're licked."

Then the clear, cool waters of the stream, sent by Him above for our salvation, would shock the life back into our frames.

We'd lie lifeless in the current, feeling its healing fingers ripple over scorched skin.

In its luxurious coolness our melted bones would become firm again.

Our heads would shrink to normal and rejoin our bodies. Our eyes would relax and come out from the depths of our skulls.

Our minds, cooled, calmed, and rested miraculously in the stream, would again feel the joy of life and offer silent thanks for mercies granted.

It is moments like these that cause us to acknowledge that there is a kindly God, that religion has substance.

Contrary to accepted doctrines, it is not the moments of strife, fear, or despair that drive us on our knees to God.

When they are predominant we have no time to ponder over a spiritual being; our minds are too full of matters at hand.

We do not pray during long nights when enemy planes menace us overhead and enemy soldiers skulk just beyond reach in the black jungle.

Prayers are forgotten while we crouch in fox holes as the earth shudders under the hammering of high explosives.

It is not the whispering of flying shrapnel fragments that tells us there is an Almighty God.

No, none of these things makes us pray.

Rather, on clear nights when there's a hint of breeze, when nature smells pure and clean, when crickets, katydids, and frogs pour their choral concert into the dark, when stars wink, the moon smiles, and light, silvery clouds rest in the sky, when the illusion of peace surrounds us, we acknowledge a kindly, beneficent, and Almighty God.

You wanted to know if there were really "heathens in fox holes."

This is my answer, based on 7 months of uninterrupted experiences of life in its most elemental phase.

Absenteeism in Congress

EXTENSION OF REMARKS

OF

HON. THOMAS E. MARTIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 22, 1943

Mr. MARTIN of Iowa. Mr. Speaker, under permission to extend my remarks in the RECORD, I am presenting a very interesting comment on Absenteeism in Congress, written by Hon. W. D. Jamieson in his column The Window Seat, for June 23, 1943. Mr. Jamieson represented the Eighth Iowa District in the House of Representatives in the Sixty-first Congress, 1909 to 1911. He was an editor prior to his coming to Congress, and he has practiced law in Washington since completing his service in Congress. He has written The Window Seat for many years, and because of his splendid background and understanding of governmental affairs his special column, The Window Seat, has enjoyed an unusual distribution in the newspapers throughout the Nation. Mr. Jamieson is especially well qualified to portray accurately the functioning of Congress, and I know that Members of Congress will particularly be interested in reading what he has to say on the subject of congressional duties:

CONGRESS ABSENTEES

B. H. Shearer, who has the Gazette at Columbus Junction, Iowa, a paper each of us—my father, mother, and myself ran at different times—and who is one of the best country editors in that State, has an editorial squib in which he notes with amazement the number of House Members who are absent on roll calls. He says maybe I can tell something about it.

The fact is, Friend Shearer, voting in the House is only a small part of the almost unbearable work Congressmen have to do, and it isn't fair to accuse them of absenteeism because their names do not appear on all the roll calls.

They have heavy committee work, thousands of letters to answer, department matters without limit for their districts and States, people from home who come to see them on personal matters, bills to study, speeches, next election coming, and a thousand interruptions.

MANY LITTLE BILLS

Thousands of votes come up in the House that are of little consequence, and often Members are paired with other Members who would vote on certain matters the opposite way from them. Then many times they know in advance whether certain bills will pass or not if they are not present. On some important bills there is someone on the floor to notify them if their votes are needed.

I know from experience it is often hard to tell where a Member should be—voting on the floor or outside doing other work. Of course, a Member should never dodge.

Most Members put in long hours at hard work, many of them die from overwork, and the average of them are conscientious.

It's hard to be a good Congressman, but easy to criticize them.

CLEAN FELLOWS

Everyone I know is hard working, clean living, and takes his job seriously.

A Tribute to Russia

EXTENSION OF REMARKS

OF

HON. ALBERT W. HAWKES

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Tuesday, June 22 (legislative day of Monday, May 24), 1943

Mr. HAWKES. Mr. President, I ask unanimous consent to have printed in the RECORD an address entitled "A Tribute to Russia", delivered by the distinguished and erudite senior Senator from Utah [Mr. THOMAS] at Newark, N. J., on the 21st of this month, before a meeting under the auspices of the Russian War Relief, Inc., as a tribute to Russia.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

On the evening of June 21, 1941, one can safely assume, somewhere in the rear of the 180 German divisions poised along the 1,800-mile Russian border, there was a conference between Herr Hitler and his most eminent generals. The Fuehrer probably said something like this:

"At 4 a. m. tomorrow you will strike at the Soviet Union while its people sleep. Move swiftly. Push the panzers through the Bolshevist ranks. Stop at nothing. In 3 weeks we will meet in Moscow."

Some such monolog as this undoubtedly occurred.

But on that same evening, by one of the sardonic quirks of which fate is capable at high moments in human destiny, the opera company of the Moscow Art Theater was presenting to a packed house Shakespeare's comedy, A Midsummer Night's Dream. Because the Russian people universally like Shakespeare and his salty commentaries on human foibles, the audience undoubtedly chuckled, as American and English audiences always do, when Puck cried:

"Lord, what fools these mortals be!"

By nightfall of the next day thousands of Russians had died before the onrushing Nazi legions, but it was not the Russians who had laughed with Shakespeare who were the fools. The fools were they who thought that in the Soviet Union they would find the weak leadership which undid France, the Quislings of Norway, the divisions within a people which had brought nation after nation to slavery.

For the Soviet people and their leaders have exhibited to an increasingly astonished world in the 2 years which have elapsed since that night such unity, such heroism, such willingness to die rather than surrender their freedom that the whole course of human destiny has been altered by it. None among us can say certainly what might now be the condition of Britain, China, and America had Hitler been right, and Puck

wrong. But I think there is not one of us who will not, if he but contemplates for a minute the awful probabilities had Russia fallen, thank God for the leadership and the fighting spirit of the Russian people.

America by her Lend-Lease Act, by opening with Britain the African campaign, by her many other aids, but above all by her decision to make the support of Russia a major, if not the major, war aim until Germany is beaten has displayed all the appreciation a friendly ally can. Above all the American people applaud the Russian women and the Russian youth who in their new-found freedom have added a new epoch of man's advancement to world history.

So it is appropriate for us today, as our Soviet allies enter with undiminished determination the third year of the struggle which Hitler expected to last only 3 weeks, to pay to them the public tribute which is the purpose of this meeting and scores like it being simultaneously held throughout the United States, in Canada, and in many other countries.

Some persons like to insist, with what seems to me to be a pointless synicism, that no thanks are due our Russian friends because, so the argument goes, the Russians are fighting in defense of their country not ours. To which I reply, "We Americans are fighting for our country not theirs." Of course, Russia is fighting for herself and America is fighting for herself, and so are the other United Nations, but whoever beats Hitler, the benefit goes to all. It is a fundamental of the concept of freedom and liberty that although they are gained for one, all profit. Freedom and liberty cannot be clutched selfishly by one. If it is, it is lost. It is with liberty as it is with love: The more you give, the more you get. Russia can't keep the victory to herself, neither can we. Our victory, like theirs, when it comes, is for the world.

Why bother with cynics? The American people pay tribute to Russian heroism and they are happy in doing it. We are not "thanking" them, although I think we properly and gracefully could. We are giving recognition to courage and sacrifice, to a great achievement made possible only by characteristics which we recognize as noble in an entire nation of 180,000,000 persons. It is in what we like to think of as "the American tradition" to give applause to the traits which the Soviet people have so abundantly evidenced in the last 24 months.

It is good for our own souls as well as for the morale of our allies to pay this tribute even if there were no other reason for doing so. But I think this Tribute to Russia Day has a greater utility than the achievement of either of these purposes.

Twenty-one years ago our boys of that generation began coming home from Europe after winning the war for democracy. We had won or could have exacted easily the unconditional surrender of Germany which today is again our immediate war goal. That we made some awful error in the days that followed is sufficiently evidenced by the fact that so short a time later we are again fighting the same enemy.

I think our public tribute to one of our allies today is an activity of a sort that can help to prevent a repetition of at least a part of our former grand error.

What was our error? I do not pretend to wisdom that would enable me to weigh infallibly all of the complex factors that went into the making of the last peace and the precipitation of the new war. But one thing I do know, had the Allies who defeated the Kaiser hung together after their victory and cooperated as friends, we would not now have Hitler to defeat. And, in that event, we probably would not be worried by Japan either.

The last 20 years prove the verse which the ancient Greek dramatist made his character wail, "Men unite for war and destruction but divide for peace and construction." If our allies are useful and beneficial in war, they can be made even more useful and beneficial in peace because there are actually more peace problems than war problems and much more can be done for the men, women, and children of the earth through peaceful activities than through war. The same amount of energy given to peaceful pursuits which we are now giving to the war would make the earth a paradise. Look what 20 years of peace has done for Russian youth and women! What a lesson for the people of the earth if they would but learn it!

So sure am I, and I think most men share my opinion now, that both the chance of winning a decisive victory in the war and that of insuring a just peace rest upon the establishment of a solid friendship, trust, and community of interest among the United Nations, that I rate efforts in that direction as equal to our drive for the production of arms and food.

It is for this reason that I feel the national tribute to Russia and the work of the organization which sponsors the tribute are exceedingly important.

Our Russian allies need our friendship, trust, and aid. We need theirs. A sound basis for this relationship is being laid in the war, but friendship and trust are tender plants. They need to be watered and cultivated. We know that our understanding, respect for, and liking of the Russians has grown greatly in the last 2 years. We know that we Americans are determined to fight the war to unconditional victory.

But how can a Russian John Jones know how we feel unless we tell him?

Our Russian allies count 10,000,000 dead during the 2 years of their war. Nearly 40,000,000 Russians have been driven from their homes by the invaders. They are actually face to face with famine. They are desperately short of clothing and fuel. Tens of thousands of them are struggling to keep their children and themselves alive in caves and dugouts and dreading the return of the 50°-below-zero weather next winter.

Although future historians may mark it down as one of the decisive battles of the world, our great African campaign was but a minor engagement when compared with the warfare being waged along the 1,800 miles of the Russian front where daily more and more of Russia's sons and fathers are slaughtered.

Is it not understandable that John Jones of Russia, the Russian worker and farmer who is so like ourselves, needs to be told and have it proved that the Yanks are coming?

I think it would be superhuman of our Russian allies not to require such assurance.

So today we and millions of other Americans are saying to the people of Russia:

"We, the inheritors of the tradition of the men who stayed with Washington through the cold and snow of Valley Forge, are committed to fight with you to the limit of our ability until Hitlerism is destroyed and the world freed from its outlaws.

"We admire, beyond our power to express our feelings, your courage and achievements in the last two years.

"We understand how greatly your indomitable fighting spirit has benefited us and our country.

"We pledge ourselves to produce, to fight, as hard as we can, until victory is won.

"And we are determined that after this war is over the unity which war has forged shall not be destroyed by the peace."

Our Russian allies have said all that they need to say with blood. We pledge them our friendship. If we execute our pledge in good faith, our world will be far advanced toward peace, justice, and the insurance of the rights and dignity of all mankind. Britain, Russia, China, and America allied in war, united in peace, can insure a new world. They with their associates in the United Nations have varied experiences, differing traditions—so much so, in fact, that in them may be found the great universals essential to world organization. The dream of a united world can be made to come true if we will but appreciate the sacrifices already put forth and which must be made yet before the terrible scourge now in the earth is put down. Those sacrifices must be made to bear fruit. Men and women must cease to die in vain. If it is simple to die for a purpose, it must be made simple to live for one. We are fighting to bring peace. Let's make it a real peace. I repeat the words of our President, "The war must be won and it must stay won." The Russian people can contribute to that as they are contributing to the war. Let's make friendship work.

Address of Hon. James M. Mead, of New York, at Touchdown Club Luncheon

---

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 22 (legislative day of Monday, May 24), 1943

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very interesting address delivered by the junior Senator from New York [Mr. MEAD] at the Touchdown Club luncheon on June 22, 1943, at Washington, D. C.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Sports have become part of the American way of life, and unless in some particular case they affect the war effort adversely, they should continue. Elmer Layden, prior to the recent meeting of professional football, stated that since football makes a definite contribution in peacetime, there is no reason why it can't make the same kind of a contribution during the war. That same reasoning applies to baseball as well as other sports. Both of these sports furnish recreation and relaxation for thousands of war workers and service men and women. Two baseball teams or football teams, with squads of about 50 men entertain crowds of 50,000 in the stands and thousands more over the air waves.

The same reasoning applies to the other popular sports. Both from the spectators and the competitors standpoint, they are an integral part of our war effort.

Our servicemen recruited from the sports world maintain an active interest in their own specialties while in the service. The National Amateur Athletic Union track and field championships held this past week end in New York had the largest entry of servicemen in the 55 years of its existence, with representatives from 32 service posts participating. Most of those men were on furlough.

The men who have stepped from the sports field to the armed forces are legion, and they took with them the physical prowess, the initiative, and the leadership which competitive sports inculcate in the athlete. Some of those men have already paid the supreme sacrifice. The whole Nation mourned the loss of Niles Kimmick, honored but a short time ago by this group for his outstanding ability.

Competitive sports produce the heroes whom our American boys emulate. Thousands of embryo Sammy Baughs, Tommy Harmons, Babe Ruths, and Walter Johnsons, are to be found in the country today. These boys are our leaders of tomorrow. The freckle-faced kid of yesterday who went through 4 years of practice with the high-school squad, is a leader of men today on the field of battle.

Maj. Gen. Francis B. Wilby, Superintendent of the United States Military Academy at West Point, denied last week that there is a movement on foot to stop athletics at West Point. He said that the authorities at the Academy feel that competitive athletics is one of the finest things in the training of a soldier; and that the training and morale of the whole cadet corps will suffer if that is omitted.

Both the Army and Navy recognize this need for an athletic program which will provide continuous sports activities for all the men, to keep them physically fit and to give them wholesome, healthy activities in their leisure time. A well-rounded sports program helps make a good soldier. Athletic equipment is a "must" for our armed forces both at home and abroad.

We can perform a vital function on the home front in fostering athletic programs for our youth, and spectator sports for the recreation of our war workers and servicemen on furlough.

Our concept of morale is far different from the Nazi approach. Himmler has stated that "enforced discipline and intimidation is the best means of preserving civilian morale during the war." Our morale is based on intelligent understanding and wholehearted cooperation.

Morale is a rather general term and has as many definitions as there are people who define it. One of the definitions which seems to sum up the subject is that morale is a spiritual condition—it is more than physical condition; it is more than mental condition.

It is something greater than these two put together, and yet it grows from both of them. Morale is an important element in warfare—on the battle front and on the home front—it is a connecting link between those two fronts. The greatest armament output is worthless unless complemented by a fighting force which will brook no interference, backed up by a loyal citizenry at home fired by a fierce determination to let no sacrifice be too great if it will help the men on the fighting front.

In addition to the morale features of the spectator sports, sports events of all kinds have stimulated the sales of War bonds and have raised funds for the Army and Navy relief societies and Red Cross activities. Baseball has just made a notable contribution of this respect. The War Bond Baseball League, started in New York 2 weeks ago, promises to account for War bond sales totaling $500,000,000 before the end of the season.

One of the greatest sports spectacles in normal times is the annual Army-Navy football game. Last year the authorities saw fit to deemphasize this service event by staging it at Annapolis, where only a small crowd could view the event. I can think of many reasons for restoring this event to a large stadium, where it can provide wholesome entertainment for thousands of civilian war workers and servicemen. It will prove a source of revenue for our service institutions in the financing of their much-needed athletic activities. It can be localized to eliminate strain on our transportation agencies. The men on our far-flung battle lines are eager for broadcasts of sports events from home. They thrill to the breathless accounts of a tight world series struggle or a desperate last-minute aerial attack on the grid-iron. Sports should continue so long as they help and not impede the war effort.

The Alabama Incident—Long-Haired Washington Theorists Reap What They Sow

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 22, 1943

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the May 28, 1943, issue of the Mobile Labor Journal, Mobile, Ala.:

THE ALABAMA INCIDENT—LONG-HAIRED WASHINGTON THEORISTS REAP WHAT THEY SOW

(By Stanton Dann)

The regrettable incident at Alabama is significant.

Theory cannot thrust aside a cold fact.

Philosophies imposed upon communities in the holy name of the war effort are setting back the cause of minority groups many years. The professional "do-wellers" of this country would be well advised if they let practical, responsible labor leadership apply their practical methods to a subject loaded with dynamite.

The imposition of the doctrine of social equality is a thing that the thinking Negro leader does not want. If he would advance the cause of his people he would and does apply himself to the economic field with the idea in mind that he raise the economic standing of his people within their own group. The American Federation of Labor has long recognized the right of men to earn equal pay for equal work—to obtain better housing facilities irrespective of color or creed and generally that the problem of minority groups is one that needs fair and honest approach based upon experience.

As a practical proposition we all know that social equality is simply a phrase. Do you feel that it is your responsibility to invite everyone to your home? Are you offended if others preserve to themselves the right to choose who shall or shall not be their associates? Certainly not—the problem is that simple.

This Government cannot by edict over night change a condition of fact based upon human emotions. The exploiters of those who toil have deliberately, in times past, capitalized on the illiterate and blind animosity of the white man toward the negro and vice versa. That spirit of animosity has been built up over generations. It cannot be changed over night.

Liberal and progressive southerners are trying—by the process of evolution—to bring about an honest evaluation of the colored workers contribution to the progress of this section of the country and the Nation as a whole. They feel that that effort and contribution should be rewarded. The problem will never be solved on the basis of compulsion. Those who believe otherwise are needling the citizens of the South and in truth are hurting the cause of the Negro to a greater extent than do all those who exploit the Negro, or any minority group.

The matter or incident might be justified if there were a shortage of jobs here in Mobile but the cold fact is that—

There are thousands of jobs here for competent and capable Negro workers. These jobs are available and do not come in conflict with established union contracts or customary working arrangements. The employment on these jobs available would not and could not open old sores nor would they deliberately create friction between workers on the basis of color distinction. The whole incident in the face of this fact was so silly that it questions the intelligence of those who would deliberately create a race issue in a vital war connected center.

I seriously doubt that the professional do-wellers are sincere in their protestations—if they were they would be in part guided by those who live here and are intimate with the problem and not try to cram their half-baked ideas down the throats of our southern citizenry.

At all events cool heads are needed now and true leadership is needed from both white and colored if we are to work in unity to prosecute the big battle of beating off Hitler and Tojo. Let's for God's sake get the big job done and then work on a common sense basis to better the lot of the Negro. Too many philosophies are being imposed upon America's citizens in the name of the war effort. It's time to call a halt.

Post-War Relationships

EXTENSION OF REMARKS

OF

HON. ARTHUR H. VANDENBERG

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Tuesday, June 22 (legislative day of Monday, May 24), 1943

Mr. VANDENBERG. Mr. President, on Friday last the able junior Senator from Massachusetts [Mr. LODGE] made one of the ablest speeches I have heard in my time. He was dealing with the realities of America's post-war relationship. I ask unanimous consent to have printed in the Appendix of the RECORD a series of editorials commenting upon the able address delivered by the junior Senator from Massachusetts.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star of June 19, 1943]

REALISTIC APPROACH TO PEACE

Senator LODGE, of Massachusetts, has suggested a "fruitful" approach to peace for this country. His plan differs from others which have been advanced because it frankly and realistically declares that the United States should be prepared to state its own needs when peace is made. He places emphasis on what the United States is to get out of this war. The emphasis in other peace proposals has been upon what this country is to contribute to the rest of the world.

In one respect, however, the Lodge approach to peace is on all fours with other plans. He puts permanent security against war—the adoption of a workable plan to assure peace—first on the list of this country's needs. Without some instrumentality to maintain peace, once the war ends, there can be no assurance that any of the needs of any of the United Nations will be filled.

The Massachusetts Senator, quoting from the experts who have looked into the situation, showed in detail that essential minerals are fast being used up in this war—among them lead, copper, iron, and petroleum. The Nation, he said, will have to import these and other necessary materials after the war. The country will not be self-sufficient, as many have believed in the past. It will be necessary, therefore, that steps be taken to assure

the United States proper supplies—which will no longer be available within its own territorial limits.

Further, among the needs listed by Senator LODGE, are means of using the huge merchant marine which is now built and building, the proper participation of this country in the great field of commercial aviation which is expected after the war, and the use of all kinds of international communication services.

Frankly, Senator LODGE does not have too much faith in what he calls the "cosmic" or "transcendental" approach to peace. It has its place. But in a realistic world in which our allies, Great Britain and Russia, both know what they hope to get out of this war, it would be folly for the United States not to be prepared to say at the proper time what it will require in a material way. During and after the last war, it was repeated many times that the United States wanted nothing out of the war—except to make the world safe for democracy and the maintenance of peace. The United States got nothing out of the last war. Not even a long-maintained peace.

To the idealists, Senator LODGE'S demands for a realistic approach to peace may come as a shock. And, indeed, should the United States proclaim today what it intended to demand at the peace table, the effect might easily be to encourage other nations to make even larger demands than they intend to make and to focus attention on conflicting aims at a time when the whole effort should be the winning of the war. However, it should not be amiss for the United States to give due consideration to its needs when peace is made and to be prepared to make such demands as may be necessary.

It was the contention of Senator LODGE that a more definite and realistic program—or the proposal of such a program—would go further toward uniting the American people than a more idealistic and altruistic program, in which this country is visualized as an international Santa Claus. It may be that he is right. Certainly there is far less agreement in this country that Uncle Sam is to assume a Santa Claus role once the war is over than there is beyond American borders.

[From the Boston Post of June 19, 1943]

LODGE'S PEACE POINTS

Senator LODGE'S statement outlining some of the material things the United States should insist upon in a peace settlement will at least have an appeal to the large element in the community who realize that we shall face some very practically minded gentlemen among our allies at the peace table. These men will allow our world brotherly love dreamers talk to their hearts' content, but the realistic fellows will take home the bacon as they did at Versailles after the last war.

Senator LODGE says we are becoming a Nation of "have nots" by the dissipation of vital natural resources in the war and that we should insist upon access for our fair share of these. Also that we should have equality with other nations in communications services, radio for example; free competition in international aviation, a matter which is sure to be of immense importance after the war; a "real chance" for our merchant marine in a world which will have an enormous oversupply of ships; and, surely as important as all else, military bases to guard the approaches to our shores.

Britain, the Senator says, has already announced that the British Empire will be maintained intact, and Russia has given the world notice of her intentions about several of the small countries adjacent to her borders that were taken away from her after the last war.

Whether it is necessary or expedient to go into much detail about our aims now, with the possibility of creating a rift in allied unity, is a question. But there have been so many proposals set forth by visionary enthusiasts about our need to play Santa Claus to restore the post-war world that Senator LODGE'S recommendation to keep an eye on some of these material factors is not untimely.

[From the Christian Science Monitor of June 19, 1943]

MINERALS AND GOOD WINDS

Senator LODGE, of Massachusetts, has projected the interesting question whether the United States could, even if it most ardently wished to, return to a pre-war type of isolationism. His discerning correspondence with Dr. R. R. Sayers, Director of the Bureau of Mines, confirms his opinion that the war, with its immense drains on American resources may very likely leave the United States in the position of a "have not" Nation insofar as several strategic minerals are concerned.

Of course, as Profs. C. K. Leith, Dr. Cleona Lewis, and J. W. Furness recently pointed out in their Brookings Institution study World Minerals and World Peace, all nations, without exception, are interdependent in one degree or another for mineral supplies; but Senator LODGE carries the thesis into practical perspective, asking what shall the picture be in the immediate post-war period when the foreseeable exhaustion of some vital American resources will make active trade, if not world exploration and development, mandatory? What, then, shall be the American foreign policy?

It is true that minerals are the keystone upon which rests industrial power. And it is true that the headlines daily tell us this is an industrial war. But the Axis' claim that war became inevitable because they were denied sufficient mineral imports does not bear analysis.

Looking back, it is clear that in the 10 years before the war any nation or individual having exportable surpluses of minerals was only too glad to find a foreign market. The profit motive took care of that. Prewar criticism of American shipments of the sinews of war to Japan, Italy, and elsewhere bear evidence to what happened.

The shortage, as the Brookings report makes clear (and Senator LODGE does not), really resulted because many have-not nations lacked foreign exchange. Moreover, once they had determined on war as the method for adjusting their deficiencies, their needs for minerals became inordinate and could only be filled by thrusting domestic and external economy further awry.

What the Axis countries really needed, indeed what all nations needed and will continue to need for peacefully expanded living, is an easy exchange of one another's goods. And that was what the United States and others by trade restrictions and isolationism, partly denied their neighbors.

America could sustain such an awkward economy because it required few strategic imports and had plenty of money with which to buy what it did need. But if in this leaner post-war world that Senator LODGE sees, the United States should acutely need oil, copper, bauxite, and other essential and industry-dominating minerals, a less complacent and considerably more realistic approach to the problems of international trade might easily result.

[From the Lowell (Mass.) Sun of June 19, 1943]

SENATOR LODGE'S WARNING

While America races headlong toward what could prove to be a Pyrrhic victory, a remonstrating voice is raised in the Halls of the United States Senate by HENRY CABOT LODGE, of Massachusetts, who appeals to his Government for an immediate and forthright definition of post-war plans and an inventory of our resources and stores of vital raw materials.

Idealists who are shouting about one world and the amalgamation of all nations into one society after the war have made no impression upon the intelligence of the Massachusetts statesman, whose theories on the adjustment era are not warped by international enthusiasms of the moment.

Senator LODGE bluntly told his colleagues that our allies, England and Russia, have definite admitted ambitions—England with the preservation of her empire in toto and Russia with territorial enlargement in eastern Europe. Meanwhile, America, the arsenal and bread box of the democracies, purrs contentedly in response to the soothing attention of other nations, but failing the while to plan practically for the future in the light of expectant needs, needs that will grow out of the war. Commenting upon this smug self-satisfaction which is leading America into the category of "have-not" nations, he says:

"It has become plain as day and it is common sense to recognize that our British and Russian allies are not only dedicated to the broad purpose of crushing nazi-ism and fascism, but that they have a number of very definite and very practical national aims which have been frankly revealed to the world. These great nations are not only committed to defeat of the common enemy and to cooperation for peace thereafter; one of them—Britain—frankly intends to maintain the Empire and the other one—Russia—has clear intentions regarding eastern Europe.

"We in the United States, on the other hand, are committed to speedy victory and to effective measures to preserve peace thereafter. But in the field of definite and practical aims there seems to be a vacuum. Why this vacuum exists, I cannot say. But I do suggest that it is not because there is any lack of matters lying outside our borders in which we have a vital interest. And I further submit that the clear statement of these aims is not only in our own interest, but that it is also a frank act to which our allies and our own people are entitled and an essential step—nay, the most fruitful approach—toward discharging the overshadowing obligation of effective post-war collaboration."

Production, production, and more production. That is the very proper philosophy of wartime America, and that is one of the vital reasons for the Senator's appeal on behalf of post-war planning in the interest of America—beyond the national borders.

America's great wealth of natural resources, heretofore considered to be without limit, are being tapped so heavily and so speedily—for the benefit of all the United Nations as well as for our own war effort—that serious thought must be given to our natural riches of tomorrow.

Thus, as the Senator said:

"It will come as a surprise to many Americans to be told that we are actually facing the prospect of an America materially depleted of some of its magnificent natural resources. The great demands of our own fighting forces and those of our allies have cut deeply into our reserves of vital, basic materials. We are not in the habit of regarding the United States as a 'have not' Nation—and now is the time to think of steps to avert such a catastrophe."

There is ample documentary evidence to substantiate the Senator's remarks, not the least of which are letters addressed to him by the Director of the Bureau of Mines in which the possible depletion of natural stores of minerals and even of petroleum is forebodingly mentioned.

The future of our domestic economy is being jeopardized, yet the administration is too engaged to do anything about it. It may even be too engaged or too stubborn to heed Senator LODGE'S warning.

The Senator calls for a sharply defined declaration of "beyond the border" relations after the war, pooh-poohing the cosmic approach theory which has found so much favor with the professors in Washington. He says:

"Mr. President, I have very little faith in what I call the cosmic or transcendental approach to the question of American foreign relations. I cannot see why it is necessary to treat the relations between peoples of different nationalities on a highly theoretical, political, and emotional basis when the relations between peoples of the same nationality are not treated that way. True, the airplane has changed commerce and revolutionized military science; it has not, however, automatically created a universal state of brotherly love."

Summarized, this clarion call to the people of the United States urges them to wake up before it is too late; by inference, it charges our Government with having lost sight of the necessity for safeguarding American economy in the post-war era.

Without name calling or any other display of viciousness toward our allies, it tells plainly and simply of their far-reaching plans after hostilities have ended. It scoffs at ethereal thinkers who speak in terms of a cosmic society, and it issues a warning to America that unless positive arrangements are made now for beyond-the-border dealings, the depletion of our natural resources may leave us high and dry—prey in later years for new and stronger aggressors that may come over the horizon.

This is one of the most convincing commentaries that has originated in Washington since the war began, and the American people owe Senator LODGE a debt of gratitude for speaking in defense of America of the future and coming generations of Americans.

Let's forget "globaloney" and do some progressive, practical thinking.

Post-War Social Security

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, June 22 (legislative day of Monday, May 24), 1943

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix a thoughtful article entitled "American Planners Study Freedom From Want" by Msgr. John O'Grady, appearing in the magazine America, May 22, 1943.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Sir William Beveridge's Report on Social Insurance and Allied Services in England has aroused widespread interest in social insurance in this country. Many people are saying that what America needs is a similar document based on conditions in the United States.

In this connection, it should be noted that social insurance has long been regarded as a method of providing a certain minimum of protection against such hazards as accidents, sickness, invalidity, unemployment, and old age. After all, as Sir William points out in his report, "in three-fourths to five-sixths of the cases studied * * * want is due to interruption or loss of earning power." During the past 40 to 45 years, Great Britain has made great progress in protecting its people against the hazards that cut off their earning power. The problem now is to improve the methods of protection.

For more than 30 years, in this country, the various States have been developing workmen's compensation. This does give a certain amount of protection against industrial accidents to some 40 percent of our wage earners. But due to a lack of interest in some States, workmen's compensation has failed to reach the expectations of those who promoted it. It is limited in the number of workers covered; in many places the concept of industrial accident is too narrow; occupational diseases are frequently excluded; most of the State laws are voluntary.

The Social Security Act of 1935 laid a foundation for a more extensive social-insurance program in the United States. It gave us a national system of old-age and survivors insurance; it gave us a Federal-State system of unemployment compensation; it provided grants-in-aid to the States for public assistance for the aged and for the care of dependent children in their own homes and the homes of relatives, up to the second degree of kindred.

Social insurance, therefore, is not a new venture for us. We have not gone as far as the British, but we have made a substantial beginning. We now need to study our present programs in the light of possible future developments. Nobody is fully satisfied with our present system of old-age and survivors insurance; it should have a wider coverage. Nor are people satisfied with the scale of benefits provided by unemployment compensation in most States; they want better standards.

When the Social Security Act was being debated, there was question of extending old-age and survivors insurance to cover invalidism. As it stands, it covers only persons of 65 years and over. How about the large number of persons who become disabled before they reach that age? How about those whose incomes have been cut off by temporary disability due to sickness? Is not this just as important as unemployment? Should there not be some method of providing insurance against it?

After the people of the United States had been studying the Beveridge report for a few weeks, the President took from the drawer of his desk a report on security, work, and relief policies made by the National Resources Planning Board and sent to the White House under date of December 4, 1941. With this, the President sent to Congress a report on post-war planning and program, made by the same Board under date of December 16, 1942. The latter report contains only a very brief résumé on social security, written by Eveline Burns, who served as Director of Research on the technical staff of the Board making the original report on security, work, and relief policies. This earlier report, based on a study made over a period of about 3 years, bears many of the earmarks of depression psychology. We were still in the midst of the depression when the report was made. It emphasized grants-in-aid to the States for public assistance; pointed out that all employable persons have a right to work; and urged the extension of existing social-security benefits, including unemployment compensation and old-age and survivors insurance.

The National Resources Planning Board's report is highly academic; it brings together a great volume of material—weighing over 5 pounds—in regard to programs that directly or indirectly are concerned with the relief of human needs. On the whole, it stands out in striking contrast to the Beveridge report, which is clear-cut and concise, and which looks ahead to a society in which all workers, including the self-employed, would be given, as a matter of right, a certain minimum of protection against all the hazards of life.

The reports of the National Resources Planning Board must not be confused with the program that is being developed by the Federal Social Security Board. During the past year the Security Board has been studying ways and means of improving and extending the existing systems of social insurance in this country; it has also been considering the possibility of adding new forms of insurance for hazards not yet covered.

One of the problems to which the Social Security Board has given much attention is the extension of coverage of old-age and survivors' insurance to self-employed persons, agricultural workers, and employees of religious, educational, and charitable organizations. There is no good reason why all these groups should not have the benefits of protection against want in their old age. Ordinary wage earners do not look to old-age assistance with any feeling of security; they still regard it as a form of relief; they prefer a form of protection which they have earned and which is theirs on the basis of right.

In the extension of old-age and survivors insurance to additional groups, there would arise some problems. Many religious, educational, and charitable agencies have questioned the desirability of their inclusion under a plan that is clearly revenue in character. If we had followed the British plan of having the contributions from employers and employees paid into an insurance fund entirely separate from revenue, this question would not have come up. There was a historic reason, however, for making the contribution really a tax; it was doubtful whether the courts would permit the Government to exact a contribution for social insurance. This difficulty has since been removed by the decisions of the Supreme Court in cases involving the constitutionality of the Social Security Act (*Steward Machine Co.* v. *Davis; Guy T. Helvering and William M. Welch, The Edison Electric Illuminating Co.* v. *George P. Davis*).

For some time before the act was passed there was a division of opinion as to whether we should have a Federal system of unemployment compensation or a Federal-State system. Since the law went into effect, in February 1938, a great many questions have arisen in regard to the Federal-State system. For instance, some 40 States have what is known as merit rating. If employers have a favorable employment experience during a previous year, the tax can be reduced to almost zero.

There is now a good deal of competition among the States with regard to tax reductions for unemployment compensation benefits. If this competition keeps up, there is a probability that the funds may not be adequate at some time for a crisis.

Unemployment should be considered a national industrial problem. As the late Justice Cardozo of the United States Supreme Court wrote in the case of *Helvering and Welch, The Edison Electric Illuminating Co.* v. *Davis:* "Unemployment spreads from State to State" (No. 910, October term, 1936); and again in *Steward Machine Co.* v. *Davis:* "The problem of unemployment had become national in area and dimensions" (No. 837, October term, 1936). During the depression we had to deal with it as a national problem through a national work program. Any plans or policies that Government makes for handling such a problem in the future should be national in scope. It may be asked

therefore, why should our unemployment compensation system be a State system?

In appraising unemployment compensation we must not think of it as a means of taking care of those out of work for an indefinite period; it is essentially a method of taking care of temporary unemployment; it is designed to keep the members of the industrial army, as long as they are able and willing to work, in proper condition. There should be some methods of taking care of those out of work for long, indefinite periods, but unemployment compensation is not the answer.

The only sensible method of taking care of those unemployed for long periods of time seems to be through a work program. In planning a work program we should not merely think of public works; we should explore very carefully the experience we have gained during the war in governmental aid to private industry. We now have a combination between industry and Government that might be far more useful than any public-works program in providing employment opportunities. Our experience between 1933 and 1935 showed clearly that no large-scale public-works program will create the number of jobs necessary in a depression; it must be a flexible public-works program like the Work Projects Administration.

One of the greatest mistakes we have made in unemployment compensation is in relating it too closely to the worker's earnings. This has made for a very complicated system that workers do not understand. It probably would not be practicable for us to have a flat benefit system like Great Britain, but we could have at least flat benefits for workers in certain wage groups. We do have this now in legislation covering railroad workers (Railroad Unemployment Insurance Act). Moreover, when people have a right to benefits under unemployment compensation, those benefits should be given for a uniform duration. A number of States now have a uniform duration in benefit provisions.

Extending old-age and survivors insurance to cover invalidity would involve, first of all, a definition of permanent disability. If we have a rigid definition, it would mean an addition of 0.5 percent to the pay-roll tax; if a liberal definition, it would mean an addition of 1.5 percent. To extend the Social Security Act to include temporary disability and costs for sickness would call for a new section in the act. A cash benefit for temporary disability would mean an addition of 1 percent to the pay-roll tax. Costs of hospital care, if included, would mean another 1 percent; the inclusion of medical care would call for a 2 percent addition to the pay-roll tax. The whole extension program, as it has been considered up to date by the Social Security Board, would call for a pay-roll tax of 12 percent, to be divided equally between employers and employees.

In providing social insurance for temporary disability, we should be confronted by many highly debatable questions. There is the cost of hospital service. Will the Government be willing to pay the full cost, or will it pay only a mere pittance, as has been the case so frequently in workmen's compensation? Then, too, the medical profession objects to what it calls socialized medicine. The objection of the doctors, however, might not preclude the payment of a cash benefit.

In discussing protection of workers against industrial hazards, we shall naturally emphasize benefits based on rights, benefits that grow out of the wage system. We shall naturally want to look toward the objective that Sir William Beveridge set before himself in his report, namely, a system of social insurance that gives the workers a certain minimum of protection against all the economic hazards of life.

We shall think of these in terms of minimum benefits; we shall want to leave a wide area for private social service. We know that what the Beveridge report contemplates, namely, the provision of a minimum amount of food, clothing, shelter, and medical care, will still leave a large field of needs to be provided by private agencies. We shall want to see private agencies associate themselves with the administration of social insurance; we shall want them to supplement it; we shall want them to cover the problems to which it has not been extended. And we shall only be taking a realistic approach when we say that the field left over will still be too great for even the best efforts of private agencies, and that there will therefore be need for a well-organized public-assistance program. But we shall look forward to a diminishing need for a public-assistance program as social insurance expands.

For the ordinary wage earner, social insurance provides a form of protection for which he has paid; it is his own; it is really a continuation of his wages. It does not give the State any control over him; it does not empower the State to investigate his family situation, to tell him how he should live or how he should bring up his children. Social insurance is entirely different, therefore, from public assistance or relief administered by State or Federal Government.

Since we are basically interested in protecting the ordinary wage-earner against the hazards of life that reduce him to poverty, we should therefore be interested in the possibilities of extension of social insurance. We shall want to consider these in an objective way. It is to be hoped that we shall not be guided by any mere shibboleths in discussing these programs; that we shall not be led astray by leaders who regard these programs as visionary. The same people have always regarded efforts to lift up the masses as visionary. It is to be hoped that we shall discuss these programs in our study clubs, at the meetings of our various organizations; that we shall consider their significance for us; that we shall study them in the light of our Christian teaching, in the light of the social doctrine of our church.

World State

EXTENSION OF REMARKS

OF

HON. HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 22 (legislative day of Monday, May 24), 1943

Mr. KILGORE. Mr. President, I ask permission to have printed in the RECORD an article entitled "World State," written by S. W. Bryant, of Clay, W. Va.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WORLD STATE

We have world wars, why not a world state?

I may be bold, but please do not consider me a crackpot if I try to sell all the oceans, belonging to no one, no man's land, to a government that does not exist. This can and should be done, though no one in official position in any of the principal states can now afford to advocate such action.

If someone has something big to develop, a big corporation is organized to take it over.

An international government, or world state, supreme and self-sufficient, external from the internal affairs of all other states, should be organized to assume dominion of all the open waters of the world.

This world state would be formed just as our Federal Government was organized by the Original Colonies, and would grow and develop just as our National Government has grown and developed.

The first step in the organization would perhaps be taken at the peace conference and a constitution be provided and submitted for ratification. The constitution would provide a basis of representation, perhaps providing that in the final distribution, representation should be apportioned about one-third to each—the American Continent, Europe, and Asia; and that no less than 10 percent be allotted to each—England, Russia, China, and the United States—in the final distribution of representation; that each of said four states have equal representation until further allotment; and that the world state be effective after ratification by these four states.

At present certain amenities are recognized, but there is no law of the seas, but the world state would make such laws, and police the waters of the world. The world state would be a buffer state separating the masses of the world. The world state would outlaw submarines except for their use in policing the waters, taking over all such craft as exist for such purposes. It would maintain an army and navy for police work.

Japan has never cared much for the freedom of the seas, which they enjoyed, and has long had the idea of making the Pacific Ocean their lake.

"There is nothing free," Emerson said, "have what you will, pay for it, and take it." We drove the pirates from the seas in our early history as a part of our contribution to the freedom of the seas.

Hitler, to justify wars of conquest, in his book, cited examples to show that all governments in their inception were usurpers, but to gain dominion of the seas after this war is over, will require no conquest, but just the assertion of dominion. There will be no one to oppose. This will be an unselfish and benevolent usurpation, and the best security for ourselves and all others against recurrent wars. It will isolate local wars. Nations must learn to trust and to cooperate or continue in recurrent wars.

FINANCE

The world state can finance itself by the sale of license flags, just as our State sells license plates for automobiles. Our roads have no toll gates, but those who use the roads and those who get goods transported over the roads pay. Nothing is free. The Japs have long had the advantage in water transportation by reason of their slave or pauper labor and disregard for the health and life of their mariners.

This advantage will, in a measure, be removed by a tax on water transportation. A toll, or tax, or restriction on maritime commerce will not be a subsidy to the railroads because water transportation, where it can be had, will still be the cheaper, but if in instances business be thrown to the railroads, it will help keep down rates.

Such a tax will in a measure afford protection to domestic industries. It will regulate international commerce.

The world state should have a court to hear and adjudicate controversies and a currency system. Its money will be the money of commerce and exchange. The world state will stabilize post-war conditions.

S. W. BRYANT,
Clay, W. Va.

Gen. George C. Marshall

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 22 (legislative day of Monday, May 24), 1943

Mr. REYNOLDS. Mr. President, on Sunday I clipped from the Washington Star a very interesting article descriptive of General Marshall, Chief of Staff of the United States Army. The article, which is entitled "The Achievement of General Marshall," was written by Mr. Owen L. Scott. I ask unanimous consent that it be published in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE ACHIEVEMENT OF GENERAL MARSHALL

(By Owen L. Scott)

The new American Army now is proving itself in action on every count. Its infantry, artillery, and armored forces showed themselves superior in Africa to the best the Germans possess. Its leadership outsmarted Hitler's best generals. Its air forces now are crashing through with proof of the wisdom of the concept of daylight precision bombing as the key to successful use of the bomber as an offensive weapon.

American tanks are credited by the British with turning the tide in Africa. American artillery weapons stood up with the best. American fighter planes, which were much criticized early in the war, ran up a score of better than two to one against the Germans. American bombers all along have been in a class by themselves.

All of this is the basis of very much satisfaction to Gen. George C. Marshall, United States Chief of Staff. The reason is that General Marshall set out 3 years ago, starting from scratch, to build an American Army and his has been the primary responsibility for that building ever since. In that time he has seen created what probably is as powerful a military force as there is in the world. It is on the basis of experience that the decisions made by General Marshall, in the face of great pressure, now can be seen to have been very wise.

One of the first decisions was to give full recognition to the air forces. He accepted Gen. H. H. Arnold on a par in rank with himself. He agreed to allot nearly one-third of the Army's personnel to the air forces. He allowed air officers to give full play to their idea of how an air war should be fought. When there was much effort to force the American air forces to give up their idea of daylight use of bombers, operating as a separate offensive arm, and capable of fighting their way to a target for precision bombing, General Marshall refused to listen.

In another decision, General Marshall, despite strong pressure in Congress, refused to give undue emphasis to the armored forces in building a ground Army. Experience now shows that the tank is far less of a decisive weapon than it had appeared to be in France. The infantry and artillery are back in their old roles and the American Army is well balanced in all of its arms.

When it came to selecting a general to lead American forces in their offensive operations, General Marshall jumped over the heads of very many generals and chose a man who not long before had been a lieutenant colonel. His choice of Gen. Dwight D. Eisenhower was much questioned at the time, but it is no longer. Having selected General Eisenhower, General Marshall backed him in some tight situations with the full force of a very strong personality.

In Africa, French politics became a problem for the American general who was no politician. He made his decisions on military grounds and General Marshall backed him to the limit. In Africa, too, it was almost logical that a British general should hold the top command after British forces had chased the Germans half way across the continent. General Marshall thought otherwise and now the British join in praising General Eisenhower as a genius in modern warfare.

There all along has been a natural British thought that London rather than Washington should be the staff headquarters for Allied forces. On many occasions there have been rumors that General Marshall would become the generalissimo of the British and American Armies and would have headquarters in Great Britain. It may be that the American general will later be given an increase in rank and responsibility, although he asked for none, but it is quite certain that headquarters will remain in Washington. It is here that the over-all war planning is done.

In another field of controversy, that of a division of forces between the Pacific and the Atlantic war theaters, General Marshall has insisted all along that one of those wars had to be a holding operation while forces were gathered to deliver a knockout punch in the other. The knockout could not come from dispersed forces. When the Roosevelt-Churchill decision was to treat Hitler as enemy No. 1 then the division of American military strength was on a basis designed to stop the Japanese and to punish them, but to concentrate on a blow at Germany and Italy. That blow is beginning to be delivered.

At the same time the American people have reason to be pleased with General Marshall on another count. The reason is that the General is a man who is willing to change his mind. At the time when it appeared that Russia might not be able to stand successfully against Germany the United States made plans for an army of 15,000,000 men. However, when the situation changed as a result of Russian successes General Marshall was quick to agree that a force not much more than half that size would be adequate, with one-third of the smaller army devoted to the air forces.

Every sign is that this country is fortunate in having General Marshall as its Chief of Staff in wartime. He is a military leader who harbors no political ambitions and who does not seek the limelight. His ability and stature are such that it is easy for commanders of the Allied armies to turn to him for leadership. And through it all the people of this country can know that General Marshall will plan to win this war with a minimum of casualties.

Thomas Jefferson Dinner

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, June 22 (legislative day of Monday, May 24), 1943

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able address made by Ambrose O'Connell, executive vice chairman of the Democratic National Committee, at a Thomas Jefferson dinner held on Monday evening, June 21, 1943, at the Commodore Hotel, New York City, under the auspices of the Democratic National Committee and the Democratic State Committee of New York.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The chairman of the Democratic National Committee recently offered the recommendation that all political hostilities be deferred in favor of a unified program of concentration on the more vital hostilities of the war.

The chairman of the Republican National Committee rejected the proposal; and in rejecting it took advantage of an opportunity to publicly launch his campaign of 1944.

In launching the campaign at this time and under these circumstances, the opposition brought into sharp focus the significant contrast in the present attitude of the two major political parties in connection with the next election.

The Democratic Party looks upon the election as a chance to win the war.

The Republican Party looks upon the war as a chance to win the election.

By making the election, rather than the war, their first objective, by deciding for themselves not to let a thing like our world-wide war distract them from the eternal business of politics, the Republicans have sought to gain a special advantage for themselves.

Armed with this program, the opposition has expanded into a frenzy of wordy criticism and has paraded its seeming success in the last election with a minimum of modesty and a maximum of self-exploitation.

The Democratic Party stands by its own sound suggestion of a late and short campaign. It refuses to be lured into a politics-as-usual diversion. This does not mean, however, that we are idle. Idleness doesn't win battles, campaigns, or elections.

The Democratic National Committee is preparing for use in the next campaign a record of the accomplishments of the administration, a description of the sordid mess the President took over in 1932, and the upward trend of business since that time.

It is preparing a list of the Government and war agencies with an account of what each does and its record of achievement. It is also compiling a chronology showing how Republicans in Congress voted against practically every defense measure, thus severely handicapping the fight for freedom, and showing the strategy and the activities of the opposition in the present war Congress.

It is important in this grim time in our Nation's history not only that the right side wins the next election, but also that wise leadership directs its entire effort toward the alleviation of bitterness within the country, and toward the creation of greater national unity with which to face the hard, troubled days of making the peace and handling our serious post-war situation.

Republican claims, accusations, exaggerations, and fantasies must, it seems to me, be answered in a way different from the traditional no-holds-barred technique of the political arena. They must be answered by a clear, definite, and concise presentation of the naked truth; the truth as to the objectives, the program, and the genuine achievements of the Democratic administration.

The purpose of the Democratic Party, in relation to the election of 1944, is to present a campaign of education; one that will clarify the whole conduct of the war and throw the clear white light of truth on the activities of both the fighting front and the home front.

The truth can only reveal that any shortcomings are heavily outweighed by the accomplishments, that mistakes are the exception, not the rule, that competence leads our war effort and wisdom guides our decisions.

The Republican Party in the next campaign has nothing to offer but words. The Democratic Party has nothing to offer but deeds.

So far the good works of the Republican Party have been confined to words and they show a tendency to believe that the recognition of a problem is also its solution. Actually, the road is long and hard and heartbreaking between the recognition of a great national question and its solution.

The Democratic administration has proved that it knows this, and further knows how to travel each road and overcome the many obstacles encountered on it. The reciprocal trade treaties, the destroyer deal, lend-lease, social security, and other humanitarian enactments are specific demonstrations of this knowledge and ability.

In the face of vast, concrete Democratic accomplishments, the Republicans can point only to words; words that recognize certain problems but never suggest how to solve them.

The New Deal is still deplored and denounced. Yet everybody knows that the New Deal is now too well proven to be anything but a positive issue. The worth of its achievements is so fully accepted by such a large majority of the American people that the attempt once more to parade it as a menace is bound to fall flat.

There is a new note in the Republican strategy which is of a sinister character. This is the definite campaign to smear, discredit, and render powerless the work of the various war agencies. There is plenty of evidence that this is a planned campaign, shrewdly conceived to muddle people's minds on the work of the agencies and the proper conduct of the war.

The doubts, fears, and confusion that such a campaign raises can only retard victory and jeopardize peace. Such a campaign could descend into the business of one party attacking and the other defending the war agencies, the war moves, and the over-all strategy. This thing could result in the whole war becoming a political football and the American people becoming the baffled spectators to its being kicked around.

Everyone knows of the dominant place of civil service in our Government, of the nonpolitical status of most of the so-called bureaucrats, of the inevitability of a large number of bureaus, no matter who is elected or what party is in power. Everyone knows also that the war agencies are headed, and, in many cases set up, by the pick of American business brains, frequently men put forth by business itself. Practically every last one of these men wants to get back to the business he came from as soon as the war is won.

The chairman of the Democratic National Committee has no illusions about the size of the job of conducting a national campaign of education and enlightenment. It's big and it's tough. It will take a lot of courage. It will take a lot of people, a lot of work, long grinding hours.

It will take a stubborn will to refrain from answering irresponsible Republican accusations, dire prophecies, and misstatements, and from jumping into the excitement of a good, old-fashioned political brawl. It will take patience and skill to promote the success of this program of education of the chairman of the Democratic National Committee—but it can be done.

In every community in this country there are men who are Republican by birth, habit, or inertia, but who cannot be anything but unhappy with what their traditional party now stands for.

The purpose of the Democratic National Committee in connection with the next campaign is to bring to the minds of the people a realization and understanding of the enormity of this war. It would prepare them for the task and privilege of writing the world's first peoples' peace. It would show them why the day that peace comes must either be the dawn of the century of rule by the people, or the beginning of a century of woe and distress.

The Democratic National Committee is assembling the facts that will bring out in bold relief the aims of our war effort as against the sordid aims of the Axis. The public is pretty well aware of the methods by which the dictators came into power—the taking and holding of power by force, the liquidation of the opposition, the elimination of the ballot box, the chaining of a free press, the throttling of free speech, and the shackling of religion.

The people know that not one of these things has happened in America.

The reactionary press, the frequently recalcitrant Congress, the presence in the Cabinet itself of the opposition, the obvious fact of a free election, are all living, visual, vocal proof that a working democracy is still the guiding principle and philosophy of the Democratic Party.

Our American Heritage

EXTENSION OF REMARKS

OF

HON. HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 22 (legislative day of Monday, May 24), 1943

Mr. KILGORE. Mr. President, at the request of the distinguished senior Senator from Virginia [Mr. GLASS], I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered in Martinsburg, W. Va., May 16, 1943, by Robert Nelson Anderson, Special Assistant to the Attorney General of the United States, and former President of the Federal Bar Association, at an I Am An American Day rally, under the auspices of the Martinsburg Bar Association.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Today we have gathered at the suggestion of the Congress of the United States, made in its public resolution of May 3, 1940, and pursuant to the proclamation of President Roosevelt under date of March 12 last for the purpose of recognizing all citizens who have attained their majority or who have become naturalized during the past year. As we meet we should be inspired and stirred at the thought that throughout this broad land on this same day the attention of thousands upon thousands of other citizens is being centered upon "the duties and opportunities of citizenship and its special responsibilities in a nation at war."

It is a great privilege for me to be here and have a small part in your observance of I Am An American Day, and to be introduced by your distinguished fellow citizen, the Honorable Clarence E. Martin, former president of the American Bar Association. I am not at all surprised that Martinsburg is included among those American cities and communities that today will celebrate specially I Am An American Day. This city was laid out by Adam Stephen in those trying days of 1778 when a struggling people were endeavoring to throw off the shackles of a foreign tyrant. The experiences of those years have left an indelible imprint upon the life and character of its citizenry. Your patriotism and love of country is evidenced by your presence here.

And in this connection I wish to commend the local bar association and its president, Hon. Hugh S. Byrer, for the sponsoring of this important affair. The American Bar Association and its constituent bodies throughout the Nation, under the leadership of its accomplished president, George Maurice Morris, and through a special program of activity headed by Hon. Robert E. Freer, member of the Federal Trade Commission, has done much this past year to keep before the American public the meaning of American citizenship. The American lawyer, having out of his specialized knowledge and experience contributed so much to the creation and preservation of our great democratic institutions, probably senses above all others the irreplaceable treasure inherent in American citizenship. It is for this reason that he gladly lends his heartiest support to any effort that will tend to emphasize and exalt the significance of that citizenship.

When this Nation was established it was not just another nation that saw the light of day. There can be no doubt but that Providence had a hand in its appearance among the peoples of the earth. Did you ever stop to ponder why this hemisphere with its fabulous wealth and marvelous natural beauty should have remained hidden from an inquisitive mankind centuries after the dawn of history? There can be but one answer—a divine plan preordained that man should first prove himself worthy to inherit it. Out of the crucible of war and turmoil in Europe, Asia, and Africa, out of exploded theories concerned with the divine rights of kings and that the sovereign could do no wrong, out of the miseries of the oppressed and tortured, a new and chosen people set their faces to the west in the search of a new freedom and a new liberty. Made strong by their trials and tribulations—of many races, yet under the skin all brothers—they came to fulfill a new destiny in history: to some day assist those they had left behind in the dark corners of the world to also find the light.

The Revolutionary fathers, and I like to call them just that, fought and bled and even died for what they deemed sacred principles of personal liberty. Patrick Henry, in immortal words that will live down through the ages, demanded of George III that liberty, or, in its place, death. In penning the Declaration of Independence and thereby proclaiming the birth of the Republic, Thomas Jefferson solemnly announced that "all men are created equal, that they are endowed by their Creator with certain inalienable rights, that among these are life, liberty, and the pursuit of happiness." In short, the objective of the Republic was to point out to mankind the pathway of freedom and mutual helpfulness. Equal opportunity was to be accorded all citizens. The common man was to be raised from the sloughs of discouragement and hopelessness and his feet placed upon solid ground, untrammelled by those who would deprive him of a happiness he was justly entitled to. Special favor and special privileges were to be done away with. All forms of tyranny over the minds, bodies, and souls of men were to be eradicated. A man's progress was to be made dependent upon his own moral qualities, his physical prowess, and his intellectual attainments. These were the ideals for which our forefathers struggled

and without them America would have been no advance over the nations about her.

On October 17, 1781, Cornwallis surrendered at Yorktown and the War of the Revolution, for all practical purposes, was over. The soldiers of freedom had gone hungry and ragged, their land was laid waste and their homes desolate, some had shed their blood, some had laid down their lives. Those who remained were determined that they should not be deprived of the things for which they had fought.

The forefathers' complaint against the British Government reached much deeper than the concrete grievances and injustices they had openly expressed. There was a feeling in the heart of each revolutionist that the British Crown had deprived them of the rights of freemen. For the first time in the history of the world men dared to think in terms of human rights that could not be changed and which could not be taken from them. It was a new and exciting idea which thus pervaded the thoughts of these pioneers of freedom. The idea, however, was not a creation of the hour. No doubt the germ for its appearance was laid in the Magna Carta wrested by the barons from King John in the thirteenth century, and a document called the Bill of Rights passed by the English Parliament in 1689, immediately after the glorious revolution and a century before the American Government was formed.

Then, too, the colonists had not failed to assert certain rights during their dealings with the mother country. For instance, in General Fundamentals, published at Plymouth in 1636, there was set forth for the Massachusetts colonists the "free liberties of the free-born people of England," while 3 years later the General Assembly of Connecticut adopted a declaration of rights. During the same century Virginia, Maryland, and New York also asserted rights against the British Government based upon what they deemed the English common law allowed them as British colonists.

But the specifically stated rights of the colonists were a long cry from the broadly outlined "inalienable rights" of freemen which occupied the thoughts and attention of the participants in the American Revolution. As the breach between Colonies and mother country widened, Americans came more and more to state their demands, not as the grievances of colonists appealing for justice in this and that situation but as the declarations of freemen asserting the freedoms with which they were endowed.

It is the English and French philosophers like John Locke and Jean-Jacques Rousseau and our own American statesmen of the Revolution we must thank for the idea that man has immutable and inalienable rights. This idea reached its highest level in the immortal words of Jefferson to which I have already referred. "To secure these rights," said Jefferson, "governments are instituted among men, deriving their just powers from the consent of the governed." Later he pointed out that he "turned to neither book nor pamphlet" in his preparation of the original draft of the Declaration. Nor did he need to. While the genius of the language was his own, the ideas he used were all about him—they were a part of the common thought and conversation of the day.

When the forefathers sought language with which to clothe these liberties, they found them in the idea of natural rights which are a part of "nature and nature's God." These rights, John Locke and others had argued, could never be surrendered by the individual to his government, even if he wished. He could not strip himself of them. They were inalienable.

It was not surprising that the philosophy of these sages of the Revolution showed up to a degree in the Declaration of Rights adopted on October 14, 1774, by the First Continental Congress. In the spring of the following year actual fighting between outraged colonists and the British Government took place. Then, in 1776, came the complete break with the Crown. The Continental Congress adopted a resolution advising the Colonies to provide for themselves new governments. Virginia, the oldest colony, was the first to act and in the same memorable year it adopted a new constitution. But before Virgina took this far-reaching step, significantly the Virginia Convention meeting at Williamsburg on June 12, 1776, adopted a Declaration of Rights which men came to speak of as the "Virginia Bill of Rights." This order of events was of great importance and is well worth noticing—it was a way of saying for the benefit of all mankind that inalienable rights came first and that the powers of Government were merely secondary.

George Mason, a Virginia planter, wrote 14 of the 16 clauses of the Virginia Bill of Rights. He was a close friend of Thomas Jefferson who was at that time in attendance at the Continental Congress at Philadelphia, and it is reasonable to assume that Jefferson's theory of the rights of man was reflected in the tenets of this famous document. The example set by Virginia was followed by the constitutional conventions of other States. Under the leadership of the venerable Benjamin Franklin the Pennsylvania Convention in July 1776 also adopted a declaration of rights. Maryland was next with a bill of rights containing 42 articles. In 1780 John Adams sponsored and secured the adoption of a bill of rights by Massachusetts.

Peculiarly enough, however, approximately 15 years were to expire from the date the Virginia Bill of Rights was formulated to the adoption of a Bill of Rights for the Nation as a whole. But the very temper of the Revolutionary fathers and the lessons their long struggle taught them made the establishment of a national Bill of Rights inevitable. The delay was due not to any lack of interest or desire, but to mere circumvention of events.

It is well known that the Central Government under the Articles of Confederation was far too weak to require even a hint of curbing. Naturally, therefore, it was not until the Constitutional Convention met in 1787 that the importance of adopting a Bill of Rights came again to be a matter of daily conversation. This convention, it would seem, would have presented a wonderful opportunity for establishing a new charter of liberties and the adoption of such a charter was specifically urged. But the members of the Constitutional Convention were concerned with the immediate and pressing problem of bringing order and system out of the chaos into which the Articles of Confederation had thrust the new-born States. These men had experienced the uncertainty and devastating effects of a weak government. Uppermost in their minds, therefore, was the creation of a strong government that would insure stability, both politically and economically. Therefore, their immediate concern, attributable to the necessity of the moment, was the strength of the government they were forming rather than the guaranties of the freedom of the individuals who were to be governed by it. But this does not mean that they left the government they planned completely unchecked. The drafting fathers willingly furnished certain guaranties against arbitrary government; among other things they placed certain limitations upon the power of Congress, provided for the writ of habeas corpus, forbade ex post facto laws, and defined treason. This, however, was as far as they were willing to go. The Constitution therefore went into effect upon the ratification of nine States, but no Bill of Rights had been incorporated therein.

The matter, however, was not to be thus shelved. Hundreds of amendments to the Constitution were offered, many of them having to do with a Bill of Rights. Feeling again ran high, and above the noise of debate and controversy could be heard the pleas of Thomas Jefferson for the immediate adoption of a Bill of Rights for the Nation. In Paris during the sittings of the Constitutional Convention, Jefferson made no secret in his letters to his friends that his deepest anxiety was the absence of such a document. "A Bill of Rights," he wrote after he had received a draft of the proposed Constitution, "is what the people are entitled to against every Government on earth."

The first Congress under the new Constitution convened in April, 1789. It undertook the difficult and important task of putting the mandates and directives of the Constitution into actual practice. But along with the manifold problems arising from this tremendous undertaking, the lack of a national Bill of Rights was constantly brought to its attention. President Washington referred to the matter in the inaugural address which he delivered on April 30, 1789. A friend of Jefferson, and a member of the Constitutional Convention, James Madison, finally determined to insist upon affirmative action. On May 4, he rose in the House of Representatives and announced that he would bring in a set of amendments to the Constitution in 3 weeks. Delayed a few days, on June 8 he carried out his promise and submitted 9 proposals which were destined to form the basis of our Bill of Rights or the first 10 amendments to the Constitution—on December 15, 1791. Virginia, as the last State necessary for adoption, on that day ratified the Bill of Rights and it became a part of our supreme law.

One would have thought that the final ratification of this bill would have been accompanied by celebration and festivity. But curiously enough the great historical event made little noise in its day. The newspapers of the period did not even mention it. The Virginia Gazette and General Advertiser of Richmond, accustomed to print legislative notices and statutes passed by the State legislature, failed to mention the adoption of the Bill of Rights because no doubt the ratifications of the legislature were in the form of a series of resolutions rather than in the form of statutes. Likewise, the news of the ratification was not carried in the newspapers of Philadelphia, which was at that time the National Capital. But even though the adoption of a Bill of Rights for the Nation with its guaranty of freedom of religion, speech, and the press, and trial by jury, and with its due-process clause and other precious safeguards of the rights of man, was not accompanied by great acclamation, nevertheless it was a "shot heard round the world." This Bill of Rights is our great American heritage. Truly it can be said in the words of the poet John O'Reilly as written in his Pilgrim Fathers:

"Here * * * on this soil
Began the kingdom, not of kings, but man!
Began the making of the world again;
Where equal rights and equal bonds were set;
Where all the people equal-franchised met;
Where doom was writ of privilege and crown;
Where human breath blew all the idols down;
Where crests were naught, where vulture flags were furled,
And common men began to own the world."

Under this unique system of government, fostered and nurtured by the founders of our Nation, our growth was stupendous. Out of a purchase by Jefferson in the early days of the Republic, a great western empire was built. Impelled by the great spirit of freedom that prevailed in the breast of every American, and with a desire for new fields to conquer, step by step our national frontier

was pushed across the continent and our domain soon stretched from sea to sea. Our great national resources became manifest. The inventive genius of man was called into play by the opportunities the new fields presented. The combination of these two soon produced great captains of industry and huge commercial enterprises sprang up here and there over the entire Nation. Out of it all America merged a mighty people whose achievement became the wonder of the Old World. A few struggling States in the short span of 150 years had become the most powerful and richest nation upon the earth.

But it was not destined that America should live apart from her brothers in the rest of the world enjoying the greatest blessings that had come to all mankind. The very things our scientific geniuses had produced destroyed the barrier that nature had erected about us. The radio and the airplane had made the world one community. It was inevitable that in 1917 under the gallant leadership of the immortal Wilson we should fight a war to make the world safe for democracy. Many of us here were engaged in that terrific struggle. But, alas, when the peace had been concluded and prosperity once more returned, many Americans failed to grasp the true significance of our struggle and we as a nation settled back into a foolish and ostrich-like complacency behind 3,000 or more miles of ocean front.

But again we find ourselves involved in a titanic struggle that has shaken the very foundations of the world—this time to the end that the principles for which our forefathers fought and died shall not perish from the earth. Vividly the poet, Duane Edwin Fox, has described the hour:

"Four million men, intent on their own life
Of work and play, were called upon one day
To throw it all into a foreign strife
That liberty upon this earth might stay.

"Their valor won but in the very hour
Of victory their hand was held, ere yet
The chains were riveted on evil power,
By statesmen knowing only to forget.

"Now sons of those who fought must fight again
Against the selfsame beast their sires had tamed;
God save them from the curse that comes to men
Who grope in darkness where the torch has flamed."

We and our allies fight for the "four freedoms"—for the Bill of Rights of all mankind which has its roots in the Bill of Rights written by our forefathers of the Revolution—which stems from our own American heritage—freedom of speech, freedom of religion, freedom from want, freedom from fear.

As our great President has said:

"The 'four freedoms' of common humanity are as much elements of man's needs as air and sunlight, bread, and salt. Deprive him of all these freedoms and he dies—deprive him of a part of them and a part of him withers. Give them to him in full and abundant measure and he will cross the threshold of a new age, the greatest age of man.

"These freedoms are the rights of men of every creed and every race, wherever they live. This is their heritage, long withheld. We of the United Nations have the power and the men and the will at least to assure man's heritage.

"The belief in the 'four freedoms' of common humanity—the belief in man, created free, in the image of God—is the crucial difference between ourselves and the enemies we face today. In it lies the absolute unity of our alliance, opposed to the oneness of the evil we hate. Here is our strength, the source and promise of victory."

It is thus a fine thing on this Sabbath Day to take notice of the significance of our citizenship. It is a day of dedication, not without its religious meaning. Providence has earmarked us a Nation of destiny. It is a splendid thing to be a part, no matter how small, in this wonderful movement. We know our armies will be victorious on the field of battle. When the smoke has died away and the peace has come, it is the duty of each American citizen to do his utmost to see to it that the rights of man are made available to all mankind. In this way our American heritage will become the heritage of the world. Let me conclude with this salute to freedom in the stirring words of Joseph Rodman Drake:

"When Freedom, from her mountain-height,
Unfurled her standard to the air,
She tore the azure robe of night,
And set the stars of glory there.

"She mingled with its gorgeous dyes
The milky baldric of the skies,
And striped its pure, celestial white
With streakings of the morning light.

"Then from his mansion in the sky
She called her eagle bearer down
And gave unto his mighty hand
The symbol of her chosen land.

"Forever float that standard sheet!
Where breathes the foe but falls before us,
With Freedom's soil beneath our feet,
And Freedom's banner streaming o'er us?"

The Meat Situation

EXTENSION OF REMARKS

OF

HON. TOM CONNALLY

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, June 22 (legislative day of Monday, May 24), 1943

Mr. CONNALLY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the New York Times of June 22, 1943, with reference to the so-called meat shortage, but revealing that there is actually a surplus.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

VAST CATTLE SURPLUS PILES UP AS MEAT FAMINE INCREASES—IF HALF THE EXCESS WERE SLAUGHTERED, IT WOULD SUPPLY 200,000,000 PERSONS WITH BEEF FOR A YEAR, RANCHMEN SAY

(By Jefferson G. Bell)

As the meat famine deepened both in New York and Chicago, center of the packing industry, spokesmen for the Nation's livestock industry declared here yesterday that the country was building up a huge surplus of cattle. The surplus, it was estimated, would increase by next January to 15,400,000 head as the result of restrictive regulations by the Office of Price Administration. Slaughterers' quotas and subsidy roll-back of prices are blamed.

The surplus of cattle is rapidly becoming a national problem, according to representatives of the cattle growers. If just one-half of this huge surplus were slaughtered, they pointed out, it would be sufficient to supply normal quantities of beef for a year to 200,000,000 persons, including the entire population of the United States and 74,000,000 others.

Meanwhile, Mayor Fiorello H. LaGuardia and Frank Russell, district Office of Price Administration director, disclosed that they planned to submit to Washington immediately plans to ease the local meat famine. The mayor hopes to induce Washington to set up a definite quota of meat for civilians and to guarantee it from raids by agencies purchasing for the armed forces, lend-lease, etc. Mr. Russell will submit a plan for district control and supervision of meat allocation and distribution.

The colossal backing up of livestock through the country is a matter of common knowledge in the West, according to livestock industry spokesmen, who hope to bring this phenomenon to the attention of the East.

This gigantic accumulation of livestock, which will present an increasingly difficult problem later, as the feed shortage becomes worse has been called to the attention of Office of Price Administration authorities in Washington without avail, according to livestock industry representatives. They declared that all they had got out of Washington was theoretical plans for production and distribution.

CATTLEMEN DISCLOSE SITUATION

The amazing situation in the livestock industry was disclosed here by the Texas and Southwestern Cattle Raisers Association, an organization of 4,430 active ranchmen operating ranches that range in size from 10,000 to several hundred thousand acres.

Through its counsel, former Judge Joe G. Montague, of Fort Worth, this organization, headed by C. K. McCan, of Victoria, Tex., prepared a statement of the livestock situation as they know it first hand. They submitted their findings to representatives of 113 other livestock organizations throughout the country, according to Robert J. Kleburg, manager of the Kings' Ranch of Kingsville, Tex., and a director of the Texas and Southwestern Cattle Raisers Association.

"Without one single exception, as far as we can find," Mr. Kleburg explained, "they are all in accord with the sentiments expressed in our statement."

Mr. Kleburg then emphasized that he thought "black market" was a misnomer for the thousands of small slaughterers and customers who are determined not to be deprived of beef artificially by Office of Price Administration regulations.

"Throughout the West," Mr. Kleburg explained, "an increasing number of individuals are buying and storing in freezers whole carcasses of beef, and these people are not comparable with the members of the old prohibition bootleg trade. They are patriotic, but they are determined that they shall not go hungry."

SUESIDY PROGRAM DISCUSSED

Discussing the proposed subsidy program, the association's statement said:

"The feeling is so strong throughout the entire industry that the subsidy is unsound, that the industry wishes to take this opportunity to refuse to accept responsibility for the consequences of the subsidy program, as we feel that it will result, first, in a reduced supply of meat, and second, in the liquidation of a great many small packing concerns, and the two will greatly impede the war effort."

A memorandum showing the colossal surplus of meat that is being built up as a result of Office of Price Administration restrictions, was submitted by the association, showing that in 1939 the total number of cattle slaughtered in the United States was 17,201,000 head. In pounds that year's slaughter represented 7,049,000,000 pounds of beef and 934,000,000 pounds of veal or a total of 7,983,000,000 pounds of meat from cattle, according to the statement. The memorandum further read:

"From Government estimates we know we will have by January 1, 1944, a surplus of 15,400,000 head of cattle. This represents a surplus in poundage of 7,700,000,000 pounds.

"If we slaughtered one-half, or 3,850,000,000 pounds of the surplus, we would produce enough meat to feed 74,000,000 people in addition to supplying our own armed forces and our civilian population with this normal supply of beef, and these additional people would be supplied as bountifully as are our fighters and civilians. In fact, the use of this surplus would be a genuine service, since it would relieve our ranges and our feed lots of a severe strain on their resources

"As far back as August 1942, the announcement of the intention of imposing price ceilings on livestock had so disturbed the confidence of the livestock producers that by the time the quota and ceilings had been imposed the effect of this lack of confidence in livestock producers was strongly in evidence in the lack of cattle ready for immediate slaughter in January and February 1943.

"When the consequences of these regulations became apparent the representatives of the various groups comprising the livestock industry asked for immediate removal of the quota system. The industry was met by the assertion that all would be worked out as soon as the ration-card system was also in effect. The industry again patiently waited to see the results of this system."

INCREASES SINCE 1922

The association's statement then pointed out that the Nation's livestock had increased from 68,000,000 head in 1929 to 74,000,000 in 1932, when the Government stepped in and through purchase and subsidy had 8,000 head killed.

"The Department of Agriculture now estimates that the cattle population will reach 82,500,000 head by January 1944," the statement continued. "To plan for the food of the beef industry and to avoid similar overstocking conditions to those that prevailed in 1932, these numbers should be reduced during the next few years, so that at the end of the emergency our ranges and farms will not be overstocked.

"By planning to increase the Bureau of Animal Industry slaughter by 6,000,000 head for the next 2 years we would have enough additional slaughter in the country to provide for the total supply of meat needed for the Army, Navy, and lend-lease, plus a surplus over and above normal of around 1,000,000,000 pounds of beef per year for the civilian counter."

The livestock spokesman pointed out that the industry's Livestock and Meat Council had submitted to Washington last spring a corrective program to guarantee adequate meat supplies. This plan, according to the statement, had the approval of Office of Price Administration Director Prentiss M. Brown, War Food Administrator Chester C. Davis, and Maj. Gen. E. B. Gregory, Quartermaster General.

The plan calls for the recognition of the fundamental law of supply and demand, according to the livestock producers' spokesmen, and determines the available supply and the demand among the armed forces, lend-lease, and civilians, the needs of the latter being controlled through point rationing.

FEAR VOICED FOR PLAN

"Following the endorsement of the plan by the above-named officials," the statement continued, "the Government has attempted to put it into operation. The War Meat Board has been set up in Chicago with all essential details of the plan adopted, but unfortunately, and in spite of the opposition from the entire industry and from the Office of Food Administration, the roll-back and subsidy plan has been hung on the neck of the plan and it is seriously feared that such an impediment may cause the failure of the entire plan. Certainly it can and will do no good, and only added confusion will result."

After making the first forecast of the possible collapse of the War Meat Board, from which so much is expected, the livestock industry statement assailed the roll-back program, saying:

"There is prevalent a great deal of misunderstanding concerning the effect of the roll-back and subsidy program insofar as it affects meat. Under normal conditions the average per capita consumption of meat in this country was 131 pounds annually. Under rationing the maximum per capita consumption of meat is 104 pounds annually. Actual statistics show the real consumption now under rationing quota, and zoning, is 87 pounds annually.

"It is clear that the maximum per capita saving to be effected by the roll-back and subsidy plan, under rationing, is $2.08 and the actual reduction in per capita cost, based on actual consumption, is $1.74, which is less than 15 cents a month, or less than half a cent a day.

"In order to effect this infinitesimal per capita saving, the Government's announced plan proposes to spend several hundred millions of dollars of public money that must be raised by taxing the people to whom this saving is supposed to be beneficial."

Conditions Among Cattle Feeders

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 22 (legislative day of Monday, May 24), 1943

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD a telegram I have received from Gordon Labree, mayor of Casselton, North Dakota, with reference to conditions among cattle feeders.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

CASSELTON, N. DAK., *June 19, 1943.*

Hon. WILLIAM LANGER,
United States Senator,
Washington, D. C.:

Meeting held this morning representing a fair cross-section of the county. Many feeders out of business and many more to follow. It would appear that price of fat live cattle the three top grades is approximately a dollar and a half per hundredweight too low on live cattle compared with cost at time of purchase. You are well informed on beef cattle production in this area and will be surprised to learn that out of about 85 to 100 feed lots there isn't over 500 to 600 head of cattle where normally there would be thousands at this time of year. Many of the feeders unloaded and took their loss; the remainder of the fellows are caught with 12½ to 13 cent cattle and at the present ceiling will sustain a considerable loss. It is needless to say what effect this will have on the feeder situation here and this territory supplies a considerable amount of cattle as you know. The situation is deplorable. I raised the question of a subsidy similar to butter and received a storm of protest.

The butter subsidy apparently is not meeting with approval since the small dealer cannot carry the load when the time and prospect of payment is so uncertain and as a result the farmers do not receive any temporary benefit.

LABREE.

Report of West Oakland (Calif.) Carmen's Investigating Committee

EXTENSION OF REMARKS

OF

HON. SHERIDAN DOWNEY

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 22 (legislative day of Monday, May 24), 1943

Mr. DOWNEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the report of the West Oakland Carmen's Investigating Committee.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

The general membership of the car men should know of the impasse of violations that have occurred at West Oakland. In the spirit of cooperation and sacrifice in our eagerness to help out in the war effort and support the brothers at the front a train of violations have occurred, culminating in the Southern Pacific Co.'s local management suspending from service our local chairman, Robert Donnachie.

In defense of Local Chairman Donnachie this committee has been authorized by an action of Local 40, Brotherhood of Railway Carmen of America, West Oakland car men, to warn the carman of the system federation of this unlawful challenge to our long-fought-for and hard-earned rights and on the most basic fundamental proposition of unionism that an injury to one is an injury to all we are asking the support of every local.

For 9 years the company's local management has had everything their own way, and many car men have left the service in disgust. The responsibility fell upon the local to elect a chairman who would dare to represent the rank and file and not the local management, so in the last election we elected Brother Robert Dannachie, a man of character, courage, and ability, our local chairman. In characteristic disrespect for law and agreements, the company's local management has heaped upon our local chairman threats, coercion, intimidation, and abuse, in flagrant violation of the agreement and the Railway Labor Act.

Now after a dispute between the company's local management and Chairman Brother Donnachie over the interpretation and application of certain rules in the agreement, the local management, with usual disrespect for working agreements and contempt for the Railway Labor Act, proceeded to take the law in their own hands and for punishment suspended Brother Donnachie from service. By a crude distortion of facts Rule 801 of the Transportation Rules was invoked to bring up a lot of unjust charges against Chairman Donnachie, and every carman knows it is a frame-up. Right here we can say that it would have been mighty lonesome for the master car repairer if it had not been for the self-sacrificing loyal and patriotic efforts of Brother Donnachie to keep the men working. But his reward has been further humiliation and now, about 10 days later, we have the spectacle of a star chamber rehearsal performing to endeavor,

in violation of article V to compel a man to be a witness against himself. And to clinch the frame-up that as local chairman he actually conspired to protect the rights of the overworked brothers in the car department—and in so doing "he was trying to run the company's business."

Such reversion to medieval justice and jungle law might seem amazing but to a carman. Our hand has been forced in this matter by the local management: we do not welcome this fight, we were disposed to patiently suffer the chain of violations, but when the local management unjustly and unlawfully attacked Local Chairman Donnachie, our elected representative, for daring to represent the membership, they violated every principle of our organization and are jeopardizing production of transportation at this point, because such undignified muddling hooliganism on the part of the local management will not be tolerated.

It is intended to fix the responsibility on the individual company official responsible for all these violations and to cause them to be corrected. We have abundant data and mean to prosecute this case of violation of the National Railway Labor Act and of the rights of our elected representative Brother Robert Donnachie. This is a question of whether we are going to have representatives of our own choosing or local management domination of unions. They say "This is just a test case," and we are appealing to every local and all carmen to support us.

By INVESTIGATING COMMITTEE FOR
LOCAL 140, B. R. C. A.,
West Oakland.
WALTON A. PHILLIPS, *Chairman.*
APRIL 18, 1943.

American Resources

EXTENSION OF REMARKS
OF
HON. CHAPMAN REVERCOMB
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES

Tuesday, June 22, 1943

Mr. REVERCOMB. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a dispatch by the Associated Press, entitled "Demand Heavy on Resources," appearing in the Baltimore Sun on May 24, 1943.

I also ask to have printed in the RECORD an editorial entitled "American Resources," from the Daily Press of Newport News, Va., on May 25, 1943.

There being no objection, the dispatch and editorial were ordered to be printed in the RECORD, as follows:

[From the Baltimore Sun of May 24, 1943]

DEMAND HEAVY ON RESOURCES—SENATOR REVERCOMB CITES GREAT DRAIN BY MODERN WAR ON ORE AND METALS—RUMORS HOLD UNITED STATES MAY NOT BRING BACK METALLIC EQUIPMENT SENT OVERSEAS

WASHINGTON, May 23.—Concerned that this country's metal and oil resources may be depleted to the danger point by our war commitments abroad, Senator REVERCOMB (Republican, West Virginia), urged today that the United States be practical and insist that our allies furnish their full share.

"One of the great dangers of modern war is its vast demand for irreplaceable natural resources, such as iron ore, petroleum, copper, zinc, and other metals," he said. "Once removed, those things don't grow back.

"We must use the wealth we have to win the war; I hope it won't take too much of it, I also hope that we will be generous, and, at the same time, be practical and ask that our allies furnish their full part."

UNITED STATES OUTPUT INCREASES

By the end of this year, Mr. REVERCOMB told his interviewer, the United States will be furnishing more of the things needed to win the war than all our allies together.

"If we become a nation in need," he said, "if our people ever reach the time that they are in want, there isn't going to be any world peace. The American people, under such circumstances, then would be on the march to get what they feel they need.

"We'll be a peaceful people as long as we have the goods that we need to make us live in comfort. Right now we want to see that future generations of Americans won't be impoverished."

MAY ABANDON ARMAMENTS

As a member of the Military Affairs Committee, the West Virginia Senator has an opportunity to appraise the number of tanks, guns, trucks, shells, planes, and other metallic equipment being shipped abroad to our own forces and on lend-lease. Already, he said, he has heard talk that it might not be practical or wise to bring the stuff back after the war.

"After the last war," he recalled, "thousands and thousands of American vehicles were left abroad. Some people then thought that the Army trucks and cars should be brought back and sold to the public, but they were junked because it was claimed that selling them would ruin the automobile market.

"I hope at least that sufficient war equipment is brought back to maintain a strong Army in this country from hereon, and it is my intention to do all I can to see that it is all brought back. I never have been able to see any good in the destruction of anything of value."

[From the Daily Press, Newport News, Va., of May 25, 1943]

AMERICAN RESOURCES

Senator REVERCOMB, of West Virginia, sounded a note of warning that American resources are not inexhaustible. Concerned with the tremendous drain being placed now upon such resources as iron ore, petroleum, copper, zinc, and other metals, he pointed out that "once removed, those things don't grow back." The plan of conservation suggested by him was the distribution of the drain by asking America's allies to furnish their full part.

As a member of the Military Affairs Committee, REVERCOMB is in close touch with the vast shipments to our own forces, and on lease-lend commitments. He pointed out that by the end of the year the United States will be furnishing more of the things needed to win the war than all our allies together.

REVERCOMB believes that overconfidence in limitless resources may lead to want. Profligacy now instead of wise distribution of the burden of furnishing needed materials may exhaust what we have and lead the American people directly to war in the future, in order to obtain elsewhere that which has been drained out of our own land.

The basis for REVERCOMB's remarks is laid in findings from scientific investigations. A careful study has been made of our resources and the normal use to which they may be put. Estimates likewise have been made of the length of time these resources will last.

Recurring wars all over the world for centuries have been laid in the background of dire need of people for things which were not at hand, and without which prosperity could not attend.

The American Revolution was generated directly by restrictions put upon trade of the Colonists by the mother country. The threat of ruin which faced the prosperous colonial merchant through the imposed navigation acts threw the Colonists into a mood for independence.

The high tariffs instituted in America through the control of the protectionists in Congress prior to the Civil War faced the South with possible ruin. Planters in Southern States felt keenly the discrimination against them imposed by the tariff. The South sought to escape an inevitable domination by seceding. Slavery became the popular issue, but was not the underlying cause of the war.

Protection of the newly found means for world trade led the United States into the Spanish-American War. The trade-mark Made in Germany underwrote World War No. 1. And, so, it has been with us and others.

Our futures as individuals and citizens of nations is so inextricably bound up in goods, that we cannot afford to neglect the full meaning of resources in our struggle to uphold certain ideals seemingly unrelated to the material.

Strategy and Conduct of the War

EXTENSION OF REMARKS
OF
HON. SCOTT W. LUCAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES

Tuesday, June 22 (legislative day of Monday, May 24), 1943

Mr. LUCAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "We Don't Know How," appearing in the Carrollton (Ill.) Patriot of June 18, 1943.

The article is very interesting, and was originally published in the Lion Magazine. It contains about the only commendation which I have seen of college professors. I doubt if there is any group in America which has been more severely criticized than college professors. It is stated in the article that a college professor was asked for an expression on the conduct of the war, and his reply was, "I am just a college professor. I don't know how to win a war." Armchair strategists who are advising how to win the war should read the article.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WE DON'T KNOW HOW

When one of the numerous United States commissions was about to open its sessions to consider the conduct of a Government activity, newspapermen asked one of the members, the president of a famous university, for an expression on the conduct of the war.

"In this matter," he replied, "I am just a college president. I don't know how to win a war."

That is one of the finest bits of wisdom anybody has uttered since this war began. Here is a man in the prime of his intellectual life, highly educated, at the head of a noted institution for educating young men, profoundly read in the history of the world and all the wars it ever waged. But he has not had military training, he is not skilled in strategy or tactics. He confesses that he does not know how to win a war.

Yet on every street corner, in every store and saloon and barber shop and country postoffice, in every place where men gather, are those who know all about how to win the

war. And they tell how. The strategy of the Allied Nations is all wrong—it should have taken an exactly opposite course to that it has pursued. Our plans for organization are weak. Our armies and our navies have been mishandled. Our relations with our allies are on a mistaken basis. We should do this, that, and the other thing which we have not done. They know how to win the war.

Let us pray for a modicum of the common sense which that college president showed. Let us realize that the conduct of the war is in the hands of men whom the various Allied Nations have chosen to handle it. They alone can know all the facts in all their relations. They alone have the responsibility. They alone should have all the authority, and all the backing of us who remain at home.

Let us give them that backing without stint. Let us confess that we don't know how to win a war.

New Strategy Speeds War on Japan

EXTENSION OF REMARKS

OF

HON. ALBERT B. CHANDLER

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Tuesday, June 22 (legislative day of Monday, May 31), 1943

Mr. CHANDLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "New Strategy Speeds War on Japan," by David Lawrence, one of America's ablest commentators on public affairs, which appears in the Evening Star of today.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEW STRATEGY SPEEDS WAR ON JAPAN—UNITED STATES AND BRITAIN APPARENTLY JOIN IN DUAL VICTORY PLAN

(By David Lawrence)

Little by little the facts about some of the decisions made at the Roosevelt-Churchill conferences here last month are coming out. At least the news indicates changes which must have been decided on by the President and the Prime Minister and which quite properly can come out now, since enough time has elapsed to permit the necessary rearrangements. They concern vitally our war against Japan.

The facts that have come out are these:

1. Field Marshal Wavell has been made Viceroy of India and General Auchinleck has been made military commander in the Indian area, but a separate East Asia Command is being created and London dispatches significantly remark that an American is being considered for the post.

2. David Lloyd George in a public speech says that the Casablanca decisions now have been superseded by the Roosevelt-Churchill decisions at Washington and that Japan is no longer to be considered a No. 2 enemy but a No. 1 enemy alongside of Germany. This is the first intimation of a program that looks toward the simultaneous defeat of both Japan and Germany instead of the beat-Hitler-first idea with its suggestion of a partial demobilization thereafter of British forces.

HOPE FOR CHINA

Apparently Great Britain and America, with an unexampled comradeship and with a unity of purpose that no amount of mutual criticism can shake, have through their chosen leaders decided on a strategy that satisfies them both. It is no secret that our high Army and Navy officers have felt Japan is a first-class military and naval power and must be dealt with effectively as circumstances demand and not as if the choice were solely in our hands.

It is no secret, too, that our military men have been distressed because the building of air bases and the carrying out of the ground operations necessary to recapture Burma and thus open up a supply line to China did not materialize before the monsoon season set in this month. Apparently the measures urged by America have been adopted in collaboration with our British allies and in due time China, with her immense manpower and air fields, will be properly mobilized and equipped to deliver death blows against Japan.

Evidently since America has been a critic, America is to be given a large responsibility in reopening the Burma Road, but Americans are eager to try their hand. Once the road to China is opened and air bombing hits directly at Japan's mainland on a day-by-day basis, the American Navy will be in a position to strike hard from the mid-Pacific even as our forces of the South Pacific gain air bases coming north and the United States air bombers move southward from the Aleutians toward Japan—the whole thing making a four-sided pincers movement that spells the doom of Japan.

What has happened to make a possible beginning on even a part of this conception, though the consummation of it may take 2 years or more? The answer is that two big events of the most profound military and naval importance have occurred. One is the discovery of ways of cutting down merchant shipping losses heretofore suffered in U-boat attacks, and the other is the reopening of the Mediterranean through the capture of north Africa and control of the Straits of Sicily.

Both these steps mean that the figures on available shipping tonnage suddenly have taken an enormous leap upward. It is as if we had increased our shipbuilding capacity manyfold. For ships are the key to this war. Planes need supplies and air bases, and the latter can't be built without the ordinary tools, machines, and materials which can be transported in great quantity only in surface ships. Shortening the route means a gain in time and thus in tonnage, for if ships can turn around faster on voyages due to shorter distances their utility is increased thereby.

PRESS TOWARD VICTORY

What Senator CHANDLER, of Kentucky, and others clamored for before the decisions were made at the Roosevelt-Churchill conference may not all be achieved right away, but it begins to appear that Britain's statesmen now see eye to eye with us on the importance of defeating Japan at the earliest possible moment without relaxing one bit our pressure against Hitler. The belief is that with a $70,000,000,000 Army appropriation bill and sums almost half that size for the Navy and with billions for shipbuilding, we should be able to lick Hitler and Hirohito at the same time.

Again it may be said that American impatience to get the war over within not less than 2 years more—and with certain breaks in our favor perhaps even much sooner—is being translated into global policy. Japan and Germany both may be on the defensive before the summer is over despite the recurring rumors of attempts on their part to try some offensive operations so as to thwart our progress and gain time. The situation as a whole looks decidedly better.

Interference With Freedom of Schools

EXTENSION OF REMARKS

OF

HON. RAYMOND E. WILLIS

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 22 (legislative day of Monday, May 24), 1943

Mr. WILLIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter addressed to me by Clement T. Malan, state superintendent of public instruction of the State of Indiana, which constitutes, I think, a professional educator's competent discussion of one phase of the question of the Federal Government's interference with the freedom of American schools.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

STATE OF INDIANA,
Indianapolis, June 17, 1943.

Hon. RAYMOND E. WILLIS,
United States Senate, Washington, D. C.

MY DEAR SENATOR WILLIS: I wish to register my vigorous protest against the proposal now before the Congress of the United States to establish a federally controlled and federally operated system of public schools under the National Youth Administration. I note the proposal calls for a general program costing $55,390,000, of which $3,314,000 would be spent for administration and $60,000 for printing.

Obviously this would build up a powerful group of Federal employees, not responsible to local communities or to State systems of public schools, who would duplicate the work of public schools developed over a period of more than half a century or more. This Federal system would seek to do the things the schools have done and are doing and are in an excellent position to do better in the future than any new agency, because of the experience, personnel, and accountability to the local communities of the long-established public-school system.

Those of us who as school administrators or patrons have had experiences with various agencies of this nature, controlled from Washington, believe strongly that the National Youth Administration and the Work Projects Administration, both created as depression emergency remedies, should be liquidated in fact as well as in name. Constant vigilance is needed in guarding against the creation of agencies of like nature and purpose, under the guise of new names, which would continue to seek to gain the same throttlehold of power and pay roll, for political purposes. Persons formerly on Work Projects Administration should not be employed by newly created agencies merely to go about carrying letters some three or four blocks in the role of public welfare or social service work.

Needless sapping of the public purse to set up a dual system of public education with undue advantage to the Washington-directed agency not responsible to local or State control, while paying students to attend and thereby draining the regularly constituted schools, is indefensible. Such camouflage is incompatible with all ideals and traditions of the free schools of America, governed as they are by their own local communities and coordinated by their own State departments of education. Our American democracy is founded upon free education.

The proposal would exploit boys and girls of our Nation for political purposes, create a paternalistic set-up in Washington with power to indoctrinate all schools of America with any given philosophy; violate the fundamentals of our type of government, wreck the fine system of balances and coordination now existing between local school corporations (1,145 in Indiana) with their home-rule privileges, and the State department of education. At present, our local communities are given the choice in many things which are to be taught to their own boys and girls.

Again I say, I wish to register a vigorous protest against this needless, heedless exploitation of the taxpayer, the children, and the fundamental principle of government vested in States' rights. If citizens of our land do not beware, they will lose their blood-bought rights by sheer apathy and suffer the fate of other nations which have allowed usurpers to wrest the power from the people by fair means or foul. Let's protect our schools against a pseudo system of public free education under the National Youth Administration.

Sincerely yours,

CLEMENT T. MALAN,
State Superintendent of Public Instruction.

Riots in Los Angeles

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 22 (legislative day of Monday, May 24), 1943

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Riots in Los Angeles," from the Chicago Sun of Friday, June 11, 1943.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RIOTS IN LOS ANGELES

The riots in Los Angeles' notorious Skidrow district must be charged up to the laxity and inefficiency of its public officials and police.

They failed to quell gangs of zoot-suited hoodlums who had attacked, robbed, and stabbed soldiers and sailors. It appears that the police actually encouraged bands of servicemen bent on revenge to invade the section. Once the rioting started, the police took a hand, but certain of them explained quite jovially that "some of the servicemen were just raising a little hell."

The "little hell" of Skidrow has expanded to alarming proportions. Other sailors have been slashed, a policeman has had his back broken, rioting has spread to more communities and Navy authorities have declared Los Angeles out of bounds for sailors.

Worst of all, racial animosities have been heightened. Because many of the grotesquely clad toughs were Mexicans or Negroes, innocent members of these two groups, with or without zoot suits, have been assaulted, stripped, and beaten by invading servicemen. Fascists accordingly are chuckling in glee.

These happenings are hardly the customary hi-jinks of servicemen on leave. They are race riots, ugly manifestations of anti-Mexican and anti-Negro feeling. Their basic causes are not stuffed cuffs and reat pleats but discrimination of many years' standing against these minority groups. Resentful, some of those unable to secure decent jobs or wholesome living conditions have become belligerent or criminal.

The public officials who allowed these tendencies to flare into terror, and the Army and Navy authorities, confronted with an emergency, must clean up this ugly state of affairs, and clean it up fast. We cannot afford such outbursts of hatred while we wage war against the very thing that thrives on them—fascism.

United Nations Food Conference

EXTENSION OF REMARKS

OF

HON. HAMPTON P. FULMER

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 22, 1943

Mr. FULMER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Hon. Marvin Jones, President of the United Nations Conference on Food and Agriculture, before the House Committee on Agriculture Tuesday, June 22, 1943:

The United Nations Food Conference was the first step in an effort to get the nations of the earth to work together in time of peace as necessity compels them to work together in time of war.

As separate nations we would be in danger of losing this war. As united nations we have found in unity an irresistible strength for winning it. Everyone now knows, even the Nazi and Japanese tyrants, that if we continue to work together we shall win, and their power and domination will be utterly destroyed. They know that their only chance lies in the hope that they can divide us, destroy our unity, and caus us to fail.

We stood together in World War No. 1, and won the war. Then we fell apart and lost the fruits of that victory. In doing so we permitted the seeds of another war to be sown.

As I read history, nations, in settling their difficulties and disagreements, have dealt largely with boundaries, frontiers, commerce, trade, geographical areas, and political control. They have paid little attention to human beings—to men, women, and children. Little attention was paid to their needs and yet these needs are the basis of civilization. I hope that when this war is over those who gather at the peace table will give some attention to these basic facts.

The subject matter of the recent conference was food and agriculture. We began with that. We believed somehow, somewhere, conditions can be so fashioned that every able-bodied person will have a chance to earn what he needs to eat, and be able to secure enough of the right kind of food for life and health. That is a very simple idea but it has never been realized. The most important thing in the world is to make it a fact.

The food conference dealt with the strange paradox of hunger in the midst of plenty. In the long years of the past there have been, nearly always, many forms of food going to waste in some parts of the world while at the same time human beings were hungry and even starving in other regions and in other countries.

The conference recognized as a premise that each nation's interest will be best served and the foundation of an enduring peace will be laid when the production, transportation, interchange, and use of food are not left to blind chance, but when reasonable effort is made to cause it to flow into the streams of consumption and use.

The representatives who attended the meeting were concerned with winning and maintaining the peace of the world. Many of their recommendations can take effect only after the war has been won. They dealt with the longer range problems that must inevitably follow the ending of the war. They did not undertake to treat directly the relief for the people of the war-torn areas. This did not mean that they were insensible of the hunger and suffering of those millions in the countries temporarily occupied by the Axis—those millions who are keeping the flame of freedom alive in spite of untold persecution and hardship. Those are immediate, pressing problems which call for the action of the times. That action is being taken. It will call for everything that nations and individuals are able to do. I am sure the elemental justice of humanity will cause those needs to be met.

The conference made a number of recommendations. Naturally at this time they were limited to basic fundamentals that are applicable anywhere—everywhere—at all times. Enduring peace cannot be won by simply ending the battle strife. We must build peace step by step.

Let it be understood at the beginning that these various recommendations do not carry with them the idea of any nation playing the part of Santa Claus. No nation is wealthy enough to do this, and, besides, it is not a sound method of building a strong people. It was therefore recognized in the Declaration that the building of its own resources and the taking care of the needs of its people are the primary responsibility of each country. But it was also recognized that by exchanging information, lending a helpful hand, treating each other as neighbors rather than as hereditary enemies, and by working together along common-sense, practical lines, we can all help each nation to help itself. What people want is not a free ride but a free opportunity—the chance to work and help to build.

A part of the action of the Conference may be summarized as follows:

1. It was recognized that the world needs to take advantage of the knowledge that has been accumulated in recent years by those who are skilled in the science of nutrition, as well as by those who are skilled in methods of production. The men who presented their facts were practical men of experience in their fields. They know the soil and they know the needs of the human body. They brought with them a vast fund of information. They are not dreamers. They are men of science who respect facts and who deal with facts as they are. They know that disease follows lack of adequate food. They know that from the hunger of undernourished people economic tides have arisen that swept away a nation's hope.

I believe in research and I am sure the members of the Committee on Agriculture in the Senate and the House do also. They have made vast provision for that research in the different sections of our country.

Many wonderful things have been made from the forces of nature by the ingenuity of man, but we have only scratched the surface. The Creator has placed many rich resources at our feet. In the earth, in the sea, and in the air He has planted secrets that are a challenge to the human race. These are only waiting to be discovered, harnessed, and put to use. What has been done, therefore, is but faintly typical of the possibilities for the future if we work together in the right direction.

2. It was recommended that each nation pay particular attention to the conservation and rebuilding of its soil and the proper use of water as linked to that soil. More than one-third of the tilled land of the earth has

been seriously eroded by washing away in the watered areas and by being blown away in the drier regions. Those who have studied the soil tell us that there are less than 5,000,000,000 acres of fertile, productive, tillable land to support the more than 2,000,000,000 peoples of the earth. Each and every country and every man, woman, and child down the long lane of the future is interested in the preservation of the soil's fertility. Once it is wasted it takes generations to rebuild it.

3. It was recommended that a freer exchange of commodities is desirable for all nations. It was recognized as a practical matter that this objective cannot be attained all at once, but systems of ever more rigid restrictive trade barriers and retaliatory measures tend not only to stifle production and distribution and use, but also sow the seeds of future misunderstandings and even conflicts.

4. It was recognized as a long-range desirable objective that expanded production for expanded use, rather than limited production for limited use of the products of both farm and factory, is desirable from every viewpoint. This will not injure any nation, but by creating wider markets will further the interests of all. Better interchange methods can make the surplus production of any nation available for use on a fair basis, and will mean gain for every nation.

The farmer will be infinitely better off if these results can be achieved. Because of a lack of market, the surplus-producing farmer in many countries has been forced to adjust his production of needed crops. This has not been a matter of choice; it has been a matter of necessity. The same course has been found necessary by the manufacturer and industrialist in many countries. They did not wish to reduce their production, but conditions which they faced left them no choice. The manufacturer, laborer, and consumer are better off when full capacity production can be disposed of on a fair basis. Likewise, the farmer will be better off when there is a wider and full market for all he can produce to meet the essential needs of human beings. Our methods of trade and distribution can and must be improved.

It is recognized by all thinking people that in securing full production it is necessary that the producer receive a fair return for his products; that provision be made in each country for credit for individual producers at low rates of interest; and that proper steps be taken to preserve the soil in order to assure continued productivity.

This should be followed by adequate provision for full-time employment. Industry and agriculture are the twin evangels of modern civilization. They should work to a common purpose. In this way a fair return can be had for all those who work in the different groups.

5. It was also recognized that in any country the development of decentralized industry is wholly desirable. In this manner, the raw material and the finished product can go hand in hand, thus developing a balanced economy, helping to solve labor problems and preventing a lopsided development.

6. It was also recognized that by all nations working together in hard-headed, practical manner, each nation would help every other nation to help itself, that the development in any nation, that raising of its standard of living, the increase of its purchasing power, will furnish a wider market for the products of all nations, and, in addition, will enable each nation to produce what it is best suited to produce.

The conference was charged with the duty of assembling data, exchanging views, finding facts and making recommendations to the respective governments. Much information was assembled that will be of great value to the peoples of each nation; information as to the dietary needs of people, food shortage, and reasonable goals; better production methods; the conservation of natural resources; better methods of interchange of commodities; assembling of facts in reference to the commodities which the various nations are best suited to produce.

It was recognized that many of the specific problems could not be determined at that time and in a short conference. It was therefore recommended that an interim commission be established to give further study and make recommendations for a permanent commission. I hope the members of the committees before which I am appearing today will be willing to advice and counsel with whoever is selected to represent the United States in the preparation of that recommendation. The recommendation will be submitted to the Congress and to the proper authorities of each nation for approval. Our past experience in war and in peace makes it desirable that it be worked out along the most practical lines.

In a world grown small by courtesy of science—the airplane, the radio, the telephone, the wireless—the peoples of the earth must get acquainted with each other; they must deal with each other. It is far better that they deal as friends and neighbors.

In one of McGuffey's Readers was the story of a man with six sons who were always quarrelling. One day he called them together, showed them a bundle of sticks bound together and offered a prize to any one of them who would break the bundle. They all tried and reported that it could not be done. "That is easy," said the old man, who then unbound the sticks and broke them one by one. "Anyone could do it that way," the boys replied. "So it is with you, my sons," declared the father; "if you stick together no one can hurt you, but if you continually quarrel and fight among yourselves you can be broken separately."

If the United Nations remain bound together by the voluntary ties of mutual interest the peace of the world can be kept.

In a world torn with battle scenes it was inspiring to see the flags of 44 united and friendly nations floating side by side at the conference. It gives hope for the future. Sixteen hundred million people—three-quarters of the population of the earth—were represented. We worked together. We must continue to work together.

I have never seen a finer group. They were earnest. They were sincere. They were able. Many of them have given a lifetime to study and research with little thought of their own interests. They worked early and late as did all who had a part in the conference. From north, south, east, and west, from every part of the earth, strong men met face to face and came to a common understanding.

We hope the foundations have been laid for better living conditions in all countries, and that the action taken will tend to promote enduring peace for the nations of the world.

War conditions have shown that full employment can be had. There is no reason why that cannot be continued in a world of peace. Through expanded production, full employment, and complete use, world conditions can be built in such a fashion that for the first time in history every man, everywhere, will know that he can earn enough to eat. If we can win security from hunger for all men, we can win for freemen security from the rise and aggression of tyrants. If we can win freedom from want, we can make all men strong enough to be free.

If the peoples of the earth can be better fed and enjoy better health; if we can provide full employment and full production and distribution of the products of both the farm and the factory; if we wisely use and truly conserve the natural resources of the earth—if we do these things we will not only provide the highest standards of living the world has ever known, but we will lay the foundation for a lasting peace.

Some Food Problem Fundamentals

EXTENSION OF REMARKS

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 22, 1943

Mr. SIKES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by War Food Administrator Chester C. Davis at the Dairymen's League Cooperative Association annual meeting in New York City, N. Y., June 17, 1943:

In the national over-all food problem there are some very important details that are immediately pressing. Last month there were others. Next month there will be new ones.

As of today, the part subsidy should play in food pricing is one important question under discussion. Price policy is another. Feed supply for our livestock is a current and long-time problem of unsurpassed interest to this organization.

These and a dozen other gigantic details are on the fire at this moment. You saw them there this morning—alongside a host of old ones that simmer there regularly. The list is long.

One detail is that of food for our armies so they can destroy our enemy. Another is food for the British and the Russians, who are destroying our enemy even faster. Another is food for American civilians, the claimant for the biggest part of our food supply, who in 1941 and 1942 enjoyed the greatest feast period in all our history and have the purchasing power to continue their record demands for food. Another is the important detail of farm labor and machinery so our farmers can continue to produce up to their present amazing records.

Each of these is vastly important in its own right. To various groups each is the most important part of the whole problem.

But each is in fact only one part of the whole national food problem.

And if all these problems were solved this week, we would have a whole new set of detail problems on the doorstep next week.

But there are some steadfast verities in a sound national food policy. There are some fundamentals that persist as detail problems come and go. These are the things to watch.

I will try to confine this discussion to some of those fundamentals, rather than ponder here any of the current administrative problems—important as many of them are as details.

One fundamental is this: No matter how much food our resourceful farmers produce no matter how good the weather, or how much farm labor and machinery are available, or how high our mountains of reserves are piled, or how soon the war is over, we won't have enough food to satisfy all the claimants for all the kinds of food they want.

There are some plain, cold reasons for this. One is that our civilians, the largest food claimant, still have unprecedented purchasing power and they demand more and better food than ever before.

Let me repeat here a fact I have often stated because it is such a persistent factor in any realistic appraisal of the food problem. It should be noted, checked, and pondered long and thoughtfully by every American today. It is this: In our first full year of war the American civilians ate more food than in any other year in our history, except 1941, which was only a fraction higher. The last 2 years have been our greatest feast period.

The number of coupons which have always limited the civilian purchases before—and I mean by that the number of dollars he has had to spend for food—has increased as the national income has soared to its all-time peak, while he was unable to spend for autos and other such things in short supply. He has more of the dollar food coupons with which to buy food than ever before and, being human, wants to spend them.

This unprecedented demand for more and better food, thus creating the appearance of shortage, will continue until these extra dollars, now burning in the civilian's pockets, are drawn off into other investments, such as investment in his government through higher taxation and heavier buying of government bonds.

I mentioned the American civilian first because he is the biggest food claimant. Last year he ate more than 85 percent of all our record-breaking production. The rest—less than 15 percent—went to our armed forces and for lend-lease to our allies.

But the proportion for military and lend-lease will be greater in the future. It is a paradox, but a realistic fact, that with every military success the correct management of food becomes more important and difficult. Our food is the chief reliance for encouraging the liberated people to help us in the final assaults against the Axis gates. Correct use of food is the cheapest way we can hasten the end of the war. Our food must continue to help keep the British and the Russians swinging prodigious blows against our enemy. That small 6 per cent of our last year's production which went for lend-lease was vitally important to our allies. Without it, Britain might have collapsed. With it the Royal Air Force, the British Army, the British Navy and their huge merchant shipping fleet are fighting more strongly hour by hour.

And we must have food for the liberated areas, such as north Africa, to enable them to get back into production. That former food surplus area must be helped back to that status with all haste.

The second fundamental principle in a sound national over-all food policy emerges from the first. It is this: Because of the number of food claimants and the nature of their demands, all our genius must be used to produce not only the most food possible but in the proper balance to get the maximum amount of human nutrients from our soil and labor resources.

In the interest of good nutrition and high morale the diet of our armed forces, civilians, and our allies should include the maximum possible amount of milk, meat, and eggs. What the maximum is, for all those who must produce and fight for us, is the problem. Our feed resources and land resources determine the amount of meat and milk and eggs we can produce. When wartime demand puts on the pressure for the maximum nutrients from our resources this fact must be considered.

We are endeavoring to expand production of foods that are high in nutrients relative to the expenditure of farm land and labor. Emphasis is being placed on stepping up output of such foods as whole milk, cereals, potatoes, peanuts, soybeans, dried beans, which make the most efficient use of our farm resources, instead of other commodities which require greater use of land and labor, but which are more in demand because of swollen wartime incomes.

Our effort will be to maintain milk, egg, and meat production at the highest possible level our feed supplies will permit, and we will produce and market much more meat in the coming 12 months than in the past 12 months.

But our civilians will demand more food because of their purchasing power. Our armed forces would take more. So would our allies and the liberated people. Since we can't meet all these food claims with animal products we must increase production of bread grains and dried beans and peas, and potatoes and the oilseeds. That is the only way to provide adequate nourishment for all the people who must get it from us if they are to keep on producing and fighting for us most effectively.

I have mentioned this tremendously important detail—the livestock-feed ratio—because it illustrates how even it is only one detail of the over-all food problem, and must be examined, and faced on that basis, whether we want to or not.

While on this subject let me describe briefly our efforts to bring in feed wheat from Canada. Two months ago the Commodity Credit Corporation bought 7,250,000 bushels of Canadian wheat for feed, to supplement the feed supplies her in New England and the Middle Atlantic area. The big problem in bringing in wheat from Canada is transportation. It has to compete for space on the boats with heavy traffic of other essential goods. So far we have unloaded about 1,000,000 of the seven and one-fourth million bushels brought, at Georgia Bay ports, awaiting shipment to New England, and additional cargoes of 750,000 bushels will arrive shortly at other bay ports or Buffalo.

In addition to this Commodity Credit Corporation wheat, about 17,000,000 bushels of domestic and Canadian feed grains have moved by boat into the Northeast from the opening of navigation to June 10.

This week the President signed a bill providing for the sale of an additional 50,000,000 bushels of feed wheat by the Commodity Credit Corporation. This will help relieve the feed problem in eastern, southern, and western deficit areas.

The third fundamental is closely related to the second I have just discussed. It is that a sound national food policy demands that every aid possible be given to the farmer to help him produce. The full resources of the War Food Administration have been pledged to that end result—production. I renew that pledge today.

The ingredients to production are farm labor, farm machinery and equipment, weather, and encouragement in the form of price support and credit. If the American farmer has these his genius will do the rest.

The farmer has proved this on his record. Last year he broke by a full 12 percent the amazing all-time food production record of the year before. He has had to use his limited supply of labor and machinery and equipment to the utmost of his ingenuity, but it has been adequate for him to make records.

Let me digress from fundamentals to discuss briefly one detail in this connection, the recent developments in increasing the amount of farm machinery. The War Production Board issued a new order on June 15 which controls farm machinery production at an average of 80 percent of the high machinery output in 1940. This new machinery program, in which War Production Board and the War Food Administration have cooperated fully is geared to our war food needs.

The outlook on machinery is encouraging, but farmers should not expect new equipment to show up immediately on their dealers' floors. War Production Board has assured us that steps will be taken to see that steel and other materials are delivered to manufacturers in time so that they can make and deliver the goods to meet the seasonal needs. But time is needed to put the machinery on the market, complications are involved in the manufacture of parts and transportation is not as fast these days. In other words, much progress has been made and the outlook is good, but farmers must not expect to find all the machinery they want in their dealers' yards tomorrow morning.

During the quarter beginning July 1 special emphasis will be put on manufacture of harvesting equipment for use this year, and after that period the emphasis will be on equipment needed by farmers next spring.

Now these fundamentals of a sound national food policy that I have discussed so far lie in the field of production. Those come first. But there are others. I will mention them only briefly.

It is fundamental to a sound food policy that the available supply be allocated equitably among all the claimants. I want to emphasize here that the civilian supply is not just what happens to be left over after the military and lend-lease have taken theirs. The civilian supply is calculated for in advance and is set up to be nutritionally adequate to maintain health and efficient production at a wartime tempo.

Then there is the problem of management of the civilian food supply; of rationing in certain commodities where demand exceeds supply; of reducing some distribution expense so as to keep farm prices high enough to induce production and yet hold the line on retail prices; of the relationship of rationing to price control and to the whole economic stabilization policy.

Finally we come to one of the most important fundamentals of all in a successful national food program. It is the responsibility of the public to learn and apply the principles of nutrition to get the most out of what is available. He must learn and apply methods of eating right for health and strength and methods of stopping waste.

How shall we bring it to pass that every American mans his battle station on the food front—plays his part in making food fight for our side in this war? The answer is obvious. Americans will play their full part on any front once they are convinced that by so doing they are helping to bring victory—and bring it sooner.

Here are some of the facts I hope every American will keep before him as he thinks about food and acts to produce it, save it, share it, use it wisely, and adjust his habits to the changes of wartime.

1. Food doesn't just happen; it can't just be taken for granted. Food has to be produced by work and planning and conserved by genius and care.

2. Our allies actually do depend in large measure on the food supply from which we eat so freely and the success of the Royal Air Force and the Russian Army are a part of our direct responsibility in food management.

3. Our armed forces must plan with a margin of safety and for rapid replacement of supplies that are sunk at sea. The Army is prudent in its takings of food.

4. The civilian supply of food will be large enough for health and strength for all, but not for waste.

5. Rationing of some foods is necessary; it is difficult to administer a rationing program perfectly, but some rationing system must be relied upon to assure fairness in dividing the supply among all; without it there would certainly be less fairness.

6. Never during the war, no matter how long it lasts or how wise and skilled we become—never will we get all the problems solved and all the difficulties overcome. Never during this war can the consumer or producer settle down to assurance that all

the food-producing and food-using habits can stay the same from here on out. There can be no such hope. He must expect change, which is inherent in war. Neither the production nor the needs can be completely prophesied. The only thing constant about war is that there will always be change.

Citizens must know the vital importance of food in the war. They must understand the total food program. They must know the increase that could be made in the effective food supply if waste could be eliminated. They must know the cumulative effect on the usefulness of food as a weapon if each individual played his full part.

I conclude on this point because it is, after all, one of the most important fundamentals of all in a successful, over-all national food program in time of war. No food program can be made to work solely by rulings and orders and devices and directives.

But this national food program of ours can be made to work by an informed citizenry. An informed citizenry must not only be sufficiently aware of the importance of food in the war effort but of the everlasting importance of individual action. Right there is where we will succeed or fail.

The Coal Strike

EXTENSION OF REMARKS

OF

HON. CALVIN D. JOHNSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 22, 1943

Mr. CALVIN D. JOHNSON. Mr. Speaker, the Nation today faces a third coal strike in as many months. Should this strike materialize and become widespread, production of vital war materials will be drastically curtailed. We have heard many condemnations on the floor of the House toward those who are considered responsible. Various recriminations have been made toward John L. Lewis, who, as leader of the miners' organization, is charged as being responsible; also we have heard criticisms of the operators for their refusal to make concessions.

Let us, however, pause for a moment and analyze conditions under which all negotiations have been carried on. A hold-the-line policy or Little Steel formula, which many of us feel is outmoded, has been adhered to by the War Labor Board. On the other hand, the operators find it impossible to grant a wage increase without the assurance of the Bituminous Coal Commission and the Office of Price Administration that price increases will be permitted, as the Bituminous Coal Commission is responsible for recommendations as to coal prices and the Office of Price Administration is the agency that regulates price ceilings. Thus no increase in wages can be granted by the coal operators until assurance is given them by these two Federal agencies that they will be permitted to increase the price of coal; otherwise bankruptcy is inevitable. The bitterness between the War Labor Board and the mine workers' union representatives has reached a point where it is merely a matter of personal enmity and animosity, from which bitterness the Nation suffers and which will make it impossible to bring about an amicable solution of this problem.

Very few persons question the fact that the mine workers are underpaid. As proof I hold in my hand an advertisement from the San Francisco News, promising women $214 per month during a short training period, then $270 per month when the training as welders is completed. These women are to be paid with Federal funds, on shipbuilding projects; think of it, $214 per month while they are learning to do the work for which they are employed. I doubt if there is a miner in America who makes that much money for performing the most hazardous work in the industrial field.

This coal strike must be settled and can be settled by the simple application of sanity and an earnest effort to win a settlement. I do not condemn the War Labor Board, as it has been instructed to stand by a policy which I frankly believe the members of the Board itself feel is unjust. I cannot blame the miners for demanding that which they feel is their just due, but while these two parties remain at odds, the Nation suffers. It is time that action was taken. I, therefore, make the following suggestion:

That the President take the entire matter of settlement from the War Labor Board and place it in the hands of Fuels Coordinator Secretary Ickes, in whom the miners and operators have expressed their confidence. This can be done without a violation of the Little Steel formula as portal-to-portal pay is not an hourly wage increase, it is an allowance for travel time within the mine and would be based upon a national average, not on an hourly or daily prevailing rate. I then suggest that a meeting be called and the attendance of representatives of the miners, the operators, the Bituminous Coal Commission and the Office of Price Administration be present. Should the Office of Price Administration and the Bituminous Coal Commission grant to the operators an increase in price ceilings sufficiently high to meet the added operating cost, I am of the opinion that the operators will immediately grant a portal-to-portal allowance and the strike will be settled.

I live with both miners and operators in my district. I have witnessed the closing of 50 mines out of 60 which operated there within the past 10 years and I have seen employment shrink by 90 percent among the miners. I know these miners to be loyal, patriotic American citizens. Their sons are in the armed forces along with yours and mine. I know the operators who owned the 50 mines that have closed and I know that many of them are virtually bankrupt today because they could not obtain a price sufficiently high for their coal to keep those mines in operation.

As to this increase, this is war and we must pay for it, and personally, I would rather try to justify an increase in coal prices to pay coal miners than to try to justify the purchase of underwear for Arabs with lend-lease funds. This strike can be settled within 48 hours if the effort is made to settle it. Let the President, therefore, remove this strike case from the War Labor Board forthwith, and as time is of the essence, place its settlement in the hands of the one man in whom both miners and operators have expressed their confidence, and coal production will be back to normal before the end of this week. Should the miners be forced back to the pits under Government order, production will not be of the quantity that it was when they were working as free men, for no man is at his best when he feels that he has been wronged.

Sinews of Peace

EXTENSION OF REMARKS

OF

HON. JOSEPH P. O'HARA

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 22, 1943

Mr. O'HARA. Mr. Speaker, an example of the fact that the people of this country are not only thinking of the past and present conditions but of the future, is best illustrated by a paper prepared by one of my constituents, Mr. Frank E. Watts, a farmer living in my district. This thought-provoking paper follows:

FELLOW AMERICAN: Unwise policies of today make wars tomorrow. On Armistice Day I said the war with Germany would have to be fought over. Ten years ago in Los Angeles, standing beside a great vessel loaded with scrap iron for Japan, I predicted the Jap-American war.

Let's look into this war and avoid another.

Yours for world peace,

FRANK E. WATTS.

SINEWS OF PEACE

Peace is the rightful heritage of the most humble in every land. It is vital to his prosperity and happiness. Yet the broadest pages of history are written in blood. History is a story of rebellion, revolution, and conquest. These are bald, hard statements, yet they, too, truly record the failure of the race thus far, to bring about a lasting peace.

Twice in our generation the world has been forced into a war that threatened all free government. When the First World War broke nations were better prepared to resist. Even small nations could claim some slight protection of international law. This, in spite of the overrunning of Belgium and Germany's disregard for a "scrap of paper." Hitler's regime was far from being entirely new. It was built into the warp and woof of the ideals and motives of German world domination, dear to every German long before Hitler. The deceit, treachery, and stealth, employed by Hitler, had been a part of German preparation in 1914. Nor did the armistice put a stop to these practices. At the end of two decades they broke the bonds of their recent victors with plans and preparedness that startled the world. This time with an all-out effort to achieve the overthrow and subjugation of all nations opposing world domination of Hitler Germany.

Any approach at the question of obtaining a lasting peace will fail unless it rightfully considers the factors which made these wars possible. Behind all facts and figures will be found the ever-present elements of

human nature. Not all the causes therefor will be found leading to Berlin, Rome, or Tokyo.

The common freeman will declare that the cause of war is greed. The student of economics and political economy may say it is ambition. When the Axis nations wreaked death and destruction on those neighbor nations it was greed. And back of it all was a people moved by national ambition to sack the world and build a Greater Germany, another Roman Empire, and an All Over Power of the Rising Sun. But the plot was not perpetrated without the depraved ambition of political leaders given over to the philosophy of greed, plunder, and destruction. Free peoples do not wage such wars. Thus it will be observed, that dictatorships were set up, who took over the powers of government. Self-government was safely removed from the people, who were reduced to abject slavery and fear.

Far be it from the truth to permit the impression that all the dirty work done by dictators and gangsters was unknown to the world. True, much was done under cover. World capitals, however, were not in the dark. For 5 years before Pearl Harbor Japan waged war on China. During this time and 5 years before that Japan built almost her entire strength from war materials secured from the United States. Nor was Washington without warning of Japan's attitude toward the United States as far back as Hoover's administration, when Stimson warned of the serious intentions of the Japanese Government. Notwithstanding this, the policies continued through the years in which our agent, Grew, persistently warned Washington.

Before Hitler's steamroller rolled into Austria Mussolini pushed over into Ethiopia. This, while England debated "appeasement" in the League of Nations. Even worse, while Mussolini loudly proclaimed his aim to "gather up the fragments of the British Empire." The League also watched the insidious meddling and the final overthrow of the Spanish Government. It has been commonly reported that war factories in Germany never stopped at the end of the First World War. Be that as it may, Hitler and Roosevelt came to power at about the same time. While some have professed not to know Hitler's plans, the most common reader could guess pretty accurately. And although each offensive was beclouded in falsehood and deceit, the truth was first printed and published.

In seeking about for safe ground for an enduring peace at the close of this war, it will be wise with care and without bias to look into the attitude of the nations, large and small, toward this oncoming struggle. It is doubtful if there has been a time in history when such fear and tension existed in the capitals of Europe. Nations were warned of the power and cruelty of the German war machine. Diplomatic connections were carefully laid in every land to touch German agents and fifth columns. One small nation at a time was invaded and warned of the death and relentless cruelty that awaited opposition to German war demands. Hitler's convenient and faithless promise that no other nations would be overrun failed to allay their fears. None dared join in any united resistance.

As to larger nations, however much they may have been responsible for Germany's power, all could see that a demon had broken loose. In connection with fear, appeasement, and delay in controlling the Axis war machine, it is important to consider the fifth column. In the First World War the German minority played an important part. At Munich Hitler called on all German minorities everywhere to "adhere to and defend the Reich." Highly organized fifth columns in Norway and other countries only too plainly proves how far reaching this policy may be in undermining all government everywhere. Short-wave radio carried propaganda, not only to German minorities, but to populations everywhere. Every aspect of public opinion in every country was card-indexed. No medium of influence was overlooked. The Bedouin of the desert was secretly taught to distrust British rule. Strongholds of German sympathy and trade were established in South America. A thousand crafty tricks were practiced in the United States, through personal contact, radio, and college professor.

Since we are at war, and it is a world war, it becomes a pertinent question just what the aims of the Allied Powers may be. Frankly, common people anywhere and everywhere are not sure. Is it because of the cloud that hangs over Pearl Harbor? Or could it be laid to the fact that the people were not "let in" on the Atlantic Charter? It has been hinted that some of the very elements of the "four freedoms" were violated by the authors. Americans, by nature, object to freedom being administered in capsule form by force. And now, over a year after Pearl Harbor, we find that this is the kind of freedom we are fighting for. We, whose ancestors threw off the shackles of monarchy and made it right to debate charters, declarations, and a constitution.

However far we may be from a peace conference, it is certain that a number of hot spots threaten on the home front. Problems unsolved now, may become worse at the close of the war. There is a decided feeling that after the war there must be change in the opportunity offered the man without money. The labor problem, crying for settlement at the close of the century, is still unsolved. Added features make it more complex. Half a century ago two-thirds of our population was rural, one-third metropolitan. Today the ratio is reversed. At the same time labor-saving machinery has made industry less dependent on manpower. At the end of the war, millions, free from service, will be jobless. Organized labor, now in paying jobs and Government favored, will hold tight. It is one thing to say the unemployed shall be fed. It is another to offer an opportunity to make an independent living and a home.

Defeat of the Axis Powers can hardly bring a solution to such as the above problems. Admittedly, a policy of temporary support for soldiers will be a public duty. There will, however, be a positive demand for a more substantial and fundamental adjustment. With business of the country organized to the teeth and all the wealth in the hands of its operators, the expression "equality of opportunity" will sound like an idle joke to a penniless soldier. It will be wise for the interests of wealth to coinsider this question before being compelled by force of events.

Leaders, ambitious to hold high office, will make this a political football to amuse the sidelines and reach the goal of power, or retain it. An added 4-year administration of radical policy may launch the Nation on a system that will revolutionize our economic structure. It will set up a planned economy and inaugurate such regimentation as will be unbearable to all who hold to Americanism. It will intrench the Federal administration behind a block of office holders Nation-wide, from township to White House, making it next to impossible to unseat a virtual dictator. No dictator will ever stabilize human rights and freedom in America. Any government that forces its opinions on the people by political intrigue, if left unchecked, will wreck the western freedom, brought forth in '76. But dictatorships rise out of disorder and injustices. We are but 10 years away from the evasive preachment of rugged individualism, which the people repudiated with disgust. The amount of it all is that one individual, with a family, penniless and jobless, makes about as much impression on a modern capitalist as a Norwegian coffee party resisting the Gestapo. The refuge of cheap land is no longer in the picture. It is plainly a matter of government aid for the unemployed.

Logically, the problem is not confined to unemployment. It includes all classes not in control of finance and organized business. For business is so organized as to squeeze out all the profits of labor and production at both ends. The loud call, so long unheeded, is for a new attitude toward possession of wealth. For human greed is no less a factor in the field of economy than in war. How many are there who live in luxury without labor by an unearned fortune, while millions labor without luxury, and always close to the breadline? Morally unfair, and continued only by pressure, this system is on the way out. It is part of the industrial revolution which is going on in war and in peace. Banker and businessman may aid in its solution. He may oppose, he cannot prevent.

The pendulum has swung 10 years away from "rugged individualism." Millions have tasted food from the New Deal "grab bag." This, however, is but the interim of makeshift, the period of soliloquy. To go further, with the endorsement of the American people, will be to follow ancient Rome, whose industrial fiber rotted out on handouts from the public crib.

As a government appeases the people, it usurps their prerogatives of opinion and power. Many recent and current cases might be cited in evidence. The ultimate objective of such government may be found in Wallace's recent statement that "We are moving away from democracy, and toward communism." America's strong background of freedom lulls us into the dream that free government cannot slip from us. For a decade, too many policies in Washington have indicated a contempt for sacred and blood-bought documents, framed by patriots to safeguard free institutions of America. Now we have the proclaimed policy. He says, "we are moving away from democracy." Americans understand democracy to be government by the people. And he says, "Moving toward communism." Americans understand communism to be some sort of government control under a dictatorship.

Popular government in America can be displaced only by emasculation of the ballot. Hitler's election was made unanimous by casting out all negative ballots. Evasive methods are more likely here. Weakness in our nominating system makes it possible for a party organization to force a weak or otherwise objectionable candidate before the people at election. A bureaucratic system makes this alarmingly true. Even more so, when the dominant party in Congress and the executive are in the same organization, as the purge becomes a whip.

Any political party facing the people in 1944 will have to prove fit to be placed in trust. The problems of the people must be faced squarely and honestly. Leaders opposing radical Government must not attempt to deceive the millions and give them A stone when they cry for bread. Great questions are at issue. Must millions vote away freedom to obtain bread?

POSTWAR SECURITY

Basic in the life of the common people in every land is the love of peace. Only when sorely oppressed, attacked from without, or incited by ambitious leaders, do the rank and file of any nation favor war.

Whence do wars come? Alexander the Great, master of military formation, led the Macedonian Phalanx to world conquest, and then wept because there were no more worlds to conquer. Then in turn, warriors of the Roman Empire subjected and enslaved the proud and literary Greeks. Rome and Carthage maintained a standing feud for war practice. Finally, All roads led to Rome, where jealous triumvirates held sway over a decadent empire that rotted under

the oppulence of conquest. English history is the story of wars that for over a thousand years, soaked British soil with blood. Regardless of the advent of the Prince of Peace, the valleys and plains of Europe have been strewn with the bones of men who fought the useless wars of ambitious monarchs.

Why these wars? For the most part, to establish power and supremacy. To overthrow one crown or dynasty and establish another. With William the Conqueror came the bloody Tower of London, historic dread of all who displeased the Crown. The reforms of Magna Carta were wrested from the limp hands of King John. Henry the Eighth established a free English church in order to free himself from the papal antidivorce decree. Under the theory of divine right of kings, it cost the head of Charles the First to restore Parliament to the people. A tenacious feudal system, right hand of royalty, built up English aristocracy, that mighty class of privileged rich, whose hand of exploitation reaches out into mighty India, the diamond fields of South Africa, and the most remote parcel of the Empire.

The hand of realism has swept the ridiculous and mythical "Divine right of kings" away like witchcraft. Yet selfish leaders, seeking to emulate the Caesars, the Charlemagnes, and Napoleons, have circumvented the milestones of freedom in the Bill of Rights, the Preamble and Constitution. Today the peoples of the civilized world are either under absolute dictatorships or threatened with the downfall of free government.

We are in the surges of a mighty world war. There can be no peace, no security, until the enemies of freedom are vanquished. Questions still unsettled forbid final judgments as to penalties. The utter cruelty and abandon of this onslaught staggers the mind. Figures fail in computation of lives or property destroyed by these outlaws. Most guilty in all history, these nations and their leaders must face the bar of justice. Lives of the gangster's victims cannot be restored nor fully avenged. But in the name of the helpless, the innocent, and the dead in two wars, there must be restitution. Millions of peace-minded men, forced to fight in this holocaust, will demand full penalties for the guilty.

Paramount over all post-war issues will be the disarmament of all gangster nations. These world conquerors have held a gun on the world long enough. They have forfeited their rights among nations. Each must be dealt with separately as the case requires. Italy alone could hardly become a world menace. Yet her geographical position renders her an enviable ally in any combination aiming at control of Europe and Asia. And her corrupt and ambitious leadership has staked everything in the vilest play for power. As to Germany there must be no mistakes. The repetition of attempts at world conquest puts this nation in the class of dangerous criminals. Their deep-dyed sagacity would turn any loose probation into an opening for treachery. Indeed, dismemberment would seem the only safe plan of control. Regardless of time or method required, the people must be turned from the devilish doctrine of a German superrace. In the Orient Tokio must be disarmed and kept so until China holds the balance of power. China must be rehabilitated without exploitation.

This program will meet with bitter opposition. Hardly a question can be raised with more divergent opinions. Allied Nations fought the first World War, little realizing the deep-seated complicity of the German people in the war plot. That the same appalling ignorance prevailed two decades later was fully attested by the Chamberlain appeasement at Munich. Up to Pearl Harbor a popular college round-table theme was "Unfair treatment of Germany at the peace table." Another class bewailed "Lack of room for Axis expansion." And there is the fetching plea of the haves and the have nots, which may be more genuine after the war than during the fabulous expenditure for armament. Racial minorities, under cover for the duration, will at the peace raise their ugly heads. It will then be well to bear in mind that business and politics respect neither race nor creed.

The day of unconditional Axis surrender will be one of the most critical in history. This day will have been bought with the lives of millions. Decisions rendered on this day will go far in determining the future course of civilization. Whether peoples shall be free to govern themselves and to do so without fear of aggression. On this day all nations will be on trial. For as the free nations acquit themselves in this victory, so shall a new freedom advance for all the world. Utopian in ideal, this freedom must end all exploitation and oppression, until every man who lives by the "sweat of his brow," shall also enjoy the "fruits of his labor." These ideals call for men. Men loyal to truth and fearless in its defense. Caesars and business magnates or theorists may wreck this peace.

A LEAGUE TO PRESERVE PEACE

There is no argument as to temporary control of Axis powers after the war. Some in Government circles favor a permanent world league. They argue that American membership in the League of Nations would have averted the present war. The common people do not share this opinion. They hold that the dominant nations in the League, as well as America, knowingly armed the Axis Powers for this war. Free peoples of the world are tired of wars "to end war," while active causes of war run rampant. Chronic sufferers ever seek a panacea for their ills. Peace clinics are today hailing "Dr. Woodrow Wilson's League of Nations" as the greatest peace preserver on earth. The common man, the conscripted man who fights the wars, is slow to turn down the advice of "trusted physicians" in the "Government household" for a century and a half, against such "nostrums." A subtle nationalism grips America. Its adherents cry for more power of the executive and perpetuation in office. Union of this regime with British imperialism and Russian totalitarianism could form only an international dictatorship. A league like this could hardly be expected to extend the four freedoms to the subjugated nations of earth. It would certainly not promote peace.

Motives of United Nations are negative and incohesive. They wage war on a common enemy today. Their intersts diverge tomorrow, perhaps oppose. The new wine of advanced freedom cannot be put in the old skins of imperialism or the much-courted system of communistic totalitarianism.

It should not be overlooked that a world league offers within itself grave dangers to world peace. With Germany silenced, domination of Europe will fall to London and Moscow. Statements by Churchill and Stalin belie substantial indorsement of the principal of freedom for all peoples. Added to the wide divergence in the philosophies of these two nations, lies the menace of the smaller states of Europe. Jealousy, treachery, and secret diplomacy have made every capital a tinder-box, threatening European equilibrium and world peace, for over 2,000 years. Yet none of these nations has power to resist conquest. While these conditions permeate Europe, further outside intervention is futile. Only when a new spirit is conceived will a new freedom be born in Europe. Cooperation and union toward a common peace must replace discord and division. A definite stride in this direction would be the organization of a union under some such name as the League of European States for Peace. This would land the problem of European peace in Europe where it most properly belongs. Americans have fought in two European wars. The common people of United States will not underwrite a third.

The fact that Japan made war on China with American weapons and then turned them on the United States, carries sober warning to foreign policy in Washington. Is it possible that the irritability of the State Department is due to congressional reluctance in the indorsement of policies bitterly opposed by the people? A new China will emerge from the war. Oriental mysticism will give way to industrial development. Fabulous resources, torn from Japanese grasp, will attract world finance. Any post-war program that smacks of exploitation will cheat the boasted "freedoms," and pave the way for more conscripted foreign wars.

CAN PEACE BE ASSURED?

Present trends of warfare can but darken any outlook into the future. The worst is yet to be enacted. Axis failure to use gas, disease germs, or any more deadly weapon, has not been due to any inhibitive reflex of conscience. A more powerful alignment of nations may one day wipe out the life of an enemy overnight. This preview, however vivid or truthful, offers no deterrent to the warmakers' lust for glory, power, or profit. Wars will not cease unless and until the champions of right and peace stop the warmakers.

Petroleum Price Increase Again Recommended by Secretary Ickes

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 22, 1943

Mr. PATMAN. Mr. Speaker, I am inserting herewith a copy of a letter from the Petroleum Administrator for War, the Honorable Harold L. Ickes, to the Honorable Prentiss M. Brown, Administrator, Office of Price Administration, relative to the price of petroleum. It is self-explanatory:

PETROLEUM ADMINISTRATION FOR WAR,
Washington, June 10, 1943.

Hon. PRENTISS M. BROWN,
Administrator, Office of Price Administration.

MY DEAR MR. BROWN: I regret that I am unable to subscribe to the views expressed in your letter of May 1 in answer to mine of April 7 recommending a general adjustment in price ceilings on crude oils. For although I note with satisfaction that we seem to agree on the importance of maintaining adequate reserves of petroleum, apparently I did not stress sufficiently either the imminence of a shortage in our daily productive capacity or the practical urgency of a price increase if the risks of such a shortage are to be minimized.

For me, it is no answer to an imminent shortage to say that the rate of exploratory drilling is now "approximately the same as last year" when neither that rate nor the rates prevailing since 1938 have led to sufficient discoveries to replace what we have consumed. This decrease in discoveries is of far greater import than that of a mere loss in total reserves. It is from new fields and fields only a few years old that we procure

flush production. It is upon flush production that we have always depended for over half of our current production. A shortage of crude oil occurs when demands exceed current productive capacities—it cannot be postponed by statistical calculations of theoretical reserves producible over half a century.

Had we not been fortunate enough to enter this war with a large excess of daily capacity to produce from flush fields developed in the thirties, we would have been compelled to pay more for crude oil long before now. So substantial was this excess that proof of any erroneous decision relating to oil production was almost impossible to establish. Was price too low? Did we drill too few exploratory wells? Did we fail properly to conserve? Underlying trends were hidden by unobserved replacements from then-existing excess capacity. But now that excess capacity is virtually gone. Only in certain areas in Texas does it remain and even there, both because of increasing demands and continued natural declines common to all oil fields, this relatively small remaining excess will have largely disappeared by the end of this year unless practical remedial action is taken immediately.

No one, least of all the Petroleum Administration for War, would deny that there are "other factors than price" which have "a distinct and direct bearing on the problem" of current crude oil supply. You mention manpower, spacing restrictions, proration, material and transportation difficulties. Each of these we had already recognized and for each appropriate action had been instituted before we turned to you for such additional assistance in the price field as only your office has the present power to provide.

With manpower we have created a special division which, in collaboration with selective service authorities and the petroleum industry, is endeavoring to find constructive solutions. Spacing restrictions have been and continue to be relaxed. Allowables in virtually all States have been raised and, save for a relatively few fields in Texas, have already reached the approximate limits of efficient capacities beyond which neither we nor the State regulatory authorities dare go without precipitating that rapid deflationary spiral in both reserve and current productive capacity described in my previous letter. As to materials, we have claimed and received from the War Production Board additional supplies, and that Board has approved, after months of intensive work by this office, revised orders to simplify the acquisition of such materials. In addition we have established special pools of materials reserved for exploratory activities and located at convenient points throughout the country. Finally, the efforts and accomplishments of this office in the field of transportation are so enormous and so well known as not to require further review.

To my mind little can be gained by debating whether price or a combination of some or all of these other factors which you have mentioned and with which we have sought to deal, is most important. The term "most" as thus applied is as nebulous and conjectural as you fear would be the results of a price increase. Is it not enough that price is admittedly an important factor? Do not the results of recent actions taken in relation to California illustrate the point? Confronted there with large prospective increases in the demand for heavy oils and declines in heavy crude production, this office relaxed spacing restrictions and yours permitted price increases. Immediately, and I stress the rapidity with which it occurred, drilling operations rose 52 percent above the levels of the previous year.

You state that a general increase in crude-oil prices cannot be justified on the basis of increased costs. But that depends on how costs are computed and which costs are deemed important. Those experts of the United States Tariff Commission who compiled the reports from which your figures on costs and margins were derived would be the first to admit that their cost figures are largely historical.

These cost figures are an index of current costs only to the extent that in their calculation are included present day out-of-pocket expenditures for operating existing wells plus such exploratory outlays as companies with production may elect to charge against that production. All of the balance of these computed costs of production consist of capital amortization charges representing the much lower costs of lease acquisitions, labor, materials, and drilling of years gone by and into which are averaged tens of thousands of naturally cheap wells in fields like East Texas which we cannot reasonably hope to duplicate today. What is worse, as those in the oil industry curtail their exploratory efforts, the cost of current crude as thus computed declines so that, paradoxically enough, the greater the decline in needed exploration, the less the justification for a price adjustment.

It simply must be recognized that the producing branch of the petroleum industry is divided into two more or less distinct groups—a relatively few integrated companies which, in addition to production, engage in the transportation, refining, and marketing of petroleum and its products, and some 10,000 smaller companies and individual operators, so-called independents who engage only in production. The integrated company is a great manufacturing and merchandising organization as well as a producer of oil. To achieve these ends, it is compelled to explore or buy proven crude oil properties. But the independent is under no such compulsion. There is never a day when he is not free to put his business on a liquidating instead of an expanding basis. His decision will not be based upon historical costs—rather it will be governed by current and forward costs in their relation to prospective prices. When a barrel of oil brings less than 10 pounds of steer on the hoof or 4 pounds of green beans in the market, he naturally concludes that we want beef and beans more than oil. This is not mere figure of speech. Hundreds of experienced and skillful independent oil producers have in fact already withdrawn from activities to devote themselves to more profitable farming and ranching. These are the men who have discovered one-half to two-thirds of our total number of oil fields. As such, the independent operator is critically important.

I do not believe that any complicated patchwork of subsidies extending from exploration to stripper wells to marginal drilling and secondary recovery can possibly be drafted, introduced, financed, and administered with sufficient speed and adequate safeguards to minimize, in any substantial degree, the effects of the shortage we face.

However useful a subsidy to obtain marginal production by or through a relatively few producing units, the complexities of its administration and its cost are staggering if applied virtually throughout the entire band of producing effort in the Nation's second largest industry. How many geophysicists, geologists, petroleum engineers, lawyers, cost accountants, auditors, clerks, field officers, collection agents, and general administrative officials must be added to governmental pay rolls to determine forecasted costs, location, and actual expenditures for thousands of exploratory holes; to segregate from hundreds of thousands of existing wells those that should be classified as "strippers"; to decide where, when, and how Government funds shall be invested in technologically complicated secondary recovery operations; and to pass upon the propriety and amount of governmental aid for thousands upon thousands of potential marginal drilling locations? We have no such staff nor has any other governmental agency. To employ such a staff would siphon off a whole host of skilled manpower from the very industry in which they are now more than ever needed for finding and producing oil in the fields and at the wells as opposed to preparing, checking, and reading papers and reports in either industry or governmental offices.

On the one hand, if you are prepared to recommend individual advances only after careful scrutiny and adequate subsequent administration by a necessarily large staff of governmental experts, the manpower consumed and the time required will render the plan valueless in providing necessary productive capacity before our present slim margin of safety has been exhausted. If, on the other hand, you are prepared to recommend that subsidy funds be advanced with a lavish hand without such scrutiny and subsequent careful administration, the whole plan will inevitably degenerate into a promoter's paradise in which the drilling of dry holes becomes a profitable business and the number of barrels of oil found and produced per dollar invested and per ton of material used far less than if such productive effort were stimulated automatically by the moderate price increase which I have proposed.

The so-called self-sustaining features of the subsidy plan you have proposed are almost wholly illusory. To the $150,000,000 exploration bill which you would have the Government pay, there must be added the cost of subsidizing stripper wells, marginal drilling and secondary recovery, together with inevitably large administrative expenses and interest on funds, furnished over an indefinite period of time, and much of which will never be repaid. No historical ratio of producers to dry holes will hold since the Government will inevitably be asked to risk its funds in the lemons, not the plums. Indeed, in the end the Government would be able to liquidate its investment only by permitting a rise in crude oil prices sufficient to permit a few of its successful projects to pay off its losses on innumerable purely promotional ventures. Under either the subsidy plan you have proposed or under any theoretically more perfect modification, I fear we shall search in vain for a system of economic perpetual motion by which an increase in crude prices can be avoided if essential military and civilian demands are to be supplied.

Whether such a price increase as has been recommended is regarded as inflationary or as increasing the cost of living depends, in the last analysis, upon the point of view of the individual observer. Upon the side of excess purchasing power made available for the purchase of consumer goods as opposed to expenditures for exploration and development, an oil price increase is unlikely, on balance after taxes, to result in any larger windfalls than those which are certain to be pocketed by promoters under any set of subsidy proposals capable of operating quickly on a broad enough front. Moreover, a price increase, to the extent that it fails to induce expenditures for new productive capacity, increases Federal tax revenues while a subsidy works precisely in reverse. On the side of consumer costs, an increase in the price of that gasoline still used for nonessential purposes can hardly be deemed inflationary, and where rationing has curtailed nonessential uses, the gasoline bills of consumers in general are today lower than ever before. With fuel oils, as I have already pointed out, competitive price levels ought not to continue to be such as to encourage continued excessive consumption of our exceedingly limited supplies of oil as against coals and other fuels of which we have an abundance. For every barrel thus consumed we shall have to pay unnecessarily large sums either to transport oil from distant lands or to mine or manufacture, synthetically, liquid fuels for which there are no abundant substitutes.

Ever since the wartime responsibility of supplying petroleum and its products was placed upon me by the President over two

years ago, I have deemed it my duty to sponsor plans whereby the dangers and hardships of clearly forseeable shortages of petroleum products might be mitigated. First it was oil transportation shortage which this office foresaw and endeavored to meet well in advance. Then it was 100-octane gasoline manufacturing capacity. Later it was rubber. Now a prospective crude oil shortage impends. Because this is so completely the age of oil, because not only all military operations but the whole of our civilian economy is absolutely dependent upon oil, I feel I would be doing less than my clear duty now if I did not urge and reurge that not only some, but all possible steps, including the price adjustments which I have recommended, be taken to minimize those dangers and those hardships which a severe shortage of oil and its necessarily more stringent civilian rationing are bound to impose.

Sincerely yours,

HAROLD L. ICKES,
Petroleum Administrator for War.

Amendment of the World War Veterans' Act

EXTENSION OF REMARKS
OF
HON. MARTIN J. KENNEDY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, June 21, 1943

Mr. KENNEDY. Mr. Speaker, today, we are considering H. R. 2703, a bill to provide more adequate and uniform administrative provisions in veterans' laws pertaining to compensation, pension, and retirement pay, payable by the Veterans' Administration.

EXPLANATION OF THE BILL

Briefly, the bill is designed to correct inequalities arising under existing law, with a view to simplifying adjudicative practices and administrative procedure by establishing uniform provisions wherever possible.

Sections 1 to 8, inclusive, define or modify existing definitions, the terms "widow of a World War No. 2 veteran," "child," "parent," "father," and "mother"; provide for uniform application of section 21, World War Veterans' Act, 1924, as amended, and Public Law No. 262, Seventy-fourth Congress, as amended, which pertain to safeguarding of estates of veterans derived from benefits under laws administered by the Veterans' Administration, and the administrative and definitive provisions of Public Law No. 2, Seventy-third Congress, and the Veterans Regulations, as amended, including provisions for renouncement of compensation or pension; provide for forfeiture of certain benefits as to persons found guilty of certain offenses; and authorize termination of awards in favor of persons in enemy-controlled territory with provision for apportionments to their dependents who are in the United States.

Sections 9 to 13, inclusive, contain provisions applying to World War No. 2 veterans the presumption of soundness and rebuttable presumption of service connection for chronic diseases to be applied uniformly to veterans of World War No. 1 and the Spanish-American War, Boxer Rebellion, and Philippine Insurrection under part I of Veterans Regulation No. 1 (a), as amended; giving recognition to service as a cadet at the United States Military Academy, as a midshipman at the United States Naval Academy, or as a cadet at the United States Coast Guard Academy on or after December 7, 1941, and before termination of hostilities incident to the present war, as active service in World War No. 2 for the purposes of laws administered by the Veterans' Administration; clarifying the exemptions from the income limitation in Public Law No. 484, Seventy-third Congress, as amended, and extending entitlement to a child or children, otherwise eligible where the widow's rights are barred by the income limitation; regulating payments of accrued benefits due and unpaid at death; establishing uniform application of the limitations on payments in hospitalized and domiciled cases of veterans without dependents, increasing the reduced amount of $15 per month to $20 per month, and increasing the reduced amount for non-service connected disability under part III of Veterans Regulation No. 1 (a), as amended, from $6 to $8 per month.

Section 14 simplifies and adjusts the rates of wartime service-connected death compensation or pension by elimination of the differentiation in rates to the widow or children based upon age, adopting the higher rates for all ages. These adjustments result in increased rates and will facilitate adjudicative actions. The increase of the widow's rate from $45 to $50 per month and the payment of that rate regardless of age (now $38 if under 50 years of age) is believed to be a conservative and more appropriate recognition of the Federal obligation in these cases. In order that no inequality may result and that the rates of death pension based upon service other than in period of war may simultaneously be adjusted, this section adjusts those rates to the recognized 75-percent ratio to wartime service-connected rates. The estimated cost of the wartime service-connected adjustment under this section for the first year is $4,026,000 and the adjustment of death pension rates based upon service other than during a period of war is estimated at $510,000 for the first year.

Section 15 governs the receipt of concurrent payments, removing certain inequalities in existing law and providing more equitable rules for uniform application.

Section 16 relates to the effective date of the act and of certain adjustments or benefits authorized thereunder and provides that no payments authorized by the act shall be made for any period prior to date of its enactment.

Section 17 provides that pension payable for disability shall be payable from date of discharge if claim therefor is filed within 1 year from discharge.

I am glad to find such unanimous sentiment in favor of this legislation because as a matter of patriotism, equity, and justice it should become law.

Address of Hon. Paul V. McNutt

EXTENSION OF REMARKS
OF
HON. ROBERT RAMSPECK
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 22, 1943

Mr. RAMSPECK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. Paul V. McNutt at the Memorial Service for those employees of the Federal Government who have lost their lives in the service of their country during the present war, Sylvan Theater, May 30, 1943:

It is a privilege to preside over this meeting and to pay a well-deserved tribute to those in the Federal service who have given their lives for their country.

On the program which you have received is a page upon which are the names of fellow workers who have died or are missing. That is a list which will grow, for we are engaged in a war which will be both long and hard, and costly in human life.

I hope that you will keep that list and study it. Though you may know personally few or none of those whose names appear upon it, it will serve as a reminder of the devotion and patriotism of those with whom you served.

I would have you note especially that nearly half that list is the names of those who were engaged in civilian services. It is the first such list that I have seen, and I found some difficulty in obtaining further information about the actions in which these men lost their lives, and deeds of valor which they performed. Their stories remain untold.

Government administrators have not recognized—as private industry has recognized—the human value of making such records known. For the sake of the whole Federal service, there is an obligation which should be met.

I think it is important that these human stories be told, just as I think it is important that we meet here today to pay our tribute to these dead. For despite the outcry which clouds the public's understanding of its civil service, Federal employees have a record to be proud of. Both in the total and in the military age group, they have contributed more than the national average to the military service of their country.

More than 250,000 Federal employees are already in the armed services.

And with the application of deferment policies which are more rigorous than those generally applied to private industry, that leadership will be maintained.

On this Memorial Day of 1943, when Americans are fighting in the skies of Europe, in the rocky fastnesses of the Aleutians, in the jungles of New Guinea, it is well to remember these things. It is well to scan this list of dead and to remember that the public service is a calling that requires courage and idealism in civil as well as military service, in peace as well as war.

And if I may call for inspiration upon mighty words which are chiseled into the nearby memorial of Abraham Lincoln, "From these honored dead we take increased devotion."

It is a devotion to victory in this war.

It is a devotion to building after this war the kind of peace, the kind of public service that they fought for here and on the field of battle.

Hot Springs Conference on Food and Agriculture

EXTENSION OF REMARKS

OF

HON. FREDERICK C. SMITH

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 22, 1943

Mr. SMITH of Ohio. Mr. Speaker, Judge Marvin Jones, who was chairman of the Hot Springs so-called Conference on Food and Agriculture, this morning made a report to the Committee on Agriculture of the House on the work done at that conclave.

The truth is he told the committee practically nothing of the real work that was done at the Hot Springs meeting. His statement to the Committee on Agriculture was representative of the tactics he pursued all through the conference to shield in secrecy its activities.

Just as Judge Jones took great pains to give the Committee on Agriculture the impression that the conference was almost wholly interested in food, so he also tried to give this same impression to the public throughout the session of the Food Conference.

The facts are, as written records will show, the Hot Springs conference considered practically every phase of the entire economy—all production and consumption, full employment and cradle to the grave security for all the people of the world, a reduction of the standard of living of all the peoples of the earth to a common level, and so forth. Furthermore, it considered setting up a world bank and a world new deal with such devices as W. P. A., triple A, and so forth.

Above all, the dominating thought of the delegates collected together at Hot Springs was to form an international body to which it would give functions and powers so great as to constitute what would amount to an authoritarian superstate.

It was noteworthy to observe how Judge Jones shied away from answering a question asked by one of the committee members relating to land ownership. He tried to give the impression that whatever consideration the conference gave to this question was of a general nature and in no way important.

The fact is directly to the contrary, as the record will show. Serious consideration was given to land tenure, and this was done under the direction of Alexy D. Krutikov, chairman of the Russian delegation. He was chairman of section 2, which was given the following agenda to consider:

Existing agricultural practices.

Suitable farming systems and practices.

Government and group activities concerning:

(a) Credit or capital developments.

(b) Cooperation services.

(c) Land tenure.

(d) Other similar activities and education.

According to press reports, Krutikov's committee actually recommended community farming as they now have in Russia.

Why did not Judge Jones tell the Committee on Agriculture of the outstanding position occupied by the Russian delegation at the conference, namely, that Alexy D. Krutikov was second vice president out of four vice presidents at the conference; a member of the executive committee and of the steering committee; also chairman of section 2? Furthermore, according to press reports, Krutikov was also chairman of the drafting committee.

Finally, according to a press release, Krutikov was accorded the high honor of making the motion at the closing plenary session of the conference for the adoption of its recommendations.

Judging from certain records of the Food Conference which I have in my possession, Judge Jones failed utterly in telling the Committee on Agriculture what really took place at Hot Springs.

Subsidies That Are Now Being Paid by the Government and an Explanation of the Plans Used in Certain Cases

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 22, 1943

Mr. PATMAN. Mr. Speaker, I am inserting herewith a statement showing the estimated amount of subsidies for selected commodities for the period mentioned, and also statements prepared by the Office of Price Administration disclosing how the different plans for subsidies work on certain items. They are self-explanatory.

Estimated amount of subsidies for selected commodities for calendar 1943, estimated on basis of information obtained June 1, 1943

[In millions of dollars]

Item	Paying agency	Calendar 1943 estimated as of June 1
War risk insurance	War Shipping Administration	44-54.5
Sugar	Defense Supplies Corporation	58.5
Fats and oils	Commodity Credit Corporation	15.0
Copper, lead, and zinc	Metals Reserve Corporation	53.0
Bituminous coal	Defense Supplies Corporation—War Shipping Administration	40.0
Coffee	Commodity Credit Corporation	1.5
Fibers	Defense Supplies Corporation—Commodity Credit Corporation	5.0
Petroleum	Defense Supplies Corporation—War Shipping Administration	144.5
Metals (imported)	Metals Reserve Corporation	25.0
Copper scrap and other scrap metals	Copper Recovery Corporation	27.0
Nicotine sulfate	Agricultural Marketing Administration	1.8
Alcohol	Commodity Credit Corporation—Defense Supplies Corporation	16.0
Chilean nitrate	Defense Supplies Corporation	7.0
Cheddar cheese	Commodity Credit Corporation	30.9
Puerto Rican food	Agricultural Marketing Administration	(1)
Canned goods	Commodity Credit Corporation	25.0
Bleached sulphite wood pulp	Defense Supplies Corporation	(1)
Milk, fluid	Commodity Credit Corporation	(1)
Total		494.2-504.7

[1] Total of these items is less than $10,000,000.

Office of Price Administration, Division of Research, June 18, 1943.

The Premium Price Plan for Copper, Lead, and Zinc

By using a subsidy to obtain high-cost production of copper, lead, and zinc, the Government has been able to make sensational savings. In order to mine high-cost copper, producers needed a return of 17 cents a pound. Most copper, however, was produced very comfortably under the ceiling of 12 cents a pound. Instead of raising the ceiling for all copper to 17 cents a pound, the Government buys the high-cost production at 17 cents a pound and sells it to the users at the ceiling price. This 5-cent premium cost the Government $10,000,000 in 1942. But if, instead, the ceiling had been raised to 17 cents for all copper, the additional cost of copper would have been $280,000,000. Since all of the supply was to be used in the production of war goods, the net saving of $270,000,000 accrued to the benefit of the Government.

In the case of lead the Government spent $4,000,000 in 1942 in order to save $72,000,000. In zinc it spent $11,000,000 in order to save $65,000,000. Thus the total expenditure for copper, lead, and zinc of $25,000,000 saved $417,000,000, a return of about $16.70 for every dollar spent.

This program will be expanded in 1943 because of increased costs in the mining industry as a whole, because poorer ores will have to be worked, and in special cases prices higher than those established in the original premium payment plan will be paid. The subsidy for the three metals may reach $78,000,000 but, if the ceiling price were increased instead the cost of the three metals would rise by about $980,000,000. Thus the net saving will be over $900,000,000.

Mechanics of Premium Price Plan

The premium price is paid on tonnage in excess of quotas fixed by a joint committee of War Production Board and Office of Price Administration. These quotas are fixed on a monthly basis and they are fixed to include all output that could reasonably be produced at the established ceiling of 12 cents a pound for copper, 8¼ cents a pound for zinc, and 6½ cents a pound for lead, taking account of the quality of the ore, past production records, costs of production, depth of mines and other relative factors. In most cases mines which had no production during 1941, or which produced less than 200 tons during that year have been assigned zero quotas. For output in excess of the quota, the Metals Reserve Company, a subsidiary of the Reconstruction Finance Corporation, pays 5 cents a pound for copper and 2¾ cents a pound for zinc and lead. These amounts are expected to cover the additional costs involved in developing new mines and in mining ores of low-metal content, costs which would not be covered at the ceiling prices. In some cases, where it is necessary to mine inordinately low-grade,

high-cost ores, additional payments are made.

To obtain premium payments the mine operators must file a certified affidavit of production data monthly. These affidavits are filed by the mining operator with his smelter who in turn forwards copies to the Metals Reserve Company. Payments are then made by the Metals Reserve Company to the smelters for all mines qualifying for the premiums. The smelters, acting as agents for the Metals Reserve Company, pay the mining operators.

COMPENSATORY ADJUSTMENT PLAN FOR EXCESSIVE TRANSPORTATION COSTS OF PETROLEUM AND PETROLEUM PRODUCTS

By payment of a subsidy amounting to $100,000,000 in 1943 and by averaging cost increases through a pooling arrangement, the Government is saving east-coast consumers of petroleum products $290,000,000 this year. About 45 percent of the savings, or $130,000,000, accrues directly to the Government on its purchases of petroleum products, and 25 percent, or $73,000,000, is saved by industry, which in turn passes on a considerable part to the Government through lower costs of war goods. The remaining 30 percent, or $87,000,000, represents a direct saving to consumers on cost-of-living items.

Beginning in the summer of 1941, the increased use of tankers for international rather than coastwise shipments, as well as the sinkings along the Atlantic seaboard, necessitated an almost complete shift from the low-cost tanker method of transporting oil to high-cost railroad tank cars. It costs, on the average, about $1.20 more to bring a barrel of petroleum—or petroleum products—from the Texas fields to the east coast by tank car than it used to cost by tanker. If prices had been raised to the full extent necessary to get in these high-cost supplies, it would have meant an increase in the total cost of east-coast petroleum supplies amounting to $606,000,000 in 1943.

Office of Price Administration first attempted to solve the problem of this tremendous increase in the costs of one form of transportation by shifting part of the costs to petroleum still coming to the east coast by normal means of transportation—chiefly pipe lines—and to petroleum produced in the East. This was done by permitting a moderate price increase on major petroleum products consumed on the east coast, regardless of their point of origin or the method of transportation used. The additional revenues accruing to petroleum sellers were earmarked for a pool; this pool was drawn upon to pay the additional cost of tank-car transportation.

Total claims against the pool will amount to $316,000,000 in 1943. Of this amount $216,000,000 will be met by pool revenues. The deficit of $100,000,000 will be paid by the Defense Supplies Corporation on the basis that additional costs of wartime transportation should not be borne entirely by east coast consumers, but that the Nation as a whole should bear a share.

It is expected that payments under this subsidy program will rapidly decline as new pipe lines replace the high-cost tank cars as a means of transporting oil.

In addition, the War Shipping Administration is absorbing a part of the current unusual freight and insurance rates on the small amount of oil that is still moving by tanker. This amounts to $45,000,000 a year.

MECHANICS OF THE PLAN

This subsidy is paid by the Defense Supplies Corporation to east coast importers of petroleum and petroleum products on their purchases originating in district 3, and, to a lesser extent, in district 2. The importers file a claim with Defense Supplies Corporation for the excess of their actual transportation costs over the pre-war costs of importing from a normal source of supply. If they elect to do so, importers may retain additional revenues which they have received on account of the special price increases, as a verdict against their claims.

SUBSIDY ON INCREASED TRANSPORTATION COSTS FOR SUGAR

By subsidizing unusual wartime transportation costs and by ruling out the necessity of increasing all sugar prices sufficiently to cover the added costs of bringing sugar in by the most circuitous emergency route, the Government has kept refined sugar prices from advancing by as much as 79 cents per hundred pounds at wholesale. This is equivalent to a saving of a cent a pound at retail. The total cost of the subsidy in 1943 will be $43,500,000; this compares with a potential price increase amounting to $103,000,000, of which $21,000,000 would have to be paid directly by the Government on its own sugar purchases. Industrial users are saving $30,000,000, and consumers as a whole are saving $52,000,000 directly on the cost of living.

The need for this subsidy arises from the fact that wartime transportation dislocations made it necessary to import sugar from Cuba, Puerto Rico, and Hawaii not only at unusually high-cost shipping rates to normal port of entry, but also to use abnormal ports of entry involving much higher overland transportation costs to the refining centers. For instance, much of the sugar destined for Boston now is shipped by water to Florida, where it is transshipped by rail up the coast at a cost equivalent to 79 cents per hundred pounds of refined sugar in excess of normal costs. A price increase of this amount would be more than enough to meet the additional transportation costs of 75 percent of all sugar.

This subsidy applies to unusual transportation costs on all sugar, whether imported or domestic. All shipments of sugar, both beet and cane, are made pursuant to War Production Board General Preference Order M-98; because of this order, movements of sugar to refineries have been altered from their normal course.

MECHANICS OF THE PLAN

The Defense Supplies Corporation sends checks directly to refiners to cover the following charges:

1. The difference between the ocean freight rate to the port of entry and the rate which existed during December 1941.
2. Any increased rail or barge freight resulting from a diversion of shipping from normal routes.
3. Extra handling costs at transportation points.
4. Losses resulting from a reduction in weight by reason of transshipment.

In cases where it is customary for the sugar producer to pay the shipping charges, Defense Supplies Corporation makes reimbursement to the shipper rather than to the purchasing refinery.

CHEDDAR CHEESE

A subsidy program was adopted in Cheddar cheese manufacturing to obtain sufficient production to meet unprecedented military, lend-lease, and civilian demand without raising prices to consumers above the October 1942 level. The subsidy technique has permitted the holding of prices in accordance with the President's hold-the-line order, and in addition has meant a net saving to the Nation. For every $1 of subsidy expended, $1.40 is saved in retail prices to consumers.

This saving arises from the fact that wholesalers' and retailers' mark-ups are on a percentage basis and amount together to 40 percent of costs; thus any primary price increase results in a 40 percent greater retail price increase. For 1943 the subsidy will cost approximately $26,000,000. With the Government taking 50 percent of output during the first 5 months of 1943 and 70 percent thereafter, the net cost to the Government of the subsidy program as an alternative to a price increase will amount to only $10,000,000. This expenditure will save consumers $14,000,000.

In the fall of 1942 it became evident that milk was being diverted away from Cheddar cheese production, since it was less profitable for farmers to sell milk to Cheddar cheese producers than to sell it for other dairy manufactures or as fluid milk. The subsidy program was arranged to enable Cheddar cheese producers to pay higher prices to farmers for milk, and thus to maintain the high level of production necessary to meet wartime needs.

The Commodity Credit Corporation subsidy, which went into effect December 1, 1942, enables cheese processors to pay farmers for milk on the basis of a 27 cents per pound price for No. 1 American Cheddar cheese, but at the same time to sell such cheese on the basis of 23¼ cents per pound. Producers receiving the subsidy are required to pass on to the farmers all payments received by them from Commodity Credit Corporation. These payments are in addition to the payments farmers would otherwise receive for their milk; thus the continued flow of milk in Cheddar cheese production is assured.

MECHANICS OF THE PLAN

The technique of the subsidy is essentially a buy-sell operation. The Commodity Credit Corporation buys the cheese from producers at 27 cents per pound and resells to them at 23¼ cents per pound. Claims are filed monthly with the Commodity Credit Corporation by producers.

COMPENSATION FOR INCREASED RAW MATERIAL AND WAGE COSTS FOR CANNED VEGETABLES, 1943 PACK

The wage and raw material subsidy for canned vegetables will absorb both recent wage increases permitted by War Labor Board and the increases in vegetable support prices announced by the Department of Agriculture.

If the increased cost to canners had been passed on to the retail price, consumers would have had to pay 43 percent more than the primary cost increase. This is because prices charged by canners, wholesalers, and retailers are based on percentage mark-ups. In the aggregate these mark-ups amount to 43 percent of canners' costs. Thus every dollar of subsidy prevents a retail price increase of $1.43, and the total subsidy of $25 million saves consumers nearly $36 million.

There will be a further saving, which cannot at this time be estimated exactly, due to the fact that all prices will not have to be raised sufficiently to compensate marginal canners for their increased wage costs. Only those canners who are making a less than reasonable profit as determined by Commodity Credit Corporation and the industry will be eligible for the wage subsidy. This compensation, therefore, will make it possible for marginal producers to remain in the industry, even though the dollars and cents ceiling prices on canned vegetables remain at the approximate level of the 1942 pack.

The cost of producing tomatoes, peas, beans, and corn has increased approximately 25 percent above the 1942 level. The new support prices announced by the Department of Agriculture compensate the growers for this increase and make possible the maintenance of acreage. The growers are assured that this increase in prices will be paid to them, since no canner will be able to sell his raw vegetable pack to Commodity Credit Corporation unless he can show that he has paid the higher prices. If he can prove this, Commodity Credit Corporation will purchase his raw vegetables at 1943 season average prices and resell them to him at 1942 prices.

Address of Gen. George C. Marshall

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 22, 1943

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Gen. George C. Marshall, Chief of Staff of the United States Army, before conference of Governors at Columbus, Ohio, June 21, 1943:

It has seemed advisable as the war develops that public statements by the Chief of Staff of the Army should be restricted to a few special occasions. A conference of the Governors, the leaders of the various States, is such an occasion. Furthermore, this is a most critical summer both for us and in the history of the world. We have passed through the period of military adolescence, our initial deployments have been completed and lines of communications solidly established. Quantity production of both men and matériel, the former in as exact a pattern as the latter, is now in full blast, the enemy's initial advantage in men and guns, and in ships and planes, has been overcome. We have seized the initiative, the most vital factor in war.

The past 2 years of preparation have been a trying period, especially the prolonged strain of German and Japanese successes during which we struggled to meet the surge of power which they had carefully accumulated during the past decade. The change in the attitude of the public essential to the furtherance of the necessary legislation and appropriations presented many complications. The establishment of our industries on a full war basis had its multiplicity of troubles, and the building of the full war military machine entailed a stupendous task of a wide variety of problems, invariably arousing pronounced individual reactions of our people.

Today we stand squarely on our feet in all these respects. Initial strategic problems involving hectic application of piecemeal tactical actions—anathema to a soldier—are things of the past.

Furthermore, and probably most important of all, we have secured a basis for unity of action as to strategy, operations, shipping, matériel, and virtually every phase of this warfare, in a manner without precedent in history.

The pattern for victory is clear. If we had set the stage we could not have provided a more sharply defined picture than that offered by the battle of Tunisia. There we had:

A perfect example of coordinated leadership for Allied action.

An assemblage of overwhelming military power—air, land, and sea.

The explosive effect of the skillful application of that power.

Incidentally, the psychological by-products of that battle are proving of immense importance. There has been a rebirth of the French Army with a splendid example of courageous and aggressive fighting power. The observing nations have seen selected German troops humbled by an extension and improvement of the technique that brought about the downfall of France. The Allies have gained great confidence in each other, and in the Allied fighting men, and the scales have so tipped that those nations who have been maneuvering merely to be on the winning side can no longer escape the conclusion that there is no victory in prospect for Germany. The superman has had his day. The democracies have called his bluff.

Tunisia gave us an invaluable pattern for the future. But the tasks will be increasingly difficult, usually with the great hazard of an overwater approach and a heavy battle to be maintained beyond the beaches. The way will be far from easy, the losses heavy, but the victory certain.

The recent battle in Attu has special significance. There we encountered probably the most difficult of fighting conditions. An amphibious operation in uncharted waters over a stormy sea, deep snow, and high mountains, with a complete absence of roads and trails; an enemy dug in with complete cover and communications, and our own troops transferred through necessity directly from the pleasant climate of California to a battle with the elements over extremely difficult terrain, against a desperate enemy. It was a severe test of the American soldier, but today we hold Attu, with more than 1,900 Japanese graves as a memento of their previous occupation. More than 3 Japs were killed for each American soldier lost.

The fighting in the Tropics of the south and southwest Pacific has also presented great difficulties of climate and terrain. It has been vicious throughout but we have been successful in each operation since the initial offensive move into the Solomons.

One of our great puzzles is how the Japanese can stand the beating they are taking in the air—no other word adequately describes the situation in this respect. Judging from our own reactions, particularly those of the press, when we have a moderately heavy loss in planes, it is hard to visualize the state of mind of the Japanese command when their ordinary air losses run from 30 percent to 75 percent, with very moderate losses on the part of the American pilots. In the recent air battle in the Solomons we destroyed 94 out of 120 planes and lost but 6. Furthermore, the Japanese suffer continuous losses of planes on the ground. We find the usual average is one destroyed on the ground for every one lost in the air, and in addition probably a training or operational loss outside of combat at the same rate. Evidently our equipment is excellent, and our pilots, gunners, bombardiers, and navigators are superb.

The daylight precision bombing out of England has had a tremendous effect on the air operations of the German army. The losses inflicted on German fighter planes during these daylight bombing expeditions had a direct and important bearing on the victory in Tunisia and a similar bearing on the German air power on the Russian front. The fact of the matter is, the Germans must check this precision bombing, and they have assembled their best pilots in large numbers in an endeavor to halt these staggering blows at vital installations, delivered with constantly increasing frequency and mass.

Measured by the losses in planes and installations suffered by the enemy, our own losses have been surprisingly small.

While on this subject I think it proper to express a word of caution against hasty conclusions or impromptu conceptions regarding the utilization of air power or any special weapon in the conduct of this war. I am convinced more and more each day that only by a proper combination of war-making means can we achieve victory in the shortest possible time and with the greatest economy in life. Pantelleria was an experiment, for which there appeared to be, and proved to be, a sound logical basis. However, the situation there was unique as to the character of the island, the quality of the garrison, the complete naval control of the surrounding waters, and the proximity of Allied airfields. The victory of Tunisia was favored by overwhelming air power, but the result would have been a stalemate without aggressive ground and naval action.

Your adversary may be hammered to his knees by bombing but he will recover unless the knockout blow is delivered by the ground army, with infantry and artillery as important as tanks and antiaircraft, and engineer and signal troops vital to the whole.

The encouraging aspect of the situation today is the fact that we have the men trained, the guns and tanks, the ships and planes in constantly increasing numbers; that the Russian forces grow steadily more formidable and present a constant and terrible threat to the bulk of the German Army; and that there is a steady improvement in the equipment and training of the Chinese forces to sustain them in their fixed determination to expel the Japs from China. There can be but one result unless the enemy succeeds in creating internal frictions among the Allies, divisions of one against the other and misrepresentations leading to public loss of confidence in our war effort.

We are engaged in this war to maintain the democratic form of government. We fight to destroy dictatorships, to guarantee freedom of speech and of the press. Yet sometimes I am discouraged by the democratic processes in a great and critical emergency like that of today.

For example, I returned from Africa 2 weeks ago to find the most atrocious, if not subversive, attack being directed against an organization of the Army, one of the finest we have ever created. I refer to the Women's Army Auxiliary Corps. There was no foundation for the vicious slander, though it was given wide publicity. Some seem to be intent on the suicide of our own war effort, not to mention the defamation of as fine an organization of women as I have ever seen assembled. Such a procedure to me appears inexcusable. If we can't be decent in such matters we at least should not be naive enough to destroy ourselves. I very much hope you gentlemen will take the lead in building up a public opinion which will suppress actions of individuals who abuse our liberties by propagating such outrages.

There is another phase of the present situation for which I would solicit your strong support, and that is a check against sudden waves of optimism leading the public to feel that we have made our great effort and the end is in sight. This is far from the case. We are just getting well started. The great battles lie ahead. We have yet to be proven in the agony of enduring heavy casualties, as well as the reverses which are inevitable in war. What we need now is a stoic determination to do everything in our power to overwhelm the enemy, cost what it may, to reduce him to a supplicant under the impact of aroused and determined democracies.

The failure today to surge forward with every ounce of power and effort we possess would be to write a tragic page for history. The temptation to ease up after initial and relatively minor successes seems difficult to resist. The Axis nations probably count on this as a weak element of Allied psychology. Their opinion has been contemptuous of our soft way of living, of our toughness, and our military stamina. The most forbidding prospect with which we can now confront the enemy is the continuation in full measure of methodical, ruthless preparations to overwhelm them in the same manner that the Army of von Arnim was eliminated in Tunisia. The allies have unified their military effort. We must all do the same at home.

Two things we must guard against:

There must be no divisions among the allies.

There must be no let-up in our preparations.

National Youth Administration

EXTENSION OF REMARKS

OF

HON. PAUL CUNNINGHAM

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 22, 1943

Mr. CUNNINGHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

WAR MANPOWER COMMISSION,
NATIONAL YOUTH ADMINISTRATION,
June 9, 1943.

Hon. PAUL CUNNINGHAM,
Member of Congress,
New House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN: The National Youth Administration program for this fiscal year consists of (a) the war production training program and (b) the student work program. In Iowa all of the colleges and the majority of the high schools are participating in the student work program. In the 5 States of the region of which Iowa is a part, National Youth Administration is currently assisting 2,799 college students to stay in college and 5,268 high-school students to continue their education. A monthly average of 700 Iowa high school students and 900 Iowa college and graduate students are being thus assisted.

During the first half of this fiscal year in these 5 States, National Youth Administration has given war-production training to 13,365 youth, 4,238 of them from Iowa. This program provides training for war industries, in the following fields: Machine shop, aircraft mechanics and woodwork, aircraft and general sheet metal, radio, and welding. National Youth Administration is also operating a number of agricultural units wherein high-school students and other youth are trained in the repair and operation of farm machinery.

National Youth Administration shops are producing items for many local cosponsors. However, the largest part of the production work this year has been done for the Rock Island Arsenal. The first 6 months of this fiscal year 2,963,315 items of value in the war activity have been produced. In this region we have produced more than 50,000 M–5 chests which are used in the Army tanks, 108,726 gun slings, and 360,000 rifle cases.

The estimated value of these products which have gone directly in the war effort is over $2,000,000. This figure may be compared with the total cost of all National Youth Administration in this region for the same period of time, which was $2,946,509.

The following excerpts are from a letter received recently from Brig. Gen. N. F. Ramsey, of the United States Army, Rock Island Arsenal:

"All other training centers have been utilized in recruiting our machine operator trainees. The fundamental training you have been able to give them * * * has obviated much of the preliminary training we would have to give with our own equipment and personnel.

"I hope that the arsenal work projects and the Clinton Training Center can be continued."

The National Youth Administration has during the past several years rendered a distinctive service on the health front of America. For example, since the inauguration of the health program in the fiscal year 1942, 40,064 youth have been given thorough physical examinations by competent physicians. Eighty-nine percent of the sampling of 11,000 youth in this region were found to be either temporarily or permanently unfit for war work before receiving remedial treatment. Eleven percent were physically fit. In the last 6 months alone in one State of the region more than 200 presumably unemployable youth of a handicapped classification have been rehabilitated and placed into defense industries.

The National Youth Administration, through its war-training program, its production work, and its health-program activities, has been a significant factor in furthering the war effort.

Sincerely yours,

C. B. LUND,
Regional Administrator.
By THEODORE P. ESLICK,
Regional Director of Operations.

House Shuts Purse on Abuses

EXTENSION OF REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 22, 1943

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence:

HOUSE SHUTS PURSE ON ABUSES—USES OLD POWER TO CHECK PUNITIVE REFORMS OF RADICALS

(By David Lawrence)

The power of the purse is the oldest parliamentary power in the long history of the people's struggle for self-government. And the power of the purse is just now being exercised with unmistakable vigor by the House as a check against misuse and abuse of power by the executive agencies.

When our forefathers wrote the Constitution, they imposed a 4-year tenure on the Executive and they gave him, through the veto power, a controlling judgment over the acts of both Houses of Congress equal to the votes of two-thirds of one House and just one vote less than two-thirds of the other House. The people can speak at the polls on Presidential policy only once in 4 years. The Canadian and British people can force an election at any time.

This means that the American legislature, unlike the British Parliament, does not possess an overnight check against arbitrary or autocratic action by executive agencies of government—a fact which the radicals who have been patterning their administrative law on British practice by means of Executive regulations have overlooked.

So when the radicals in Government agencies introduce social reforms and punitive measures, taking as their cue some vaguely worded phrases in a statute, Congress can do nothing about it except to exercise the power of the purse. And that's what is happening today.

INTRIGUE AGAINST BROWN

Specifically, the Office of Price Administration started out to be an innocent looking agency to help ward off inflation by imposing price ceilings on various commodities. Leon Henderson, who is a member of the original New Deal group of economists, picked for his staff professors and lawyers who saw eye to eye with him in his economic philosophy—an understandable and logical approach from his standpoint. But when Mr. Henderson left the Office of Price Administration, his advisers and policy makers didn't go.

Prentiss Brown, who took over, was faced with the necessity of putting in new personnel. He was vehemently fought on this by the powerful intrigue of the radicals who have access to the White House, where in its outer offices sits another group of radical advisers at the elbow of James F. Byrnes, once Director of Economic Stabilization and now War Mobilization Chief.

For weeks the press was filled with left-wing criticism about the wobbly Office of Price Administration and how Mr. Brown wasn't functioning effectively. Actually he was facing an internal war—one of those things Elmer Davis wishes the press wouldn't report. It turns out that Mr. Brown still has the advisers who believe that the war can be used to achieve reforms, especially the control and regulation of the profit system by Government.

BLOW AT BUSINESS UNCOVERED

Within the last week a special House committee under the chairmanship of Representative SMITH, Democrat, of Virginia, has uncovered some amazing evidence of how the so-called policy makers in Office of Price Administration twist the phrases of law into regulations that strike into the very heart of the American system of free enterprise.

Harold Allen of New York, counsel for the committee and one of the ablest managers of a congressional investigation who has appeared on the horizon in some time, has revealed through the files of the Office of Price Administration policy makers themselves confidential memoranda and policy programs, which clearly show that the American businessman not only must face excess profits taxes by the Treasury under law but an additional system of profit control—evasively termed "price control" by the Office of Price Administration staff—which actually regulates profits irrespective of the principle of efficiency in production.

Thus if a company finds a way to lower costs per unit through expansion of output, it must lower its price to suit the Office of Price Administration. Congress has never voted that policy, and it is contrary to the whole development of American industrial production. Large companies are penalized on the profit side on such vague basis as the need for controlling inflation. It was brought out, too, that the Office of Price Administration acts even when no price rise has occurred or is threatened in a particular article, but when there is a sort of inflationary tendency in the air in other commodities. The justification given is admitted to be to appease labor groups and prevent demands for wage increases.

ARBITRARY BASE SET UP

The Office of Price Administration officials on the stand have conceded that their rollback in prices or their freezing of prices can mean a reduction not only in profits but in taxes due the Federal Government. Also they concede that their moves sometimes increase purchasing power and widen the "inflationary gap." Nowhere has Congress authorized 1936 to 1939 as the base years for determining profits in connection with price control but the Office of Price Administration radicals nevertheless selected that base.

What remedy is there for Congress when "laws" are made in star-chamber sessions by Office of Price Administration officials? To repeal or prohibit such regulations? But the President has the veto power which means he can overrule the majority of both Houses, something that cannot happen in Canada or Britain, where the people have a closer check on their executive agencies.

The only defense which the people have in America when bureaucrats become arbitrary and insist on writing laws that never were passed by Congress—as for instance in the matter of subsidies—is to deny the executive agencies funds for operations. It's a severe form of redress but it's the only one left that can be used against radicals who are using war for social reform and are breaking down business and industrial morale.

O. W. I. and the Motion Picture Industry

EXTENSION OF REMARKS

OF

HON. WILL ROGERS, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 22, 1943

Mr. ROGERS of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following extracts from an article written by Mr. Walter Wanger, president of the Academy of Motion Picture Arts and Sciences and president of the Motion Picture Society for the Americas. Mr. Wanger is one of our most distinguished motion-picture producers. As much as any one man he has attempted to advance the motion picture as a serious medium of expression, notably in the case of Blockade, Foreign Correspondent, and Eagle Squadron.

Mr. Speaker, the complete article by Mr. Wanger, which appeared in the Public Opinion Quarterly for spring of 1943, discusses fully the set-up of the O. W. I. as it refers to the motion-picture industry. Everyone interested in this question of motion pictures contributing to the war effort should read this article by Mr. Wanger. After discussing the present set-up of the O. W. I., Mr. Wanger makes some recommendations, naming names and making concrete suggestions. The concluding part of his article is as follows:

Were I in government and wished to obtain maximum results, in war morale and home-front stimulation, here in the Office of War Information set-up I would draft for liaison, planning, and full responsibility for execution:

Over-all director: Y. Frank Freeman, president of the Association of Motion Picture Producers, Hollywood chairman of the War Activities Committee of the Motion Picture Industry, vice president in charge of production, Paramount Pictures, Inc. Mr. Freeman has viewed pictures from the public's angle since he opened a theater in a vacant room over a general store in Greenville, Ga. He has successfully administered all three branches—exhibition, distribution, and, now, production. At Paramount, a studio which had retired several executives, Mr. Freeman promptly changed the ledger from red to black—big black. In Hollywood, a town ordinarily clannish, Mr. Freeman's character and ability were so outstanding that he was elected president of the producers' association 2 years after he arrived. He has been reelected three times.

Production liaison: Edgar J. Mannix, of Metro-Goldwyn-Mayer. The record of that organization scarcely needs elaboration. Mr. Mannix is one of the industry's most seasoned experts.

Distribution liaison: Spyros Skouras, president, Twentieth Century Fox, Mr. Skouras went to his present position from years spent in building Fox West Coast Theaters (now National Theaters, Inc.) to one of the most successful exhibition circuits in the country.

Exhibition liaison: Karl Hoblitzel, president, Interstate Theaters, Dallas, Tex. Mr. Hoblitzel's name is synonymous throughout the industry with accurate advance appraisal of exhibitor and public reaction.

Only the broadest indication of policy would be necessary to these men. For example, with Mme. Chiang Kai-shek's arrival in this country, Mr. Freeman, tipped by the State Department, might have told Mr. Mannix, "We want a really dramatic short subject, centered around Mme. Chiang Kai-shek, and thus-and-so is the picture's purpose." Mr. Mannix would know just which director to pull off his regular work for that picture. The director and Mr. Mannix would agree on the best fitted writer. Mr. Skouras would prepare all distribution companies to clear a spot for the picture. Mr. Hoblitzel would "sell" it to exhibitors. Most important—the picture would come out right; it would interest and thrill theater goers.

PLACE OF THE MOTION PICTURE IN THE POST-WAR WORLD

Since such an idyllically practical set-up as the officials and advisory board here put forward seems unlikely, I have a definite recommendation to present to current Office of War Information contacts. Before doing that, here are some general observations. They may be of use in the thinking of anyone seriously studying motion pictures in relation to the world today and tomorrow:

1. Despite recurrent criticism, among the super-intellectuals, of the motion picture because it "does not accurately portray American life" (someone should take a course in drama), the first move of every dictator, Mussolini, Schickelgruber, or Tojo, is to bar American motion pictures. If those totalitarian lords of all utterance thought American pictures accomplish anything but good in "selling" the United States, they would be eager to have our movies shown. Only the other night, a high-ranking journalist, who was in Berlin when the news broke, "America is in the war," told me: "Then the German morale began to crack. Germans know America through American motion pictures. The youth, the vitality, the amazing industrial productivity, the hustle and bustle of business, the let's-go-and-do-it of America, have all been vividly impressed on Europe—by our movies. The German people said to themselves: 'Nobody can defeat a people like that.'"

2. Most dangerous of all theses is that we should present to the world, in motion pictures, only what the consciously high-souled (and middle-aged or elderly) idealists consider "the better side of life in the United States." In the first place, any such attempt would devitalize the American motion picture, and destroy its usefulness. Our pictures would no longer be world box-office. Moreover, this criticism derives from a superman complex. We must show ourselves, argue some, clad only in the light of our virtues. Shades of Hitler! Reports indicate to me that one of the most impressive proofs of democracy at work, to the European mind, was the frank picture, Grapes of Wrath. One commentator put it this way: "Only a real democracy can produce Grapes of Wrath, make it commercially possible, and then go on and get something done about the conditions exposed."

3. Who is going to run the world of the future? The middle-agers, who did little to save their own generation, the oldsters, who thoroughly wrecked theirs, or the young people? And to whom does the American movie most appeal? The young! Better let it keep the vigor, lack of stuffiness and sense of gayety and life that now inform the screen. Otherwise, the most vital avenue we have through which to talk to the young will be avoided by them. They wonder what right we have to preach.

4. I must repeat this again: The movie is the most democratic means of expression—unsubsidized, existing only through doing its job effectively. It makes mistakes, but it responds to the most valid automatic corrective in human experience—the reaction of the people. And—freedom of the screen is every whit as cogent as freedom of the press.

Here is my final suggestion to the Office of War Information in its relations with motion pictures. Change, for the benefit of the results you want, from a take-over attitude to one of cooperation. You will find in your files, from motion picture leaders, suggestions for specific pictures far more powerful, toward the ends of victory and understanding, than any suggestions that have come to Hollywood from Washington. We really do know something about our business. We wish to make an even larger contribution to winning the war and achieving good will on earth than motion pictures already have made. The industry is not jealous of prerogatives, nor of personal standing; it has proved its willingness to waive profits in war-necessary film-making. Give the industry the broad lines of policy and leave the committees within the industry the task of producing results.

The real issue at stake is the one thing of which the industry is jealous. You should share that concern—the unimpaired entertainment power of the American motion picture, which constitutes its great strength and which is absolutely indispensable if the medium is to be of round-the-world value after the war.

The Problem of Rising Prices in Wartime

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 22, 1943

Mr. PATMAN. Mr. Speaker, it is absolutely necessary that we hold prices down and this can be done. Our individual welfare, as well as our national welfare, depends on a strong national program of economic stabilization.

The danger of a serious price rise is great in wartime. The war has created a huge supply of spendable income and at the same time has reduced the supply of goods and services available for civilians. The resulting volume of excess purchasing power exerts an intense upward pressure on prices, as buyers bid against each other for scarce goods, sellers seek higher prices and profits, and workers seek higher wages. As this pressure causes price rises to occur, they in turn force up the prices of other goods, tend to push up wages and business costs, and can set in motion a mounting spiral of price and wage increases.

If prices were to get out of control—and they have not—economic disorganization could result which would lengthen the war, cause hardships for nearly every one—now or later—and make difficult the attainment of many of the benefits of the peace to come.

The pressure of excess purchasing power must be met in two ways:

First. It must be reduced by diverting it into channels other than the purchase of goods; for example, higher taxes, buying War bonds, savings, life insurance, and so forth.

Second. It must be met directly—by Government controls on prices and wages and by voluntary civilian action.

In other words, all unnecessary spending must be avoided and group or individual pressures for higher prices and higher wages must be resisted.

Too Many Cooks; Some Poor

EXTENSION OF REMARKS

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 22, 1943

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Norwich (N. Y.) Sun:

TOO MANY COOKS; SOME POOR

An excellent illustration of conflicting authority and overlapping jurisdiction is afforded in the case of gasoline, threatened scarcity of which is creating Nation-wide uneasiness.

Secretary of the Interior Harold L. Ickes, who serves the Nation in the dual capacity of Petroleum Administrator and Hard Fuel Administrator, clearly has broad powers over the distribution of gasoline and other petroleum products, but they are rationed by the Office of Price Administration.

Ordinarily this newspaper would not look with favor upon a proposal to increase and extend the authority of the Secretary of the Interior in any direction. But it is indeed more than a little anomalous that the office charged with the responsibility for the Nation's petroleum policy—one of the most important both on the military and the home fronts—has little or no authority as regards the rationing of petroleum products. A similar situation exists in relation to foods. In that important field Chester C. Davis presumably is the boss in matters both of production and distribution, but, as in petroleum, rationing is administered entirely by the Office of Price Administration.

The purpose of this editorial is not to suggest that the Office of Price Administration has served its usefulness and should be liquidated as recently proposed and its functions be distributed among other agencies, such, for example, as the Food and Petroleum Administrations. It is rather to point out that too many cooks are likely to spoil the broth and that one of the tasks confronting the recently created Office of War Mobilization is to see to it first that there are not too many cooks and that the cooks who are on the job shall be up to it as well.

National Youth Administration

EXTENSION OF REMARKS

OF

HON. CHARLES A. EATON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 22, 1943

Mr. EATON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following press release of the New Jersey State Chamber of Commerce:

NEWARK, N. J., June 22.—The New Jersey State Chamber of Commerce recommended here today that the defense training program now being carried on by the National Youth Administration be discontinued.

The recommendation was based upon a survey of the National Youth Administration training program in New Jersey, made by the State chamber's department of governmental research, of which Alvin A. Burger is director.

Originally 19 in number, the National Youth Administration training centers in New Jersey have been reduced to five because of decreases in enrollments. The five centers now operating are located in Jersey City, Newark, Trenton, Camden, and Phillipsburg. The National Youth Administration program provides for the training of young men and women, between 16 and 24 years of age, in courses designed to equip them to take positions in war production industries. The courses include machine shop, welding, sheet metal work, and industrial sewing. Trainees now receive 25 cents an hour, or a maximum of $40 for a 160-hour month.

Conclusions reached by the survey and released here by the State chamber are as follows:

"1. The National Youth Administration defense-training program in New Jersey is a weak, ineffective, and costly duplication of the training programs which are much more extensively and competently carried on by New Jersey's public vocational-school system and by the Training Within Industry Service of the War Manpower Commission.

"2. Most of the National Youth Administration training centers in New Jersey have been grossly mismanaged, with resulting wastage of manpower, equipment, materials, and public funds. The only existing National Youth Administration training center which is reported to be giving satisfactory service is that located in Camden. In this center, however, the training is actually supervised by the Camden County vocational-school system, although financed by National Youth Administration.

"3. Most of the New Jersey National Youth Administration training centers have been manned largely by poorly trained, incompetent supervisory and teaching personnel.

"4. In order to build up enrollments in some of its training centers, the National Youth Administration in New Jersey has engaged in widespread proselyting activities among students in public high and vocational schools.

"5. Some records kept by the National Youth Administration, such as those dealing with enrollment, trainee attendance, and so forth, appear in many instances to be incomplete and inaccurate.

"6. The relationship between the National Youth Administration and the public school systems in this State has deteriorated, thus creating a situation which is harmful to the general war production training program.

"7. New Jersey's war industries generally have found the results of the National Youth Administration training program to be unsatisfactory, and they almost unanimously favor its discontinuance."

On Tuesday, last, a majority of the House Appropriations Committee struck from a Federal Security Agency supply bill a recommendation that the National Youth Administration be given $40,800,000 to carry on a "limited program" during the fiscal year starting July 1. Supporters of the National Youth Administration program are now attempting to have this appropriation reinstated.

Further observations contained in the State chamber's survey follow:

"There are 24 well-managed public vocational schools and training centers in New Jersey which are giving the same training courses offered by the five National Youth Administration centers operating in this State. The vocational schools are adequately prepared to take over the entire National Youth Administration training activity in the event that the latter is discontinued, and by virtue of superior teaching personnel and facilities, to do a much better job of fitting the trainees for war-industry jobs.

"Our survey disclosed that in many of the National Youth Administration training centers quantities of tools, machinery, automotive equipment, and other materials and supplies have been subjected to neglect and misuse. Much of this equipment has been broken and left in a state of disrepair. Installations made at great expense were subsequently torn down or abandoned as a result of poor planning or inept management.

"There is evidence that essential war materials have been carelessly cut up, placed in the hands of inexperienced operators, ruined and subsequently discarded with utter disregard of value. Machinery, in many instances, was installed in buildings, but never placed in operation. Trucks and other automotive equipment provided for the use of National Youth Administration personnel and trainees have likewise been abused and neglected.

"The majority of National Youth Administration supervisory and teaching personnel lack training or experience in teaching, guidance, and planning. It is apparent that many positions have been filled on some basis other than that of general competence for teaching work. This condition has resulted in a low standard of teaching effectiveness in general, and in a break-down of classroom discipline in many cases.

"It has been found that in an endeavor to build up and maintain enrollments in the various training centers, the National Youth Administration has approached many regularly enrolled public school students, directly or through the mails, offering not only free training for 'big pay' positions in industry, but also the inducement of wages while learning. Complaints have been registered by school superintendents that this practice has materially affected the classroom work of many public school students and has resulted in the withdrawal of others before graduation."

Price of Virginia Lee Cut Green Beans

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 22 (legislative day of Monday, May 24), 1943

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD a letter I have received from J. J. Simon, of Thompson, N. Dak., relating to the price of Virginia Lee cut green beans.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THOMPSON, N. DAK., *June 6, 1943.*

HON. WILLIAM LANGER,
United States Senate,
Washington, D. C.

DEAR SIR: February 1943, I purchased some Virginia Lee cut green beans. I paid $3.19 for a 24-can case—No. 2 cans. Today I can purchase them—same year crop—for $2.59. Who got my 80 cents?

I cite above as an illustration of many such.

Respectfully,

J. J. SIMON.

The Consumer and White Collar Man

REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 22, 1943

Mr. SABATH. Mr. Speaker, replying to the gentleman from Michigan [Mr. HOFFMAN] who called attention to letters which he received with respect to the corn shortage, may I say that only a half hour ago I directed the attention of the Chairman of the Committee on Banking and Currency, who appeared before the Committee on Rules to urge the granting of a rule for the consideration of the Commodity Credit Corporation bill, to the fact that we have tremendous quantities of corn and other products that I feel should be disposed of and not held by the Commodity Credit Corporation. We were informed that the Corporation has served notice on hoarders of corn, as well as farmers who are holding their corn for higher prices, that it will call the loans the first of next month. This action was intended to effect the release of millions of bushels of corn to relieve the existing shortage. My real interest and what I urge is that the Corporation should not continue to withhold from the markets tremendous quantities of accumulated surpluses of farm products and foodstuffs, but to release any products whenever their scarcity becomes apparent in the market. Since the meeting of the Committee on Rules this morning, I have been informed by members coming from the corn sections that the calling of the loans will not place the corn on the market or overcome the shortage because the farmers are holding the corn and will refuse to sell due to the fact they are obtaining from $1.30 to $1.40 in the black market, such diversion for hog-feeding purposes commanding a higher price than on the market.

Mr. Speaker, it is to be regretted that the farmers in such practice, for whom so much has been done by our Government, should take advantage of conditions as they are doing now. I feel that with hogs and cattle bringing such extraordinarily high prices that a ceiling should be placed on livestock, notwithstanding the opposition of hog and cattle raisers. They should be satisfied with receiving prices ranging from a 300- to 500-percent increase over that which they obtained 10 years ago.

Mr. Speaker, we cannot sit idly by and permit the consumers of this Nation, and especially the 21,000,000 white-collar workers and the unorganized small-wage workers, and their families, to be the suffering victims of the ever-increasing cost of living. They cannot be ignored any longer and should not be a prey to unscrupulous speculators and black-market farmers to be enriched at the expense of those people whose wages and salaries have not been increased and who, today, are obliged to pay nearly 100 percent more for their food. Compare the present living costs of the white-collar worker and the unorganized small wage worker with the fare of the farmer today. In that connection, I wish to direct attention to a speech delivered by our colleague the gentleman from Texas [Mr. PATMAN] on Saturday, June 19, appearing in the Appendix of the RECORD on page A3097, in which he gave figures and statistics showing that since August 1939, the increase in the price of farm products to the consumer approximates 110 percent. On the other hand, the figures show that since 1939, the increased cost of farm equipment, implements, machinery, clothing, shoes, boots, and other farm necessities is not quite 15 percent. So the increased cost of living to the consumer worker is about 8 times greater than what the farmer is obliged to pay for his farm needs.

Missouri Senate Wants Action

EXTENSION OF REMARKS

OF

HON. WALTER C. PLOESER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 22, 1943

Mr. PLOESER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following Senate Resolution 68:

Senate Resolution 68

Whereas Senator HARRY S. TRUMAN and the Senate investigating committee did during last week conduct an investigation concerning the alleged waste, graft, and incompetence in the construction of the Sunflower Ordnance Works of De Soto, Kans.; and

Whereas witnesses were brought before said committee who testified that 150 truckloads of good lumber were burned each day while said plant was under construction; that tons of steel intended for the construction of the roofs of buildings was covered with dirt; that a great amount of electrical equipment was uselessly wasted by being covered with dirt; that unskilled workers were issued union cards whereby they were paid from $100 to $150 per week; that clods of dirt and other foreign substances were mixed with the concrete so that much of the concrete work had to be redone; that many men were hired to work only on Saturday and Sundays in order that they might receive premium pay for overtime work; and that inefficiency, mismanagement, and graft was prevalent everywhere: Now, therefore, be it

Resolved by the Senate of the State of Missouri, That the Federal Government of the United States, through the Department of Justice, is hereby respectfully requested to ask for a Federal grand jury investigation to determined the correctness of said accusations, in order that those who are responsible for said malicious waste, mismanagement, and graft, if any, may receive just punishment for said violations of law; be it further

Resolved, That a copy of this resolution be sent to the Attorney General of the United States, one copy to each of Missouri's United States Senators, and one copy to each United States Congressman from Missouri.

War, Peace, and Education

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 21, 1943

Mr. MASON. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following address delivered by Dean H. H. Schroeder of the Illinois State Normal University at the Illinois State Normal University commencement exercises held on June 14, 1943. The address is noteworthy because of its contents, and also because it is Dean Schroeder's farewell address to a great institution he has served so well during the past 30 years. As an alumnus of the university, the oldest normal university west of the Allegheny Mountains, I recommend the address to the attention of my colleagues:

Life involves a constant interplay of conflicting forces. The life of man is an unceasing struggle to secure the satisfaction of his wants, the achievement of his purposes, the realization of his aspirations and ideals. Living for human beings is more than making a living. It is more than satisfying our physical wants, such as our needs for food, clothing, and shelter. It includes the enjoyment of life in its fullness, the gratification of our love of recognition, of achievement, of security, the satisfaction of our love of truth, of beauty, of goodness. This tremendous life urge in its various aspects is the inevitable source of conflict and strife, for human beings do not live in isolation, as hermits. Men must learn to live together. Primitive man fights just as do the lower animals. Experience teaches him the costliness and folly of internecine strife, for blood feuds weaken his own clan or tribe, making it the easy prey of a rival clan or tribe. Thus primitive courts and law originate; government is established to safeguard the interests of the group. And so with the nation in modern times, aiming through government to promote the general welfare within the nation.

In its early beginnings civil government was essentially the application or the threat of the application of physical force to compel compliance of individual members of the whole group to what the governing group demanded as desirable behavior. Furthermore, all civil government, even in its most democratic form, to this day must provide, on last analysis, actual or implied application of physical force to bring recalcitrant individuals into conformity with the demands of the law.

But government is not the only means of social control; it is not the only agency to help to make it possible for all members of the group to satisfy their own wants without interfering with the same desires of others. Public opinion, custom, tradition are similar aids. The inevitable tendency is in the direction toward the development of inner pressure as a means of control to take the place of outer pressure. True self-government is better than any form of government imposed from without. The education of the child provides the basis for this self-government as a more effective means of control than that which is provided by courts and the police power of civil government. Because some parents in rearing their children would keep in mind only the latter's interests, utterly

ignoring the interests of others, and because the church does not reach all the children, society finds it necessary sooner or later to assume the responsibility for educating all the children of the state. When a person's education has enabled him to make a living and to enjoy his leisure in a wholesome manner without trespassing upon the rights of his fellow citizens, policemen and night watchmen are not needed to protect society against possible depredations on his part. On the other hand, where education has failed to do its work, or where undesirable conditions have undone the work of education we have the problem of crime and its treatment on our hands. This truth has been recognized by our courts; for example, the Supreme Court of Tennessee said in a decision rendered in 1899:

"We are of the opinion that the legislature, under the constitutional provision, may as well establish a uniform system of schools and a uniform administration of them, as it may establish a uniform system of criminal laws and of courts to execute them. The object of the criminal laws is, by punishment, to deter others from the commission of crimes, and thus preserve the peace, morals, good order, and well-being of society; and the object of the public-school system is to prevent crime, by educating the people, and thus, by providing and securing a higher state of intelligence and morals, conserve the peace, good order, and well-being of society."

The following interesting analysis of the connection between Government and education is found in a decision of the Supreme Court of Louisiana in 1915:

"Education is one of the functions of government and the public school system is a department of the Government. Education insures domestic tranquillity, provides for the common defense, promotes the general welfare, and it secures the blessings of liberty to ourselves and our posterity."

If government is to "promote the general welfare," if it is to "secure the blessings of liberty to ourselves and our posterity" it must of course be something more than negative. Its function must be that of protecting the weak against the strong. A mere "hands-off" policy, merely permitting a "free-for-all" contest between the weak and the strong reminds one too much of Dickens' famous paraphrase of a familiar saw: "Every man for himself and God for us all, as the elephant said when he danced among the chickens." Instead, government must provide conditions that will enable willing, honest, and capable men to make a living and to live worthy human lives.

Where, on the other hand, conditions are permitted to come about in which large numbers of willing, honest, capable men cannot make a living or can only barely exist, there is always the danger that the resulting restiveness may end in revolt or revolution. Several centuries before the beginning of the Christian era Aristotle called attention to the truth that great disparity in wealth among men who yet feel that they are equals is sure to breed dissension and revolution. Centuries before the days of Aristotle the ancient Chinese proverb pointed out the same profound truth: "When the rich grow too rich and the poor too poor something happens." And that is just as true of nations as it is of individual men.

The promotion of the general welfare includes the need of providing for defense not merely against dangers from within but as well against dangers from without whether this be done directly through the State department and the diplomatic service or indirectly through education. If the relations with other countries are such as to engender friction and serious differences it is the business of Government to guard against the danger of a breakdown, for once that occurs there is usually no recourse but to the stern arbitrament of war. It is as Napoleon said: "For the maintenance of peace nations should avoid the pin-pricks, which forerun cannon-shots." In the same way it is the business of Government to keep a watchful eye on the internal conditions of other countries—of course, without meddling or without interfering with their sovereignty—for those conditions may become a menace to the rest of the world. This is most especially true in regard to those economic factors that lie at the base of all human welfare. Where whole nations find it impossible to live reasonably comfortable lives the resulting dissatisfaction easily provides the opportunity for demagogues to establish dictatorships and to drag their people into wars of conquest. Other nations, thus attacked, then have no choice left them but to defend themselves.

And that is where we are today. However much we revolt at the horrors of war, however much we may be convinced that this war could have been averted had the proper steps been taken by the statesmen of the world years ago, we are confronted by the hard, simple, undeniable fact that we now are actually at war. For every good, loyal citizen that means first of all that it is his duty to do all that lies in his power to help bring this war to a successful issue. And let us remember that when we civilians do our utmost it is little indeed in comparison to the deprivations and hardships experienced by the men at Pearl Harbor, at Bataan, at Guadalcanal, in Africa, and elsewhere.

However anxious all of us are that we win the war we are just as much concerned with the hope that this may be the last war. From time immemorial man has been enabled to endure the horrors of war largely because of the hope that the given war would be the last one. He has ever hoped for the day "when nation shall not lift up sword against nation" and when men "shall learn war" no more. The desire for a universal and lasting peace is probably stronger today than ever before, for the present war involves the whole world with all the heartaches and suffering for untold millions of human beings.

In spite of the universal desire for permanent peace there is good reason to fear that the time for such a consummation of man's fondest wish has not arrived. Permanent peace implies the abolition of war and the abolition of war implies the overcoming or the controlling of the causes of war. However great the diversity of these causes they can all be subsumed under one head: The striving of human beings to secure the satisfaction of their various wants, usually, in the great international wars of modern times, their basic economic wants. The selfish interests of nations or perhaps more truly the selfish interests of the groups controlling the governments of such nations ordinarily make amicable settlements impossible. For ages wars have been the commonest ways of settling international difficulties. One of the greatest authorities on war said a generation ago: "An analysis of the history of mankind shows that from the year 1496 B. C. to the year 1861 of our era—that is, in a cycle of 3,357 years (there) were but 227 years of peace in 3,130 years of war. In other words, there were 13 years of war for every year of peace." It is no wonder that so great a statesman as Jefferson said: "I hope it is practicable, by improving the minds and morals of society, to lessen the disposition to war; but of its abolition I despair."

Perhaps any serious student of the history of wars and the many various ways of attempting to prevent their recurrence is likewise inclined to be skeptical about any hope to abolish war. The most primitive way of assuring peace for the future is that of putting the defeated enemy into slavery, crushing him, reducing him to impotency. Unfortunately, the history of such attempts demonstrates their ultimate futility. The crushed enemy somehow refuses to remain crushed.

Treaties as a means of assuring peace for the future are at best rather unreliable, even where they are not imposed by force upon the defeated. They are probably signed with certain mental reservations even where there is no conscious intention to deceive as was the case with the ancient Locrians when forming a treaty of alliance with the Siculi, swearing that they would keep the faith "as long as these heads are upon our shoulders and this soil is beneath our feet," having first taken the precaution to place some heads of garlic upon their shoulders under their togas, and to put some earth in their sandals. Where a treaty is signed freely, not under duress, both sides to the pact probably believe that their own national interests will be furthered by the terms of the treaty, conditions being what they are. But conditions change and change rapidly and in unexpected ways, so that no signatory to a treaty possesses the power of divination with reference to these kaleidoscopic changes. And so it is not surprising to find, in the history of every nation, ancient and modern, instances of violations of such agreements.

Still less reliable than treaties have been the attempts, by means of unilateral agreements, to secure respect on the part of other nations for the interests of the Nation issuing such promulgation and by this means to maintain peace.

What about international law as a means of safeguarding peace? Unfortunately the mandates of international law are likely to be observed by powerful nations, in times of peace and of war, only when it suits their wishes to do so. Weaker nations find it necessary to confrom while stronger ones do so at their pleasure. A well-known writer on the subject, Maj. Stewart L. Murray, put it this way a generation ago: "There is no such thing as international law. What is wrongly called by that name is nothing but international usage. If a nation is sufficiently strong, it can add a new usage at any moment. It cannot be stressed too much that international law merely protects the strong and that the only laws recognized by the Great Powers as binding are those of might and military preparedness." How that reminds one of the incident related by Thucydides regarding what the Athenians said during the Peloponnesian War, to the inhabitants of the island of Melos, a Spartan colony which had remained neutral during the war: "Well, then we Athenians will use no fine words; we will not go out of our way to prove at length that we have a right to rule, because we overthrew the Persians; or that we attack you now because we are suffering any injury at your hands. We both alike know that into the discussion of human affairs the question of justice only enters where there is equal power to enforce it, and that the powerful exact what they can, and the weak grant what they must." How up to date that sounds!

Considerations such as these naturally induced tribes and nations to form leagues and alliances, for when the weak combined they could meet the strong on terms of equality. Such were the different leagues in ancient Greece and the various schemes to preserve the peace propounded during the Middle Ages and up to modern times. In the main these schemes aimed at perpetuating the status quo, the maintenance of established imperialisms, instead of attempting to remove the fundamental causes of war.

To control the forces making for war there must be a still stronger organization of force or forces making for peace. Until by means of education the whole human family has been brought to that stage of development

where all are willing to refrain from doing injury to others—in other words, until we have reached the millennium, the only way to secure such control is through the medium of civil or political government in some form. Just as crime and revolution within a nation must be met by physical force through government, so provocative acts by one nation against another would have to be taken care of by some form of international control. Furthermore, just as the government of any nation must try, first of all, to prevent crime and revolution by dealing with the causes lying back of them, so any form of world organization would have to try first of all to prevent wars by dealing with the causes that are likely to lead to war. It is for these reasons that the philosopher Kant said in 1784: "The greatest problem for the human species is the establishment of a universal civil society administered on the basis of justice."

That very year Josiah Tucker, the dean of Gloucester, perhaps the foremost authority in England on the relations of the American colonies with the mother country, in discussing the possibility of the unification of these colonies under one government, said:

"As to the future grandeur of America, and its being a rising empire under one head, whether republican or monarchical in its form, it is one of the idlest and most visionary notions that ever was conceived even by writers of romance. The mutual antipathies and clashing interests of the Americans, their differences of governments, habitudes, and manners, indicate that they will have no center of union and no common interest. They never can be united into one compact empire under any species of government whatever; a disunited people till the end of time, suspicious and distrustful of each other, they will be divided and subdivided into little commonwealths or principalities, according to natural boundaries, by great bays of the sea, and by vast rivers, lakes, and ridges of mountains."

Yet what seemed chimerical to the dean of Gloucester became a reality within 3 short years, and the union then effected has lasted for more than a century and a half in spite of some of the severest strains to which any government could be subjected. So might it not be possible for an organization of all the nations of the earth to come about in time in some form, in spite of the even greater diversity of conflicting interests of a great multiplicity of nations and of powerful groups unduly influencing the governments of such nations?

Many of us do not realize to what extent governments are influenced by the selfish interests of powerful commercial or industrial organizations. After having gone through an experience of terrible disillusionment, Woodrow Wilson said in his famous speech at St. Louis, on September 5, 1919:

"Why my fellow citizens, is there any man here or any woman, let me say is there any child here, who does not know that the seed of war in the modern world is industrial and commercial rivalry? The real reason that the war that we have just finished took place was that Germany was afraid her commercial rivals were going to get the better of her, and the reason why some nations went into the war against Germany was that they thought Germany would get the commercial advantage of them. The seed of the jealousy, the seed of the deep-seated hatred was hot, successful commercial and industrial rivalry."

It would be a mistake to assume that imperialistic attitudes are a thing of the past. The publisher of three of our most popular weekly and monthly publications has indicated that the twentieth century must be the American century, that America must be the dynamic leader in world trade, that America must be first in the councils of war and first in the policy of the world. Similar sentiments have been expressed by the president of the executive board of the National Manufacturers Association and by others. It ought not to surprise us to learn that within a week after the recent conference between the President of the United States and the President of Mexico a prominent labor leader, Señor Alejandro Carillo, warned the Mexican Congress in these words: "There is profound uneasiness in all Latin-American countries about the threats to the good-neighbor policy on the part of the United States imperialists." Over in Europe Stalin has intimated that he expects to hold that part of Polish territory which was part of Russia before World War No. 1. Churchill has indicated that the principle of self-determination announced in the Atlantic Charter is not to apply in the case of India and Burma, that instead they will be helped to obtain free and equal partnership in the British Commonwealth. Colonel McCormick is perhaps more generous when he suggests, rather facetiously, that England and other members of the British Commonwealth be accorded the privilege of applying for statehood in our country.

Such considerations alone would indicate that the statesmen who are to draw up the terms of peace at the close of hostilities will be confronted by almost insuperable difficulties in the attempt to provide for a lasting peace. For a peace to be lasting, for a peace to be durable, it must be endurable. It must be a peace of justice, a peace that will make it possible for the people of all nations to live on the level of decent human living and according to their own ideas and wishes so long as they do not interfere with the same rights of others. None must be treated as though they were God's stepchildren. Washington, in writing to a friend in France, in September 1785, put this thought in these words: "My first wish is to see the blessings of peace diffused through all the countries, and among all ranks in every country, and that we should consider ourselves as the children of the common parent, and be disposed to acts of brotherly kindness toward one another. In that case, all restrictions of trade would vanish. We should exchange produce with other countries, to our reciprocal advantage." With this same thought in mind Sumner Welles, the Assistant Secretary of State, said recently: "So long as any one people or any one government possesses a monopoly over natural resources or raw materials which are needed by all peoples, there can be no basis for a world order based on justice and on peace."

The bringing about of such a peace will be the more difficult because of the animosities and hatreds engendered during the war. How powerful a factor such emotional attitudes may become is well illustrated by an incident related by Sir J. Basil Thompson, former chief of the British intelligence service, who guarded the statesmen at the Versailles peace conference. He says in his memoirs, published a few years ago, that when Wilson suggested that France should have nothing to do with the Saar, Clemenceau sprang up and jumped at Wilson's throat, shook him, called him "Boche, Boche," and spat in his face.

Hatred will probably be an even more powerful factor to deal with after this war than it was after World War No. 1 because of the greater and more widespread suffering caused by ruthless persecution and cruel oppression in the countries that have been overrun. It is a rare person indeed who has attained the lofty nobility of Mme. Chiang Kai-shek who said in a broadcast last March: "All nations, great and small, must have equal opportunity of development. * * * Then, too, there must be no bitterness in the reconstructed world. No matter what we have undergone and suffered, we must try to forgive those who injured us and remember only the lesson gained thereby." Most of us probably find it difficult under present circumstances to live up to the eminently sound religious injunction to "hate the sin without hating the sinner."

It seems rather more probable that the bitterness engendered by the war will induce the victors to impose a police control over the vanquished that will not be devoid of the element of revenge. A control of some sort will undoubtedly be necessary but such control should be motivated by the spirit of justice, which is a very different thing from one prompted by revenge or even the desire for wielding authority. History demonstrates the futility and mischief of the latter. Our own "carpet-bagger" policing of the South after the War Between the States still rankles in the memory of Southerners more than does the memory of the "lost cause" itself. To humble a defeated enemy is sometimes necessary; to humilitate him always a grievous mistake. There can be no amity in the family of nations if some are to be branded as pariahs. Furthermore, policing alone can never bring about a lasting peace. Vice President WALLACE said very truly last January: "I am sure that, unless continuous, strenuous, and united efforts are made to attain economic justice, it will be impossible to prevent military war by any type of force."

When one gives serious thought to the profound difficulties standing in the way of any attempt to get all nations to agree on a world order which would aim to secure the welfare of all, one can easily see why so many statesmen have assumed that nations are actuated only by purely selfish motives.

One would like to believe that nations are sometimes moved by more idealistic considerations. There is no question that the masses of our people subscribed to the sentiment expressed by Woodrow Wilson in his speech of May 17, 1915, when he said: "The interesting and inspiring thing about America is that she asks nothing for herself, except what she has a right to ask for humanity itself." But no one knew better than Woodrow Wilson that the masses of our people were not in control at the peace conference after World War No. 1. The masses throughout the world welcomed Wilson's 14 points most enthusiastically, but their governments were largely controlled by powerful selfish interests.

Had Wilson's idealistic program been carried out it is highly probable that there would be no war today. And would not that have been to the real benefit and advantage of all nations? Was it a mistake for Grant at Appomattox to allow Lee's defeated men to keep their horses so that they might return to their homes to till the soil? Was it a mistake for Lincoln to make it his chief concern to heal the wounds made by the war? Was it a mistake for us to return the indemnity paid us by China after the war following the Boxer Rebellion and the similar action taken toward her at the end of the great war a generation ago? Would it be a mistake on the part of any nation to forego a number of minor interests if by that means the interests of all peoples could be furthered and the danger of a recurrence of war be averted or at least reduced?

Perhaps mankind is not ready to accept the doctrine that the good of one nation should not be gained at the expense of some other nation, and that the real, ultimate welfare for any nation cannot be secured without promoting the welfare of all nations. Human beings learn through experience, too often only through their own bitter experience. What is learned thus is probably learned best, but we need to remember what a famous French essayist said to the effect that the wisdom gained through experience is like a comb which we come to possess after we are baldheaded.

It is a significant thing that the history of all nations shows that their wars come about a generation apart. Men's memories of the hardships and suffering endured in one war seem to fade away and when they are

thus weakened they no longer serve as effective deterrents to keep men from again engaging in war. It seems then that humanity must suffer more and still more before this most important lesson will be effectively learned. Horrible and revolting as it sounds, it is probably true that untold millions of men and women throughout the world, in all nations, will have to experience suffering so acute and agonies of mind so excruciating as to be almost beyond human endurance before all will be ready to make concessions in order to make possible a lasting peace and thus spare future generations the horrors of war.

Nations are too much like headstrong individuals who learn only through bitter experience. It is as St. Thomas Aquinas says: "Good is better known in contrast with evil; and while evil results come about, we more ardently desire good results; as sick men best know what a blessing health is." Greater good, it would seem, cannot be expected until there has been even more and greater evil. Perhaps when mankind has suffered enough mankind will finally be convinced that Chiang-Kai-shek was right when he said: "There will be neither peace, nor hope, nor future for any of us unless we honestly aim at political, social, and economic justice for all peoples of the world—great and small."

Whatever the settlement of difficulties at the close of the war, the work of education must go on, for it is only by means of education that those spiritual values that constitute the essence of civilization can be maintained or preserved and improved upon to be transmitted to the next generation and the next. In the very forefront of these values is the great truth in that immortal document, the Declaration of Independence: "that all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness."

Let every human being learn through his education that what rights he justly claims for himself he must be willing to recognize as belonging equally to all other human beings; that every real right is accompanied by a corresponding duty or responsibility, the obligation to respect the same right of every other human being; that the right to life, liberty, and the pursuit of happiness cannot take care of itself in this world of conflict, that rights must be fought for to be maintained and that therefore it is the duty of everyone, not merely to refrain from interfering with these rights of others but the equal duty to promote them on behalf of those who cannot maintain them for themselves, the weak among us and the disinherited throughout the world. If all the people of all nations could be imbued by education with this great fundamental truth of the equality of all mankind as regards their rights the problem of lasting peace would be well on the way toward solution.

Unfortunately there is to be found, perhaps in every nation, a false sense of their own superiority over all other nations. Nearly a century ago a French sociologist, Gobineau, propounded the doctrine of the superiority of the Aryan, more particularly the Germanic or Teutonic race. Half a century later Houston Stuart Chamberlin, an Englishman, glorified this same idea. Still later an Austrian with a rather limited education, chafing during his imprisonment after an unsuccessful attempt to establish a new government in the country of his adoption and obsessed with the fanatical idea that he was to be the savior of the German people, carried this same misconception to the absurd and ridiculous length of looking upon the Teutonic race as the master-race, with the disastrous results with which we are all familiar.

Unfortunately every people is likely to be convinced of its own peculiar superiority over others. We are no exception. The great majority of our own high school graduates and even college graduates are imbued with the idea that we are superior to all other races or peoples. One of our best known and most highly respected editors commented as follows some years ago:

"The best blood of the earth is here—a variated blood of strong, indomitable men and women brought here by visions of wider lives. But this blood will remain a clean, Aryan blood, because there are no hordes of inferior races about us to sweep over us and debase our stock. We are segregated by two oceans from the inferior races, and by that instinctive race revulsion to cross-breeding that marks the American wherever he is found."

What the world needs is, in every country, an appreciative understanding of all other peoples and races in order that misunderstandings and resulting friction, animosities and hatreds may be prevented from arising. Lincoln truly said: "The man I don't like is the man I don't understand." This is just as true of nations or races as it is of individual men. A better knowledge of the conditions under which other nations live and have lived will enable us to understand them the better. A marine who went through some of the worst fighting in the southwest Pacific and who helped bury some of his best friends said in a letter recently: "Maybe I'm just not much of man, but I feel no personal grudge against the Japs. I like to think that we are combating an idea. I would feel no higher than the animal we must become in combat if I were fighting individuals." He speaks of the need of bringing the Japanese up to our level and adds: "In the case of the Japanese, that is going to be difficult. From what I have seen of them they don't seem to be exactly human. Of course, when I observed them I looked and acted like an animal myself. They might be different under different conditions." How that last sentence of this marine reminds one of a remark attributed to John Wesley upon seeing a criminal being taken to a public execution: "There, but for the grace of God, go I."

In thinking of education as a means toward international reconciliation and of promoting good will it is apparent that the education of children and of young people today will exert little, if any, influence on the outcome of the present struggle, whatever its influence in such matters a generation hence. On the other hand the present conflict will profoundly affect education in the immediate future, in ways that cannot well be ignored by the school, the home, or the church. There is bound to be an undermining of religious and moral standards. Just now too many people are overoptimistic because the war is undoubtedly providing a helpful stimulus to religion.

They forget the aftermath that always follows war. After World War No. 1 Dr. Arthur T. Guttery, speaking of conditions in England, said: "The nation has swung from self-control into wild excesses of self-indulgence. We have mortgaged our resources and live upon our capital, with no thought of the morrows. We endured scant rations under military necessity, but with relaxation we crave luxuries of which we had little experience in pre-war days. Prudence and thrift are out of fashion; extravagance and waste know no bounds. Churches decline in membership, Sunday schools decrease year by year, and if we except great preachers with personal magnetism, our congregations are small. They who were driven to worship in days of fear desert the altar now that safety permits sensual indulgence."

Recently the Archbishop of Canterbury in a broadcast to the British Nation mentioned similar phenomena already in evidence although the war is by no means over. J. Edgar Hoover, the Director of the Federal Bureau of Investigation, has called the attention of the American people to the startling increase of juvenile crime in our own country during the past year, some sex offenses having increased more than 100 percent in a single year.

Such and other grave and serious problems are sure to confront us in ever-increasing number and magnitude in the coming days and weeks and years. The burdens of war are sure to become even more onerous, the suspense greater, the trials more distressing, suffering more acute and reaching greater numbers of people. Throughout it all there will be only one thing for us to do—to bear up and carry on until it is all over.

And if when it is all over it should be found that again mistakes shall have been made in permitting conditions to remain or to arise that will throw the whole world into still another holocaust of war a generation hence, man will still continue to hope for a future better than the past and better than the present. He will still cling to the faith that this is a world of jusice, that there is in this world a "Power not ourselves which makes for righteousness," a Power which works itself out in us and through us by means of the ideals engendered in our nature. Man will ever entertain the dream and the hope that some day men will "beat their swords into plowshares and their spears into pruning hooks." He will continue to hope against hope and in spite of all disappointment that sometime the day will arrive that is pictured in Tennyson's vision: "When the wardrums throbb'd no longer and the battle flags were furled in the Parliament of Nations, the Federation of the World."

To make this possible it will first of all be necessary for the statesmen and the people of all nations to subscribe to the doctrine promulgated by some of the most prominent church heads of England in December 1940, namely, that the "resources of the earth should be used as God's gift to the human race." It will be possible only when we are ready to render more than mere lip service to the ideal of the "universal brotherhood of man."

Thus and only thus can there ever be realized the dream of the dreamer, the vision of the seer, the hope of the statesman; yes, the fondest wish of every human being who has ever given serious thought to the enormity of the horrors of war.

"It's coming yet, for a'that,
That man to man, the world o'er
Shall brothers be, for a' that."

Assistant Secretary of Commerce for Small Business

EXTENSION OF REMARKS

OF

HON. RAYMOND E. WILLIS

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 23 (legislative day of Monday, May 24), 1943

Mr. WILLIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address dealing with the bill providing for an Assistant Secretary of Commerce for Small Business, delivered by the Senator from Wisconsin [Mr. WILEY] on the Congressional Record of the Air program over station WHN, New York City, Tuesday, June 22, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

There is pending on the Senate Calendar S. 883. This bill provides for an Assistant Secretary of Commerce for Small Business. The bill has been reported unanimously from the Committee on Commerce of the Senate.

It has the approval of the Secretary of Commerce, Jesse Jones, and has the approval of businessmen generally.

The bill calls for no appropriations. It would create no additional bureau. It would not add materially to the overhead of Government.

How then, you may ask, will the Assistant Secretary of Commerce for Small Business look after his job?

We have often heard it said that behind every great accomplishment is the lengthening shadow of a great man. Behind every great human effort there is the energy, vitality, and vision of a man or a group of men. All history repeatedly illustrates this truth.

Small business does not want a bureau in Washington which would increase bureaucracy. It does not want an organization with tentacles reaching out into its communities and into its businesses. What it wants is an articulate voice here, someone who understands its language and who recognizes the importance of small business in the economic, social, and political life of the Nation, someone who can head a great cooperative effort, utilizing the small businessman in his community, so that small business will be prosperous and the community's economy healthy.

What, then, it may be asked, could an Assistant Secretary of Commerce for Small Business accomplish? He could be the liaison man in Government, representing the small businessman. He could preach cooperation between small business and big business. He could reach out into the highways and byways of the Nation and utilize groups of small businessmen to the end that there may be cooperation and building for the Nation. There are innumerable chamber of commerce groups and civic association groups. There is the United States Chamber of Commerce which is now studying this problem. The Assistant Secretary of Commerce would cooperate with the C. E. D., known as the Committee for Economic Development.

When the war is over, the Assistant Secretary of Commerce for Small Business could have throughout the Nation a working organization of small businessmen who are not on the pay roll of the Government, but who are interested in maintaining the vitality and the character of their own little business concerns.

These men realize the tremendous job which will have to be done in getting the millions who are now engaged in the war service or in war production back into industry and the economic life of the Nation on a peacetime basis. All the men and women thus employed and all those in the armed services must be transferred to civilian production work as soon as possible after the war is won. On this front small business and big business will be collaborating with labor. Through collaboration private enterprise will again demonstrate its vitality, as it has in this war enterprise.

The point is that we want for small business, someone, here in Washington, who recognizes the importance of small business to the economic and political life of the Nation. We want someone who will not simply talk, but who will see to it that small business obtains recognition. Recognition means a place in the economic sun of America.

The Assistant Secretary of Commerce for Small Business would begin now to think this problem through as to how each company and each little business interest in every little community could help and be prepared to do its part in the post-war period.

Small business is concerned with the post-war problem of public works in city, county, State, and the Nation and, of course, the Assistant Secretary of Commerce for Small Business could render assistance in that direction and could assist and advise with existing business agencies and individual companies.

The initiative of the individual is what built this country, and it is not the purpose of the bill to interfere with such initiative. Rather, if an Assistant Secretary of Commerce is appointed, and the bill provides that he shall be appointed by the President, one of his objectives would be to add impetus to the initiative and invention which has made America great. His purpose would be to aid and assist small business in tackling its own post-war problems and the problems of the Nation.

The Assistant Secretary of Commerce would stay out of politics. He would have no part in politics. His heart and soul would be in the high purpose of strengthening the economy of the Nation by doing all he could to make small business strong.

Small business recognizes that the Nation will need homes, food, radios, autos, clothing, air conditioning, and a thousand other articles when the war is over. Small business recognizes that there is now a terrific deficit in machinery on the farm and that this deficit will grow greater, and that there will be in the post-war period a deficit of machinery for supplying the Nation's needs. The outside world will need our help and this will call for expanded facilities. There will be new methods of production and new products to manufacture. We will have to build new schools and highways, and we will undoubtedly think in terms of great international highways both in the air and on the land. Small and big business is in that picture.

Small business wants to play its part in these great developments and adventures. Individuals will have huge economic savings in banks and trust companies to aid in the accomplishment of the job which the Nation will be called upon to do. With its Assistant Secretary of Commerce, small business would have the cooperation of economists and scientists in studying the policies of government and fostering maximum productive employment.

Small business is a relative term. It includes nearly everyone except the very large business institutions. The perpetuation of small business means, as one great American said to me, the perpetuation of the American way.

The Department of Commerce estimates that in 1939 there were 2,758,272 small business establishments in the United States. These establishments, consisting of manufacturers, wholesalers, retailers, servicemen, that is, establishments which sell services rather than commodities, such as laundries, barbers, etc., construction men, hotel operators, and owners of amusement places, employed 8,364,971 persons.

Secretary of Commerce Jones, in expressing his approval of my bill, S. 883, said:

"Small business numerically embraces 9 out of every 10 business establishments. It accounts for over one-third of the dollar value of goods and services. It employs approximately 45 percent of all wage earners."

The statement "45 percent of all wage earners" was confined, of course, to personnel of these specific industries—manufacturing, wholesaling, retailing, service establishments, hotels, construction, and places of amusement.

Small business has always stood on its own feet, and it will continue to stand on its own feet.

We are living in a changing world. It has been contracted. It has grown much smaller. All of this calls for careful planning. It calls to labor and management, small business and big business, government and the citizen—all segments of our society—to practice cooperation. It calls for more cooperation on the home front as well as on the international front. We are all one—we Americans—and in a sense we are each our brother's keeper.

If we pass this bill, it will have a great psychological value. Whether its operations will be successful will depend upon the vision of the man who is appointed. Passage of the bill will notify the small businessmen of America that Congress has at last—at long last—taken cognizance of their situation. It will give the small businessman a shot in the arm and will make him feel that he has someone in Washington who is thinking about him, who is concerned about his affairs—someone to whom he can go, or to whom he can write, and to whom he can submit his individual problems.

When peace comes all business, big and small, must be ready to do the job that will then be necessary; ready to back up its Government in its effort for international collaboration; ready to take its part in employing those who come back from the services and those who come out of the war plants.

Only by thinking this problem through now can that result be accomplished. What a great job the proposed Assistant Secretary of Commerce for Small Business will have if he will make it great.

A Competent Observer's Conclusions in Regard to the Farm Security Administration

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 22, 1943

Mr. LUDLOW. Mr. Speaker, Mr. Maurice Early, distinguished staff writer of the Indianapolis Star, has made a most interesting contribution to the discussion concerning the value of the Farm Security Administration. Mr. Early, who is a discriminating observer and analyst, chose Clinton County, Ind., one of our best midwestern agricultural counties, as the field of his observations. He went in person to that county and interviewed all who could throw light on the subject. His conclusion is that the Farm Security Administration really does help the small farmers and by its assistance it does much good in making it possible for worthy persons to get established on farms who otherwise would gravitate to already overcrowded and congested centers.

Mr. Early's observations and conclusions are set forth in the following communication to his paper from Frankfort, the county seat of Clinton County:

FRANKFORT, IND., June 15.—Has the American food supply been made more secure through the efforts of the Farm Security Administration to help little farmers to get on their feet and stay on the land? The National House said "No." The Senate said

"Yes." So the fate of the Farm Security Administration hangs in the balance.

Perhaps the answer lies in a close-up view of the operations of the Farm Security Administration in this typical Hoosier county. What is going on here in Clinton County is being repeated in most of the several thousand counties of the Nation.

During the last 5 years Farm Security Administration has provided funds for 14 Clinton County families to own their own farms. In no instance did these farm purchasers have any appreciable amount of capital for a down payment in order to obtain a commercial loan. The supervised Farm Security Administration loan at 3 percent interest was the only vehicle available which could settle them on land of their own.

Otherwise these families would be chained to the land as tenants or the head of the house would give up as a tiller of the soil and drift to the city as a factory worker.

Arthur J Mosson, one of the group of purchasers, with his wife and five children now are well on the road to rural affluence because of the lifeline tossed out by Farm Security Administration. He had owned a small farm in Orange County, but abandoned it as worthless 13 years ago to come to Clinton County as a tenant farmer.

Four years ago today Farm Security Administration provided $9,600 for him to purchase 120 acres of good farm land west of Frankfort. Of course, prices have been good in recent years, but his advance toward complete ownership has been startling. His contract with Farm Security Administration gave him 40 years to repay the loan. He has paid half of it already and has livestock and crops in prospect this year to enable him to pay in full and burn the mortgage.

When the war came he decided to milk 13 cows instead of 8. He increased the number of brood sows 40 percent. Mrs. Mosson increased her flock of chickens this year from 500 to 600. This sort of increased production, which means working from dawn to dusk, is typical not only of the farm purchasers, but of the tenant farmers who have been given Farm Security Administration chattel loans.

This instance is not exceptional. Most of the farm purchasers are paying far in excess of the required payments. Most of them have substantial equities in the land. Only six of the group have had loans for 4 years. Another six have loans made in 1940 and 1941. Nothing is yet due from the two loans made last December. Yet out of a total of $154,000 advanced to the purchasers to become landowners, a total of $23,344 had been repaid up to June 7. When this year's crops are marketed another big dent will be put in the mortgages.

Paul H. Teal, Clinton and Boone Counties Farm Security Administration supervisor, and Mrs. Ruth Van Camp, home management supervisor of the area, explain that these character loans, while not sound from a commercial banking point of view, are actually rather secure.

Every member of a family to get a loan must be in top physical condition. They must be passed on by a local farm committee, which in this county consists of Clarence Beisel, Earl A. Good, and Warren Brant. In addition an expert appraiser and an engineer study the property the purchaser wants to buy to determine whether he is getting his money's worth.

Five percent of the farmers of Clinton County have been given either farm-purchase or rural-rehabilitation loans. Out of 143 tenants given chattel loans in order to enable them to make a go of it on the land, all are toeing the line in interest and principal payments except 14. Ten of these are attempting to pay the loans. Four have been dropped from the books as losses.

Tenant loans are not made to the shiftless. Some are youngsters just starting on their own. Others are hard workers who have had tough luck. A typical instance is one tenant borrower who was wiped out 3 years ago when industrial impurities in a creek killed all his hogs. The Farm Security Administration loan gave him a new start. Otherwise he would have moved to a city. He has stepped up production from 5 to 10 milk cows and increased his sows from 8 to 13. His wife added 100 chickens to her flock. They have an only son in the Army and have a hired man to take his place.

The Mysterious Disappearance of the Potato

REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 23, 1943

Mr. SPRINGER. Mr. Speaker, fortunately we are slowly recovering from a national affliction nobody would have thought possible even under the most extreme conditions. I refer to the recent sudden, mysterious, and complete disappearance of the most common item of food—the potato.

To my knowledge no one has yet satisfactorily explained the unannounced retirement of the lowly spud from the American scene. And, although the new crop is relieving the situation, no one has come forth with assurance that a similar drought will not occur again. But, with time to recover from the shock of the recent dilemma, responsible officials should consider methods of avoiding another potato shortage. One solution could have been considered during the late loudly lamented shortage, and can well be kept in mind in the event of another potato disappearance in the duration. I suggest the application of lend-lease in reverse about which we have heard so much.

According to reliable reports England has a surplus of potatoes, and has had. An Associated Press dispatch from London not long ago told of how English scientists had perfected a method of making synthetic cork from potatoes—and at a time when we were using about everything but cork for a substitute in our diet. A more recent account told of the surplus of potatoes in England, so great that quantity lots were being sold at a ridiculously low price to farmers for feeding hogs.

That bottoms for shipping potatoes this way from England are plentiful is evidenced by the statement of a Government official before a committee of Congress some time ago. This official stated that cargo ships returning from Russia were coming back empty, while many returning from England were loaded with Scotch whiskies and some textiles. Now it is reported that whiskey and textiles have given way to sand and other ballast for returning convoys. Why has not the English potato surplus been employed in a twofold purpose? A month ago the strongest devotee of Scotch whiskey on this side of the Atlantic would have traded his daily scotch and soda for a potato, and many an American would have gone without a suit of imported cloth, cuffs or no cuffs—or, in effect, given the shirt off his back—for a serving of fluffy whipped potatoes.

In an experience such as we recently went through nobody would stop to debate the relative value of American and British potatoes. In such dire circumstances a potato is a potato regardless of its origin, race, creed, color or previous condition of servitude.

Unless there is another "hold the line order" between seasons our domestic potato supply may remain adequate—we certainly hope so. But, should another shortage occur from any cause, and our allies have a potato surplus, then lend-lease in reverse should be applied. Ballast for our returning convoys and potatoes for our tables.

We Should Quit Talking About What We Expect To Do to the Japanese While the War Is on, in Order to Protect Our Innocent Men Who Are Prisoners of the Japanese

REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 23, 1943

Mr. PATMAN. Mr. Speaker, every day almost we see in the newspapers and we also hear on the floor of the House attacks upon the Japanese that are interned in this country. It occurs to me that such attacks may possibly cause harm to our prisoners of war who are now confined by the Japanese on the islands in the Pacific and on the mainland of Japan. Under the Geneva Conference a nation at war is obligated to treat prisoners humanely, to pay them for work according to certain rules and conditions, and to provide them with living quarters and food. Our country expects to carry out the terms of the Geneva Conference.

The charge is often made that the Japanese prisoners that we have in the United States are enjoying better food than the civilian population. That is very true, because under the Geneva Conference we are obligated to give these prisoners of war the same food that we provide our own soldiers, and since our own soldiers receive better food than civilians, the soldiers coming first, it is true that Japanese prisoners are receiving better food than the civilian population of our own country. The same is true as to the German prisoners. Other countries are under the same obligations to our servicemen who are prisoners of war.

We are all hoping that our American boys who are prisoners of war of the Japanese will be treated humanely and properly in every way. If we so viciously attack the Japanese in this country now and leave the impression with the Japanese people that they have been treated too well in this country and cause the Japanese people to come to the conclusion that we are not going to treat them so well in the future, and possibly cause them to believe that the Japanese prisoners of war here will be treated unfairly, it is likely to cause the Japanese to mistreat our American prisoners of war which they have in their possession. It is certainly my hope that we will not do anything that will give them any possible excuse to ill-treat or torture our fine American boys who are now confined in Japanese prisoner camps or any excuse to retaliate in any way.

It is my belief that we should treat the Japanese prisoners and those Japanese citizens who are interned according to the humane rules of warfare in the hope that it will save our men who are their prisoners from any undue suffering or mistreatment.

I imagine that if the 25,000 or more American servicemen who are now confined by the Japanese and who are suffering enough by being compelled to live upon Japanese rations, could send a message back to us here in Congress or to the American people, they would advise us to not do anything that would cause the Japanese to be harder on them there. I am also sure that is the fervent prayer of every mother, father, and other loved one of these prisoners of war that we be very careful what we say in this dark hour of warfare, when innocent men, their loved ones, are confined in foreign countries in enemy prisoner camps.

Roll-Backs

EXTENSION OF REMARKS

OF

HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 23, 1943

Mr. HOPE. Mr. Speaker, the principal argument advanced in support of the roll-back on the prices of meat and butter is that wages were stabilized last September while prices were not stabilized. No facts have been submitted by the advocates of subsidies and roll-backs in support of this contention, no doubt for the good reason that there are no such facts. It is true that there has been an increase in the cost of living since September 1942. What the proponents of the roll-back do not mention is the substantial increase in wage payments and in wage rates since that time. The proponents of price roll-backs take the position that they want to stabilize both wages and prices as of last September. If that is done, then we must roll back both prices and wages to what they were at that date.

I am including herewith three tables prepared by the Legislative Reference Service of the Library of Congress which show respectively the average hourly earnings, average weekly earnings, and average hours worked per week in all manufacturing industries, May 1942 to April 1943; total manufacturing pay rolls May 1942 to April 1943; indexes of cost of goods purchased by wage earners and lower-salaried workers for large cities of the United States, May 1942 to May 1943:

Average hourly earnings, average weekly earnings, and average hours worked per week in all manufacturing industries, May 1942 to April 1943

Month and year	Full-time hourly earnings		Straight-time hourly earnings		Weekly earnings		Average hours worked per week
	Average (cents)	Index January 1941=100	Average (cents)	Index January 1941=100	Average	Index January 1941=100

Race Riot in Detroit

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 23, 1943

Mr. RANKIN. Mr. Speaker, it may not be out of order to say to the Members of Congress, who signed the anti-poll-tax petition and who supported that measure which was designed to stir up race trouble in certain Southern States, that their chickens are coming home to roost.

Detroit, Mich., has suffered one of the most disastrous race riots in history. This trouble has been hastened by the crazy policies of the so-called Fair Employment Practices Committee in attempting to mix the races in all kinds of employment, as well as by individual uplifters who are constantly fanning the flames of discontent with their misguided efforts to promote what they call social gains.

There is only one way in which Negroes and whites can live together peaceably on the same soil, and that is on a basis of complete segregation. The sooner everybody connected with this administration realizes that fact, the better it is going to be for all concerned, and the fewer innocent white people and innocent Negroes will pay with their lives in disasters of this kind.

The Scarcity of Meat

REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 23, 1943

Mr. STEFAN. Mr. Speaker, I have received today a resolution and telegrams from the farmers in my district, who have been feeding cattle and producing meat for many years. Unless some program upon which they can depend is inaugurated immediately, they predict, and I agree with them, that millions of pounds of meat heretofore produced in my State alone will not be produced. We are going to be faced with a meat famine. I have made appeals for help at the departments. I include these resolutions and telegrams in my remarks, in order that those of you who are interested may see the side of this meat question as it comes from the meat producers of the country. These producers appeal to Congress now for immediate help.

JUNE 19, 1943.

DEAR SIR: For your information, the following wire was sent to President Franklin D. Roosevelt, June 18, 1943:

"The following resolution was passed in Fremont, Nebr., June 17, 1943, at a meeting of 700 livestock producers and feeders, representing many thousands more:

" 'In order to guarantee an adequate supply of pork, beef, and lamb for (1) armed forces, (2) the civilian population, and (3) lend-lease, that they demand that James Byrnes, Director of Office of War Mobilization, rescind his order, which is effective Monday, June 14, 1943, rolling back wholesale prices and ordering subsidies to be paid on beef, pork, and lamb, and if it is not immediately rescinded the producers and feeders of the Corn Belt States will request all feeders and producers to withhold the marketing of slaughter animals effective Monday, June 28, pending compliance with their demand and further, that the feeders of the Corn Belt States demand that the reflected price on meat animals be sufficient to cover cost of production.'

"During the last week, because of the break in prices of live animals marketed, the producers and feeders have lost hundreds of thousands of dollars. The request to withhold the marketing of slaughter livestock would be made to save the producers from these losses during this period of uncertainties. Further, the Corn Belt producers and feeders of livestock stated in a resolution, 'We, the livestock feeders and producers from 28 counties in Nebraska and 9 in Iowa, oppose the roll-back and subsidy program on meat, butter, and coffee as un-American, inflationary, and discriminatory.' The livestock producers and feeders of the country, at the request of the proper authorities in charge and at your personal request, have increased the production and marketing of livestock to the highest levels in the history of this country. The decision to keep slaughter livestock off the market would not mean a strike in production because the production of meat tonnage would continue on animals now in feed lots. Many feed-lot operators, however, already have been discouraged from buying additional livestock and have ceased making replacement purchases, with the result that thousands of feed lots already are empty or are rapidly being emptied. In this they are influenced not only by price roll-backs recently announced but also by the fear of further price reductions by the same method in the future.

"The apparent lack of understanding on the part of people in Washington as to the seriousness of the food situation and their unwillingness to request and accept the counsel and advice of people with knowledge and practical suggestions for solution, gives them no choice but to take drastic action and insist that this whole problem have your personal, immediate attention.

"HARRY GARDNER,
"Oakland, Iowa.
"HERMAN DINKLAGE,
"Wisner, Nebr.
"Resolution Committee."

HARRY GARDNER.
HERMAN DINKLAGE.

HASTINGS, NEBR., *June 22, 1943.*

KARL STEFAN,
Member of Congress,
Washington, D. C.:

Ninety-eight livestock feeders of Cedar County, Nebr., met tonight and bitterly opposed the roll-back subsidy program.

These feeders will produce more than 11,000,000 pounds of meat this year.

Unless a stabilized Government policy is adopted at once, meat production will be drastically reduced.

We have no intention of quitting while we have sons and brothers on the fighting fronts. We only ask a square deal, and we expect you to get it for us.

CEDAR COUNTY LIVESTOCK
FEEDERS ASSOCIATION,
GEORGE HIGGINS, *Secretary.*

GENOA, NEBR., *June 21, 1943.*

FRANKLIN D. ROOSEVELT,
President of the United States,
White House, Washington, D. C.:

As operators for the past 50 years of a substantial cattle-feeding business, we wish to report directly to you that the situation is now such that cattle-feeding operations can only be carried on at a loss. Fat cattle prices do not reflect cost of production, particularly since the recent roll-back, and can only result in rapidly squeezing cattle feeders out of business. After being encouraged to increase production, we are now in grave doubt whether the Government of the United States desires us to continue making grain-fed beef. Because we want to make the greatest contribution we can to the war effort, we take the liberty of calling this regrettable condition to your attention. Granted some encouragement and the assurance of cost of production, we will do our full share in producing meat for the Nation. If our product is not wanted, we would like to know it so we can endeavor to produce what is wanted. We know that our attitude is shared by many loyal cattle feeders of the Middle West.

KENT & BURKE CO.

Soldiers Speak Out Against Prohibition

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 23, 1943

Mr. CELLER. Mr. Speaker, under leave to extend my remarks, I herewith insert a statement from a local issue of the Stars and Stripes, the daily newspaper of the United States armed forces in the European theater of war. It is an editorial presenting the serviceman's views on prohibition:

They're at it again in America, and even as in the days of World War No. 1 we may yet hear that America is dry.

Most of us in the United States armed forces could not be classed as violently opposed to liquor control, for most of us believe in moderation. On the other hand, there are a few of us who could be included in the group of Americans who felt "the noble experiment" was a huge success.

It is with alarm, therefore, that we learn of the growing political strength of the anti-liquor crowd in the United States.

Taking advantage of wartime conditions and restrictions, the new prohibition group is working night and day for legislation which will give America prohibition in fact if not in name. Using the tactics of the farm bloc, the antiliquor crowd is tacking on amendments to practically every military appropriations measure in a desperate effort to secure prohibition or the nearest thing to it they can force through Congress.

Rationing is playing into their hands and gives them a good excuse and no opportunity is missed to use this excuse in their effort to limit the production and distribution of liquor of all types.

We can remember the days of prohibition, when moonshine whisky made quick fortunes for bootleggers, crooked politicians, and dishonest police officials. As a result, we claim we know what we want in the way of liquor legislation and feel those at home should wait until we return before initiating further legislation on liquor control.

It is interesting, also, to submit an editorial which appeared in the Lowell, Mass., Sun on June 14, 1943. It is the type of editorial that is appearing in the enlightened press throughout the country:

OUR SOLDIERS SPEAK

Though they are scattered over the face of the globe, our fighting men must not lose their identity as citizens of this country, privileged to express their opinions on national issues in the true democratic way.

There are geographic limitations to the securing of a collective opinion on matters of moment pertaining to civilians, and it seems only fair that positive action on any issues which might be of paramount interest to our soldiers and sailors should be deferred until after they are home.

As much as possible, our fighting men are trying to keep informed of affairs at home, and right at the moment most of them are disturbed by the machinations of prohibitionists who would again throw this country to gangsters, criminals, and bootleggers through the adoption of antiliquor legislation.

Our experience in prohibition was such a ghastly reflection upon law, order, and decency that our fighting men have a natural right to object.

Proposed Repeal of Certain Immigration Restrictions

EXTENSION OF REMARKS

OF

HON. RUFUS C. HOLMAN

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, June 23 (legislative day of Monday, May 24), 1943

Mr. HOLMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of a radio speech which I have prepared on the subject of immigration and some of the current proposals to repeal essential restrictions in the present Federal immigration laws.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

There are now a number of bills before the Congress which propose to relax the present restrictions on immigration; one of the most far reaching of which (H. R. 2428) has been introduced by Hon. SAMUEL DICKSTEIN, of New York, who is chairman of the Immigration Committee of the United States House of Representatives.

As a member of the Senate Committee on Immigration, I am opposed to Mr. DICKSTEIN'S bill and all other measures intended to repeal or relax present restrictions on immigration. For the duration of the war, I would stop all aliens from entering our country for permanent residence.

My conviction is that while our soldiers, sailors and marines, and those who aid them, are away from home and are sacrificing their youth, health and opportunities for happiness, and while many of them are forfeiting their lives in battle-areas and in foreign lands, is not the time to relax our immigration laws. Some day this war will be over and then more than 10,000,000 American boys and girls now in the uniforms of our combat forces will return to what? If we now open wide the gates and permit and encourage the hordes of foreign peoples of many nationalities, diverse races and confusing cultures, to occupy and possess their vacant places.

Moreover, after the war, more than another 10,000,000 Americans now profitably working in war industries will be thrown out of employment by the reduced, or discontinued, operations of these industries. Where will they then find employment if we now add to that job-seeking army, the impoverished and job-taking multitudes of all the war-weary countries in Asia, Africa, and Europe?

In addition to these two groups of approximating 20,000,000 Americans who will be seeking jobs and employment after the war, there are possibly more than 10,000,000 youths now in our public and private schools who also will be seeking then their chance to get on in the world.

The welfare of these 30,000,000, or more, Americans, and their dependents and loved ones, is my first consideration. I am their Senator. If I, and other Members of the Congress, do not now protect their interests, who can, or will?

I am opposed to any person claiming, or enjoying, dual citizenship—allegiance to two different and separate governments—if one of those governments is our own. I have introduced legislation in harmony with this thought.

An intelligent and constructive approach to a discussion of immigration requires that we set aside any prejudices, or antagonisms, we may have and consider with an open and fair mind only the welfare of the American people.

I believe it is unfortunate when large numbers of two or more distinct races, which are not readily assimilated, try to occupy the same area simultaneously. It has often led to violence, persecution, cruelty, and, quite recently, to bloodshed and death. It is an unhappy situation for all concerned. It is not a question of superior or inferior race. It is not a question of good people or bad people. Who is to judge? There is not a best race nor a best people, in my opinion. We are all God's children and I would try to simplify, rather than to complicate, one of our many serious social problems. I would not perpetuate and increase the confusion initiated at the building of the Tower of Babel, or augment the smoldering animosities which now seethe beneath the surface of public expression.

Already there are now nearly six million aliens in this country; people whom we have not yet assimilated and many of whom we can never assimilate. That is about as many people as are in the combined populations of Oregon, Washington, Idaho, Montana, Wyoming, Nevada, Utah, Arizona, and New Mexico. That is an awful lot of aliens to have on hand at one time. And there are those among us who now want to increase this number.

About the middle of the last century (1857) Lord Macauley, the British statesman, historian, and essayist, then discussing the American form of government as an experiment in the government of a great people, observed, in effect, that when the time came that America no longer had free lands on which her excess population could settle, and there should be large congested urban populations, then the American form of government would be put to the test. He doubted if our Federal Constitution could survive the discontent which agitators and demagogues would excite under such conditions. That time and those conditions are now present.

He remarked further that when such conditions prevailed in our country, our Republic would be as fearfully plundered and laid waste by barbarians in the twentieth century as the Roman Empire was in the fifth; with this difference, that the Huns and Vandals, who ravaged the Roman Empire, came from without; while our Huns and Vandals will have come from within our own country; providing some Caesar or Napoleon had not, by that time, seized the reins of government.

Was he a prophet? I hope not, and I shall resist the possible fulfillment of his direful prediction to the utmost; but we cannot now sit idly by while hoards of aliens with subversive ideas and by sinister activities despoil us and wreck our Government under subversive leadership. "Forewarned is forearmed."

Let us beware whom and how many we permit now to enter our country to augment the discontent and turmoil already discernible to all well-informed and observant persons. Should we not settle some of the most vital internal problems affecting the Government of the people already here, before we open wide our gates to the immigration of millions of more people, with entirely different racial and cultural backgrounds than those which are traditionally American?

During the past 4 years, even under the difficult conditions incident to the war, possibly as many as 200,000 aliens have entered our country for permanent residence. This is a lot of people. Do you think we can assimilate aliens in such large numbers so rapidly, or that they can be absorbed into our schools and by our pay rolls without creating a number of unhappy conditions and difficult problems—unhappy for them and difficult for us?

If our present restrictions on immigration are repealed now we may witness the very vessels which convey our troops overseas, transporting to America on the return trip, refugees whose adult male members are unwilling to fight for the homes which our boys in foreign combat service are expected to save.

By the turn of the century a multitude of immigrants were coming to America every year; the peak was reached in 1910 when nearly 1,000,000 aliens came to our shores for permanent residence.

For many years this country had no Federal laws restricting the admission of aliens. We had no serious immigration problem for the first century after independence, because of the vast expanse of unsettled territory and the fact that most immigrants came from northern Europe and were readily assimilated into our domestic and political economy.

Improved and safer facilities of ocean-going transportation, the solicitation of tourist business by trans-Atlantic steamship companies, the efforts of some employers of large numbers of unskilled workers to obtain cheap labor, unhappy conditions in foreign countries, and other factors, have caused an ever-increasing number of aliens to seek our shores. To protect the American interests the Congress has, from time to time, placed restrictions upon immigration.

While such restrictive laws were being enacted to safeguard the American interests an attempt was made to meet the problem arising from the migration of Chinese laborers, particularly to the west coast, by a treaty with the Chinese Government concluded in 1880. By the turn of the century the immigration of Japanese began to increase and it was feared that they would rapidly supplant the white population on the west coast. An unofficial agreement, known as the gentleman's agreement, was concluded with Japan, and under this agreement the Japanese Government was to refuse to permit laborers to emigrate to the United States.

Our present quota law, the Immigration Act of 1924, permits a maximum of approximately 150,000 aliens of all kinds to enter this country every year. This number does not include, however, nonquota immigrants. This law prevents the immigration of Japanese aliens and completes the statutory restrictions against the admission of orientals.

There is a rising tide of alien propaganda in this country which is directed toward the repeal or relaxation of these long-established immigration laws. The forces behind this undercover campaign have long been awaiting the arrival of what they conceive to be a favorable opportunity to repeal some of the barriers which Congress has created against the admission into our country of vast hordes of foreign elements which would flood this country while millions of our soldiers, sailors, and marines have been sent into foreign combat service to carry on the war to maintain American conditions at home and establish similar conditions elsewhere.

Strong and sinister forces are now at work, with the encouragement of persons in the highest places of Government, to make us more conscious of our racial differences, more sensitive to the diversity of our religious views, and more active in various political thoughts.

The attempt to capitalize the popular admiration of the Chinese people because of their heroic struggles against the Japanese forces of aggression and destruction is an effort to force an entering wedge into our immigration restrictions by this sinister group of propagandists who have more far-reaching purposes in mind than appear on the sur-

face. This is a misuse of the Chinese popularity rather than an act of real service to the Chinese people. The Chinese themselves were the very first of existing peoples to exclude aliens from their own country. More than 2,000 years ago they built the great Chinese Wall for that purpose. In harmony with that tradition of exclusion of aliens the Chinese in the year 1900 engaged in what is known as the Boxer Rebellion, when members of the Boxer Society committed outrages upon Europeans and Christian converts. This reign of violence and bloodshed culminated in the siege of the foreign legation in Peking.

The United States did not enter this war in order to break down our immigration laws. The United States has not appropriated billions of American dollars for the aid of our allies in order to be repaid by demands that our immigration laws be relaxed. If this war ends in a break-down of our long-established restrictions upon immigration, we shall have been defeated in the objectives we have fought to preserve. It is my understanding we are fighting to preserve our American way of life. Our restrictive immigration laws constitute a most important factor in that purpose. No man, no group of men, no nation, no group of nations, must be permitted to force our people to recede from our traditional position and established policy regarding the regulation of immigration. No Government in this country which seeks to recede from that position should survive a national election.

The subject of regulating immigration should be thoroughly canvassed and openly discussed now.

"Men are never so likely to settle a question rightly as when they discuss it freely."

The Value and Importance of the Congressional Record

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 23, 1943

Mr. WHITE. Mr. Speaker, evidently many people fail to appreciate the real importance and value of the material contributed to the CONGRESSIONAL RECORD and printed in the Appendix—a record of the expression of public sentiment that exerts a powerful influence on the Members of Congress in shaping the policies of our Government.

The subject of a recent letter, in answer to a criticism of the RECORD suggesting a surgical operation to remove its Appendix. My letter follows:

HOUSE OF REPRESENTATIVES,
Washington, D. C., June 21, 1943.

Mr. W. H. MACKELLAR,
Department of Public Speaking,
University of the South,
Sewanee, Tenn.

DEAR MR. MACKELLAR: Let me assure you that it is a pleasure to receive your letter of June 18 and have an opportunity to exchange views with you on national issues.

As the policy of the Congress in publishing the CONGRESSIONAL RECORD is at issue we need not go into the money question, a subject to which I have given considerable attention and on which I have presented my views at some length, as your familiarity with the RECORD may have disclosed.

Your estimation of the value of the material printed in the Appendix of the CONGRESSIONAL RECORD may be compared to that of the great Turkish general that conquered Alexandria when asked by his subordinates what should be done with all the books in the library. The general is reported to have said, "If they disagree with the Koran they must be destroyed and if they agree with the Koran they are not needed, therefore let them all be destroyed."

Coming to the old Latin maxim "Vox populi vox Dei," or in other words, public opinion, is the greatest power on earth. There is the possibility that the expression of current public opinion, as presented in the Appendix of the CONGRESSIONAL RECORD may be as important, if not more important, to the historian and students in future periods in discerning and evaluating the events and influences that shaped national policies and the trends of national development in our time as the bare record of the proceedings of this greatest deliberative body on earth, if you will agree as to the importance of the legislative branch of our Government.

May I suggest to you, as an educator, that in conducting your researches in your study of the influences that have shaped the course of the development of our country and its Government, you may with profit consult the chronicle of events and the expression of public opinion as revealed by editorial and civic opinion recorded in the Extension of Remarks appearing in the past issues of the CONGRESSIONAL RECORD.

Future generations may be indebted to this record for the happenings and influences of our day, just as we are indebted to the chronicles of Pliny, Cicero, and Atticus for the record of the events and influence that moulded the destiny of the governments of their day.

Let us agree that the material in the Appendix of the CONGRESSIONAL RECORD will have its place in guiding the students of the future in evaluating the influences that are shaping our destiny.

Sincerely,

COMPTON I. WHITE,
Member of Congress.

The Fight of Agriculture for Economic Equality

EXTENSION OF REMARKS

OF

HON. BENNETT CHAMP CLARK

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Wednesday, June 23 (legislative day of Monday, May 24), 1943

Mr. CLARK of Missouri. Mr. President, the Missouri Farmer is a journal published by the Missouri Farmers' Association, one of the greatest agricultural cooperatives in the United States. The Missouri Farmer is one of the greatest farm journals published in the United States. Sometime ago, at the request of the editor of the Missouri Farmer, I wrote an article entitled "The Fight of Agriculture for Economic Equality," which was published in the Missouri Farmer for June 1, 1943. I ask unanimous consent that the article be printed in the Appendix of the RECORD, together with the editorial comment which accompanied it. I ask that the editorial comment be published preceding the article.

There being no objection, the article and editorial comment were ordered to be printed in the RECORD, as follows:

[From the Missouri Farmer of June 1, 1943]

LET'S GET THE RECORD STRAIGHT

During the past 12 months or so there has been at lot of misinformation disseminated by the daily press, radio, and other mediums concerning agriculture, the farm bloc in Congress, the farm organizations, and various farm legislation. It is important that farmers understand what has been done and why. For unless we do understand the situation we become confused, and as an organization we become ineffectual. This is why we asked Senator CLARK of Missouri to write the accompanying article. From time to time we expect to ask other competent legislators to write on the same subjects.

Senator CLARK, by the way, has been one of agriculture's stanchest friends in the United States Senate during the trying times through which we have been passing. He has steadfastly supported measures which he believed were in the farmers' best interest. On one occasion he stood out until the last with three other Senators on a proposal to definitely fix prices on everything—including farm prices, wages, profits, and transportation charges—as was recommended by President Heinkel. Another time he was willing to get up out of a sick bed, against his doctor's orders, to confer with Frank Young, who was sent to Washington to represent the Missouri Farmers' Association on a price-fixing bill. These instances and others, we feel sure, the Missouri Farmers' Association membership will appreciate.

THE FIGHT OF AGRICULTURE FOR ECONOMIC EQUALITY

(By Senator BENNETT CHAMP CLARK)

Among the strangest phenomena of these tragic times is the persistent and relentless effort on the part of many great metropolitan newspapers and particularly of newspaper columnists and radio commentators to discredit the farmers of the United States and hammer down the price of agricultural products. In this short-sighted and un-American attitude it is a fact, regrettable but true, that in recent years these efforts have apparently had the connivance and assistance of some of the highest administrative officials of our Government.

These efforts upon the part of the great metropolitan press are the more remarkable in view of the fact that in the passage of the price-fixing and stabilization bills, the newspapers of the Nation sought and obtained for themselves a specific provision exempting newspapers from price limitations. Nearly every large newspaper in the country has freely and properly availed itself of the right to raise its own prices to cover increasing cost of production. Yet the right which they have claimed for themselves of raising prices to cover cost of production—including increased labor costs—plus a reasonable profit on their investment and for their efforts, they have been the first and loudest to deny the farmers. The farmers themselves and those of us in Congress who regard agriculture as a fundamental and essential American industry which must at all hazards be not only permitted to survive but encouraged and stimulated to maximum production for the supply of those most vital war necessities of food and clothing, have been assailed and

abused in the public press and over the radio, and accused of every crime from callous selfishness to downright treason. No more unfair campaign has ever been waged against any great section of the Nation's population.

No sensible man or woman can have the slightest doubt that one of the most desperate and pressing needs of the United States and its allies in this war emergency is the greatest possible production of agricultural foods and fibers. We must supply our armed forces around the globe with food to eat and clothes to wear. We must supply our own civilian population with sustenance in order to keep production of other essentials at the maximum in order to support and maintain our armed forces at highest efficiency. We must to a large extent supply the needs of our allies and of friendly neutrals in order to prevent a complete breakdown in the combined effort so vitally necessary to win the war. Without the very greatest possible production in this country of these vital essentials our war effort must inevitably collapse and disaster beyond any possible calculation might follow.

FARMERS ARE PATRIOTIC

Yet while all admit these salient facts, many high officials and many editors and commentators apparently have not had the wit to see what is necessary to bring about this maximum production of these essential requirements. Many of them have apparently never realized that the mere writing of a quota or an allotment on a piece of paper and the noisy trumpeting of aims for agricultural production through the press and over the radio does not of itself bring the needful production.

The average American farmer is as patriotic, as industrious, and as self-abnegating as any citizen of any nation in the history of the world. He has been the very bone and sinew of our Nation from the very beginning. But he cannot perform miracles and he should not be expected to do so. To use a Biblical expression, the farmer "cannot make bricks without straw."

Too many of our professorial and editorial economists—who so often feel themselves entirely competent to speak as the last authorities upon agricultural problems about which they know nothing and care less—have completely overlooked the most rudimentary requirements for adequate agricultural production.

This may be briefly summarized as follows:

1. A price which will enable the farmer to pay his costs of production, including labor, plus the carrying charges on his investment in his land, improvements, and equipment, plus at least a living wage to the farmer and his family for their own labor and efforts. This is absolutely necessary because no matter how patriotic a farmer may be, the vast majority of farmers do not have sufficient resources to continue to produce at a loss even if they were willing to do so. Furthermore, when industry engaged in war work is being awarded cost-plus contracts insuring them cost of production including labor costs in addition to a reasonable profit, and when under the Little Steel formula wages have been stepped up to meet the increased cost of living, there is no reason on earth why the farmer should be asked to operate at a loss.

2. Sufficient farm labor to at least prevent wanton wastage of the agricultural resources of the Nation. It should have been recognized long ago that the man who is engaged in producing the materials for food and clothing for our armed forces is certainly engaged in no less essential an effort than the man engaged in producing munitions and that his occupation, though less hazardous, is no less essential than that of the man who carries a gun. But the farm has been steadily depleted of its manpower for production by drafts of farmers for military service and even more dangerously by high wages offered in munition factories with Government sanction and encouragement.

MORE MACHINERY NEEDED

3. Adequate farm machinery to make up the deficiencies in farm labor due to the foregoing causes. Since it was inevitable that a vast number of young men would leave the farms to enter the military services or be attracted by the disproportionately higher wages of munition plants, some provision should long ago have been made for filling this loss in farm manpower with an adequate supply of farm machinery.

These requirements are so plain and simple that he who runs may read. It is amazing that there should ever have been any dispute about them among men and women who recognize the absolute necessity for the greatest possible production of the vital agricultural products. Yet early all of the controversies with regard to agricultural production which have taken place in the last 2 years have revolved around these very points.

When, nearly 2 years ago, a few of us in the Senate and in the House began to point out the danger to agricultural production by the curtailment of manpower on the farm both from the operation of the draft laws and from the steady drain on farm labor by the ruinous competition with the higher wages of munition factories, as well as the imperative need of supplementing the farm labor remaining available by liberal allocation of farm machinery, if necessary financed by the Government, we were voices crying in a wilderness.

THE TYDINGS AMENDMENT

It should have been clear as crystal from the beginning that if maximum production of foods and fibers was to be maintained, the available supply of farm labor must not be unduly depleted either by the draft or by competition of munition factories and that the only way in which any such depletion could be made up was by additional farm machinery. But it was impossible to obtain any action on deferment of essential farm labor until adoption of the Tydings Amendment which was forced on to the last draft act by a militant group of Senators last October. Even then the spirit of this amendment was largely flouted by the Selective Service System and its effect largely nullified. The Senate at last took drastic action and over bitter administration protests, passed an act for the blanket deferment of bona-fide essential farm workers. This act has apparently been salted away in the House Committee on Military Affairs with little hope of passage but its adoption by an overwhelming vote in the Senate has had the effect of forcing the Selective Service to carry out the spirit of the Tydings Amendment. The situation has been thereby much improved but the improvement came so belatedly that as I stated in the Senate it was a good deal like locking the barn after the horse was stolen. The suggestion seriously advanced as a substitute by the War Department of using military units as organizations to work the farms is of course ridiculous. It would be interesting to know what possible use such a fine military organization as the old 77th Division, exclusively from Greater New York, would be on the farms of Missouri, Kansas, and Iowa.

The situation with regard to farm machinery has been equally slow and difficult in improvement. For a long time the War Production Board stoutly resisted all efforts to obtain an allocation of the necessary material for agricultural implements. Even with the substantial reduction in the critical materials necessary for the use of tanks, and certain allocations were made for farm machinery, a quota system was set up based upon the extent to which the farms of the various States were already mechanized. Thus, States like Iowa which were already mechanized to the extent of 85 to 90 percent were given quotas of the available supply on that basis, while States like Missouri and Oklahoma, mechanized to the extent of only 13 or 14 percent, were restricted to that basis, despite the fact that their need was undoubtedly greater. This situation has been much improved and is likely to be further improved in the immediate future. Only a few days ago, Chester Davis, the new Food Czar, who really knows something about the farm situation, notified the War Production Board that the most pressing necessity for agricultural production at the present time is additional farm machinery. This will in all probability bring about great improvement but too late to be of great effect in this season's crops.

It can scarcely be denied by anyone that taking the 10-year administration of President Roosevelt as a whole it has been notably friendly to agriculture and has brought about a vast improvement in farm prices, farm credits, and farm conditions. One has only to compare conditions at the outbreak of the war with the unforgettable disastrous situation existing when President Roosevelt took office in 1933 to be convinced of that fact.

I was not one of those who favored the plan of the original Agricultural Adjustment Agency bill. I believed with William Hirth and many other distinguished farm leaders that the preferable plan was to determine the amount of agricultural production needed for domestic consumption, guarantee the farmer a fair price for his production and then permit him to produce anything else he pleased to be sold on the markets of the world for whatever he could get for it. But when the theory of the Agricultural Adjustment Agency became the policy of the Government, in company with other friends of agriculture I accepted this principle and voted for every measure to make it work to the best advantage. Whether or not the Agricultural Adjustment Agency was the best possible plan which could have been adopted at that time, it can scarcely be denied that the over-all results of that measure and its accompanying and succeeding legislation was greatly to the advantage of agriculture until the outbreak of war conditions.

I do believe, however, that since the development of war conditions, the handling of the whole price situation has been unfortunate and has worked unfairly on the farmers of the country in comparison with other great sections of the population. A very strenuous and sincere effort is now being made to correct these inequities.

Everyone recognizes the necessity for stabilization of economic conditions during this war if inflation which would be disastrous to all classes alike is to be prevented. Everyone realizes that all must make sacrifices—desperate sacrifices—if we are to win the war without precipitating calamity at home. But there should be—and should have been from the beginning—insurance for equality of sacrifice and insurance that all should be treated alike in an economic sense. There should have been over-all control from the outset—control of profits, wages, and prices as well as control of agricultural commodities.

When the first price-fixing bill—largely written by Mr. Leon Henderson—was before the Congress, it was strongly urged by a few of us that the plan would not work unless it did include over-all control. The sponsors of the bill, however, were unwilling to include control of profits or wages. By reason of this refusal, it was necessary to provide that prices of agricultural products should not be fixed at less than 110 percent of parity. Now, no one had any idea that this provision would bring about an over-all price of farm products above parity. The limit of 110 percent of parity was inserted because of the sponsors of the price-fixing bill refusing to

deal with profits or wages and on the theory that a general floor of 110 percent of parity would actually in practice permit about 100 percent of parity on the average.

Some of us in the Senate pointed out the dangers of such a system and insisted on an over-all system which would protect agriculture against a repetition of the calamitous experiences of the last war, when with high prices on agricultural products, the farmer was whipsawed as to his actual returns—his real prices—between exorbitant profits and abnormal wages. We were overruled by the majority. I predicted then that the system would not work and that further legislation would speedily be necessary to correct the very evils that we were then creating. As far as I was then advised—or for that matter so far as I am still advised—the farmer was perfectly willing to submit to Government price control so long as it did not upset the essential balance between commodity prices, wages, salaries, profits, and transportation charges, any one of which being out of control might be calculated to throw the whole system askew.

In September of last year, the President made his Labor Day speech. With the substance of this speech I was not in accord. He used the farmer as a whipping boy. He attributed the dangers to the safeguards against riotous inflation to the limit in the previous act to 110 percent of parity. While not denying the possible efforts of exorbitant profits and of wage increases, he placed the blame squarely at the door of agriculture. His suggestion was that he would take care of profits and wages by Executive order, but his demand was that unless Congress should act by a day certain to reduce the limit on farm prices, he would proceed by Executive action to exercise powers which few competent lawyers in the United States believed him to have and reduce these limits by Presidential decree.

When the stabilization bill, drafted in accordance with the President's instructions, came before the Senate it followed this outline. I pointed out in the Senate that this really meant that the control of commodity prices would be put in the hands of Mr. Leon Henderson, already notably and publicly hostile to agriculture, while the control of wages would be put under the control of the War Labor Board, openly and notoriously committed to an increase of wages at least to the extent of 15 percent. It seemed to me that such a system could not possibly work in the direction of stabilization because the act itself was setting up contending forces to pull in opposite directions. After consultation with Mr. Heinkel, president of the Missouri Farmers Association, and other farm leaders, I introduced and supported a substitute for the administration bill which eliminated the discretion between contending governmenal agencies and definitely fixed prices, wages and salaries at the highest point reached between January 1 and September 15, 1942. This substitute was defeated in the Senate. It would have had the effect of treating all alike and definitely stabilizing economic conditions. It is in effect the exact provision recently put into effect by the President's Executive order. Whether he has waited too long for it to be really effective, only time will tell. In September 1942, it could have easily been made effective.

During the consideration of the last stabilization bill, an amendment was offered by Senator THOMAS of Oklahoma, providing for consideration of the increased costs of farm labor in fixing the prices of farm commodities. The proposition seems to me so simple that the farmer should be placed in a similar position to every other producer of essentials in the United States that I have never been able to understand the bitter opposition to this proposal. Nevertheless it did meet with bitter opposition and was supplanted by a compromise amendment, which I denounced on the floor of the Senate as a fake compromise, which indeed it proved within a week after its enactment. I will always be proud of the fact that I was one of four Senators—and the only Democratic Senator—who voted against its adoption.

During the consideration of the stabilization bill in the Senate, any suggestion that the powers conferred in the measure could be used to apply benefit payments under soil conservation or other governmental acts was either denied or pushed off. In my opinion, if it had ever been stated that it was the purpose to apply these payments to a reduction of parity prices, the bill would never have been passed. Such intention was specifically denied on the floor of the Senate by Senator BROWN, who was in charge of the measure. Everyone recognized that these benefit payments had to do with advantages to the whole people through soil conservation, etc., which had nothing to do with parity. After the passage of the act, there appeared in the CONGRESSIONAL RECORD a statement never read or delivered on the Senate floor which put a construction on the provisions of the act to authorize the deduction of these benefits in fixing parity.

My information is that this statement was written by Mr. David Ginsburg, at that time general counsel for the Office of Price Administration. By what chicanery it was introduced into the CONGRESSIONAL RECORD as representing words spoken in debate I have never been able to determine. Certainly, the Senate had no intimation that the bill contained such powers. Indeed, it was specifically denied on the floor by those in charge of the measure.

Shortly thereafter, an Executive order proceeded to put into effect the exact provisions foreshadowed by Mr. Ginsburg's memorandum, clandestinely slipped into the RECORD after the passage of the bill. Congress promptly passed the Bankhead bill to correct this situation by an overwhelming majority in both Houses. The bill was vetoed. The Senate referred the question to the Committee on Agriculture with a view to watching subsequent developments as to wages and profits to see whether further action was necessary. The measure providing for the consideration of labor costs in fixing parity is in the Senate Committee on Agriculture and will probably be acted on at an early date.

My conclusion is that it behooves every American farmer and every friend of agriculture in Congress to watch every step of the road to insure that the experience of the last war may not be repeated. That is to say, that agriculture should not again be the first to suffer restriction during the war and the first to feel the heavy hand of deflation after the war. That was what had paralyzed agriculture in the United States long before the official date of the depression in 1929. That resulted from unfairness of treatment during the war. It must not be permitted to occur again. Otherwise we will have no effective farming industry in the United States.

Installation of Madam Wei Tao Ming as a Member of Kappa Beta Pi

EXTENSION OF REMARKS

OF

HON. WALTER F. GEORGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 23 (legislative day of Monday, May 24), 1943

Mr. GEORGE. Mr. President, on the 16th of May in the city of Washington, Mme. Wei Tao Ming, wife of the Chinese Ambassador, herself a Chinese jurist, was installed as a member of Kappa Beta Pi, international legal honor sorority. On that occasion very appropriate remarks were made by Mr. Justice Rutledge, of the Supreme Court of the United States; Hon. Florence Allen, judge of the United States Circuit Court of Appeals; and Mme. Wei herself. I ask unanimous consent to have printed in the RECORD the introductory remarks and the remarks of those to whom I have referred. I think they will be found interesting, particularly at this time, when our friendly relationship with China are vital.

There being no objection, the proceedings were ordered to be printed in the RECORD, as follows:

Miss BORCHARDT. We are met today to install Soumé Tcheng Wei into Kappa Beta Pi as a recognition of her service as a jurist and a student of the law, and as one who has sought through the law to contribute to the promotion of better relations among men and among nations. It is a particularly happy occasion to bring Mme. Wei into our intimate fellowship, not only because our association with her will greatly enrich us, but also because she, to us, will represent China; China and her cultural heritage and her serene philosophy; China and her dauntless courage and her heroic determination to fight for freedom.

I am particularly happy that this ceremony should take place after our country has denounced its Treaty on Extraterritoriality with China. Today we recognize that a respect for the political, economic, and cultural autonomy of each people is the basis of the collaboration among all peoples for the common good.

It is, therefore, particularly at a time when we are growing closer to our Chinese ally in spirit and in fact, that we are even more happy to welcome you, Mme. Wei, for your achievements and you as a Chinese woman, into our sisterhood. The first tribute to Mme. Wei, today, will come from Judge Florence Allen. We are happy that one of our own Kappas, who is the ranking woman member of the bench of the United States, has come on from Cleveland to help install Mme. Wei. Judge Florence Allen is a jurist who can think clearly and deeply, and yet whose opinions express not only profound knowledge but a fine deep feeling as well. We are, therefore, particularly proud and happy to have Judge Allen present the pin of Kappa Beta Pi to Judge Soumé Tcheng Wei. Ladies and gentlemen, the Honorable Florence Allen, judge of the United States Circuit Court of Appeals.

Judge ALLEN. As I said to Justice Rutledge, I have the appropriate tremors as I see in this audience my very superior officer, a member of the Supreme Court, the Chinese Ambassador, Judge Harold Stephens, my friend of a lifetime, and so many others of the distinguished life of Washington. I count it a great privilege to be here this afternoon.

In many ways this celebration has significance even at this crisis when we are engaged in global war. Even now while our men of the armed forces are giving their lives on the battlefield, certain principles are discernible through the fighting, and there are certain achievements which it is well to recount in order that we may know what we have gained in this country and why it is worth while that America should continue to exist.

Only within our lifetime has sisterhood really been born, and it was made possible by the freedom extended to women in America. Mme. Wei, through induction into this sorority, is a symbol of this sisterhood. There have always been in the world the great forces of human brotherhood, fatherhood,

motherhood, love of parents for children, the love and affection and comradeship of wife and husband, the affection of man for man, their cooperation together, their comradeship, their great friendship, but never until our time has there been sisterhood. While there have been brilliant, gifted women in the past, for the most part their spiritual power has been confined to their immediate circle. Now we join hands the world over, freed by the right to go to school, to vote, to work professionally, and to organize together. Women in this critical hour are a great potential force, and so this ceremony has real significance.

We are honored by the presence among us of Mme. Wei and by her membership in our legal sorority. It is an honor to us that a woman who has held the scales of justice for a number of years in a great city like Shanghai, who has helped to prepare one of the progressive codes of the Chinese Republic, should be a member of our order. It is altogether fitting and proper also that we should recognize here our friendship to and our appreciation of the progressive ideals and staunch devotion to those ideals shown by the Chinese Republic.

Kappa Beta Pi in its very existence is a symbol of the fact that in this country women are permitted to share in the establishment of justice. The comembership of Mme. Wei in this sorority is likewise a living symbol of the liberal treatment afforded to women in modern China. And all of this signifies more than the mere right of women as human beings to engage in any professional calling they choose—important as that right is.—It recognizes the fundamental right of all human beings to help to mold the justice administered in our courts, established and sustained, as under the American system, they must be, by the people themselves.

It is also a particular joy to aid in conferring this membership upon a woman from China, a state long our friend, and one from which we can learn so much of the truest culture and philosophy. Not long ago we were provincial in America. In the very absorption of the fascinating physical task of opening up the West, crossing the mountains, digging the mines, felling the forests, we withdrew from other nations and deprived ourselves thereby of the illuminating contacts which would have enriched our every experience. It is only recently that we have begun to be acquainted with the philosophy and literature of China through such books as those of Lin Yutang and Pearl Buck, that quaint old novel, All Men Are Brothers, translated by Pearl Buck, the translations of Chinese poems by Arthur Waley and others.

If it be really true, and I think it is true even in these days, that a thing of beauty is a joy forever, then from our sister Republic of China we derive joy in great measure because she has opened to us many avenues of beauty; but there are other phases of our relationship with China which today seem to me even more significant. Perhaps we do not quite understand the ingrown, the inner, the inherent democracy of China, a democracy expressed not in form of organization, but a democracy of spirit which has made it possible in that country for men of the lowest origin, by intellectual power and by learning and endeavor, to attain to the very highest posts. Essentially, China never has presented the spectacle of domination or tyranny that we see so well exemplified in the totalitarian system.

And, lastly, today we do honor necessarily to the matchless courage of China. I heard the distinguished English preacher, Maude Royden, speak after the first terrible bombings of London. She thanked the American people for their understanding of that crisis and for their sympathy with the British will to resist and endure. Then she said, "But we haven't begun to take it like the Chinese." My friends, that is true. The time will come when Germany and Japan will be defeated, and then we will understand that the story of China has been a story of resistance unequaled in all history. I yield to no one in my admiration for Russia's dauntless power of resistance; but compare the situation between China and Japan and between Russia and Germany. China has held Japan just as the Russians have held the Nazis, and has held her with bare hands. While Japan has many more material resources than China, she has not had the mastery of chemicals and mechanical processes that the Germans have had, and so that means that she has not been mechanically as well equipped as the Germans. Yet in comparison with China, Japan was far superior, and much more superior than the Germans to Russia. I think that is a fair statement by a lay person who at least reads the papers. The material preparedness of Russia growing out of the masterly establishment of her various plants, her industrial plane which astounded the world, made the Russians more able to compete equally in the air and on the ground with Germany than China was with Japan, and the matchless spirit of Russia made up the balance. Have I made it plain that I think that Russia has done a magnificent thing? Now I am saying to you that the thing that China has done is so magnificent that we can never describe it, because she has fought airplanes and mechanized equipment with her bare hands, and fought for 5 years.

Not only have the Chinese held back the flood of oriental tyranny, but they have achieved the stupendous transplanting of 70,000,000 of people, men and women and little children, bearing on their backs the crude industrial equipment, the very libraries of the schools and universities, from invaded China into free China, and set up there their own free nation. When history is written, that will stand out as a matchless accomplishment. The reason we have not known about China's struggle is that until Pearl Harbor Japan was not our enemy, in fact we were still lately selling her scrap to be used as munitions against China and ourselves.

I was prepared, of course, for almost any brutality after we knew of the execution of the American flyers who went to Tokyo, but not even that prepared me for what I have learned of the terrible malignity shown to the Chinese by the Japanese. I will give you only one instance: They have resorted to wholesale taking of blood from the Chinese children to be used in blood transfusions among the Japanese. And so, my friends, I say to you that when we honor the Chinese women, we endeavor to honor the great spirit of China, our ally, our friend, who with unbreakable spirit has held back the blood of Japanese tyranny.

Today, then, we welcome Mme. Wei to our membership not only as a distinguished professional woman and judge, but also because she comes from a country whose devotion to liberty is unsurpassed, whose friendship we prize, and from whose serene philosophy and dauntless courage we drink in new faith.

Miss BORCHARDT. When the President of the United States named Justice Rutledge to the Supreme Court, we were happy to know that a scholar and a great jurist had been named. But we were also happy to realize that the President had named a man who devotes his life to the service for his fellow men. Justice Rutledge and Mrs. Rutledge are citizens among us who serve with us for the common good. We feel it is particularly fitting and proper that a man like Justice Rutledge should be asked to pay tribute to Mme. Wei and to China.—Mr. Justice Rutledge.

Justice RUTLEDGE. It is especially appropriate that a distinguished American jurist should welcome into this fraternity of yours a distinguished Chinese jurist. I can't define for myself, and I shall not attempt to define for you, what is the particular bond that has so long existed between China and the United States. We know it exists. We are of different ancestry, different customs, and different laws, we live in different parts of the world, we live in different geographical environment; nevertheless, for almost the entire period of our national existence, at any rate, during the latter half of it, the two nations have had a synthetic bond that has, I think, not characterized the relations of this country to any other nation in the world.

Now, I think we can rationalize somewhat more than we have and say that though their form of government is different from our own, the differences, the similarities of ideals, similarities of aspirations, which draw us even closer than we were when this great relationship began.

I think it is appropriate too that the women of China and of the United States unite to strengthen that bond, through Kappa Beta Pi, an international legal sorority. Today I think you symbolize most appropriately and perhaps in the best possible way you could, those three things; internationalism, law, and sisterhood.

Your distinguished new member could not from anything I say this afternoon add to her achievements or to her record of service. Many of you may know that she was at the first Peace Conference as a member of the Chinese delegation. I am almost tempted to say that I hope or wish that at the next peace conference we shall find the treaties made with women participating in their writing, particularly women lawyers. I have this suspicion which I wish to say to you in confidence, that if the women of the world might replace the men of the world in making and keeping the peace, we might have longer and better peace. I, for one, am hopeful that out of the struggle in which we are now engaged, will come a foundation of peace for the maintenance of law and with it both brotherhood and sisterhood which will not terminate within another score of years or some twoscore, but which may offer the opportunity for a perpetual foundation of legal institutions within which those things which we cherish in the relation of brethren and sisters may go on without interruption from armed strife. As for me, I know of no way of doing that, other than by the establishment of institutions with the strength to accomplish the task, and that means eventually the formation of some sort of international constitution which will give the world an opportunity to achieve the common objectives of China and the United States.

Mme. Wei, today you have received the pin of Kappa Beta Pi from a noted American woman jurist. She, like you, has written an interpretation of the basic law of her land. She, like you, would wish to devote our law, as you would yours, to promote welfare among men and peace among nations, and so as a symbol of that expression, I present to you, Mme. Wei, this copy of a work which is entitled "This Constitution of Ours," written by Judge Florence Allen. Your work on the Civil Code of China we should like to make available to our people for their study. We hope that from Judge Allen's work as from yours, we may each gain from our own and from the other's experience something which is valuable either for China or for us so that we may contribute each our share, but together, for our mutual good.

Miss BORCHARDT. We should now welcome a message from you, Soumé Tcheng Wei. A message from Mme. Wei Tao Ming.

Mme. WEI. I wish to thank you for the privilege of becoming an honorary member of this distinguished sorority.

As a member of the legal profession of China, I am indeed happy to join this close circle of friends, who are members of the same profession.

We of the United Nations are today engaged in a great struggle, and we are bound together not only by mutual good will, but by a common destiny. Our aim is not merely to destroy the evil enemies, but also to fight for an ideal: the ideal of justice and freedom, which is the firm foundation for an orderly progress of civilization as well as the basic requirement for peace and human happiness.

The realization of these hopes and aspirations will require the fullest cooperation and faith among the peoples of the world.

In this work, members of the legal profession have their particular duty to perform. It is to contribute their utmost to the building of a better world, in which the rule of law will prevail. Because only through law and order can freedom be made secure.

Our two countries have indeed enjoyed the best and longest tradition of friendly relationships. This is no mere good fortune. It is because we cherish the same ideals. Your respect for the rights of others, your abhorence of violence in all its forms, your spirit of democracy—these are the things which first touched the responsive chord in our hearts and which have since drawn us closer together each day. The talk here today by Judge Allen so beautifully told of that close bond between your people and mine.

It is certain that just as we are fighting shoulder to shoulder in this war, so we will be working together in the peace to come, to the end that our common ideal be realized not only for ourselves alone, but for all peoples throughout the world.

The Synthetic Rubber Situation

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 23 (legislative day of Monday, May 24), 1943

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a most interesting and informative address on the synthetic-rubber situation by Mr. Harvey S. Firestone, Jr., a recognized authority on rubber. The successful development and production of synthetic rubber in the midst of the war emergency constitute one of the outstanding accomplishments of American industry.

In the achievement of that record, Mr. Firestone gives due credit to the leadership of Rubber Director William M. Jeffers, Secretary of Commerce Jesse Jones, and the other able men associated with them in the synthetic-rubber program.

Mr. Firestone's address was delivered over the radio on the program Voice of Firestone, on June 21, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Good evening, friends, far and near; during the past year and a half since Pearl Harbor I have talked to you upon several occasions about the rubber situation. Until recently the problem has been most serious and the outlook has not been very encouraging. However, this evening I am glad to say that we are beginning to see brighter skies ahead. And the credit for such remarkable progress in so short a time must be given to American foresight, skill, and ingenuity, and to the leadership of Rubber Director William M. Jeffers, Secretary of Commerce Jesse Jones, and the able men who are associated with them.

Twenty years ago my father became convinced that the United States should take steps toward making itself independent with regard to its rubber needs, and he took the leadership in this cause under the banner, "Americans should produce their own rubber." He believed that there were three ways by which this country could try to accomplish this objective: First, by establishing rubber plantations in countries under American control or protection; second, by obtaining rubber from domestic plants; and, third, by making rubber synthetically.

He determined to pursue all three courses, and as a first step he started me out upon a survey of the rubber-producing countries of the world to determine where Americans could best grow their own rubber. After the most careful consideration, the West African Republic of Liberia was selected. At the present time we have more than 100,000 acres under development there and this year we expect to be able to bring out of Liberia 35,000,000 pounds of rubber. This is one of the few remaining sources from which the United States is still obtaining natural rubber.

In his crusade to establish an independent source of rubber for the United States, my father was joined by his close personal friends, Thomas A. Edison and Henry Ford. During the last 6 years of his life, Mr. Edison devoted much of his time to seeking plants that could be grown and harvested in the United States and which would be capable of producing rubber in practical quantities. This was the forerunner of the intensive research which has been carried on to this day by our laboratories and those of the Department of Agriculture.

The Firestone organization also turned to the development of man-made rubber and its uses. In 1933, Firestone built the first synthetic rubber airplane tires for our armed forces. In 1934, we made synthetic rubber passenger-car tires and in 1940 we went into factory production on these tires. That same year, we also began to make our own synthetic rubber, which we call butaprene, and which is the same type of synthetic rubber that was later adopted as standard by our Government.

In 1942 the Firestone organization had the distinction of becoming the first company to produce synthetic rubber in a Government-owned plant, and this year that same plant became the first to make synthetic rubber with butadiene made from grain alcohol.

During these years of experience and experiment, Firestone technical men originated new and unique methods of processing synthetic rubber, designated special machines to increase production, and developed new materials to improve the durability and strength of synthetic-rubber compounds. And with our country at war we have made all of these developments available to our Government and to the rubber industry without royalties or compensation of any kind.

Now, let us take a look at the prospect for additional rubber, both natural and synthetic, in 1943. At the beginning of this year we had on hand about 443,000 tons. It is estimated that we can obtain new supplies of synthetic and natural rubber amounting to 308,000 tons this year, making a total of 751,000 tons. When we consider that the requirements for 1943 are estimated at 609,000 tons, it will be seen that by the end of the year we may have a balance in the stock pile of only 142,000 tons, which is very close to the 120,000 tons set by the Baruch committee as a dangerous minimum.

As to natural rubber, the only important sources left open to us are Liberia, Ceylon, and Central and South America. As I have said, we expect to be able to bring out of Liberia 35,000,000 pounds of rubber this year.

Nearly all of the rubber produced in Ceylon will be sent to Russia, England, India, South Africa, and Australia. At the present time the quickest new source of additional rubber is South America. No one really knows how many rubber trees are growing wild in the Amazon valley and other parts of the continent, but there is a likelihood of getting 30,000 tons of rubber from South America this year.

Under the forceful and intelligent leadership of Rubber Director William M. Jeffers, the synthetic rubber program has made exceptionally good progress and by the end of this year there will be in operation synthetic rubber plants with an annual capacity of 850,000 tons. This production, plus the importations of natural rubber that we may expect next year, will give us in 1944 nearly twice as much rubber as this country consumed in a normal peacetime year.

Recently Mr. Jeffers reported that 12,000,000 passenger car tires will be released for civilian use this year. Of this total 7,000,000 are on hand and the remaining 5,000,000 will be made with synthetic rubber. Next year, it is expected that 30,000,000 synthetic rubber passenger car tires will be available for civilian use.

From these facts it is apparent that the Government will not permit essential civilian vehicles to cease operation because of lack of tires. Our public transportation systems alone cannot take care of wartime requirements and the privately owned motorcar must share the load.

Further evidence that the Government recognizes the need for keeping every available car in service may be seen in the recent lifting of the restrictions on the recapping of passenger car tires. Ration certificates are no longer necessary to have these tires recapped. Furthermore, quotas for the purchase of new tires have been substantially increased and the Government has already released synthetic rubber to help fill these larger quotas. However, Mr. Jeffers has made it plain that car owners cannot expect new tires for nonessential driving for a long time to come and that all of us must continue the conservation measures which have proved so effective in reducing tire wear.

I believe I am not unduly optimistic when I say that the rubber situation presents a much brighter picture today than it did only a few months ago. This is just one more indication of the progress which is being made all along the line, both on the home front and on the battle front. Our war production is now in high gear and our armed forces are moving forward. The initiative has passed into our hands and that is the beginning of the road to victory!

Russian Anniversary

EXTENSION OF REMARKS

OF

HON. SAMUEL DICKSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 23, 1943

Mr. DICKSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech

delivered by me on Tribute to Russia Day, sponsored by the Russian War Relief, Inc., in New York City, on June 22, 1943:

On March 16, 1942, the No. 1 degenerate, the arch madman of the world, the painter who uses the blood of human beings as his medium of expression, had this to say: "The Bolsheviks will be defeated by us, the Germans, in the coming summer."

On this June 22, 1943, Russia is still valiantly and successfully fighting the German invader, and so once more a German boast is not made good.

For 2 years, Russia has borne, almost single-handedly, the full onslaught of the enemy. The mighty wall of her unity, patriotism, and courage has been as strong as iron in its amazing achievement of holding back the German armies. The Russians have shown to all of us that it was not impossible to defeat a German army, that German invincibility was purely a myth.

I wonder what would have happened to the freedom-loving people of the world if Russia had not stood her ground at Leningrad, Sevastopol, Odessa, and at Stalingrad. What would have been Russia's history today, and what would have been the history of the world? Russia's resistance has given the United States time to arm herself and to gather her strength so that we too could fight valiantly at Guadacanal, Bataan, and now in Tunisia. We have shown ourselves worthy partners in heroism.

I have heard fifth columnists, propagandists, and others of their type, both in and out of Washington, say that Russia could not fight, that Russia could not possibly withstand the German onslaught and that Russia had no leaders who could carry on the fight. In answer to this, all I can say is that this propaganda spread around the country by a number of groups of so-called citizens is based upon prejudice even at the sacrifice of our own country. One has only to follow the story of Russia's great fight to find the answer to this propaganda.

To the enslaved, persecuted, oppressed peoples of Europe and Asia, Russia has given fresh strength and new hope. The remnants of the Jewish people in Europe, millions of whose brethren have been murdered, whose wives and children have been destroyed by the Nazi executioners, find in Russia's valiant fight, a source of new faith and hope, a new desire to live and to fight. Russia stands today as the immovable barrier between them and other destruction.

As an American, and as a Member of the great body of Congress, I say that we are proud to be Russia's allies and we have affirmed this alliance with blood in order to bring the four freedoms back to the suffering people of the world.

"Mighty Russian people, today we greet you again, stronger in hope, firmer in our determination to win and win soon—secure in the belief that the mighty coalition of the United Nations, forged in battle and sealed in blood—will prove even greater in peace than it has been in war."

Much has been said about the fact that Russia might make a separate peace. From my observation and from my knowledge of the Russian people, I say that Russia has the best record of any of the major nations in keeping her word, and I have every reason to believe that Russia is in this war to the finish, and that no separate peace will be made by her against the Allied Nations fighting the common enemy for the freedom of the world

When speaking of Russia, one must not forget our other great ally who protects Russia's back door, China. China is now asking for the repeal of our Chinese exclusion law and is asking to be put on an equal basis with the other Allied Nations. I am wholeheartedly in support of such a program. China has carried on a valiant struggle against our common enemy for 6 long years. We need China now, and we shall need her after the war. We must show our friend that we mean business and remove the stigma against her. We must put her on an equal basis with our other allies and extend to her the respect and consideration to which she is rightfully entitled.

Think Before You Destroy Any Food Program That Will Increase Food Production

EXTENSION OF REMARKS

OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 23, 1943

Mr. WICKERSHAM. Mr. Speaker, in connection with the consideration of the appropriation for the Farm Security Administration rehabilitation loans and tenant purchase funds, I should like to urge this House to vote for the amendments as offered by the Senate.

The amendments containing these two provisions will do more to insure additional production of food, feed, and fiber for our essential war, civilian, and lend-lease program than any other appropriations.

In our anxiety to effect economy, let us not practice false economy. Remember that if you fail to provide the full amounts contained in the Senate provisions you will live to regret it, and if you do vote to reduce the amounts then you should not complain when the blame for a probable shortage of production exists in the near future as a result of your actions.

Federal Security Administration

EXTENSION OF REMARKS

OF

HON. FRANK B. KEEFE

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 23, 1943

Mr. KEEFE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

BRANDON, WIS., *June 19, 1943.*

Hon. FRANK B. KEEFE,
Congressman, Washington, D. C.

DEAR SIR: We hear so much over the radio about the debate in Washington as to whether or not to continue the Farm Security Administration.

Permit me, as one of the many farmers in Fond Du Lac County, Wis., to voice my opinion and tell my story of how I was helped by the Farm Security Administration.

Seven years ago our family of seven moved from Wood County, Wis., to Fond Du Lac County to seek a more prosperous farming community in which to raise our growing family.

We began by share-renting on a fine dairy farm, where the owner furnished all the cattle. So we sold what cattle we had to purchase more machinery with which to operate this farm.

As our children were too young to be of much help in operating this farm, we were obliged to hire help 7 months of the year.

Then the unforeseen happened—sickness, operations, hospital bills, extra help was needed, and to top it all off we were obliged to move after a 2-year tenancy on this farm.

We were at a loss where to go. We had most of the needed machinery—horses, hogs, etc.—to share-rent a farm, but most owners demand that half the cows be furnished by the tenant.

After vainly searching for a place to call home and an opportunity to earn our living at the only occupation at which we are skilled, we finally heard of a farm for cash rent. This place, although somewhat run down, could be rented for $550 a year. We were desperate. It would either make or break us. But we took a chance and rented it.

We applied to several lending agencies for help so we could borrow money to buy cattle and pay our debts, so we could get on our feet. But, alas, they all turned us down because we lacked the main source of income and their best security, cows.

At last we turned to the Farm Security Administration for help. They heard our story and promised to do everything in their ability to help us.

At first there was a tiresome wait and we feared that they, too, had turned deaf ears on our earnest plea. But a Mr. Henry Danes, of New Holstein, Wis., became interested in our case, and when Mr. E. Freund, who is still regional supervisor of the Farm Security Administration in Fond Du Lac County, took charge of this branch of the Farm Security Administration, the horizon became more clear for us, and before long we were granted a Farm Security Administration loan and were able to buy cattle and pay our debts.

We worked with a determination to make a success of this venture. During the winter months the wife and family did the farm work while I was employed in a nearby hemp mill.

That was in the spring of 1939 that we got our first loan. We paid off every month with a milk assignment and whatever other money we could spare. Our debt began to decrease.

In 1941 we applied for an additional loan to purchase a tractor and other power machinery, so we could more efficiently operate this farm, which was slowly yet surely coming back into productibility. This loan was immediately granted and we were able to accomplish our farm labor more quickly and easily.

That was in the spring of 1941. Now it's summer, 1943. The loan is paid and we are debt-free—and we are happy.

We own between $6,000 and $7,000 worth of property—cattle, horses, hogs, sheep, chickens, machinery, and feed, etc.—and for the past year we have been able to lay aside a few dollars. Yes; we are happy, but not quite satisfied.

Our family is growing up. We have all the help needed to operate a good farm, but we're only renters. All the improvements we put on this farm are for the next renter to enjoy. We'd like to keep our family together. We'd like to buy a farm, and, of course, we've turned to the Farm Security Administration for help. They'll help us if and when Congress appropriates funds for tenant-purchase loans. We hope this will be granted Long live the Farm Security Administration.

I am,

Respectfully yours,

JOHN A. TJEPKEMA.

Campaign Contributions in South Dakota

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 23 (legislative day of Monday, May 24), 1943

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "South Dakotans Find Out Whom Their Senator Serves," published in the Huron (S. Dak.) Huronite, of June 16, 1943.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SOUTH DAKOTANS FIND OUT WHOM THEIR SENATORS SERVE

Last week's events in Washington should have made clear to everyone in South Dakota a fact which has long been apparent to many. In one of the most brazen admissions in the political history of the nation, Senator HARLAN J. BUSHFIELD conceded that his advancement in office had been financed in a large measure by rich eastern interests which haven't the slightest concern in the internal affairs in South Dakota nor in the welfare of the people of this State as citizens of this commonwealth. BUSHFIELD's startling admission, coupled with others of his statements and actions of the last few days, should serve as convincing proof to those who still require it that by the election of BUSHFIELD to the Senate, the State of South Dakota lost half of its representation in the upper chamber in Washington and that it turned half of its influence in national affairs over to the entrenched interests of the East.

Last week's admission by BUSHFIELD was a spectacle indeed. Senator BUSHFIELD, who went to Washington after two scandal-crowded terms as Governor of South Dakota, stood on the floor of the Senate as the charges were hammered at him. The charges were that in 1 year alone the Mellons of Pennsylvania, the du Ponts of Delaware, and the McCormicks of Illinois contributed thousands upon thousands of dollars to the campaign in South Dakota which paved the way for BUSHFIELD'S election to the Senate. BUSHFIELD, before the forum of the United States Senate, did not deny the charges. Instead, he said that he was happy to have friends in the East who would "help us in the campaign to save the American system of government."

There is only one deduction that can be drawn. BUSHFIELD, as the Senator from du Pont, Mellon, and McCormick, is out to save the American system of government as conceived by du Pont, Mellon, and McCormick, his benefactors and political backers.

Of course, it may be possible that the du Pont-Mellon-McCormick interpretation of the American system of government, the American way of life, is identical with that of the average voter of South Dakota and that BUSHFIELD might be able to serve both his entrenched eastern friends and his South Dakota constituents at one and the same time. Let us glance, then, into the way of life of these "friends." Let us take Bertie McCormick, the multi-millioned head of the McCormick family of Illinois and the owner of what might be termed in understatement as the arch isolationist Chicago Tribune, a newspaper which occupies a unique position in American journalism because of the coloring it adds to both its comics and its news. Let us look in at Bertie on a day off, a legendary gala day which he has set apart to entertain his minions on the Tribune payroll. The workers have been invited to spend the afternoon among the feudal splendors of the McCormick estate near Chicago. But Bertie, the lord of the manor, is not at home to greet his guests. Suddenly a huge moving van rolls up into the estate's grounds. The rear doors are opened, a ramp is let down. Astride a giant steed, Bertie rides down the ramp and onto the lawn among his guests. Majestically he waves them greeting. Grandly he rides among them. They are still gaping, when Bertie's horse mounts the truck ramp. The doors are closed. The van moves away, the horse and its rider in lonely splendor in the dark interior.

Ah, the American way of life. How dear it is to the neurotic, feudal heart of Bertie McCormick. If BUSHFIELD can save it, maybe one day Bertie McCormick will bring his van and his horse and make a personal appearance among the peasantry of South Dakota. What a day to look forward to.

But there is much work to be done before that day can come. BUSHFIELD will do his part, but others must help. South Dakotans have helped with their votes in the past. They will be called upon again. The great day cannot come until South Dakotans are truly peasants. They were nearly in that class several years ago when the structure of privately controlled economics in America collapsed. But the Federal Government stepped in over the vigorous protests of BUSHFIELD and his friends. Thousands of South Dakota farmers were given assistance which permitted them to regain their independence and self-respect.

But Senator BUSHFIELD is out to halt any further endangering of his friends' concept of the American way of life. Last week on the floor of the United States Senate he repeatedly attacked various and sundry portions of the Federal appropriations which would permit the continuance of farmer control over farm production, and farmer say in farmer affairs, and Federal assistance to farmers in South Dakota. On Friday BUSHFIELD attacked Federal crop insurance, an admittedly imperfect but nevertheless basically worthy attempt to stabilize agricultural conditions in an unstable area. In a choice between the interests of South Dakotans and those of his rich eastern benefactors, BUSHFIELD chose to champion those of the latter.

"It seems to me," he declared, "that any business venture on the part of Government is wrong. The Government has no business to compete with private institutions which carry on the same character of business."

BUSHFIELD explained that that was my personal philosophy. By strange coincidence it is the personal philosophy of the entrenched interests which have contributed so generously to making it possible for BUSHFIELD to serve in the United States Senate.

Legitimate business, large and small, has a reasonable interest in the maintenance and encouragement of a fair and healthy attitude toward private enterprise in this country. But there are those of the well-entrenched who go far beyond that which is reasonable. Let business alone to solve all of the Nation's problems, is their swelling cry. Keep the Government out of our affairs. It is wrong for the Government to interfere. It is a cry that is growing in America, a cry that is carefully McCarthyed by many well-meaning but shortsighted persons identified with lesser enterprise. It is a cry that was at its full volume in the 1920's before the system of unrestricted private enterprise all but collapsed.

Carried to its ultimate conclusion the turning over of America to its large corporations can destroy rather than save the American way of life, not as exemplified by Bertie McCormick but the American way as it is and can be for the millions and millions of little people, the independent, self-respecting people such as we who live in South Dakota. fascism in Italy, nazi-ism in Germany, and the new order in Japan can trace their ancestry directly to an illicit union between corporations and power madness.

The concentration of wealth in the form of business or in any other form is power. Unrestricted, unleashed to rule without question or control, it is power potentially out of hand. It does not have to answer to the people: And government of the people, by the people, and for the people is by-passed.

And when does private enterprise and private wealth become dangerous? It becomes dangerous when it has the power and it makes use of that power to reach out from the east into the sovereign State of South Dakota, in which it has no conceivable concern, and make possible the advancement into the great and honorable forum of the United States Senate a political opportunist who brazenly admits the favors and acknowledges the help and who goes about to perform the duties of his office, not in behalf of those whose votes elected him but in behalf of those whose money was accepted to make that election possible.

The American way of life as envisioned by BUSHFIELD'S benefactors may have been advanced by the events of last week. That great day when Bertie McCormick shall ride his charger into South Dakota as a treat for the fawning populace may have been drawn a bit nearer, but the cause of government of the people, by the people and for the people received a foul and nasty slugging.

American Foreign Policy

EXTENSION OF REMARKS

OF

HON. RALPH O. BREWSTER

OF MAINE

IN THE SENATE OF THE UNITED STATES

Wednesday, June 23 (legislative day of Monday, May 24), 1943

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial which reflects the sentiments of the people of my section of the country with respect to American foreign policy, published in the Portland (Maine) Press Herald of June 21, 1943.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FINE SPEECH

Commander J. C. Alderman of the Brunswick Airport made to a graduating class in Brunswick the other day an address which those who heard him will never forget. They will not forget the illustrations of American valor which he used; illustrations culled in part from his own fighting experience in the southwest Pacific; illustrations which could but have had his hearers breathless with interest. They are not likely to forget, either, the application of them that the speaker made; the fine and deep philosophy which gave his words a clarity and meaning that ought to be perceived by everybody.

Commander Alderman spoke quietly of the era following the last war when disillusionment and lawlessness and cynicism were the

order of the day among those who went forth to fight for a better world and were let down. He said:

"We drew back from contacts with the world; we disregarded the efforts of those who were trying to set up machinery to prevent wars; and this war is the result. We must not have your children in another 25 years marching off to war. It seems to me that you can avoid the mistakes of a generation ago—the lost generation—only by hitching your wagon to a star; by having as a guide for your conduct something bigger than yourselves. The lost generation was lost only because it had no guide, no loyalty, no anchor. Down through the centuries it has been proved that no man is sufficient unto himself; that he cannot stand alone; that happiness is too elusive a thing to be sought directly. A man without a purpose in life is like a ship without a rudder.

"Right now you have a purpose in life. It is to defeat the enemy and to save our way of life from the forces of evil which beset it. May I suggest that, when this war is over, you not lose the loyalty which you now have but that you transfer it. We must always be loyal to the United States of America; but we should also think about the whole world. Think of the world, and resolve that when at last the time comes to die, the world will have been a better place because we have lived."

That was no mere graduation stuff. Commander Alderman would have his hearers, and all the rest of us, "set up, after the war, a world government to stop this silly business of certain inhabitants killing, torturing, and degrading other inhabitants"; he would have us start repairing the ravaged areas of the world, and build a new one based on the "four freedoms." This from a distinguished naval officer who has been under fire and seen death strike down his men.

We are actually at the beginning of a new era, and some of us do not yet realize it. Before and after the last war, many, perhaps most, of the officers in our armed services were cynics; they believed that wars would always occur; that such things as leagues to enforce peace or leagues of nations were just obsessions of starry-eyed visionaries. It took the experience of the last 25 years, the outbreak of a greater war than any yet known to the world, to bring about a saner outlook. We have it now. We find it not only amongst ethical leaders, churchmen, confirmed pacifists; we find it all about us, even in the Army and Navy. A quarter century ago we did lip-service to ideas of a better world and relapsed into selfishness, carelessness, contempt for what was termed idealism, but which was, in fact, practical self-interest as well.

We must not do it again after this war. Perhaps we have learned our lesson. Those must have learned it who heard Commander Alderman at Brunswick. It means something when a naval officer advocates a course which can but have the effect of making the Navy less important as an instrument of force.

Governmental Bureaucracy at Its Worst

EXTENSION OF REMARKS

OF

HON. FRANK B. KEEFE

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 23, 1943

Mr. KEEFE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news item appearing in the newspaper published at Weyauwega, Wis.:

MAYBE WE'LL MAKE IT A CITY CELEBRATION—INTERNAL REVENUE OFFICE WILL SEND A MAN HERE TO DESTROY 2 GALLONS OF ALCOHOL

There may be a war on over in Africa and New Guinea, in Russia and on the high seas, a war in which American boys are losing their lives and in which every individual in Weyauwega, in Waupaca County, in Wisconsin, and in the Nation has a particularly high stake, but that doesn't mean that bureaucrats still don't use any excuse to hold a soft job, that red tape still doesn't unwind, or that useless expenditures don't continue to pile up on a burdened taxpayer.

The latest petty example occurs right here at home. For the past 12 or 15 years, ever since the chemistry course was instituted in Weyauwega high school, a small supply of alcohol has been kept in the building and used at one time or another in the physics or chemistry laboratory. Tom Gerlach, instructor in these classes, states that about 3 or 4 quarts are used each year.

Alcohol in the amount of less than 2 gallons is stored in a fireproof vault, a small room that adjoins the office. It has been stored in the same container in this vault for many years. Nobody paid any attention to it because it was used so seldom, and Mr. Gerlach was about the only person who ever handled the container.

One day last week an inspector from the internal revenue service of the Treasury Department arrived in Weyauwega, puffed up with importance like a toy balloon. He took note of the 2 gallons of alcohol stored in the vault and practically burst his seams in indignation and horror. Didn't anyone know that it shouldn't be stored in a vault where other supplies are also contained? Did not the school realize the error of its ways? Did not the board of education understand that a new and inspected storeroom would have to be constructed to store this 2 gallons of alcohol? Just what was the world coming to, anyway? Two gallons of alcohol, indeed.

Superintendent of Schools A. H. Koten pointed out to the outraged inspector that it would be inconvenient, unnecessary, impossible, unreasonable, extravagant, visionary, wasteful, absurd, fantastic, grotesque, ridiculous, and a plain "damphool" stunt to spend the time, effort, money, and materials to build a separate storeroom in which to place 2 gallons of alcohol, but the inspector said it had to be done—or else.

"Or else what?" queried Mr. Koten.

"Or else you'll have to destroy the alcohol," the inspector replied with a steady glint in his eye.

"Well, that's easy," the superintendent agreed. "We'll just throw the stuff in the river."

But it appeared this apparently satisfactory way out of the dilemma was altogether too simple. Before that 2 gallons of alcohol can be made to disappear forever and ever, it will be necessary for Weyauwega high school or its official representative to file notice with the Treasury Department of discontinuance of the use of tax-free alcohol, in the form of a letter, in triplicate. If the alcohol on hand is to be destroyed, such information should be embodied in the notice, fully stating the reason therefor.

But here's the prize of the whole arrangement. Upon receipt of notice of discontinuance an inspector will call at the high school to witness the destruction of the alcohol and assist in the preparation of the final report.

Imagine that. A chap is coming here all the way from Chicago or Washington or some such place just to watch the destruction of 2 gallons of alcohol. It is to be hoped that the date for his appearance will be set some weeks in advance, so that a proper civic celebration can be made of the affair, so that the band will be out in full uniform, so that Mayor Walter Kamp can prepare a speech, so that—oh, hell—what's the use?

And if you think this newspaper is kidding you about this little episode, just read the following letter from E. C. Yellowley, district supervisor, district No. 9, Alcohol Tax Unit, Internal Revenue Service, Treasury Department:

CHICAGO, ILL., *May 29, 1943.*

WEYAUWEGA HIGH SCHOOL,
Weyeuwega, Wis.

GENTLEMEN: A recent report of inspection reveals that the vault in which you store tax-free alcohol does not meet the requirements of regulations in that other supplies are also stored therein.

Mr. Arlie H. Koten, who was interviewed by the inspector, stated that the small amount of alcohol used by the school would hardly warrant the construction of a proper tax-free alcohol storeroom, and that you would therefore prefer to surrender for cancelation your basic permit authorizing use of alcohol free of tax.

In this connection it will be necessary for you to file notice of discontinuance of use of tax-free alcohol, in the form of a letter, in triplicate. If you wish to destroy the alcohol which you have now on hand, such information should be embodied in the notice, fully stating the reason therefor.

Notice should be signed by Arlie H. Koten, who, according to the records of this office, is the only person authorized to sign for your school.

Upon receipt of Notice of Discontinuance an inspector will call to witness the destruction of the alcohol and assist in the preparation of final report, on Form 1451.

Your Basic Permit, No. TF-Wis-230, should be retained by you until proper disposition is made of all alcohol on hand.

Very truly yours,

E. C. YELLOWLEY,
District Supervisor.

Food Subsidy

EXTENSION OF REMARKS

OF

HON. W. O. BURGIN

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 23, 1943

Mr. BURGIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by Samuel Grafton, from the Evening Star, Washington, D. C., of June 22, 1943:

(By Samuel Grafton)

There is something shameful in our excessive national concentration on the food issue. We sound like a nation of fishwives on this point. Why don't we stop the vulgar screaming? The plain truth is that we have eaten better, these last 2 years, than ever before in the history of the country. Statistically, we have been packing it away; on the record, we have more to burp about than to bellow for.

I have just seen a London dispatch to the New Yorker, telling how the great house of Fortnum & Mason could find nothing but a few sticks of rhubarb for its "fruit" display. Berries are gone, in England; citrus fruit is unknown; even "variety" meats, or the common ordinary liver-and-lights, have disappeared from the butcher shops.

One might imagine there was terrific discontent in England on the subject. (They

even have those hated subsidies, to control prices.) But no, there is tremendous satisfaction. Lord Woolton's tough, hard food administration is one of the most successful and popular of ministries.

Our lamentations on food have risen to the sky, this last year; now perhaps the moment has come to ask ourselves what, precisely, we are crying about.

NO "MUDDLE" SEEN

We hear a great deal about the "food muddle." This term has achieved the dignity of a proper noun. One says "food muddle" as one says "Pike's Peak," or "Radio City." If we had a genuine food muddle, one of the signs would be lower food production. But we broke all records for food production in 1941. Then, in 1942, we broke the new record by a rousing 12 percent. The American farmer did this while he was being depicted by some of his professional and kept spokesmen as down and out.

We have muddled our way to the greatest output of food in the history of America. And we have eaten it, too; for only 15 percent of this record supply went to the services and to lease-lend last year. One has the feeling that many of the essays about the food muddle have been inspired by steak luncheons.

Now, at last, there are going to be some real shortages. Well, isn't that a marvel! What do we expect during war? Has there ever been a war without shortages? When segments of the press sail off into a nonstop tizzy because of the discovery that there are going to be food shortages, I am approximately as impressed as if it had made the equally astounding discovery that there is going to be some fighting in this war.

FIRST THINGS FIRST

Some of the plans for solving the "food muddle" seem to be based on the shocking theory that shortages during war are somehow scandalous, and can be avoided. Yes, they can be, by not fighting the war, and that is what Mr. Hoover's pet plan for demobilizing part of the Army comes to. Anybody could solve the wartime food problem by not fighting the war. Mr. Roosevelt is trying to do it while fighting the war. That is a problem of a different order.

The persistent yowling for an all-powerful "food czar" is also a solution-by-not-fighting. How powerful is all-powerful? Would the food czar have the right to stop munitions trains to let food trains go by? As the President has asked, Would he have the power to take steel from gun foundries and beat it into harvesters? First things first, and who ever said belly came first?

LIKE A FEVER

I have the feeling that 6 months from now we shall be eating less and talking about it less, too. This is one of those hysterical peaks with which we ought to be familiar by now. England has been through the whole business, about a year ahead of us; 6 months of furious concentration on absenteeism, then 6 months on transportation troubles, then 6 months on food. It is like a fever, and it passes.

The final chapter will be subsidies, which we shall come to (as did England) whether we like it or not. For subsidies really are the last word. They give the farmer a bit more without letting prices or wages rise. That is why subsidies are so hated. They announce that the party is over. The moment subsidies enter the picture producers get more money only if they need it, and when they need it. Price regulation becomes a fact-finding process. The system of economics by oratory comes to its end.

The current food debate is so hot because some of those involved in it know that, once subsidies are established, the debate will be over. This is the last chance to go to town on a good scream.

National Youth Administration

EXTENSION OF REMARKS

OF

HON. RALPH O. BREWSTER

OF MAINE

IN THE SENATE OF THE UNITED STATES

Wednesday, June 23 (legislative day of Monday, May 24), 1943

Mr. BREWSTER. Mr. President, I ask unanimous consent to place in the Appendix of the RECORD an editorial dealing with the National Youth Administration, published in Portland (Maine) Press Herald of June 21, 1943. The editorial expresses the sentiment of the people in my section of the country.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NATIONAL YOUTH ADMINISTRATION

The perennial troubles of the National Youth Administration are in the limelight again—or should the word be "still"? The House Appropriations Committee last week frowned upon it, though by the narrowest possible margin. This week the Senate committee, the last chance, will virtually decide whether National Youth Administration, which has been supplying nearly 2,000 trained workers a week to the war production with a total at present in training of 50,000, will be permitted to live.

That sounds like something that ought to be preserved, to be increased in scope of program rather than harried and suppressed. Here in Maine, so far as we have been able to learn, National Youth Administration has done a superlative job. The Quoddy Center has graduated into industry more than 6,000 youngsters; at the moment, 700 are there in training. At the Dexter Center, more than 1,200 young workers in machine, welding, foundry, and other metal-trade operations have been passed through into industry. The Maine National Youth Administration has an admirable record of accomplishment in various aviation activities and in radio, it built Maine's short-wave State police radio system, and sent into the Army itself trained radio engineers and technicians.

The National Youth Administration says, quietly and with proper pride, that it is carrying on, doing its usual consistent job, sending between 60 and 100 aircraft mechanics monthly into the armed forces and into industry. It has recognized and adjusted itself for the training of young women. As many young men in the past have obtained training in industrial pursuits, so will the young women now needed in the war effort receive work experience in these fields while fabricating useful items needed by the armed forces; they will receive training in aircraft, welding, riveting, engine mechanics, instruments, machine shop, radio, auto mechanics and drafting.

Naturally enough, there is growing resentment in the Congress against the prodigality with which the New Deal has tossed around funds. The terrific drain that war entails upon the Treasury reinforces the demand for economy. When we read of a single appropriation for one branch of the service totalling 71 billion dollars for a single fiscal year, the need for economy becomes more pressing. There is a limit upon the ability of even this Country to spend and spend. Currently, Senator Byrd and others are proceeding with their economy effort and are to be praised for it.

But it appears to us, and must appear to many others, that a blind devotion to retrenchment is just as bad as a blind disregard for sane spending. All programs must be put under scrunity; economy should be practiced in everything. But is it true economy to scrap completely an organization like the National Youth Administration which, provably and admittedly, has been contributing to our success in war? We believe the Congress should go slow in adopting so drastic a procedure.

Supreme Court Quorum

EXTENSION OF REMARKS

OF

HON. JOSEPH C. O'MAHONEY

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Wednesday, June 23 (legislative day of Monday, May 24), 1943

Mr. O'MAHONEY. Mr. President, several days ago Representative HATTON W. SUMNERS, chairman of the Committee on the Judiciary of the House of Representatives, introduced in the House, and I introduced in the Senate, identical bills providing that a majority of the members of the Supreme Court shall constitute a quorum. The bill introduced by me was referred to the Committee on the Judiciary. There appeared in the New York Times of June 21 an editorial endorsing this measure. I ask unanimous consent that the editorial may be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SUPREME COURT QUORUM

Last year and again this year the Supreme Court was unable to act in cases of high importance for want of a quorum. The required quorum is six. Three members of the Court have held the office of Attorney General, one that of Solicitor General. The Associate Justice just appointed comes from the Court of Appeals of the District of Columbia and so will have to disqualify himself if cases come up on which he has ruled in the lower court. Illness is a summary disqualification liable to any member at any time.

The Court consists of 9 members. Why is a majority not a quorum? Why 6 instead of 5? In a letter to this newspaper Charles Warren, the learned and impartial historian of the Supreme Court, showed that from the beginning of the Court a simple majority was a statutory quorum. A quorum was 4 out of 6, 4 out of 7, from 1837 to 1863 5 out of 9. In the latter year, there being no transcontinental railroad, Justices found it hard to reach the circuit courts of Oregon and California, and a tenth Justice was appointed. In consequence the statutory quorum had to be raised to 6. Without going into minutiae, it is enough to say that in 1869 the Court was brought back to its membership of 9, but by a lapse of memory or inadvertence for nearly 75 years the quorum for 10 has been retained as the quorum for 9.

This absurdity, discovered by Mr. Warren, has had too long a run. Representative SUMNERS, chairman of the Judiciary Committee, has introduced into the House, and Mr. O'MAHONEY into the Senate, an amendment of the Judicial Code:

The Supreme Court of the United States shall consist of a Chief Justice and eight Associate Justices, a majority of whom shall constitute a quorum.

If passed, as it should be, this will be not merely an apology to insulted mathematics but an end to certain unnecessary delays of justice.

The Program To Hold Down Prices

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 23, 1943

Mr. PATMAN. Mr. Speaker, the program to hold down the cost of living revolves mainly about the seven points stated by President Roosevelt before Congress on April 27, 1942. Its principal elements are:

First. Taxing individuals heavily.

Second. Taxing corporations heavily and holding profits down.

Third. Diverting excess purchasing power into the purchase of War bonds.

Fourth. Holding down consumer buying by discouraging installment purchases.

Fifth. Holding down prices by ceilings on prices and rents and by stabilizing farm prices.

Sixth. Rationing scarce goods as a means of reinforcing price controls.

Seventh. Stabilization of wages and salaries.

Thus far the program has worked with a considerable degree of success, but many experts, both in and out of Government, believe that stronger controls are necessary. It should be remembered that the program is two-sided, involving both Government and civilian action. Only by civilians supporting Government measures and by practicing prudent patriotic self-restraint can the Government program be made fully effective.

Here is what civilians can do in the battle against inflation—to hold down prices:

First. Buying and holding as many War bonds as they can afford.

Second. Paying willingly any taxes, including increased taxes, their country needs.

Third. Providing for their own and their family's future by adequate life insurance and savings.

Fourth. Paying off debts and avoiding making new ones.

Fifth. Paying no more than ceiling prices and supporting rationing.

Sixth. Buying only what they need and making what they have last longer.

Seventh. Not asking any more in prices or wages than they absolutely must.

The Food Crisis

EXTENSION OF REMARKS

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 23, 1943

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement on the food situation by Frank Gannett:

The food crisis is so real, so serious, that those who have specific knowledge of it cannot be silent.

Last September I saw the food crisis coming. In November, on a broadcast, I warned: "Unless our farm policy is changed, we face disaster." Disaster is now here.

In the last 6 months I have devoted much of my time to obtaining facts on the subject. I sought opinions from farmers, processors, and editors in every State. I made inquiries of 30,000 individuals and 12,000 editors. My conclusions are based on their replies and the statistics from every reliable agency I could consult.

We face an inevitable food shortage at home, needless prolongation of the war through lowered national morale and slowed production of war materials by ill-fed workers.

The people of America are looking to you and the Members of Congress to save this country from one of the gravest threats which it has ever faced. I mean, of course, the mishandling of our food problem and the adoption of a subsidy program as a substitute for fair food prices.

The proposed subsidies will not increase our food supply nor make any more of our food available for consumers. On the contrary, this subsidy plan will discourage food production. The food producers of the Nation are vigorously and almost unanimously opposed to it.

Subsidy is a political Juggernaut that never rolls backward. The first $1,000,000,000 of subsidy, without a doubt, would grow to whatever peak vote-seeking bureaucrats figured necessary to perpetuate their rule. Any subsidy plan is sure to add billions to our taxes and national debt. Administration of a subsidy plan will be enormously costly. It will add countless thousands more to the Government's pay rolls.

In my opinion, the public sees through this attempt to deceive them in regard to the cost of their food.

The 3-day food conference in New York, which has just closed, furnished abundant evidence that we face an alarming food shortage, as I predicted. There simply will not be enough to feed our men in uniform, our allies, the people whom we may rescue from Nazi rule, and our own people at home.

It is too late now to increase food production for this year. The blame for the present shortage must be placed where it belongs—on President Roosevelt, who not only failed to heed the repeated warning, but who now is choosing to play fourth term politics with proposals which will endanger food production in the coming year. Now, when unity is most needed, he is arraying class against class, arousing bitterness between food producers and consumers; particularly, President Roosevelt hopes, by doling out unlimited funds, to win the support of labor. Workingmen, however, must realize that they will suffer most from this costly and destructive program, the subsidy plan. You can't solve an economic problem merely by spending billions of dollars.

Before Pearl Harbor, representatives of agriculture appealed to the President to regard food as important as planes, ships, and guns and to encourage maximum food production. Not only was nothing done to give us more food but the policies adopted restricted and discouraged production and brought about the present alarming situation.

Fred Sexauer of New York, representing over 30,000 milk producers, warned that there will be a milk shortage in our large cities next winter. Policies now being followed have brought about the slaughter of vast numbers of milk cows that cannot be replaced in 3 years. The wrath of mothers who, as a result, may not be able to get milk for their children can be foreseen.

The alleged pretext for subsidies is that they will prevent inflation. Nothing could be more absurd or ridiculous. As Mr. Sexauer said, "The threat of inflation is being used as a bogeyman to induce the Nation to accept social reform, regimentation, limitation of opportunity and incentive. Before the war ends, it will be used to hide social and economic mistakes and to conceal from the public the sad state of economic affairs into which the Nation has been thrown."

High prices are the result and not the cause of inflation. Again, quoting Mr. Sexauer, "To date, the Government has done much to promote inflation, including propagandizing it, and nothing to prevent it. Forcing down prices by regulation discourages production and depresses morale among producers. The present system of price fixing on food products has all the elements of a national scandal and the making of a ghastly tragedy."

When the supply of any product is decreased by low-price ceilings, prices are forced up by the law of supply and demand, creating unlimited black markets.

Attempts to roll back prices not only must fail but they make the situation worse. Consider, please, as one example, the outrageous injustice of the butter roll-back as exposed by Senator AIKEN. The announced 5 cents a pound subsidy is denied to every farmer and little creamery producing less than 1,000 pounds of butter a month. Thus, the subsidy reaches only big producers whom the bureaucrats favor and the roll-back depresses the prices, throttling production of the hundreds of thousands of small farmers with four cows or less, who, however, actually produce 68 percent of the Nation's butterfat.

Dispatches yesterday from Chicago said that the attempt to roll back butter prices under a subsidy had brought about the sale of so much butter to Government agencies, the cold-storage warehouse stocks on June 1 totaled 82,000,000 pounds—almost three times the 30,000,000 of a month earlier. Thus, the supply of butter for the public has been drastically cut by the roll-back method. Today, when there is a shortage of meat, practically all the packing and slaughtering plants in Cincinnati are closed because, as they say, they cannot operate under the Office of Price Administration price ceiling regulation.

Our food supply is of vital importance to everyone. It must not be manipulated by politicians for the purpose of winning votes. Food production and distribution must be divorced from New Deal politics in all its phases and be placed in the control of one competent man whose sole purpose will be to give us more food at fair prices. He must know food production and distributing problems, and merit the confidence of our farm population. He must be free from the restrictions and interference of New Deal theorists and have real authority to do the job.

The people look to you men in the Congress to deal with this great problem vigorously and immediately. The programs of our impractical bureaucrats, who know nothing about food production and prices, are hourly making the situation worse. There must be a complete change in policy and a thorough house cleaning of those who have helped to bring about our present sad plight. Without a doubt, the country will rise up in overwhelming protest against any effort to cover up the administration failures in regard to the food situation by granting any subsidy.

Emperors of ancient Rome subsidized their populaces with free bread. That must not happen here, and I hope that you will do your full part in stopping this threatening disaster and help check this further step toward a totalitarian government.

FRANK GANNETT,
Rochester, N. Y.

They're Gaining On Us

EXTENSION OF REMARKS

OF

HON. FRANK L. SUNDSTROM

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 23, 1943

Mr. SUNDSTROM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the New York World-Telegram of June 21, 1943. I believe it is especially significant since it is a harbinger of the very serious problem to be met in the not too distant future:

THEY'RE GAINING ON US

Among the indictments which the framers of the Declaration of Independence drew against George III was this one:

"He has erected a multitude of new offices, and sent hither swarms of officers to harass our people and eat out their substance."

Scan that again, then read the article on page 1 by Senator HARRY F. BYRD. Ponder the startling figures which the Virginia Senator brings to light—

Ohio runs its State government with 25,000 employees, but the Federal Government has 90,000 employes in Ohio; 44,500 Pennsylvania State employees, but 215,000 Federal pay rollers in Pennsylvania; 1,100 working for Wyoming's State government, but 6,200 Federal workers in that State.

The figures tell graphically what we have permitted to happen to our once proud concept of home rule. Washington sends out among us from three to six times as many people to tell us how to run our business as we employ to govern ourselves. Not counting the Army and Navy, there are more people on the Federal pay roll than on the pay rolls of all the 48 States, plus all county and municipal governments, which includes all our policemen, sheriffs, deputies, firemen, and public-schcol teachers.

Not so long ago most Americans had no contact with the central government except through the Congressmen, postal employees, the Federal judge, and the United States marshal.

Now we have Federal offices and officers everywhere, telling us when to reap and sow, telling us what to buy and sell and at what price, how long to work and at what wage, what to eat and how to cook it, what to wear and how to make it.

This is a larger and tougher war than the last one. We have to have a much larger Army and Navy, but do we need one civilian Government pay-roller for every two and one-half men in uniform, when in the last war the ratio was one civilian employee to five in uniform?

We have 2,700 lawyers working for the Office of Price Administration. Britain has only 10 lawyers in its price and rationing agency. Maybe that helps explain why Britain's price control is succeeding where ours isn't.

Well, the Government still belongs to the people. Every 2 years, through the ballot, we have something to say about it. We elect the Congress, which controls the purse strings and provides the tax money for hiring all these "swarms of officers." If we don't elect the kind of Congress that will cut down the tax eaters to a controllable size it will be our fault that they take our Government away from us.

The number of taxpayers still exceeds the number who are making a career of being on the Government pay-roll. We cannot be sure how long that will be true. Senator BYRD discloses that since 2 years before Pearl Harbor the number of pay-rollers has increased 50 percent every 6 months. They're gaining on us.

Overconfident and Complacent War Production Board Admits Guilt and Waste of a Million Tons of Steel—Big Steel in War Production Board Deliberately Deceives

EXTENSION OF REMARKS

OF

HON. CECIL R. KING

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 23, 1943

Mr. KING. Mr. Speaker, several days ago while reading the Washington Evening Star I was sorely disappointed to read that due to the steel shortage allocations of that material fell 15 percent short of what the Army, Navy, and Maritime Commission said would be required to complete their third quarter schedules. Under Secretary of the Navy Forrestal, as well as other military and naval officials, expressed alarm over the steel situation.

This shortage of steel is not new. I was not surprised to read about it, because we have known about the situation for some time now and have done our best to make the matter known to the Nation. In my remarks of June 3 to this House I decried the complacent attitude of the War Production Board and their concerted attempt to issue news releases that would keep the public deceived into thinking there is plenty of steel to meet all the demands of our war effort.

The best example of this was to be found in the article carried in the Washington Post the same day the Star ran its story on the shortage of steel. The headline read as follows: "'Find' of steel seen averting supply clash." I hastily read this article marveling on such a find. I devoured the words eagerly wondering where such a load of steel could have been misplaced or inadvertently stored, but to be my amazement they had not found any steel at all. I was misled—the public was deceived. Do you know where the War Production Board found a million tons of steel without finding either the steel or any of the elements that go to make it up? Well, here is the W. P. B.'s story—

The extra steel will be produced, W. P. B. officials hope, by straining our production capacity to the utmost, by closer scheduling of production, by tighter controls over inventories of the metal, by shifting production in the interests of efficiency, and by an all-out management-labor drive for more production.

Interesting, Mr. Speaker, to say the very least. We have been at war for over a year and the War Production Board now speaks of straining our production capacity to the utmost—close scheduling of inventory—becoming efficient and finally launching an all-out drive. What have they been waiting for? What have they been doing for the past 18 months? Do they mean to tell the American people who are giving their lives on the field of battle that they have not been straining themselves, nor been efficient, nor watched their inventories, nor made an all-out drive? To top the whole business off, you find that the War Production Board only hopes to find this steel as it is set forth in the Post. Mind you, they only hope to find this steel by doing the things I have just described to you. Then why should the subhead line read: "'Find' of steel seen averting supply clash"? Why should the lead line of the article repeat the import of subheadline by saying that "'A find' of approximately 1,000,000 tons of steel for use during the next 3 months probably has averted another show-down battle between the War Production Board and the armed services, it was learned yesterday"?

Who in the War Production Board is feeding that type of propaganda to the press? Who in that agency is attempting to deceive the American people? Who in that agency is trying to stifle the truth of a steel shortage?

Who in that agency is preventing the development and establishment of independent steel plants in war-production areas?

Who in that agency is stifling the production of a sufficient quantity of steel to hasten the winning of this war?

The Corn Crisis—The Need for Action at Washington Desks

EXTENSION OF REMARKS

OF

HON. JOSEPH MRUK

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 23, 1943

Mr. MRUK. Mr. Speaker, when the President created the Office of War Mobilization and appointed James F. Byrnes as its Administrator, I hoped that now, at last, the merry-go-round of emergency-agency government at Washington was brought under a single directing hand which would prove to be effective in action so that all the riders on the merry-go-round would drive toward victory on the home front while our servicemen overseas are continuing their push to triumph on their many fronts.

But, when I presented the subject of the corn crisis to Mr. Byrnes, who must know as I do that soon the effects of the corn shortage will be felt seriously throughout the Nation, Mr. Byrnes told me: "This is not a matter for my consideration. I presume the Food Administrator and the Price Administrator will get together and consider this situation."

I have awaited a reaction to my presentation of the situation, from the Food Administrator and the Price Administrator, but when a response came to me yesterday it came neither from Chester C. Davis nor from Prentiss M. Brown.

I now am told by William McArthur, Director of the Grain Division, Commodity Credit Corporation, Department of Agriculture, that "it must be recognized that the market supplies of corn available at this time are not sufficient to provide all users with the quantities they require, and, while it is hoped that corn will be available in larger volume as soon as planting is completed, all users of corn and corn products will have to spread their supplies as far as possible."

"We realize," said Mr. McArthur, "that corn processors and manufacturers are experiencing difficulty in securing sufficient supplies of corn from normal sources. Limited quantities of corn are being received daily by warehousemen, but these supplies are not large enough to meet the demands of all users. Farmers in the Corn Belt holding stocks are reluctant to release these quantities until the prospects of the new crop can be more accurately determined."

The War Food Administration, Mr. McArthur explained, "has acted to promote a more equitable distribution of available supplies of corn through the calling of Commodity Credit Corporation loans, and the limitation of purchases by those having ample stocks. We have taken further steps to aid manufacturers and processors in securing minimum supplies of corn by the movement to users of some corn owned by Commodity Credit Corporation now in bin storage in the Corn Belt."

I trust that such action as has been taken by the W. F. A. will keep corn processing plants supplied for war-production needs.

However, I have spoken the case of war plants, and also of bakeries, confectionery manufacturers, wholesale grocers, medical-formula concerns, and breweries. All these and every home in America will be affected by the shortages which have now become critical not only in corn but also in wheat.

The Administration, simply, has not gotten down to essentials in dealing with these shortages. To this date nothing has been done to provide an over-all food administrator. No attempt has been made to requisition all corn stocks for proper distribution. The price of corn for the farmer was fixed below parity, and so the farmer is feeding his corn to the hogs, which will bring him a better return for his efforts; either the price of hogs will have to be rolled back, or the price of corn advanced.

If the Washington administrators are expecting that the next corn crop will solve their problems for them they might best abandon that hope right now, because the crop prospects are poor, after floods, unfavorable weather, and the shortages of manpower and machinery.

When you talk with the men in Government about corn and wheat shortages you find that those who would act do not have the authority to act, and that those who could act place blame upon the weather, and so forth, rather than accept their responsibility.

Last year when the fall grain was being planted, the theorists still had in effect their subsidy program whereby the farmers were to be paid for a percentage of their land which they left idle and were to be fined so much per bushel for all grain produced over and above their quota. They cannot deny these facts, and we all are going to suffer this year because of their short-sighted program.

Washington must yet learn that there is a battle front here on our own American shores, and that we must wage a winning war, too, on this home front. We have need for Eisenhowers and MacArthurs of action at the desks in Washington.

Servicemen's Dependents Allowance Act

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 23, 1943

Mr. McCORMACK. Mr. Speaker, one year ago today, June 23, 1942, the Servicemen's Dependents Allowance Act of 1942 became law. There is no doubt that the supreme goal of our armed forces is the destruction of the enemies of the United States. In this war we have seen that the entire earth constitutes a single battlefield. Our troops must everywhere meet and overcome the enemy in the air, on and under the sea, and on land. To accomplish this mission, our troops are being supplied with the finest equipment American engineering and productive skill can provide, transported speedily where most needed, and safeguarded in health. And finally the "house must be kept in order" and the welfare and morale of those troops, as well as the folks back home, must be maintained at the highest possible level. The first of those objectives is the most important. In one sense the last two are only necessary in order that the first may be successfully accomplished.

With the passage of the Servicemen's Dependents Allowance Act by the Seventy-seventh Congress, a great step forward was taken in achieving the third objective, that of maintaining welfare and morale at home. Today, 1 year after the passage of this act, family allowance and voluntary allotment of pay are now being administered for about four and one-half million soldiers on behalf of more than seven and one-half million dependents of men in the Army. The War Department, Office of Dependency Benefits is now doing business at the rate of about $2,000,000,000 a year.

It must be remembered that, when the act was first passed, an organization of both military and civilian personnel had to be set up. The Adjutant General of the Army created the Family Allowance Division, later the Allowance and Allotment Branch, A. G. O., obtained a two-story temporary building, which is located at Twentieth and B Streets NE., Washington, D. C., and designated as executive officer of this division, Col. Harold N. Gilbert, now brigadier general, When this division began to function in June 1942, the clerical staff numbered seven. Through the vision, foresight, and executive ability of General Gilbert, as the size of the Army increased to the millions of men we now have, this organization set up on a production system, was and is able to absorb the applications from dependents of the millions of men who have been inducted into our Army to date, and the many more who will be inducted in the future. This was no small task.

In October 1942 the Allowance and Allotment Branch was merged by order of the commanding general of the Army Service Forces, with the Allotment Division, Chief of Finance, and a new agency created, War Department, Office of Dependency Benefits. Today this is one of the most important agencies of the War Department occupying an 18-story building in Newark, N. J. From Newark, N. J., the Office of Dependency Benefits has mailed over 20,000,000 family allowance checks to wives, children, mothers, and other dependent relatives of Army men. These checks, too, are the tools of war because they mean security and freedom from want for soldiers' dependents and relieve the soldier of worry. There is probably not a single post office in the country to which the checks do not go. They go to places like Portland, Dallas, Baltimore, Cherokee City, Tennessee Pass, Shade Valley, and Six Mile Run.

At this time I wish to express my commendation of the efficient, courteous, and sympathetic manner in which Brig. Gen. Harold N. Gilbert, holder of the Distinguished Service Cross, the Distinguished Service Medal, and the Order of the Purple Heart, has administered the Servicemen's Dependents Allowance Act, passed by Congress.

The work of this agency is of great importance to millions of persons throughout the country, men in the United States Army and their loved ones. I know this agency will act as quickly as possible on all matters that come before it for consideration and action. Early action on each individual application has a vital, favorable relationship to the morale of our men of the armed forces and their families who are interested in any application pending in this agency.

Steel Shortage—Over 20,000,000 Tons—Due to Domination of W. P. B. by Big Steel Dollar-a-Year Men Who Block Erection of Independent Steel Plants

EXTENSION OF REMARKS

OF

HON. NAT PATTON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 23, 1943

Mr. PATTON. Mr. Speaker, I am appalled by the recent admissions which

now officially indicate how serious is the Nation's shortage of iron and steel.

I need not emphasize that iron and steel are the basic metals of both peacetime and war. Because of the shortage of the master metal the war program has labored under, our Army, Navy, the shipbuilding, and other essential production for war must repeatedly be cut back. Though the War Production Board has been finally compelled to admit that the total requests for steel made by these agencies are actually needed, and seriously, and that they are not overstatements, but are the bare requirements for these different agencies—overconfidence and complacency characterize Big Steel's executives in W. P. B. as they continue to repeatedly block the efforts of independent small business to increase the Nation's steel output.

Think of it. The total requests for steel for the 16 claimant agencies exceed 21,000,000 tons of finished steel for a single quarter of 90 days' production; and all that the War Production Board $1-a-year men have been able to assure delivery of is 15,000,000 tons. This means a plain shortage of 6,000,000 tons. On that basis about 25,000,000 tons a year. In the face of such shortage they are permitted to block new plants when sponsored by firms outside Big Steel's exclusive ring.

This steel shortage stands like a mountain between victory and defeat, between life and death, between freedom and slavery. Only with steel and plenty of it can an army and navy fight their way to final victory. This is a war of machines. I need not present more facts, for it is common knowledge that the shortage of this basic metal—iron and steel—advances the day of our final victory.

An examination of the personnel records of the Iron and Steel Branch of the War Production Board shows that it is an easy matter to understand, for policies are determined by people whose interests appear in need of inquiry. Here high-priced executives of Big Steel are, and are found entrenched in every position of importance—not at the modest salaries paid Government employees. While they are listed on the W. P. B. pay roll at $1 per year, they still continue to receive the same big salaries directly from their regular peacetime employers. Inquiry, no doubt, would reveal that they are large holders of stock. Many are officers of the large steel corporations. As soon as the war is over, they will, of course, return to their former companies whose interests they have been ever mindful of. Regularly they are so reminded by the big salary check they periodically receive from their employers during their comfortable stay at Washington.

Why do I call your attention to these startling facts? Simply because W. P. B.'s Chairman, Donald M. Nelson, must in the final analysis rely upon such individuals for association and advice in making W. P. B. decisions. It is my firm conviction that to entrust such individuals for counsel is to assure the Steel Trust that when there is a difference of viewpoint, Big Steel is there in the saddle. When a new firm is to erect a new plant in this industry, the interest taken by these executives is not unbiased. The fact is, though they are under oath of office, they get offensive and angry and connive to discredit and to otherwise undermine the faithful efforts of those who would so increase the Nation's output of steel. What dominates their mind appears to be the fear of another competitor whose independence may upset the comfortable lucrative base point price system and the monopoly control of market conditions which the Steel Trust has been permitted to build up over the industries of this Nation in the past 40 years.

Effect of Subsidies

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 23, 1943

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD. I include the following article by Arthur Krock, from today's New York Times:

EFFECT OF SUBSIDIES—ABSENCE OF BRITISH INFLATION IS AIDED BY LEND-LEASE FOOD

(By Arthur Krock)

WASHINGTON, June 22.—The argument by those in favor of food subsidies that they will not be inflationary in the United States because they are not in the United Kingdom has been examined by opponents of the plan and found wanting in a fundamental particular. The flaw is that British food subsidies, in the amounts current and those which prevailed in 1942, are more than cancelled by the value of foods obtained from this country through lend-lease.

According to British Price Control, a pamphlet issued late in 1942 by the British Information Services for distribution in this country, Lord Woolton, the Food Minister, announced in July of that year that net food subsidies were running at the rate of $508,000,000 annually; and it is not much more now. According to testimony before a congressional committee recently by E. R. Stettinius, Jr., Lend-Lease Administrator, and one of his assistants, lend-lease food constitutes 10 percent of Britain's food supply, and in 1942 about two and one-half million tons, with a dollar value of $797,000,000, were delivered for shipment.

LEND-LEASE FOOD DISCUSSED

This lend-lease food is sold by the Ministry to the British food trade and in 1942 it disbursed about $289,000,000 less than the value of the food in subsidies to stabilize prices. Conceding some variations, also that some of the food delivered for shipment was not shipped and that some was sunk, there still remains a margin in the British Treasury over the amount paid out for subsidies there. Whatever that margin is—something less than $289,000,000 in 1942—it is not inflationary but deflationary to that extent. Even if the lend-lease dollar value of food delivered and sold were exactly the amount of the food subsidies the result would be noninflationary.

In the United States the situation is completely different. Whether food subsidies could be held under $1,000,000,000 annually, as Price Administrator Prentiss Brown thinks, or at one and one-half billions, as the President believes, every penny would be inflationary because the Treasury which paid it out would receive no compensating sum, as the British Treasury does, and the money would go into circulation. The fundamental difference between the two situations is held by those who have stated it to dispose of the argument that, since the British can keep food subsidies from being inflationary, the United States can also.

BRITISH ECONOMY STABILIZED

During 1942 the British economy was effectively stabilized and the cost of living was kept stationary by close control over all rents, prices, and wages. The control was particularly effective through the use of food subsidies, which maintained bread unrationed, plentiful, and now priced; kept the prices of essential foods low enough to enable all citizens to buy their full allowances and by these measures discouraged demands for wage increases. The Food Ministry is the sole food importer and the sole purchaser of home-produced meats, sugar, and creamery butter. It also buys eggs, bacon, and many other commodities. The foods it does not subsidize the Ministry sells to wholesalers and retailers at cost, thus fixing wholesale and retail prices. The rest it sells to the trade at a loss to keep down the prices.

This is the loss that, in over-all Treasury bookkeeping, was more than wiped out by the dollar value of the lend-lease food in 1942 for which no payment is required. And in 1943 the indications are that lend-lease shipments are rising at least as much in dollar value as the rise is British food subsidies.

The noninflationary effect of these subsidies, in contrast to what would be the inflationary effect here, is not being pointed out as a criticism of lend-lease, as a suggestion that it should be stopped or reduced or that the British should be required to pay for it. The point is made merely to demolish the attempt to prove by the British experience that United States food subsidies would be noninflationary.

Proposed Establishment of Schools Under N. Y. A.

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 23, 1943

Mr. SPRINGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

JUNE 16, 1943.

Hon. RAYMOND S. SPRINGER,
House of Representatives,
Washington, D. C.

MY DEAR REPRESENTATIVE: I wish to register my vigorous protest against the proposal now before the Congress of the United States to establish a federally controlled and federally operated system of public schools under the National Youth Administration. I note the proposal calls for a general program costing $55,390,000, of which $3,314,000 would be spent for administration, and $60,000 for printing.

Obviously, this would build up a powerful group of Federal employees, not responsible to local communities or to State systems of public schools, who would duplicate the work of public schools developed over a period of more than half a century or more. This Federal system would seek to do the things the schools have done and are doing and are in an excellent position to do better in the

future than any new agency, because of the experience, personnel and accountability to the local communities, of the long-established public-school system.

Those of us who as school administrators or patrons, have had experiences with various agencies of this nature, controlled from Washington, believe strongly that the National Youth Administration and the Work Projects Administration, both created as depression emergency remedies, should be liquidated in fact as well as in name. Constant vigilance is needed in guarding against the creation of agencies of like nature and purpose, under the guise of new names, which would continue to seek to gain the same throttle hold of power and pay roll, for political purposes. Persons formerly on Work Projects Administration should not be employed by newly created agencies, merely to go about carrying letters some three or four blocks in the role of public welfare or social-service work.

Needless sapping of the public purse to set up a dual system of public education with undue advantage to the Washington-directed agency not responsible to local or State control, while paying students to attend and thereby draining the regularly constituted schools, is indefensible. Such camouflage is incompatible with all ideals and traditions of the free schools of America, governed, as they are, by their own local communities and coordinated by their own State departments of education. Our American democracy is founded upon free education.

The proposal would exploit boys and girls of our Nation for political purposes, create a paternalistic set-up in Washington with power to indoctrinate all schools of America with any given philosophy, violate the fundamentals of our type of Government, wreck the fine system of balances and coordination now existing between local school corporations (1,145 in Indiana) with their home-rule privileges, and the State department of education. At present, our local communities are given the choice in many things which are to be taught to their own boys and girls.

Again I say, I wish to register a vigorous protest against this needless, heedless exploitation of the taxpayer, the children, and the fundamental principle of government vested in State's rights. If citizens of our land do not beware, they will lose their blood-bought rights by sheer apathy, and suffer the fate of other nations which have allowed usurpers to wrest the power from the people by fair means or foul. Let's protect our schools against a pseudo system of public free education under the National Youth Administration.

Sincerely yours,

CLEMENT T. MALAN,
State Superintendent of Public Instruction.

Gasoline Rationing

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 23, 1943

Mr. REED of New York. Mr. Speaker, I have just received a communication from the Automobile Club of Rochester, N. Y., which will, I am sure, be of interest to those who wish to compare the Canadian system of gas rationing with our own system.

In view of the discrimination of the O. P. A. in the rationing of gas in different States and in various sections of the United States of America, the uniform system of distribution in Canada presents a picture of uniformity and fairness in distribution, regardless of the purpose for which the gasoline is to be used, quite contrary to the hodge-podge rationing policy pursued here.

Under leave to extend I insert the report from the Automobile Club of Rochester, N. Y., as follows:

REPORT OF GASOLINE RATIONING INVESTIGATION IN CANADA FOR THE EASTERN BLOC CONGRESSIONAL COMMITTEE

AUTOMOBILE CLUB OF ROCHESTER, INC.,
Rochester, N. Y., June 18, 1943.

After holding a conference at Toronto on the gasoline situation in Canada with Douglas Robinson, assistant to the oil controller, and G. M. Davis, executive assistant to the oil controller, I wish to pass along to you a few statements which I believe are important.

1. That the oil controller of Canada has full power over the production, distribution, consumption, and rationing of gasoline.

2. That 17 percent of the gasoline used in Canada comes from their own wells, and they receive gasoline from South America as well as from the United States, therefore, the rumor that all gasoline used in Canada is from the United States is erroneous.

3. All A ration books are issued to all passenger-car owners upon application and all receive the same amount of gasoline for the 12-month period, namely, 120 Imperial gallons, and this may be used in 1 day, 1 week, or 1 month, but no more gasoline is issued during the year to that owner.

4. The Canadian system of rationing does not include any provision for "snoopers" or the Gestapo, because there is no need for inspectors, as holders of A ration cards may use the 120 gallons in any manner in which they see fit.

5. Car owners are permitted to make a supplementary application for additional gasoline but such applications are carefully studied as to use and necessity. After one supplementary application is granted, regardless of error, no more gasoline is permitted for a period of 1 year to a B or C applicant.

6. Taxicabs are permitted 5 gallons of gasoline a day or 150 gallons a month, and salesmen, regardless of the extent of their territory, have a 300-gallon limit for the year, with the recommendation that but two trips be made throughout the year.

7. If the supply of gasoline for the month is short it is the plan of the Canadian authorities to lower the value of the coupon, rather than to curtail the use of gasoline.

8. With reference to the report that Canada is urging American motorists to go there for the summer and intimating that they would receive a plentiful supply of gasoline, I was assured by Deputy Oil Controller Robinson and Assistant Davies, that all car owners driving into Canada will receive 12 imperial gallons, which may be used in 1 day or in 1 year, but he assured American motorists that no one will receive more than the 12 gallons in the 12-month period.

It is my recommendation to your committee that all the functions of gasoline rationing be turned over to Mr. Ickes as Fuel and Oil Administrator, so that he will have full control over production, distribution and rationing of gasoline, and bring about a greater supply at an early date to the eastern seaboard.

I herewith enclose printed rules and regulations which the Oil Coordinator of Canada gave to me to be forwarded to your committee. He did say that the Chief of the Rationing Division of the Petroleum Administration for War has much material on the gasoline situation in Canada.

In conclusion, may I urge upon your committee that steps be taken to discontinue the pleasure ban on passenger automobiles at an early date.

AUTOMOBILE CLUB OF ROCHESTER, INC.
GEORGE C. DONAHUE, *Secretary.*

Selling the Farmers Down the River

REMARKS
OF
HON. PAUL STEWART
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 23, 1943

Mr. STEWART. Mr. Speaker, the farmers of America are aroused and rightly so; they are being ignored and forgotten by the agencies of our Government who have been given the authority under the law to regulate and regiment their affairs.

The president and secretary of the Oklahoma State Farmers Union have forwarded a message to the Oklahoma congressional delegation, through our chairman, with respect to existence of outrages in selling their potato crops, which are now under way. They state that No. 1 potatoes are selling for $1.40 per hundred pounds, which is only 70 cents a bushel.

At Spiro, in LeFlore County, Okla., the farmers have been mistreated far greater. A telegram from four citizens reveals that there is no market at all for their potatoes. These people cannot understand why they have been encouraged to grow a crop and find that there is no market. Why does not the Commodity Credit Corporation or some agency with authority take immediate action on this matter? Sufficient money is available to pay these farmers at least floor price for their crops, and within a short time a shortage will occur and the Government will not lose anything.

The slowness or incompetence of our governmental agencies is indeed appalling, possibly due to the exposé recently made on the floor of the House in not having an executive head with any practical experience in many of O. P. A.'s administrative posts and other agencies possibly due to the length of time consumed in making a study in rendering a decision.

We have no time left to debate this issue. If the agents of Government responsible cannot or will not meet this emergency, the last living one of them should be discharged, and while we are considering this bill is the time to put on a limitation as to action as well as to qualification.

One of my friends, Mr. Walter Adair, of Moyers, Okla., has just advised me by letter that in Pushmataha County, in the city of Antlers, where I reside, the same situation exists. This man does not make wild statements, but under the

scheme now in vogue the trader is and has an advantage over the producer and farmer that we must not overlook.

One other thing we must never overlook is the fact that it was the farmers and planters of America who rebelled against the atrocities of the mother country and made possible the freedom we enjoy today.

I represent the middle class. I am typical of the citizens who have appealed to me. Their problems are my problems and for 20 years I have kept faith with my promises to them as a member of the Oklahoma Legislature and I would be derelict were I, in their distressful moments, to fail them or be unwilling to sponsor their cause.

With all the consideration given John L. Lewis and his gang, the failure of our Government to respond to this emergency is an issue that will have to be answered.

Millions of dollars are being appropriated under the provisions of H. R. 2481 which we now are considering for the relief of agriculture, yet it appears that those in authority have no more knowledge of this emergency than a man cosmetologist would have in the many technical phases of piloting one of our superbomber airplanes.

Our policy has been a policy of agreement, but when failure is evident we know of no course but to be honest and bring it in the open, and when we see and know of a bunch of nonchalant Government agents sitting in the peace of their self-content, then it is time to bring it to the attention of Congress.

It has always been our policy to get along wherein public weal was a consideration of making a decision but when we are told by those in authority who cannot be reached by telephone or letter they will have to delay action, we are of the opinion that a general housecleaning should be had. Regardless of those on the public pay roll the people who are the final judge are becoming very conscious of our failure to keep faith with our commitments and the cold letter of the law.

Mr. Speaker, the following three telegrams portray and depict an unanswerable indictment of those who are charged with the responsibility of meeting this emergency:

Mr. Speaker, the telegrams to which I have referred are as follows:

OKLAHOMA CITY, OKLA., *June 22, 1943.*
Hon. JED JOHNSON,
Chairman, Oklahoma Congressional Delegation, Washington, D. C.:

Oklahoma potato producers being robbed potato buyers. Selling No. 1 potatoes low as $1.40 hundred gross. Joe Scott, president Board Agriculture, Washington today, joined by Farmers Union with message from potato producers. Government should immediately take steps buy these potatoes. Keep faith with Victory Garden producers, at least floor price $2.25 hundred.

OKLAHOMA FARMERS UNION,
TOM W. CREEK, *President.*
J. H. LAWTER, *Secretary.*

SPIRO, OKLA., *June 22, 1943.*
Hon. PAUL STEWART,
United States Congress:

Please also call attention of Senator ED. MOORE that there is no potato market in Spiro, Okla., bean market port. Why do people need farm products or are we being misinformed. This protest of such conditions is sent by Russell Overstreet, Tom Overstreet, John Collins.

MARGARET OVERSTREET.

OKLAHOMA CITY, OKLA., *June 22, 1943.*
Hon. JED JOHNSON,
Chairman, Oklahoma Congressional Delegation, Washington, D. C.:

Due to recent storms, Oklahoma farmers need carload of shingles ordered more than month ago of Western Lumber & Shingle Co., Seattle. Contents buildings being damaged due to no roofs. Thanks for your usual prompt consideration.

OKLAHOMA FARMERS UNION,
TOM W. CREEK, *President.*
Z. H. LAWTER, *Secretary.*

Does O. P. A. Expect To Roll-Back Harvest Time?

EXTENSION OF REMARKS
OF
HON. E. G. ROHRBOUGH
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 23, 1943

Mr. ROHRBOUGH. Mr. Speaker, the Office of Price Administration speaks much of its accomplishments in holding back the tide of inflation, and seeks the appropriation of large sums of money wherewith to continue its regulatory efforts. I believe it has helped to curb inflation. I believe regulation as to essential things is necessary. In view of the many regulations issued, it would be strange indeed if some of them were not worth while. However, if so many things were not attempted by this organization, there would not be so much delay, so much procrastination, so much confusion; and some necessary regulations could be promulgated and applied with dispatch and common sense.

It seems to me that, judging from the many things left undone by O. P. A., it might well be called the Official Procrastination Administration. This is clearly illustrated by a form letter recently mailed by C. A. Sayler & Son, of Clarksburg, W. Va., merchandise brokers and wholesalers of that city, to its customers, which reads as follows:

C. A. SAYLER & SON,
Clarksburg, W. Va., June 21, 1943.

To Our Customers—Important:

We have today received a circular letter from one of our largest canned-goods packers, from which we quote below—giving us the picture on prospects for several items from the 1943 vegetable pack. Please note the comments regarding the Office of Price Administration, and the effect their maladministration is having on the food industry. This situation is serious, and we ask your cooperation in doing everything you can to help alleviate present conditions.

We quote as follows:

"We are now at the height of our pea pack and if conditions today are any criterion of what we may expect throughout this summer, we can now definitely say to you that you can look for a very substantial reduction in our pack. Labor is the big problem, and we were notified on Thursday, June 17, that we could advance our mail labor to 60 cents per hour, provided the Office of Price Administration would approve it. We immediately that day called the Office of Price Administration on long-distance telephone and, after talking with three different people in that agency, could find no one who could give us approval or who knew just what action to take; so what our increase amounts to is that, after 3 months, the War Labor Board approves it. But we are still waiting for the Office of Price Administration to act, even though the Office of Price Administration was notified well over 2 months ago that the increase in labor rates had been applied for and what these increases would mean in dollars and cents insofar as ceiling prices are concerned. They still are not prepared to give an answer.

"It has become quite apparent to us that the Office of Price Administration is not qualified to do the job that they have before them and that their bungling is going to seriously affect the production of food which will be seriously felt by you and your customers next winter.

"We feel that the handling of food problems should be taken out of the hands of the Office of Price Administration and have so advised our Senators and Congressmen, suggesting that in any appropriation made for the Office of Price Administration that none of that appropriation should be used in regulating the food industry, and we feel that it is the patriotic duty of every person connected with the producing or distribution of food to put before their Congressmen their experiences so as to allow those Congressmen to be in full possession of facts in deciding the action that they will be called upon to take on the appropriation now before the Houses of Congress. A wire today telling your representatives your feelings may save a lot of headaches later on.

"Quite a few of our regular customers on spinach have been writing us for quotations, and we regret to have to advise that we will have no spinach to offer our trade this year as our pack is now completed and because of price ceilings we could not operate and recover our cost, and our total pack this year is considerably less than the quantity that we were required to deliver to the Army."

You can see from the above information that the Office of Price Administration's tactics is certainly crippling food production and will continue to do so unless some drastic action is taken. We urge you to contact your Congressman immediately.

Mr. Speaker, aside from the question of removing control of the food industry from O. P. A., it is apparent from the foregoing example, as well as from hundreds of others which have been called to our attention, that the administrative officials of O. P. A. do not know their business. They may be theoretical experts, but they lack practical knowledge and experience. It occurs to me that a practical definition of such a theoretical expert would be one who knows a great deal about one subject, but whose knowledge of anything else is insufficient to enable him to apply what he does know.

Clearly, the House action of last Friday relative to O. P. A., which requires those engaged in the formulation of any price policy, maximum price, or price ceiling to have had not less than 5 continuous years of actual business experience in the particular field of business, industry or commerce to which the same shall apply, was sound and constructive. I sincerely trust that the House will not

recede from its position in that particular. The people whom we represent both expect and demand that we take definite action to insist on practical and common-sense regulations promulgated and applied by practical and experienced administrators who are earnestly striving to win the war and provide food and shelter for the American people, and not by theorists who seek to effectuate experiments in regimentation.

Certainly, the O. P. A. cannot hope to roll back harvest time for peas or any other crop.

Address of Hon. James A. Farley

EXTENSION OF REMARKS

OF

HON. MATTHEW J. MERRITT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 23, 1943

Mr. MERRITT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. James A. Farley, at a luncheon of the Rotary Club of Reading, Pa., Tuesday, June 22, 1943:

We have heard a great deal in these past few years about the American way of life. I certainly have no quarrel with those who have so ably and eloquently discussed that subject. But I have wondered sometimes if, in our glorification of the American way of life, we have not forgotten that a way of life is, in the last analysis, the product of human beings. It is not a social or a political philosophy that someone has thought out and handed to other people as a guide for their activities. It is, rather, a name that we give to the habits and methods and characteristics of men acting in their relation to other men. In short, the American way of life is the product of a human being which we call an American. Today I would like to consider for a moment that average American who has created the American way of life, who, in doing so, has built a great nation, and, in the name of that nation, is impressing his character upon a wide and distracted world.

It took a good many things to create the average American. In the first place, he was the product of a problem that may be with us as long as men live upon this earth. He was the product of a continent called Europe, which has suffered for centuries from the fact that it could produce more people than it could feed. In these days, as we get into the habit of looking at the map of the world, we see in true perspective exactly what Europe is It is a peninsula thrust out to the west and the south from a great continent. In many places its land is poor and its capacity for the production of food is low. Its natural resources are, and have always been, scarce and of doubtful value. For the most part, its coast line, especially in the north, is forbidding, and, in many months of the year, almost inaccessible. Its rivers, in spite of the exalted songs and stories that have been written about them, are not great rivers. Its mountains, with a few exceptions, are not supremely great mountains. But its population has, at least in modern times, been excessively great. That population has been stricken time and again with indescribable calamities. It has been ravaged by disease; it has been beset by hunger. And because of these factors of inadequate resources and superabundant population, it has been cursed with the most bloody and continuous wars that have marked the history of the earth.

Those who made America, were the product of that background. They left that barren and unfruitful continent for many reasons; some because they were hungry; some because they sought religious consolation; some because they disagreed with the political life of Europe; others because they sought adventure; and others because for many reasons they were persecuted and injured at home. They came to America at various times, in various ways, and for various purposes. Here they found the answer to the bitter necessities that they had experienced in Europe. They found that while there were hardships in the wilderness, those hardships were nevertheless capable of being surmounted by courage and hard work and fortitude and patience. Unlike those of Europe, our hardships in America were not manmade. Nature in America, while it exacted a price, was an honest merchant because when men invested their labor and their courage, Nature paid them a fair and ample wage. This was all early Americans asked for, and this they were able to get. They brought with them the elements of culture, and constitutional government, and the instinct of workmanship, and technical skills, for in spite of its limitations, Europe at least provided that much for its children.

But Americans found it possible, because they were in a land of promise, to build upon these beginnings and to build better than they had known before. The culture that they imported expanded in America. Constitutional government found new ways of enabling men and women to live together. They multiplied their technical skills because they found ample resources to which they might apply that skill. And in the long years after they had founded a civilization upon the narrow ledge of this continent, they discovered that whenever the curse of overcrowding impeded their movements, they could move farther into the continent and find freedom all over again. And so the growth of America for four centuries was a process of endless new discovery. They went west because the West eternally satisfied their necessities.

It is out of great experience that great men are born, and it is out of great enterprise that a great people is born. As the boundless vistas of American opportunity opened and the population grew and prospered, so did each individual expand in his own views. For, in the last analysis, America was built upon individual men and women. They found in the beginning, as they struggled for self-determination and independence, that in spite of the fact that they had sought refuge from the jealousies and conflicts of Europe, that the source of those jealousies and conflicts had, like evil angels, preceded them to this continent. They found, even before national independence was created, that greedy empires had sought, through military power, to preempt the great American domain, and that on the south and the west and the north, and in the great sea at the east, they were surrounded by the encircling armies of European imperialism.

One of the most heartening things that we can recall, as in this war we are beset by aggression on the east and aggression on the west, is that when we were, so far as population is concerned, only a fraction of what we are now, we were beset by the same dangers. In spite of our precarious position, we fought and won a war for independence. We established ourselves as a nation, 13 States, in total area only a fraction of what we are now, by uniting in a desire to be free. By the courage of our men and women, by our enterprise, by our power to expand, by purchase, by diplomacy, and, when all else failed, by war, we set about the task of freeing this country of the threat of foreign dangers. From the Thirteen Colonies, Americans moved to the West and created new States out of the wilderness. They skillfully played the ambitions of the French, the Spanish, and the English in such a manner as to acquire a vast territory beyond the Mississippi. And as they acquired territory, unlike the practice of imperial Rome, they made each acquisition of territory truly their own by settlement and development. These were not men who made compromises with forces that threatened them. They were men who destroyed those threats by their own indomitable strength and courage.

If the American Nation has, in its resources, in its political institutions, and in its culture, preeminence in the world today, it is because strong men found three circumstances that favored the growth of a great nation.

The first of these circumstances was the great area of the country and the richness of its resources. No nation, truly great in every way, can be created without natural circumstances that favor its growth. There have been nations great in a spiritual sense which have grown in a small area and with a small population, but from time to time they have been the prey of physically stronger neighbors. The United States avoided that eternal threat of danger by the happy circumstances of its own position and size.

The second circumstance that favored our growth was the wise policy, inherent in the pioneers who settle this country, of creating, as they grew, political institutions that preserve individual freedom while they offer the broadest protection from selfish influences. They created a constitution sufficiently flexible to afford for all generations to come the possibility of change and growth.

The third circumstance that favored the growth of a great civilization was the fact that America was a meeting place of many cultures, many ideals, and many diversified points of view. It has been the genius of Americans to accept immigrants of many sorts, to permit them to make their contribution to our common life, and at the same time to assimilate them and their descendants in a truly unified American tradition. We have stretched out our hands to the unhappy people of Europe. We have offered them opportunity for a better life than they had at home, and all we have asked is that they have strong hands and loyal hearts.

In the course of our growth we have, in general, avoided interference in the affairs of other countries. We have not been anxious to make others as we are. We have generously contributed whenever we could to permit other countries to live their own lives, to be free of oppression and to grow as God and nature intended that they should. But we have not sought to impress our own culture upon others. We have learned this hard lesson from our own experience, because as we grew as a nation, we asked no help from others; we merely wanted the privilege of freedom to grow as we could.

A few years after the establishment of this Nation as an independent republic, our statesmen conceived that our duty, in fact that our safety, demanded that we, as the strongest nation in the Americas, should assert leadership in the two Americas in permitting other small republics to grow as we had grown. Out of this arose the most specific American statement of foreign policy that we have ever created, the Monroe Doctrine. The development of this policy with reference to the Western Hemisphere required, on our part, not only great strength but great forebearance, for we did not conceive it to be the destiny of the United States to create an empire in the Western Hemisphere. The wisdom of our policy of living at peace with our neighbors, while at the same time we offer them the broad protection of our power, is witnessed by the fact that in this war we have the friendship and solid support of all

those countries but one, and recent events indicate unanimous cooperation.

But all of this national greatness comes back fundamentally to the American as an individual. Only sound men can make a sound nation. It has been the habit of pessimistic people to speak of the disintegration of American character. When at times we have seen evidence here and there that wealth and security have made people careless and pleasure-loving, there have been those who have claimed that the fiber of America has become soft and that the inner integrity of our people has been destroyed. But these evidences of weakness were, after all, superficial and passing. Fundamentally, the American remains as he has always been. In this war we have the proof of this inherent soundness. It is not alone that Americans in uniform have upheld in every corner of the world the finest traditions of courage and skill. It is the fact that on the home front Americans have maintained order, have willingly accepted sacrifice, and have turned with incredible industry and skill to the task of production.

There have been nations, like Germany and Japan, that exalted their efficiency. But the test of 1943 has shown that efficiency is not created by the mere proclamation of an intention to be efficient. Efficiency rises from the strength of free people. In spite of many unfortunate failures of foresight, our American industrial life is adding glories to its achievements. American women in the homes, on the farms, in the factories, in the hospitals, and in the armed forces themselves are proving themselves to be the worthy successors of those women who stood loyally beside their kin in Washington's army. American States and cities are making their contribution to the national effort. Everywhere we find a spirit of cooperation and of loyalty to the cause of victory.

Our task, as we look to the future beyond this war, will be to uphold in spite of the suggestions of those who have formulas for security and happiness, to bear in mind that the United States was not built upon formulas; it was built upon the individual. We shall retain the power that is essential to the maintenance of America's responsibilities in the world only so far as we retain the spirit of the pioneer in each individual American. The door of opportunity must be kept open. The American boy must be taught from experience that whatever he attains depends upon his own inner integrity. We have won the past by hard work and honesty and self-reliance. There is no better formula through which we can win the future. The greatness of the past, in its achievements, lights the way for progress that is assured if no man-made shadows blur the road. It is for us to preserve for our posterity what our forefathers created for us, a Nation of free people, ever helpful to others, but always selfish for the continuance, within our own domain, of the American way of life.

Students and the Times

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Thursday, June 24 (legislative day of Monday, May 24), 1943

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a Phi Beta Kappa installation address delivered by me at the University of Florida on February 18, 1938.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

When Dr. Tigert referred to the number on the program that "challenged all sleepers to awake," I thought it was a very courteous thing for him to make that request of you so early in the evening. And I thought of the appropriateness of a statement that I once heard of as having been addressed by a lady to a gentleman who confessed that during each day he drank some 12 cups of coffee. The lady, very solicitous about his welfare, said, "Well, doesn't it keep you awake?" And he said, "Well, it helps."

Doctor, I need not tell you and the University of Florida that my sentiments toward you are pretty much those I heard of in the anecdote of a minister in Washington the other day. It seems that down on the front row at each service there was one of the faithful of the church who regularly fell asleep and after about 15 minutes the fact that he was asleep became audible to all. On one particular Sunday morning the minister decided that he would see if he could not do something to impress, in rather a shocking way, upon this good brother that he should not do that. And so this particular morning the minister interrupted his service and said: "All those in the congregation who would like to go to heaven, arise." And all those in the congregation, with the exception of the sleeping brother in the front row, arose. They all sat down. And the minister said, "Now, all those who want to go to hell, arise." The gentleman, awakened by that time, jumped up and looked around, and seeing no other in the congregation standing, said, "Parson, I just want to tell you that it looks like you and I are the only two fellows going on this trip."

You do me a very great honor, Mr. President, to permit me to be the voice of this great audience gathered here this evening to pay our tribute to this occasion, and to those in whose particular honor this occasion is held. I refer to the student body of the University of Florida, both present and past, and to those who are engaged, either as instructors or administrators, in the promotion of the educational process. I am glad that the time has come when we have such a thing not only as a great university but public education. We know that education is not a new thing upon the face of the earth, that there have been honorable and ancient schools and universities, but we know also that never in the world's history has public education existed to the extent to which it exists today. And we are proud to know that our State and its citizenry honor this institution, and that we have not only gratitude for its past but we have great dreams for its future. And we are glad that it is possible for this institution to gather within its folds men from varying parts of this State and from varying positions in society—the rich and the poor.

And I, personally, am very hopeful, Mr. President, that in some way it is going to be possible for more poor boys to come to this institution. That is not only for the sake of the poor boys, that is for the sake of society. And in saying that I am merely quoting the words of President Conant, of Harvard, in making a report for the year 1936-37 to his own board of overseers; and I am referring to the pride that he expressed that Harvard, by fellowships and scholarships, was making it possible for a cross section of the United States to find instruction at Harvard University. "We all know very well that if we restrict the class which receives special education only to the homes of the well-to-do, that we shall deny both this and succeeding generations a yeast which they can ill afford to lose."

A little while ago I attended one of the most interesting dinners that I think I ever attended. The president of Stevens Institute was sitting at dinner in Washington with about 15 of the heads of the leading bureaus and departments in Washington, and after the dinner was over he pushed his chair back and crossed his legs and said, "Gentlemen, I want to talk to you just a little about what we are doing at Stevens Institute. I came here to advise with you about it. Of course, you know we have a college there, and we have students, and we have a curriculum, and we have buildings, and we have a faculty. Now, what I am trying to find out is what we should be doing there, and how we may more effectively do that which we may do there. I remember, a few years ago I was called upon rather suddenly to read a paper of a very learned man; and this learned man in this paper referred to two things of the business world, to two classes of business executives. 'One of them,' he said, 'is responsible for the management of a factory or a business. He engages personnel, he assigns that personnel to the performance of various duties. He is responsible for output, for distribution, sales and credit, and collections.'

"And then he said, 'I should call that management, perhaps, in thinking of the category into which those functions in business should fall.

" 'Now,' he said, 'there are others who perform other functions in the business world. They are those, as it were, who make large business policies, the ones who determine the scheme of things, and where that particular business should fit in in the scheme of things. They are those who discern from the multiple social forces that play upon the horizon the direction of events, and try to ascertain the appropriate relationship between that institution and those events.' "

"Now," he said, "I should call that 'administration.' "

"The thing that I am troubled about, however," he went on, "is this: How can I fit that one, out of a hundred, that may have an opportunity to get into what I call the 'administrative' class, to be able to appropriately and effectively perform the important functions of that class? I realize there are problems in relation to management, problems of human temperament—not putting a square peg in a round hole; but I think we have come more perfectly to a mastery of those problems than we have of the other problems.

"Now, before you gentlemen begin to make your suggestions to me, I may just suggest an idea or two of my own. In the first place, the student, in order to be fitted for that one chance out of a hundred, or to be an 'administrator' in the sense in which I have mentioned the term, should know something about economics. And," he said, "singularly enough, I should like for the one who teaches him something about economics to be not merely an economics professor; we prefer at Stevens that our economics professors shall have been physicists before they became economists." He said, "The reason why we suggest that is that there always seems to be a sort of quizzical quality, an insistence on the factual, about the mind of a man who has dealt in a physical realm or world, that is not found in a man who has dealt with only theoretical problems. And," he said, "in addition to that, I know that I shall want these seniors who I know some day will sit in the administrator's chair, to have sat under a philosopher. I mean by that, the kind of a philosopher who tells us not about the ancient but about this world, and about the world in which those seniors, as men, will live.

"I am very sure that since we live most of the hours of our day inside the walls of a business, this wise philosopher of mine would

want to tell those boys how they may get the most out of those hours of the day when they labor with the work of the world."

And he had other things to say. But he set us into one of the most interesting discussions I think I had the pleasure of participating in in quite a while.

He was troubled about the question of education. There was the president of a great institution in whom was reposed a great responsibility for the direction of human lives, and not only the lives of those seniors but the lives of men and women in the work-a-day world of thereafter; and he was making inquiry of friends, because he had doubts about this process that we call education. Fortunately, he knew enough about it to have doubts. The most learned professor under whom I ever sat was the first one who shocked me almost out of my seat by saying for the first time, "I don't know." And so he was inquiring into the educational process.

I want to say just a few, and a very few simple words, to the student body of this college, and, by analogy, to all college institutions.

I don't know of anybody who is more deserving of sympathy than a student body; not because of the pains and penalties which may be inflicted upon you by a faculty, but by the circumstances in which you find yourselves. Most of you are now approaching maturity—a dare say, between the ages of 16 and, we will say, 22, 23, or 24. You have come together in a rather strange society, where you dwell and live more completely with men of your own kind than you ever have before, or you ever will again You have been thrust into a new geographical environment, into a new mental and spiritual atmosphere. Some of you have come here at the instigation of stern parents; others, because the social life of this great institution was an attraction to you; others, because it was the acceptable and traditional thing in your family, or your community, for you to do; and others, because you had nothing else to do; and a few—I hope a large number—who wated to get something out of books to which they didn't at home have access; and a few more—and I hope a large few—because they wanted to live in the atmosphere of learning, and they wanted to drink deep at the fountain of knowledge. They wanted to sit at the feet of men who not only knew how to tell others; who gave information as a guidance for their footsteps; and who, while they gave information, gave inspiration. Men who were the signposts, as it were, of life; pointing in the direction in which men's footsteps should go in the future.

And then, all of a sudden, you found yourself thrown upon this campus.

Some of you lived in dormitories, some in fraternity houses, and some in private houses in town, and some of you made some peculiar residence of your own, perhaps. You were thrown into contact with men of your own class, men of other classes, men of the college of liberal arts, men of the graduate schools; and after a while you found yourself living pretty well in a general sphere within this institution—eating, talking, playing to a large degree, with a more or less limited circle of men. Without being quite aware of it, you had, to a considerable extent, chosen the kind of life you would thereafter live by the way you associated yourself with people and things. You had already indicated what was on the inside of your heart by the friends you made and the professors for whom you developed a real and genuine affection, and you had already pretty well indicated whether you were to be tolerant or dogmatic or a doctrinaire, and whether you were temperamental or cooperative in your mental and temperamental and spiritual make-up. Whether you had dreams, whether your horizon extended beyond that day's life was, to a very large degree, making itself appear by what you did day by day.

I don't know just how much attention you have given to the constituency of this institution. I don't know whether some of you have been deeply gratified by what you found here—whether you have the satisfying consciousness that you found something for which you yearned a long time.

I remember how, as a little tot, one afternoon I stood on the porch of a country home, and I happened to be looking toward the West—it was the setting sun. Somehow or another I thought of California because that was far to the west, and I thought of it as the land of the setting sun. I always had an aspiration to go there. I have never been able to gratify that aspiration, but when I do I shall think of the little boy standing on the porch of a farmhouse in far-away Alabama.

And I know there must have been times in your lives when you've yearned for the fellowship that you found here, and when you've yearned for the comradeship of kindred minds that you found here, and when you've yearned for that stimulation that somehow made you walk whistling down this campus, and made you look perhaps, in the springtime, out at the sky and the green grass, and feel something of the satisfaction of being an intimate part of life—this vibrant, buoyant life of your own generation.

Well, the college, of course, is very vitally concerned in making you the very best "you" you can possibly be. I suppose the saddest experiences that any of us have are two. The first is when we come to be aware of our own physical and intellectual limitations; find there are men who are better than we are up here, who run faster than we with their legs, lift more than we can, exert ourselves as we will. That, I suppose, is one of the first great shocks that comes to each one of us. And then the other, the other great shock that comes to us, is the fact that there isn't anybody who can answer the riddles of life for us.

I remember—perhaps you do—when the years of your youth crept away and you kept looking for some perfect man—some man who had solved life's riddles, who had achieved life's enviable equilibrium, who had found out how to balance and to compensate and to adjust the controversial and conflicting factors of life, who had in the proper relationship the things of the outside and the things of the inside. And how you looked into face after face, into faculty member after faculty member, into loved one after loved one, friend after friend, and after a while, before you found that perfect model, you found already that you had grown to such stature that other men, perhaps, were looking at you for their own guidance and their own model. And then the consciousness dawned upon you that you, to a very large degree, almost completely had to answer life's riddles from your own experience, out of your own mind and heart.

And so then a great many began to wonder what was, after all, the object of an education. Some of you, no doubt, thought it was to teach you how to be more productive economically—and it does have that very important aspect. And some of you thought that perhaps it offered you amusement and entertainment with its store of knowledge. And then some of you thought of it as giving you the tools for a great service which your own qualities aimed to achieve. And then some of you thought of it as fitting you into a complex order into which you were born so that you would be able to find your place as a cog in a machine, and not interrupt its progress but contribute your share to its smoothness and continued effective operation.

Well, perhaps, all of those things are the answers to your questions. Maybe some of you want to know if education is going to teach you to be happy, or how to be happy. Well, there were some very wise men that expressed an opinion about what of permanent value the college could give. One of these men was a doctor—Dr. Kelly, who, out of a rich medical background, wrote a treatise of what men live by; because he had gained the impression that in all the patients that he had visited there were certain yearnings which he observed to be common to them all. And so he said there are four things that are permanent values in human life: First, work; second, play; third, love; and fourth, worship.

Then there was another very wise man, Dr. Eliot, of Harvard. He said in the "Happy Life," which he wrote in a very simple way, that there are nine things which give men abiding satisfaction. He said: "First was sight; then sound; outdoor life; family life; physical exertion; reading; natural or mutual service and cooperation; good name and good reputation; judicious selection of belief and faith.".

Then there is another who wrote long ago to a group of inquiring people in a little community at Corinth. He wrote them upon the important subject that agitated their minds, about the relative values of life. And this man who had once lived in Tarsus, no mean city, and then had become Paul, said to those inquiriers at Corinth: "There abideth faith, hope, and love—these three; and the greatest of these is love."

And so to this student body Phi Beta Kappa has now come.

What is Phi Beta Kappa's significance? For a-hundred-and-fifty-odd years this fraternity has tried to emphasize in the colleges of America the abiding qualities of life, and to stimulate an appreciation of those permanent values. It has placed emphasis upon scholarship—not that it indicates a learning of books and aquisition of factual contents—but it indicates an appreciation and assimilation of life. And so this chapter of Phi Beta Kappa is to join the ranks of all Phi Beta Kappa tradition, emphasizing the permanent abiding values of life.

Phi Beta Kappa can't solve the problems for you. It is not the answer of riddles. It tries to recognize progress in the right direction. I don't know of anyone that can answer your riddles for you. I can quote, merely to refresh it in your minds, perhaps as good an ideal of a liberal education which Phi Beta Kappa does appreciate as was ever given to anyone—the one given by Huxley: "I consider that man to have had a liberal education whose body has been so trained in its youth that it does with ease and pleasure the work that as a mechanism it is capable of; one whose intellect is a clear, cold logic engine with all of its parts of equal strength and in smooth running order; ready like the steam engine, to be turned to any kind of work, to spin the gossamers as well as to forge the anchors of the mind; one whose mind is stirred with a knowledge of the vast and fundamental laws of nature and the laws of her operation; one who has studied aesthetics, is full of life and fire; but whose passions are trained to come to heel by a vigorous will, the servant of a tender conscience; one who has learned to love all beauty, to put away all selfishness, and to respect others as himself."

Now a word to your faculty and to your administrators. I want to express to you the appreciation that society has for you. And I want those to be understood as words from the bottom-most parts of my heart, and the hearts of all of those men and women out there, busy with the work-a-day world. I know what you are doing, you who have set yourselves apart in the professor's laboratory, in the quiet walks of the university life. I know how inextricably the destiny of the society of which you are a part is interwoven with what you do; because if you withdrew yourself from it, it would dry up and die in a little while. Because history teaches me that you have made it what it is. You kindled in men's souls an appreciation of the

beautiful; you aroused in their minds an understanding of the complicated and the complex. You unfolded to their minds an understanding of life. You invented the great inventions; you made the great discoveries. You have held up high the torch of learning, of wanting to learn, on your meager little salaries. You have contributed richness that is almost the equivalent of the assets of the world.

A few days ago in Jacksonville, I was at a dinner one night. A great pulpmill had just been established over at Fernandina, the like of which has been established all across the northern part of this State, and turned waste cut-over land off of the tax books into an asset for which those great companies scramble for their source of raw materials. And you know the honor guests of that evening. Here was a roomful of 200 men, probably representing nearly $200,000,000, because they were some of the great businessmen of this country—come to do honor to the founder of a great invention. Here was a quiet man sitting at the table. That day a plaque had been unveiled in his honor up at Fernandina, and I had seen this quiet little man walk over and look at that plaque on the wall with the amazement of a child looking at a new toy, and almost burst into tears to think that anyone could honor him, a humble man, so signally. He had made little for himself in all his life, giving his secrets free without royalty or recompense to commerce and trade. And here sat presidents of banks, heads of great manufacturing corporations, able salesmen—but the fellow that invented the process that made it possible for all of them to be there was quiet, simple, little Dr. Herty, an honorary alumnus of this university.

And so it occurred to me that evening when I saw a representative of the University of Florida and of the Florida State College for Women in that audience, the thought occurred to me, well, maybe—maybe the people who play music, who sing songs, who write poems that soften the heart, that lift us up out of sordidness into unselfishness—maybe after all they too are pulp makers; because had it not been for what they created, all this other would not have come. And I can prove that all through our history. They have made the world what it is—the thinkers, not always like Rodin's, with his chin in his hand, but thinkers with materials and an experiment station and a laboratory that a grateful Government, Mr. President, ought to make available to you for every bit of research your men will do. I say advertise for students to invent the most complicated thing under the sun, and they will come here inventing it for you, because it is a challenge to their scholarship. Give them a few simple tools and a little place for them to work, and they will make things that will make you a new world.

And so I do want to say to you members of this faculty, you Phi Beta Kappa members everywhere who have devoted your lives to creative scholarship, not only through the lives of men and women, but in the laboratory, and thereafter in the channels of trade, how much we do appreciate it when we stop to reflect upon what you are doing.

And so it follows, Mr. President, that you are vitally important to us, us who are out in the outer world. We don't have time to pull back the curtains and see, as is were, the horizon and the sky. We can't sit quietly; we can't get away from the telephone that long. We can't disscciate our minds from the ordinary routine of the day; we don't have the genius for it if we did. You are the social scientist. You tell us what should be done; let us select from your recommendations those we deem to be feasible. We in Government can't create; we do well if we merely execute your own suggestions.

Take your complicated modern world. Why, Mr. President, if there are graduate students here who think that they have already climbed the summit of human knowledge, tell us, pray thee, how to stop a mad race of international armament that will lead to a destruction of a very considerable part of our civilization within the next few years; and the heart of the world stands aghast; and her brain knows not how to stop it. Take these machines that have been created since Watt's day, and have taken many from the home into the factory, and from the factory into the great city, and then into the slums; and tell us how we can keep these great machines that lighten the burden of toil on the backs of men, and not have these millions of unemployed. Tell us how we can adjust our complicated economic structure so that all should have enough; all should have at least that which is reasonable. Why, Mr. President, our problems multiply so rapidly that we stand in the vortex of it, simply aghast at the complicated nature of the society of which we are an infinitesimal part. And where can anybody go, save to the students, who make the times what they are?

So, Mr. President, to this university, I want to extend my greetings; to this faculty, my kindly good wishes, to these visiting members of Phi Beta Kappa, our cordial greetings and our gratitude that they have come to us; because they made us Phi Beta Kappa members. They have given us the yeast of the Phi Beta Kappa spirit.

And so to this institution may I give what you have heard called the fishermen's benediction. The fishermen in the Scandinavian countries, when they are about to depart on their long and dangerous voyages, are seen at the water's edge, with the hands of the village priest stretched over them, while he says:

"May the Lord bless thee and keep thee; grant thee favoring winds, a prosperous voyage, safe harbors, and stout hearts for the storms."

War Mobilization

EXTENSION OF REMARKS

OF

HON. HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, June 24 (legislative day of Monday, May 24), 1943

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address entitled "War Mobilization," delivered by the senior Senator from Utah [Mr. THOMAS] on June 22, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am glad that Richard Harkness invited me to come here tonight to discuss war mobilization.

This Nation has been at war for 18 months. American men have given their lives. The domestic economy has been seriously dislocated. Hardly a family has escaped some serious interruption of its normal living. But we are yet far from the total mobilization necessary to win this war.

There has been a stubborn persistence in business as usual, in and out of Government, which has retarded our war effort. We are not striking at the enemy with all our strength. We are not using to the full the great ingenuity and productivity for which this Nation is so famous. Our tremendous national abilities are "under wraps."

Although I have done it, it does not contribute anything to say that we have produced well, that our people are thinking and acting in the interest of the war effort. I concede that we have produced great quantities of war goods. I concede that our soldiers have fought magnificently. I go further and say that we have shown a strength as great as that of any other world power. But I say that we could show very much more strength if we were totally mobilized. We could produce more arms and munitions, more food, more ships, more of everything needed. We could bring this war to a conclusion much sooner, and that should be our consuming purpose. Every day closer that we bring peace means that much less suffering and death, that much more time to build a new civilization.

A group of Senators, of which I am one, more than a year ago adopted a premise upon which to base our actions. We decided that this war must be ended by unconditional surrender and that meant to us a complete and total conversion of the national economy to the needs of war. We cast aside all doctrines of half-way measures. We pressed for abolition of all customary practices in business, politics, labor, government, or any other category of American activity where maintenance of such customary practices would contribute to the prolongation of the war.

Today we are still advocating the same general doctrine. Today we see even more clearly that this is the only way. Total mobilization must be effected if we are to win this war in time to salvage the tattered remnants of civilization. We have seen deterioration of the home front grow as the preservation of customary practices persisted, as full mobilization was delayed.

In a report to the Senate of the United States, five of us, the majority of the Subcommittee on War Mobilization of the Senate Military Affairs Committee, have pointed to the problems confronting the Nation, to the reasons for the state of crisis in which we now find the domestic economy. The distinguished Senator from West Virginia [HARLEY M. KILGORE] is chairman of the group. We have offered suggestions for the solution of these problems and the removal of the causes of crisis.

The war effort may be divided into three main parts: production, manpower, and economic stabilization. These are all so interrelated that the problems of one become necessarily the concern of the others.

Each of the major symptoms of the threatened disintegration of the home front can be traced to some fault in the administration of production, manpower, or economic stabilization. Gasoline shortages in critical areas are the result of production shortcomings; distribution facilities have been inadequate or mishandled. Food shortages are the result of ills in production, in distribution, in manpower utilization, and in an unbalanced economy.

The new Office of War Mobilization was set up by the President along general lines advocated by the committee. It is our feeling that this Office has the necessary authority to effect total mobilization. We hope Mr. Byrnes will exercise every iota of the authority which has been granted him and that he will not permit this new agency to degenerate to the status of an umpire of disputes.

The Office of War Mobilization cannot but fail if it refuses to use its directive powers. It must lay down programs for the constituent agencies and correlate those programs into a grand strategy. It must supervise closely the agencies charged with carrying out those programs. The problems it faces are legion; not one of them can be evaded or passed over lightly.

The great crying need in this country today is a unification of all groups in the common interest. We are at war and cannot afford the luxury of internal fighting. If we

divide ourselves we cannot face our enemy with our full strength. And we need that full strength. Our military leaders know it too well. If we divide ourselves how can we hope to hold our allies as a unit?

The Office of War Mobilization can be the focal point for unifying the Nation. It can set up a coordinated, cohesive program for conducting the war, giving every group, every segment of American society and the American economy a job to do in concert with the others. It can do all this—but only by laying careful plans and pushing them through with vigor, disregarding of the divisive attacks which are bound to follow adoption of such a procedure.

If we are going to have unity there must be no discrimination by those acting for our Government, and Government must intercede where discrimination arises.

There can be no doubt of the need for unity when evidence of disunity dominates the national scene. Strikes are acts of disunity. The uncivilized race riots in Detroit, Beaumont, and Mobile; the zoot-suit riots in California—these are acts of disunity. The continuous intra-Government bickerings and the snipings at Government by outside groups—these, too, are disconcerting acts of disunity. And the snipings backed by unwise administrations are also acts tending toward disunity.

These disunities result in more strikes, more riots. They result in civilian and military unrest. They result in conditions which lead to black markets and chiseling on price ceilings. They result in a confused and unbalanced economy which sooner or later must give way to uncontrolled inflation.

It does not help to heap criticism on the so-called bureaucrats—they are victims of a faulty system bigger than themselves. It does no good to curse labor leaders in general because a few have been able to lead innocent, deserving workers into a damaging position. It helps none at all to berate the zoot-suit wearer or the Negro, or even to attack those who have succumbed to the mob spirit and precipitated the race riots.

Solution to these problems lies in attacking the root causes. If we remove the economic and social evils and political inconsistencies, there will be little reason for these outbursts.

A prime example of how not to solve the problems of disunity is the Smith-Connally antistrike bill, which recently passed both Houses of Congress and is now awaiting the President's action. If this bill becomes law, we will move one step further away from the voluntary system for labor and the voluntary system for industry in our country. Rather than prevent strikes, the bill I'm afraid will stimulate labor unrest to such an extent that war production will be seriously impaired. And this would be only the beginning of a series of results in disunity. As stated in the War Mobilization Committee report, recent strikes are more significant as a symptom than as a cause of disintegration of the home front. In 1942 and in the first 4 months of 1943, one-twentieth of 1 percent of total labor time was lost through strikes. Inefficient control and direction of production cause manpower losses several hundredfold greater. It is, indeed, treasonable for any group—labor, industrial, or government—to willfully retard production of critical materials. But threats of compulsion cannot substitute for rational organization. Legislated penalties cannot take the place of removal of the causes. If we continue to have high living costs, poor living facilities, inadequate transportation, needless migration, increasing delinquency, and other strains on workers we cannot expect to keep production at a high level by simply legislating away their rights as men. Unhappy workers cannot work well; will not work long.

Unity, then, is prerequisite to doing the jobs of war properly and on the huge scale necessary to win the war soon. Unity is necessary to do the jobs, and it is necessary that these jobs be done if we are to have unity. This sounds like a vicious circle. It sounds like the old question: "What came first, the chicken or the egg?"

But if we work in the direction of unifying our activities, we cannot but bring about those conditions which will assure a solid unity now and after victory is won.

The immediate jobs to be done are three: First, increase war production and balance it with the civilian economy; second, use manpower more efficiently and intensively; and, third, stabilize the domestic economy. These are big jobs, and they require that industry, labor, agriculture, government, and the consuming public work together in their performance. That is why the Committee on War Mobilization recommended, in its report today, that the new Office of War Mobilization establish a War Mobilization Board consisting of representatives of management, labor, agriculture, and the public to advise the Director and consult with him on all major policies. That would be a step toward unity, a step toward good management of the war program.

Increasing war production is a necessity. Judge Patterson, of the War Department, has announced that production has fallen off 5½ percent, and our committee studies reveal that it never reached the desired peaks. Maximum output of military and essential civilian items, we found, can be had only by advance planning and scheduling designed to assure that all military and civilian items are in balance with one another and with shipping potentialities. Current below-capacity output results from maintenance of peacetime practices, which preclude unified production direction.

There has been less planning and integration in the field of manpower than in any part of the war effort. Piecemeal and groping measures, unrelated to strategic and production decisions, have characterized manpower administration since the war began.

But, above and beyond the failures in manpower and production, are those in the field of economic stabilization. It is here that we have floundered most. There has been no clearly defined policy. The line has not been held. Inflation has all but crept in the back door while each problem was treated singly and weakly as it arose. Meat shortages, fuel shortages, failure to enforce price ceilings, the steady increase in prices, the freezing of wage ceilings—these are only a few of the well-known shortcomings of stabilization policy which have eaten at the vitals of the American people.

The faults in production, manpower, and stabilization cannot be laid solely to the Government agencies responsible for their administration. There are groups which have driven dividing wedges into the country. The agencies have worked under attack at all times. Their main fault has been that they have listened to the conflicting voices, have cringed before the whip of those who prefer customary practices now to early winning of the war.

It is important that the American people understand that there are forces which seek to divide the country, forces which obstruct unity. That is why I am here tonight. If the American people will raise their voices against further disruption, against acts of disunity; if they will plead for united action and participate in it, then, and perhaps only then, we will go forward unitedly to victory. It is all too easy to sit back and criticize destructively. The Nation needs more constructive critics—critics who will demand that the root causes be attacked and not the results of ill-managed business, labor, Government, and agriculture.

With the American forces ready for an offensive against the enemy in Europe, we at home must bend our every effort toward unity—for only through unity can we give them the support they desperately need and richly deserve. And when the enemy in Europe is finished we'll move against Japan with a unity of action that will cause the whole world to realize the almighty power of liberty-loving people aroused to a sense of fighting for the men, women, and children of this world.

The National Gallery of Art

EXTENSION OF REMARKS

OF

HON. THEODORE FRANCIS GREEN

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Thursday, June 24 (legislative day of Monday, May 24), 1943

Mr. GREEN. Mr. President, in view of the notable record of the National Gallery of Art, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The National Gallery—War Boom in a Museum," by A. D. Emmart, published in the Baltimore Evening Sun for June 24, 1943.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE NATIONAL GALLERY—WAR BOOM IN A MUSEUM

(By A. D. Emmart)

WASHINGTON.—An art museum isn't the first place, or even the second or third, that you would look for a war boom. Rather at a time when leisure and transportation are both reduced and energies and attention are so intensely focused on the war one would expect to find museums in something of a slump.

No over-all figures are available, but it is more than probable that attendance records would confirm that expectation. Certainly in the case of many museums there has been a decline from the peak of pre-war years. Those that have managed to hold their own are in all likelihood a lucky—and a small—minority.

There is, however, at least one conspicuous and preeminent exception. Moreover, it is an exception which, for excellent reasons, will rejoice and encourage the boards, directors, and patrons of all other museums. It is the new National Gallery in Washington.

At the present time the gallery is enjoying a remarkable success, a war boom. Every month its attendance figures are rising, and rising sharply. According to some estimates the visitors are entering its rooms at a rate about four times that of the London National Gallery's pre-war attendance, and nearly six times that of the Louvre. National galleries cannot be fairly compared with municipal and private museums, to be sure. Nevertheless, it is worth noting that the Washington museum's attendance now runs to twice the size of that of the next largest and greatest museum in this country.

This record becomes all the more impressive when certain things are remembered. The National Gallery is a new institution in this country—it was opened to the public in March 1941. Hence it has not yet had the time to acquire a tradition and the place in the country's life commensurate with those of the national museums of Europe. On the other hand, it has already run through the first phase of mere superficial curiosity.

Crowded as it is, Washington is still a small city in point of population by the standards of London and Paris. And then, of course, the war has restricted a very large part of the normal tourist traffic to the Capital.

In spite of these conditions the Gallery flourishes. In its first year, from March 1941 to March 1942, attendance ran to something over 2,000,000. In the main that was a pre-war year and one that worked off the first rush of sightseers. From March 1942 to March 1943, there was a falling off in total attendance, for this second period brought with it the first full impact of the war. The number of visitors dropped to just slightly under 1,300,000—still a remarkable total.

But since January of the present year the trend has been consistently and steeply upward, from roughly 130,000 in that first month of 1943 to more than 183,471 in May. In the first 5 months and 1 week of this year the attendance has mounted to 790,000, and it is apparent that if the rate of increase is maintained throughout the summer, fall, and winter, then the Gallery's figures for its third year will far surpass even those of its first.

Probably no effort to single out, weigh, and rank the various factors contributing to this astonishing growth of public favor would wholly succeed. Certainly the Gallery has attempted nothing in the way of spectacular stunts or bandwagon advertising. Its popularity is a natural, not a forced, development of interest.

One would have to begin with the basic things, in the first place the exhibits, in the second the setting of those exhibits, the building itself. The Gallery's exhibits are not by any means the largest in the country, but they are exceptionally fine—the Mellon paintings, the gifts of Samuel H. Kress and Joseph E. Widener, and the Chester Dale paintings on indefinite loan are the rich and splendid core of the exhibits. On the ground floor of the Gallery, however, a place is found for special exhibitions of contemporary work of current interest.

The building itself, like the collections, has often been described at length. At present, it is not necessary to do more than recall certain aspects of the gallery. First, and probably most important, it is an astonishing comfortable building, friendly to the eyes and body, and an amazingly efficient one in design. Despite its great size and monumental exterior, no museum in the world could be—few, if indeed any, are—less forbidding to the visitor. For one thing it is almost impossible to lose one's way in it. Nowhere does it present any discouraging vistas of long corridors and endless series of exhibition halls. The individual rooms, so beautifully contrived to show the objects they contain to best advantage, are light in color, invitingly small, informal, and cheerful. The resilient floors are specially sprung so as to make for easy walking. The lighting is superb. The seating arrangements are numerous and convenient; it is easy to rest in the galleries. The east and west garden courts are full of growing green things. The air of the building is washed.

All of this adds up to an appealing combination of seemingly contradictory yet actually complementary elements. The gallery is so spacious that it can, and easily does, absorb a host of visitors. For soldiers and war workers in Washington that means a welcome change, a relief from cramped quarters and crowded offices, streets, restaurants, and movies. It is big enough to accommodate a variety of activities without any of them interfering with the others. But the rooms are so proportioned that they do not overpower or chill. They do not confront the visitor with a confusingly large array of objects. Nothing is pressed upon him. It is quite easy for him, in fact, to avoid exhibitions altogether if he prefers simply to rest. The whole atmosphere of the place is reassuring. Nothing of the dreadful museum hush born of "grandeur" and dutiful respect haunts it. No unusual restraint, explicit or tacit, is laid upon the manner in which one talks, walks, or behaves.

The building is inseparable from its operation, the way it works. For actually it is a gigantic machine running as smoothly and unobtrusively in every detail as a well-made watch, from the great basement devices controlling temperature and air to the elaborate system of lighting concealed beneath the roof. Visitors are never aware of these things, always of their effects.

An outstanding part of this mechanism is the services provided of the gallery—ranging from an excellent cafeteria to what are probably the handsomest, almost surely the least expensive, color reproductions and catalogs produced by any museum in the country.

It is against this background of attractions, comforts, and services that the National Gallery has been geared by its director, Mr. David E. Finley, and his staff to wartime Washington. Today, in the absence of the former armies of tourists, the bulk of the visitors are men and women in uniform and Washington's wartime staffs, and this fact is one of particular, and happy, significance.

The gallery has arranged its program of activities—as indeed all of the country's museums have done—to meet the needs and interests of these two great groups, and, of course, especially the servicemen. The big, oak-finished Founders' Room has become a servicemen's room, equipped with writing desks, magazines, newspapers, free stationery, postcards, and so on. Here visitors in uniform can read, write, or, if they desire, simply rest and sleep undisturbed.

Each Sunday evening a special concert is given in one of the garden courts by distinguished musicians and musical organizations, among them service orchestras and artists now in the Army or Navy. Last Sunday, for example, it was Albert Spalding who appeared. Not long ago the Ballet Russe de Monte Carlo made a trip to Washington in order to give a Sunday night performance at the gallery for wounded men from the Washington hospitals. On Sundays, when the crowds frequently run to 20,000 or more, members of the museum staff select at random some 30 to 40 men in uniform and their companions for invitation to supper in the gallery cafeteria's private dining rooms as guests of the gallery and the persons whose gifts make up a fund for this purpose.

The gallery is keenly aware of the war workers, too, not least those who regularly use its cafeteria. The corridor leading to the restaurant has become a display space for some of the gallery's fine prints, and a 10-minute lecture is given each day at the lunch hour as well as a 45-minute concert of recorded music. These are not forced upon the diner—they are there for him to take advantage of if he wants to do so. A very great number do.

The success of this approach is manifest in many ways. The most outstanding is certainly the popularity of the gallery with soldiers and sailors. They come to it, it appears, not out of any dutiful wish for improvement but because it offers so much in the way of enjoyable relaxation. Those who are already interested in painting, sculpture or ceramics will find what they want. Those who are not greatly interested in art at the outset find their way to it indirectly through cool, restful rooms and courts, music, and good food.

That they like the Gallery is evident enough not only in the comments which some of them put down in the visitors' book in the servicemen's room but, even more markedly, perhaps, in the steadily increasing number of them who make a point of going to the Gallery even when they have only a little time to spend in Washington. It is clear that they have heard of it from others and that what they have heard has recommended it. It is evident, too, in the surprising number of requests the Gallery receives from soldiers in far-away places for some of its admirable reproductions in color of pictures that have lived in their memories.

The effects of this popularity of the National Gallery are not to be underestimated. One might properly surmise that now in wartime it is completely fulfilling its function as a national museum precisely because it is attracting to itself men and women from all over the country. And for a great number of them, it is becoming the symbol, the fortunate representative, of all museums. Many of the present visitors have never entered a gallery before, never thought of looking at paintings. Their experience in Washington, casual though it may be at first, serves as introduction into a new world of interests—so agreeable and friendly an introduction that they will henceforth think of all museums as inviting places.

Quite apart, then, from the important role the National Gallery plays in the country's life as a great national repository of cultural riches, the services of its director as an expert adviser on the use of art and artists in the war effort, and the contribution it makes to the recreation and happiness of Washington's swollen population and the thousands of visitors from Army camps, it is helping to build a new public for museums and galleries throughout the country. A considerable proportion of the men and women who have found their way to it will carry warm recollections of it with them when at some later time they return to their homes. In that respect the amazing development of the Gallery is the gain of museums—and ultimately art and artists—everywhere in the land.

Where Easy Money Is Not Wanted

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 24, 1943

Mr. PLUMLEY. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I am including an editorial from the Chicago Tribune, as follows:

WHERE EASY MONEY IS NOT WANTED

The Legislature of Pennsylvania has passed laws and Governor Martin has signed them, providing for an 80-percent tax on estates unsettled after 7 years. The primary purpose was to get at the $20,000,000 fortune left by Mrs. Henrietta Garrett, of Philadelphia, who had disposed of only $62,250 of it by will when she died in 1930.

In all, some 20,000 claims to the rest of the money were entered by persons who asserted they were relatives of the old lady. A German gentleman seems to have murdered his uncle and aunt to get the right to sue for their shares. Claims came in from all the States in the Union save two. And which were they? One guess should be enough. They were Vermont and New Hampshire.

There is a kind of honesty bred in the New England hills that is as incorruptible as the hills themselves. It goes far beyond the mere paying of obligations incurred. These people have a positive distaste for getting something for nothing. Maybe it's because nobody who

wanted an easy living would waste his time on those fields with their thin soil and their boulders. The depression didn't get these people down and neither did the floods and the hurricane that followed them by a few years. The Yankee farmers went right ahead, asking no favors and taking mighty few of those that were offered.

One spring, ten or a dozen years ago, there were devastating floods at about the same time in the lower Mississippi Valley and in northern New England. Every Congressman from the valley was howling for relief and more relief, and they were getting it. Vermont wouldn't take a nickel. The hill people said they guessed they could take care of themselves and they did, as they always have.

Some years ago Mr. Mencken, of Baltimore, after earnest researches, reported that in proportion to population, Vermont leads all the States in the number of its sons who have made "Who's Who." Vermont is also rock-ribbed Republican. In both these particulars New Hampshire is only a step behind. We draw no conclusions. They draw themselves.

Beliefs Are Personal

EXTENSION OF REMARKS

OF

HON. WILLIAM A. ROWAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 24, 1943

Mr. ROWAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of today:

BELIEFS ARE PERSONAL

Mr. Dooley's famous dictum that the Supreme Court follows the election returns may be given even wider application. Apparently the Court also follows the course of foreign affairs. This is no more than to say that the Court is aware of the significant social currents which dominate our times.

In the opinions delivered on Monday respecting the Government's right to revoke the citizenship of the Communist, William Schneiderman, both Mr. Justice Murphy, who expressed the majority view denying that right, and Chief Justice Stone, who spoke for the minority, took pains to assert that "our relations with Russia, as well as our views regarding its Government and the merits of communism are immaterial to a decision of this case." However, the judgment of the Court was tinged to some extent by the contemporary concept that our basic freedoms must have universal application. And that is neither unwise nor unfortunate.

This was a difficult case to decide, since it involved a question of attitude, rather than of action. The dissenting arguments were exceedingly persuasive. But the verdict evidently turned upon an old judicial principle, reiterated by Justice Murphy: "* * * Under our traditions, beliefs are personal and not a matter of mere association. * * * Men in adhering to a political party or other organization notoriously do not subscribe unqualifiedly to all of its platforms or asserted principles."

Here is a doctrine which Congressmen DIES and KERR and other inquisitorial patrioteers might well commit to memory. If this has relevance in the case of an admitted member and official of the Communist Party it must apply with even greater force to the case of an individual whose affiliation with the party is at most a remote one—that is, through some organization regarded as a Communist front or allegedly dominated by Communists. The establishment of guilt by association is a procedure wholly alien to our traditions.

"Nowhere in the world today," Justice Murphy asserted, "is the right of citizenship of greater worth to an individual than it is in this country. This does not mean that once granted to an alien, citizenship cannot be revoked or canceled on legal grounds. But such a right once conferred should not be taken away without the clearest sort of justification and proof." A man's reputation as a patriotic and loyal American is no less precious to him and should be taken away no more lightly.

The chief significance of the decision in this Schneiderman case would appear to be its reinforcement of the Court's emphasis on the rights of individuals. Once more, as it did in the Jehovah's Witnesses cases, the Court has acted to curb the power of the State to enforce conformity. This is also the emphasis of the Bill of Rights. It does not seem impertinent to suggest that the Court is what the Constitution says it is.

No Check-Off

EXTENSION OF REMARKS

OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 24, 1943

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from today's Washington Post:

NO CHECK-OFF

John L. Lewis has made another conditional surrender to the authority of the Federal Government. He will allow the members of his union to return to work in the coal mines until the end of October, provided that operation of the mines remains in governmental hands. It may or may not be considered desirable to return these mines to their private owners within the next few months. That is something which the Government will have to determine in the light of future developments. We do not know. But we do know it is wholly undesirable to have the Government's action determined by John L. Lewis.

Mr. Lewis is in a position to dictate conditions today for the sole and simple reason that he succeeded in imposing his will upon the Government in the past. The blustering arrogance with which he recently defied the War Labor Board enabled him to overthrow the National Defense Mediation Board in 1941 when it refused to enforce a closed-shop contract upon the coal mining industry. With the demise of that agency and the imposition of a closed shop through the subterfuge of unofficial arbitration conducted by John Steelman, Lewis found himself empowered to control the working life of virtually every coal miner in America.

This control is reinforced by the check-off system of collecting union dues. Mr. Lewis plainly expects the Government, as operator of the mines, to continue this system. What he asks, in short, is that the Custodian of Mines shall collect dues and turn them over to the union treasury in order to enrich a strike fund which will enable the union to defy the Government again when its magnanimously granted truce has expired.

The check-off has its useful place in normal relations between management and labor. But it has no place in the relations between the Government and its employees. If it were to be continued now in the coal mining industry, it would indicate merely that the Government operation was purely pro forma—that is, a concession to Mr. Lewis' whim. Either the Government should take over the mines in fact, imposing its own conditions of employment, or it should return the mines to their owners and tell the miners to go to work under the terms of the existing contract.

It is curious that this contract seems entirely satisfactory to Mr. Lewis under Government operation and yet is viewed by him as an "infamous yellow-dog contract" so long as the mines are in private hands. He is scarcely entitled to have it both ways. The fact is that Lewis is demanding Government operation as a device to save his own face, since he has not been able to bludgeon the full measure of his wage demands out of the War Labor Board. But the Lewis physiognomy is not now so universally beloved that the saving of it can be considered a national necessity.

What is a national necessity is the saving of the Government's authority and prestige. It may be more difficult to settle the coal crisis on the Government's terms than on John Lewis'. But it is worth the extra trouble, even at a temporary cost to the war effort. Any concessions to John Lewis at this time will make the price of getting coal mined, in the long run, higher than this Nation can afford to pay.

The Battle of Detroit

EXTENSION OF REMARKS

OF

HON. WILL ROGERS, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 24, 1943

Mr. ROGERS of California. Mr. Speaker, under leave to extend my remarks, I include the following article written by Mr. Max Lerner on June 23, 1943:

THE BATTLE OF DETROIT

I have been looking through the pictures of the battle of Detroit. They are not pretty, and they are nothing for Americans to be proud of.

I don't mean just the blood and the pain that you see on the faces of the men. Nor do I mean just the more than a score dead and the hundreds of wounded in the hospitals. Pain and suffering and the fact of death itself are less important than the cause for which they are endured.

But this cause is so meaningless, so deformed.

The key to the tragedy of Detroit is the fear and hatred that you can read on the faces of the men and women in the pictures. It is the mask of Caliban enveloping a mob that is wreaking its cruelty upon the helpless and the innocent. This hatred—not of the common enemy, but of our own American brothers—is a twisted emotion that shows up all the ugliness of the American soul.

What dolts we are, to dehumanize ourselves. And in what cause? In Hitler's, as far as immediate consequences go. The men who set these riots off, whether they be Bundists or Ku Klux Klanners, followers of Paul Joseph Goebbels or Gerald L. K. Smith, are doing Hitler's work here. That much is simple.

Hitler would be foolish if he did not use this weapon, especially at a time when he is desperate. It is as if he were to send saboteurs among us—only instead of destroying bridges they destroy our sense of decency,

and instead of disrupting communications they disrupt our living and working together.

But I say these things mainly to point to the very minimum of action we must take—Federal and local action against the known groups who spread violence in our war centers. I do not say them to absolve the American people of blame.

It is too easy to find alibis that wash the guilt away from those who took part in the riots, and from the whole American Nation. We cry: "Nazi instigators." We cry: "Kluxers." We create something fancy and objective, like race tensions and race prejudice that we discuss in a detached way.

The Kluxers and the bundists undoubtedly lit the match in every instance. But in every instance our America furnished the inflammable material.

What have we done to ease the daily crucifixion of the Negro in our midst, which leaves in him a smoldering bitterness? What have we done to give him fair employment in our war industries and elsewhere? What have we done to break down Jim Crowism in the armed forces? What have we done, by word and deed to make him see that he has a share in this war and in the world?

And what have we done, in turn, to cleanse the hatred and ignorance from the whites among us? What have we done to make them see that we are in a war against fascism, and that the essence of fascism is to treat some men as submen because of color and creed? What have we done to teach an understanding of the creative contribution of our minority groups toward the total American culture? What have the Government and business and the trade-unions done to develop going experiments in which white and black alike can work and live side by side?

Our spokesmen talk of reeducating Nazi Germany, of liberating Europe. We have some reeducating to do at home. The liberator must liberate himself.

Look in your own hearts, Americans. These men in the Detroit streets—these men splattered with blood, cowering in fear, their faces bashed in, their homes looted and burned, their spirits broken—these men, whatever their color may be, are bone of your bone. And these other men and women who have done the destruction, their faces bestial and fury-driven—these are also of your own America.

American men and women: this is your task. The suffering is yours, and the guilt is yours. You must learn what the facts are, but the facts will not themselves set you free. You must set yourselves free of hate and discrimination, of blindness and inaction. No one can do that for you—not even the Federal Government. It can help, but you must not lean entirely on that help.

The papers say that the Detroit riots have cut down war production. True. But what a curious way of putting it. Negroes are not just machines for turning out planes and ships. Negroes are human beings and Americans. What the riots have cut down is the stature of America.

Post-War Relationships

EXTENSION OF REMARKS

OF

HON. HAROLD H. BURTON

OF OHIO

IN THE SENATE OF THE UNITED STATES

Thursday, June 24 (legislative day of Monday, May 24), 1943

Mr. BURTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article published in Time magazine for June 28, 1943, giving an interesting and accurate résumé and opinion of the speech recently delivered on the floor of the Senate by the Senator from Massachusetts [Mr. LODGE].

There being no objection, the article was ordered to be printed in the RECORD, as follows:

POST-WAR REALIST

One Senator also took a positive step toward the future last week, and the Senate watched him with respect. Massachusetts' handsome young Senator HENRY CABOT LODGE Jr. made a post-war speech remarkable in two important respects: (1) it took for granted that the debate about United States participation in the post-war world had proceeded from the whether to the how stage; (2) it stressed national self-interest in the clearest terms yet used.

Senator LODGE based his speech on a simple fact which many Americans are unaware of: At the rate natural resources are being used up in World War No. 2 the United States may be a have-not Nation after the war, in such once-plentiful basic material as oil. To Republican LODGE, this fact alone had forever ended any thought that the United States could remain isolated from the rest of the world. It also provided a simple, realistic foundation for post-war agreements. Said Senator LODGE:

"It has become plain as day, and it is common sense to recognize, that our British and Russian allies are not only dedicated to the broad purpose of crushing nazism and fascism, but that they have a number of very definite and very practical national aims which have been frankly revealed to the world. * * * One of them—Britain—frankly intends to maintain the Empire, and the other—Russia—has clear intentions, regarding eastern Europe.

"We in the United States, on the other hand, are committed to speedy victory and to effective measures to preserve peace thereafter. But in the field of definite and practical aims there seems to be a vacuum."

DEBT AND DEBTORS

"As a fervent believer in the pressing need of effective intenational collaboration after the war, I submit that the United States owes it to the world as well as to herself to define her needs. * * *"

"We must develop a policy based on national self-interest guided by justice, which will bring people together as Americans regardless of racial differences. Such a policy can be based on those things which we must have from outside our borders to maintain our democracy, our military establishment, and our influence for peace in the family of nations. Some of the things which should be the objects of international agreement are:

"Vital natural resources which we either lack completely or of which our supply is growing scarce.

"Equality with other nations in international radio, telegraph, and telephone.

"An opportunity for free competition in international aviation.

"A real chance for our new, big merchant marine.

"Equitable arrangements in the field of international exchange.

"Naval, military, and air bases to safeguard the approaches to the United States.

"Agreement on these practical matters will make agreement easier on the great political problems. It is a fruitful approach which will unite the people."

NATURAL DEATH

Senator LODGE is the grandson of the late Senator Henry Cabot Lodge, the great World War No. 1 arch foe of Woodrow Wilson's League of Nations. In the days of the prewar, interventionist-isolationist debate he was often on the side of the isolationists.

Last week his bell-ringing speech, with its realistic mixture of self-interest and global thinking, won applause in the hardened Senate and praise from men who had stood on both sides of the old debate. Speech maker and applause were one more proof that the old cartoon figure labeled Isolationist, which some pundits are still busy beating to death, had long since died of natural causes.

The Government Must Act To Smash Attacks on Negro Americans

EXTENSION OF REMARKS

OF

HON. VITO MARCANTONIO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 24, 1943

Mr. MARCANTONIO. Mr. Speaker, under leave to revise and extend my remarks I include herewith a copy of a letter I sent to President Roosevelt on June 16. Since that time there has occurred a shameful anti-Negro riot in Detroit, costing the lives of more than 30 Americans, the large majority of them Negro, and seriously crippling production in vital war factories. This riot, carried out by domestic Fascists, has been a direct aid to the Axis enemies of the United States. It makes even more urgent the suggestions I made to the President in my letter. It makes imperative effective action by Congress to prevent the possibility of the recurrence of similar incidents. The letter to which I call the attention of the Members of this House is as follows:

JUNE 16, 1943.

President FRANKLIN D. ROOSEVELT,
The White House, Washington, D. C.

DEAR MR. PRESIDENT: I call your attention to a series of outbreaks of violence against Negro people and other minority groups in this country which have developed in various sections of the United States. Today's newspaper reports of the lynching of Cellon Harrison in Mariana, Fla., and of a riot of 10,000 whites against the Negro population of Beaumont, Tex., are but the latest in a mounting series of grave incidents of a similar nature, which includes the so-called zoot suit-sailor war in Los Angeles, the strikes against upgrading Negro war-production workers in Detroit, Mich., and Mobile, Ala., the pitched battles between Negro troops and white military police at Camp Wheeler, Ga., the slaying of 3 Negro soldiers at Camp Van Dorn, Miss., the clash of Negro soldiers and civilian police at Collins, Miss., the shooting of 4 Negro soldiers at Riverside, Calif., and numerous other instances of riots, lynch mobs, police terrorism, and incitement to anti-Negro strikes, all occurring within the short span of the last few months.

There is a peculiar Hitler-like pattern running through all these occurrences which in my opinion is more than accidental. It is significant that anti-Negro outbreaks have been stimulated precisely in those areas which are keys to successful war production and in and about military training areas. It is significant that immediate use of these outbreaks is made by enemy short-wave broadcasting agencies to spread distrust of

American democracy among peoples of darker races in India, China, Africa, and Latin America who are our allies.

The total effect upon our war effort of these incidents is, of course, to retard industrial production, to impair the morale of our armed forces, and to injure national unity so vital to the successful prosecution of America's war of survival.

I am well aware that nothing I have said thus far is new to you. It serves, however, as the basis for suggestions I would urge upon you as Commander in Chief. I am deeply convinced that effective steps to thwart the designs of enemy agencies to create racial strife in the United States must be taken by you personally. The actions of the Department of Justice in investigating all cases of lynching since the outbreak of the war at your direction, while commendable, have not had the desired effect. While in no sense suggesting abandonment of such activity, I must point out that in no case involving a lynching has a conviction been obtained. Indeed, while recognizing many problems confronting the Department of Justice, it seems fair and objective criticism to state that it has not made the accomplishment which must be made if this hideous problem is to be solved. In no case involving the murder of a Negro soldier has the Department of Justice—either indirectly through State prosecutions for murder or directly through Federal prosecutions for violations of the Civil Rights Statute (title 18, sec. 51)—secured the punishment of a person or persons responsible for this crime. In no case involving conspiracy to deprive Negro citizens of their civil and constitutional rights has the Department of Justice action been successful. Strikingly enough, indictments secured in Detroit over a year ago against known pro-Nazi individuals have yet to be prosecuted. And in consequence we observed the renewal of anti-Negro activities by the same forces one year later in the disastrous anti-Negro strike at the vital war factory of the Packard Motor Co.

Similarly, while the War Department has been prompt to investigate reported cases of violence and mistreatment of Negro soldiers, it has in the large majority of these cases failed to accomplish either punishment of the guilty persons or a plan to prevent the repetition of these assaults. In consequence it must be said that in transit to training areas, in civilian communities around training areas in certain sections of the country, Negro soldiers are subjected to unjust and brutal treatment without cause, to the harm of their own morale and to the great distress of their parents and loved ones who live in constant fear of the lynching or shooting of their soldier relatives.

Your cordial reception of a group of outstanding leaders of the Negro church recently, your reaffirmation in Executive Order 9346 of the Federal principle of no discrimination in employment in war industry, your recognition of the great heroism of our Negro troops through awards of the Navy Cross to Negro sailors, and of other medals of valor to Negro soldiers are all tokens of your determination not only to mete out justice to all Americans, regardless of race, creed, color, or national origin, but as well of your firm determination as Commander in Chief to tolerate no act which will retard our war effort or jeopardize the security and independence of the American Nation. In these actions you have the love and respect of the whole American people.

The time has come, Mr. President, when you, and only you, can strike a blow against those Nazi-influenced forces within our borders who strike at the very heart of our democracy at a time when it fights for its very existence. Only your voice, Mr. President, as the Nation's Commander in Chief has the authority necessary to rally every decent force in American life against those influences that seek to undermine our national unity.

It is with high seriousness of purpose that I urge you to go before the people of America and the people of the world and speak out against those forces attempting to tear the fabric of national unity. I urge you to make a historic fireside chat dealing specifically with the events mentioned in this letter. I urge you to place your high office back of guaranties that Negro people and other minority groups will be freed from every hindrance which prevents their full participation in our war effort; that every member of our armed forces will be given full and adequate protection by the Federal Government wherever he may be. And I urge you to effectuate these vitally necessary declarations with proper directives to the various agencies of government under your direction.

Such action will sustain the morale of 13,000,000 Negro people and millions of other minority groups whose labor and devotion are essential to victory. Such action will extend its influence to hundreds of millions of people of darker races throughout the world, without whose support the war cannot be won. Such action, I believe, will win the deepest understanding and response of all the American people.

Respectfully yours,

VITO MARCANTONIO,
Member of Congress.

Operation of the Coal Mines

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 24, 1943

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

MEMPHIS, TENN., *June 22, 1943.*

Hon. E. C. GATHINGS,
House of Representatives,
Washintgon, D. C.

HONORABLE SIR: Newspaper and radio reports indicate that Secretary Ickes is preparing organization and procedure for governmental operation of coal mines for the duration. This is a most serious matter to the country at large and to the coal industry.

It is our opinion, which is borne out by the record, that the coal industry has done an excellent job. It has served every private and public need without Government subsidy. It is now supporting the economic policy of the administration, and the law governing, by refusing to agree to subterfuge wage increases; and its action has been approved by the War Labor Board.

You will recall the terrible experience of the Government during the last war with the operation of the railroads contrasted with the fine performance of the railroads in this war under private operation.

If the Government takes over wartime operation and control of the country's coal mines, it will be permitting John L. Lewis to determine fundamental Government policy and will be punishing the coal industry and the country as a whole for the misconduct of one individual.

Government operation of the coal mines, in our considered opinion, will defeat its own end by causing smaller production, higher costs, lower quality of production, depreciation of plants, loss of coal by improper mining, general confusion in a well-stabilized industry. If the Nation wants coal in large quantities, such as private management has been furnishing, it should arrange through its present executive branch that the mines are profitably operated by those who know how and who are economically interested—their present operators.

If, to accomplish this end, firmness must be shown in dealing with Lewis, then let the Government be firm with him.

Unless the present situation is dealt with on a basis of fairness to the industry, then every union in every other industry will be pulling the same tactics to force Government operation in the selfish hope of improving its economic status at the expense of the Nation. The time to call a halt has been reached and your active help will be greatly appreciated.

We take the liberty of writing you as we have served for 20 years the industrial and domestic coal consumers of your State.

We wired you today of the urgent responsibility outlined above and we are keenly hopeful that such action will be taken as is necessary to properly handle this matter.

Yours very truly,

KIRKPATRICK COAL CO.,
L. M. KIRKPATRICK,
President.

Congress Coming Up To Popular Opinion

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 24, 1943

Mr. MADDEN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial by H. B. Snyder, editor, Gary Post-Tribune, Gary, Ind., on June 22, 1943:

CONGRESS COMING UP TO POPULAR OPINION

The Fulbright resolution calling for the "creation of appropriate international machinery with power adequate to establish and to maintain a just and lasting peace among the nations of the world" should pass the lower House of Congress without much contention. The resolution has been accepted unanimously by the Foreign Affairs Committee, a formula having been reached upon which Democrats and Republicans could agree.

The die-hard isolationists are opposed to the resolution on the ground that no action should be taken binding this country until the war ends and we see where we stand. But Congressmen have brushed aside this criticism for what it is—the last wail of the confirmed isolationist.

The action of the committee indicates that Congress is finally trying to catch up with popular opinion. Now that so many evidences show the trend of that opinion toward cooperation in international affairs following the war, Congressmen are screwing up their courage back of the scenes to breast the fury of those who are still more interested in hating England and Russia than in taking the essential steps toward world cooperation.

The Fulbright resolution is a much smaller step than the Ball resolution in the Senate. This plan calls for a world organization and an international police force. However, the two resolutions are not incompatible, and the passage of one, or both, will tell our allies that we do not intend to run out on them when the war ends.

That is the chief need for an expression of our intent now. Neither England nor Russia nor China can work out its own peace plans unless they know whether the United States intends to cooperate in keeping the peace.

State Assistance in the Military Training Program

EXTENSION OF REMARKS

OF

HON. A. SIDNEY CAMP

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 22, 1943

Mr. CAMP. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Gov. Ellis Arnall of Georgia, delivered at the thirty-fifth annual meeting of the Governors' Conference, Columbus, Ohio, Monday, June 21, 1943:

Mr. Chairman, my fellow Governors, and friends, the responsibility of the States to support the military training effort of our National Government has been met and is being met. Our achievement has fortified the faith of the American people in a dual form of political institution as exemplified by our representative democracy. The contribution of the States toward this titanic accomplishment surpasses all expectations. We have met the challenge of the crisis. We have demonstrated how perfectly the forty-eight States composing this Union are adjusted to serve as forty-eight bulkheads to buoy our Ship of State as it sails on toward Victory while "humanity is hanging breathless on its fate."

The States have given fresh proof that democracy can be made to work, even when disaster threatens.

By this superb example the States have given a new guaranty that the light that guides freemen shall continue to shine for us and our children and for the generations yet to come.

From the instant that "the drumming guns that have no doubts" first unloosed this furious war against humanity; with the first stroke of the President's pen that proclaimed a national emergency—our State governments have formed an unfaltering phalanx of strength behind our Commander in Chief.

We have been realistic, too, in our knowledge that the potential power of any nation to wage modern warfare is measured by the size, skill, and utilization of its total population, while anything short of that is to court national suicide.

The States have vindicated what their council of State governments pledged as their paramount objective in a resolution adopted at its fifth general assembly in January 1941, in which it was declared:

"That in furtherance of the national defense program each State should immediately take all necessary steps to promote total defense and * * * to this common end, all the States pledge to each other and to the Nation their full resources."

Not only have the States been true to that promise to use their full resources in the united national effort, but we have continued to maintain strong and efficient State government as a safeguard for the future liberty of our people despite the great concentration of power in the Federal capital necessitated by the crisis of war.

As our industries swung into all-out production of armaments and our military forces commenced their enormous demands on the young men of the Nation, the problem of the full utilization of our resources to a degree of maximum effectiveness we little dreamed could be attained, has been the constant impulse dominating not only the 48 States, but pervading also the 165,000 local subdivisions of government which represent the structure and essence of American democracy; and whose autonomy and integrity we have preserved.

This concerted all-American effort has not been one merely of marshalling and delivering the weight of our military prowess upon the battlefield. Great as that has been, the efforts of the States have transcended purely military aims. They have been the instrumentalities through which all of the administrative controls essential to the war effort have been exerted and accepted by the 135,000,000 individuals in this land whose future is now at stake.

Indeed through no other channel could this have been done. Not only is it impossible to deal with 135,000,000 citizens throughout our Nation, but legal theories of quality of government have existed undisputed in this Nation since Mr. Chief Justice Marshall said "* * * no political dreamer was ever wild enough to think of breaking down the lines that separate the States, and of compounding the American people into one common mass * * *." Under this doctrine, enunciated so long ago in the case of McCulloch against the State of Maryland, there was no other resource—yes, no other recourse—save the combined efforts of the States, upon which the National Government could rely in this hour of emergency.

Three simple examples illustrate what I mean. First was the administration of the Selective Service System—set up entirely through the Chief Executive of each State from among citizens who volunteered their services to the Governors. Second was the complicated plan of rationing—whereby our soldiers would have enough food to eat in camp and on the battle front, and planes would have enough gasoline to hurl their thunderbolts from the skies. Third was the elaborate program of civilian defense. While the procedures in each instance had to be standardized and rendered uniform through regulations emanating from the seat of government at Washington, the execution was in the hands of local officials designated through the exclusive instrumentality of the States and removable by them.

Not only was the responsibility for these things a natural and inherent prerogative of the States, but the financial burdens incident to carrying them out were borne largely from State treasuries.

How extensive these expenditures have become, I can illustrate best by reference to the figures anticipated for Georgia in the coming fiscal year. Of our total receipts from all sources, except dormitory fees of civilian college students, 38 percent will go directly into the war effort. If our Georgia figures are adjusted to include the direct loss of revenues due to the nonuniform gasoline rationing, somewhat more than half the tax receipts of Georgia and virtually all the funds obtained as grants from Federal agencies are being expended directly to further the war effort.

Nor do these figures on disbursements take into consideration any expenditures from our educational establishments, either colleges or common schools, both of which have been enlisted 100 percent behind the campaign for victory.

I do not know precisely, in percentage and amount, how these compare with each of the other 47 States. Since Georgia not only is in the southeastern area where training is concentrated, but on the seaboard where additional problems including gasoline rationing, are posed for State administrators, some of our expenditures may be somewhat above the national average. On the other hand, I have no doubt that expenditures in some of the States with heavy readjustments of industrial population will exceed those of my State.

Certainly it is conservative to say that at least a third of the taxes paid to State governments are now being expended for national defense, in a period when they have assumed increased responsibilities for the normal services of government and have lost, in many instances, Federal grants and assistance in personnel to an important degree.

I think that the best summation that I can give of the part played by the States in the war effort is through a brief outline of what Georgia has done. Every State has done its share, and, in general, the pattern of participation in our united effort is much the same.

On the strictly military field Georgia has an efficient State guard, replacing for the duration the National Guard men called into Federal service. It is a regularly equipped force, comprising 11,108 officers and men. It is not merely a group of uniformed but untrained civilians. At the peak, 5,000 of these guardsmen relieved Regular Army forces in protecting vital installations. This emergency has passed, for the time at least, although several hundred are still so assigned.

The State legislature appropriated for the support of the State guard and the State civilian-defense agency the sum of $420,000 for the coming fiscal year.

The Adjutant General's Department maintains a complete record of each of the 5,300 members of the Georgia National Guard now in Federal service. These documents will constitute the basic military record of these men for all future years.

Over a quarter of a million Georgians have volunteered with the Citizens Defense Committee for some form of essential service. Excluding those who have enrolled for more than one activity, there are 52,277 volunteers in the service corps alone. There are 80,000 in the defense corps. I will not enumerate all the categories, but, as an example, I can tell you that we have over 4,000 assigned to emergency food and housing services, over 10,000 in the emergency medical services, over 3,000 in the emergency road service, and almost as many in the utility repair units.

The organization of this multiplicity of services, necessary to safeguard the public in the event of an incident, has been an obligation of the State, and the overhead has been provided exclusively from the State's budget.

I suppose the men administering the Selective Service Act in the States and in the local communities have done one of the most unthanked jobs that had to be done during the war. The 188 local draft boards in Georgia, served by 603 medical volunteer officers, and the six appeals boards with their 81 medical advisory members have done a splendid, a fairly and equitably administered job in our State, unobtrusively and patriotically. This has been wholly a State function.

These duties which I have mentioned are performed by wartime emergency agencies. Nor have the regular agencies of the State been behind. Our colleges have been turned over almost entirely to the War and Navy Departments. They house thousands of young men training for the armed services. Our common schools, through the 105,000 students that make up the Victory Corps in 508 high schools, have been training for usefulness in the war, with emphasis throughout our high-school curriculum upon those subjects that will have wartime utility either in the services or in civilian capacities.

Our health department, in addition to supervising 6 emergency base hospitals and 216 first-aid and evacuation centers and emergency medical service with 541 doctors, 649 nurses, and 982 orderlies and other aides prepared to meet any danger that might come in the wake of another sneak attack, has

performed enormous services to the Federal Government in the establishment of the vast training program in our State. I would not undertake to estimate the diversion of the department's resources, in manpower and budget, from usual activities, to those designed to safeguard the health of the soldier, the sailor, the men of the merchant marine, and the worker in defense plants. All of the department's resources have so been used and will be used until the war ends.

Our highway department's existing work is 95 percent upon defense access roads. In setting up the anticipated current budget for the new fiscal year, only $14,000,000 worth of new construction is provided. Every dollar of that money will be spent for roads essential to national defense. I may add that a great many of those roads will have very scant value when peace comes. In addition, the department will expend $2,500,000, almost all its maintenance budget, on keeping military and defense highways in condition for traffic. To add to this, the penal agency of the State has made available 700 prisoners for maintenance of such roads.

This current cost, although almost 100 percent of Georgia's contemplated highway expenditures in the next 12 months, is the smallest item. The damage done to the roads of the State by the heavy traffic incident to their military use will cost the State at least $100,000,000 for reconstruction after the war, a sum exceeding the total Federal grants to Georgia in the last 10 years.

The diversion of half of the State's revenues, directly or indirectly, to the war effort and the concentration of every agency's activity upon war work has been necessary. It has been duplicated in nearly every State.

On this record I feel that the institution of State government, as a component of the most powerful community in the world, can be proud of its support in the military training program. It has been a noble test of the apparatus of democracy in these "days that try men's souls."

Those who have borne the leadership in State government, unlike many contemporaries in private walks of life, have placed winning the war ahead of business as usual. The people's State governments were in the vanguard in buckling down to fight the war while others were content merely to talk the war.

This has been the token of our loyalty to American institutions and our determination that those institutions shall not perish from the earth.

I have described for you, as briefly as the details themselves permit, some of these activities in wartime America that are common to all of our States. If I have referred to the figures for Georgia, it is because Georgia is typical of the effort of all 48, and is that one with which I am intimately familiar.

I am confident that these 48 States, expanded from the Thirteen Original Colonies that linked themselves by an indissoluble bond "to form a more perfect Union, insure domestic tranquillity, provide for the common defense, promote the general welfare and secure the blessings of liberty" will continue through mutual trust and mutual sacrifice to lead mankind from darkness to a brighter day. Thus will be fulfilled the prophecy that America was God's last chance unto His children to make a world here below.

Because much of the personnel engaged in training units for combat are stationed here for the duration, they have brought with them their families. The congestion in our school systems is serious. Very large sums have been spent by the State and even larger sums by local units of Government in meeting this problem as best we can. The assistance given by the Federal Government has been wholly inadequate, and the selfish resistance to proposals for Federal help for the common schools throughout the Nation to provide equal educational opportunities, is to me quite beyond understanding.

Our colleges have been taken over for training purposes. The cost to Georgia, it has been estimated, will approximate half a million dollars each year. Other States have contributed the facilities of their educational institutions, but none has surpassed those of the Southeast.

Finally, Georgia is being called upon to make a contribution of a million dollars each month to the war effort through loss of taxes. I refer to the inequitable handling of gasoline rationing. This is not an administrative detail. It is an affair for the Congress, which, thus far, has failed to provide for our reimbursement.

Although this burden falls, in a measure, upon all the States of the Atlantic seaboard, its effect upon the Southern States is most critical. The tax rate on gasoline is highest in our section, because we do not have the resources and income upon which to rely for other forms of taxation and must, of necessity, resort to excise taxes. It has not been offset by increased yields from the income tax, such as have solved the problems of the Middle Atlantic and Eastern States, which have seen their treasuries swell their surpluses, in many instances, from the income taxes made possible by the huge new industries created in their midst for war production.

I have examined with some care the reasons for locating new war plants in congested industrial areas instead of in the South.

I approach that examination with an open mind.

I did not assume that there was some sinister plot against Georgia and the other Southern States.

I am glad to report that there was no sinister plot. I am compelled to tell you that, had I been the head of one of these great enterprises, I most likely would have rejected a southern site for my new plant. I would have done so as a matter of business profits, for I would have found that the freight-rate differential against the Southeast made it expensive to locate a plant there, unless I was going to build airplanes and send them flying through the skies so that no freight agent could levy tribute before they got away.

The dignity of the States must resume its rightful and primary place as vitamin A on the national diet.

It is because I am not unmindful of the possibilities of tragedy that I urge this course.

I ask you to imagine a gallant ship returning to its harbor. Its flag is bright in the sunlight—a proud banner for all the free. It has withstood the buffetings of tide and tempest—of wave and wind. It has prevailed over the enemy upon the waters, lurking in their depths, and in the skies above.

Then, in the calm of its own anchorage, before all those gathered with eyes yet moist with victorious tears to welcome its homecoming, our ship sinks. It sinks because the 48 bulkheads that should have sustained it were rat-gnawed, decayed, and rotten.

If our ship of state thus goes down, carrying with it mankind's one brightest hope, because its bulkheads of 48 sovereign States prove unsound, the tragedy will be America's and all mankind's. But the responsibility will be ours and the shame and the odium will be ours also.

Let us, like a worthy crew, keep watch, not only in darkness but in day, not only upon the high seas but in the harbor. This is the lesson of eternal vigilance we need if we are to preserve our priceless heritage of freedom.

Farmers Oppose Subsidies and Roll-Backs

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 24, 1943

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I wish to place in the RECORD, copies of telegrams received today from constituents and farm organizations regarding this matter of subsidies and roll-backs on food commodities. The telegrams speak for themselves:

WASHINGTON, D. C., *June 23, 1943.*

Hon. LAWRENCE H. SMITH,
Member of Congress, Washington, D. C.:

At a conference of Midwest farm bureaus, meeting in Chicago today, the following resolution was adopted: The subsidy and price roll-back on foods proposed by the administration is a subterfuge for increasing wages and other consumer incomes already at inflationary levels. It will be expensive to administer, benefits will be small in proportion to total cost, it will continue the already existing ruinous confusion, it contributes to rather than controls inflation, it will decrease rather than increase both agricultural and industrial production, it will impose further regimentation of production and distribution, and will aggravate our post-war price and income problem. For these and other equally important reasons this conference of Midwest farm bureaus, representing 12 States and 300,000 members, respectfully petitions our Federal administrative authorities to cease their effort to inflict this program upon us. We call upon our Congress to enact legislation which will prevent any general continuance or revival of this ill-advised experiment. Copies of this resolution shall be sent each Senator and Congressman from these Midwest States and also to all proper Federal administrative authorities.

CONFERENCE OF MIDWEST FARM BUREAUS OF THE AMERICAN FARM BUREAU FEDERATION.

BELOIT, WIS., *June 23, 1943.*

LAWRENCE H. SMITH,
House Office Building,
Washington, D. C.:

Not in favor of roll-back or subsidies. Conditions for agriculture plenty tough for the farmer now.

FRED H. EDDY.

MADISON, WIS., *June 23, 1493.*

LAWRENCE H. SMITH,
House of Representatives,
Washington, D. C.:

In interest of livestock producers of Wisconsin your support of Wolcott amendment to Commodity Credit Corporation bill.

J. SCOTT EARLL,
President, Wisconsin Livestock Breeders Association.

JANESVILLE, WIS., *June 23, 1943.*

LAWRENCE H. SMITH,
House Office Building:

Agriculture looks to you to hold inflation. Refuse all subsidies.

PAUL E. TAYLOR.

MILWAUKEE, WIS., *June 23, 1943.*
Hon. LAWRENCE H. SMITH,
House Office Building,
Washington, D. C.:

Our organization, representing 40,000 farmers in Wisconsin, strongly urges you support Wolcott amendment to Commodity Credit Corporation bill.

C. F. CLAFLIN,
Manager, Equity Cooperative Livestock Sales Corporation.

MADISON, WIS., *June 23, 1943.*
Hon. LAWRENCE H. SMITH,
Member of Congress,
Washington, D. C.:

Wisconsin Council of Agriculture urges your support Wolcott amendment prohibiting subsidies. All our livestock dairy groups deeply concerned.

MILO K. SWANTON,
Executive Secretary, Wisconsin Council of Agricultural Cooperatives.

ROCKFORD, ILL., *June 23, 1943.*
Hon. LAWRENCE H. SMITH,
House Office Building,
Washington, D. C.:

Asking you to support against roll-back and subsidizing of food prices. This will not help but react unfavorably in near future to all; very unfavorable to Wisconsin farmers, as well as Nation-wide. We need sound business in government and not politics.

HARRY WIELAND,
President, Rock County Farm Bureau.

EVANSVILLE, WIS., *June 23, 1943.*
Rep. LAWRENCE H. SMITH,
House Office Building,
Washington, D. C.:

Don't wreck the biggest industry in our country by discouraging the farmer. Cut out those subsidies and leave the farmer a living wage. Farmers are now putting fall brood sows in fattening yards.

C. S. FRANKLIN.

Government Lending Agencies

EXTENSION OF REMARKS
OF
HON. WALTER C. PLOESER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 24, 1943

Mr. PLOESER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a resolution adopted by the Missouri Bankers' Association at its fifty-third annual convention, St. Louis, Mo., June 10, 1943, as follows:

Competition from Government lending agencies threatens the soundness of the smaller banks in rural communities in that it deprives thousands of country banks of a substantial amount of their income derived from loans made to farmers, their major source of income. City banks also suffer from Government competition.

We believe the activities of Government lending agencies should be limited to that credit which is substandard for banks, the borrowers should be required to exhaust their efforts to secure financial assistance from banks before Government agencies are permitted to extend credit. Commercial banks are able, ready, and willing to meet the credit needs of the communities which they serve. A reexamination of the entire field of Government socialized credit should be made at this time.

It is recommended that in the interest of simplicity and of economy and for the purpose of curbing nonessential Government spending, the various Government farm-lending agencies be consolidated into one corporation. The Missouri Bankers Association is not opposed to a farmer-owned and farmer-controlled credit agency so long as the Federal Government does not subsidize it.

Banks have cooperated fully with the Treasury Department in selling Government bonds, they have made a contribution to the food-for-freedom program they have only recently made available their facilities for handling the Government's rationing system, they have dedicated their services to every movement for winning the war.

In view of their importance to the communities which they serve and to our entire national economy, it is imperative that some plan be worked out whereby banks shall be given the opportunity to take care of all sound credit needs.

It is recommended that a copy of this statement be forwarded to every Member of Congress from the State of Missouri.

The Tolan Committee in the Office of War Mobilization

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 22, 1943

Mr. BENDER. Mr. Speaker, the thoughtful weekly Catholic publication, America, for June 12, 1943, comments on the establishment of the Office of War Mobilization and points out what others have neglected, namely, that the Office of War Mobilization is the work of the House Committee Investigating National Defense Migration, more than of any other committee of either the House or the Senate.

I believe that the comment of the publication, America, which ends with the question, "What is holding up the Tolan committee?" is of immediate interest to this House. I offer it for the CONGRESSIONAL RECORD:

TOLAN COMMITTEE

The designation of Mr. Byrnes as czar of all czars, and the establishment of another alphabetical agency to end all alphabetical agencies, is a long overdue acknowledgment of the excellent work of one of the most efficient congressional committees within recent memory. Originally established by the House to investigate defense migration, the Tolan committee soon realized that the chaotic conditions it encountered were inextricably connected with the procurement policies of the armed services, the decisions of the old Office of Production Management, the work of the War Manpower Commission, and the Office of Price Administration. It pointed out that housing and manpower were necessarily linked with the size of the armed forces and the letting of war contracts. It found, for instance, that war contracts had piled up in regions where critical shortages of housing and manpower existed; that other regions had a surplus of both but little or no war work; that the problem of industrial and agricultural manpower was evidently being bungled, because it had not been coordinated with the plans of the military; that the facilities of small business had been ignored; that, in short, there existed no over-all plan for mobilizing our resources. It warned of impending break-downs, of conflicts between competing war agencies; and its warnings have all proved well-founded. As a result of its criticisms, Office of Production Management eventually became the War Production Board; the United States Employment Service and Selective Service were placed under the War Manpower Commission. Now the solution it proposed months ago—an Office of War Mobilization—has been adopted in its main lines by the President. Office of War Mobilization stands, therefore, as a tribute to the Tolan committee. Yet, by one of those exasperating ironies characteristic of Washington at its worst, the Tolan committee has up till now be denied funds by the new Congress to continue its constructive work. At the moment of its greatest triumph, it remains stalemated for reasons which cannot stand the hot light of publicity. What is holding up an appropriation for the Tolan committee? The House leadership owes the country an explanation, and the country is waiting for it.

What Our People Want of Congress

EXTENSION OF REMARKS
OF
HON. EARL WILSON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 24, 1943

Mr. WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by our colleague, Hon. LOUIS LUDLOW, from the June issue of National Republic:

WHAT OUR PEOPLE WANT OF CONGRESS

(By Hon. LOUIS LUDLOW, Representative in Congress from Indiana)

My experiences as a newspaperman and a Member of the Congress of the United States have convinced me that, although the general situation may at times be clouded and difficult for them to visualize, the citizens of the United States always, in the final analysis, are sound in their judgment and their will. Starting with this conclusion I am convinced now that the American people, our neighbors and our friends who go to make up this great free commonwealth and whose efforts, prefaced by the sacrifices and efforts of their fathers and mothers, have made this great land what it is today—I firmly believe that these people are desirous that their Government, of which the National House of Representatives is an important part, shall chart a course of the most rigid economy in nondefense expenditures. I am convinced further that they want Congress to place effective curbs on the overgrown and vigorous bureaucracy, which has become such a dominant force in our national life and which is threatening to stifle free enterprise.

The one outstanding lesson of the 1942 elections, a warning as I conceive it to Democrats and Republicans alike, and which ought to sink deeply into the consciousness of every Member of Congress, is that the people know, even if we may not, that this Government of ours is getting too far away from the

Constitution and that there needs to be a change of direction and a return to fundamental moorings; that the people are deeply stirred by glaring evidences of waste and extravagance and that they are alarmed by seeing the long outstretched arm of bureaucracy reaching out into every community, every business, every home, and exercising ever-increasing authority over the American way of life.

They find that in the period from January 1, 1941, to December 9, 1942, just 659 Executive orders were issued—mostly orders originating in the bureaus at Washington—and thus we are witnessing the metamorphosis from the Government of our fathers in the direction of a government by bureaucrats, a lethal process which, unless checked, could easily transform our Government "of the people, by the people, and for the people" from its original form and mold to a great Washington superbureaucracy.

During the last 10 years—January 1, 1933, to December 9, 1942—3,556 Executive orders have been issued, many of which, drafted in the bureaus, have had the effect of law and thus have substituted the will of bureau chiefs for the will of our legislative branch of government that was established to make the laws. During the same 10 years only 4,300 public laws have been enacted by Congress. Think of it. The number of Executive orders issued during the past decade almost equals the number of public laws enacted by Congress. Congressional authority, which means the authority of the people, is weakened and paralyzed to the extent that the country is governed by bureau-inspired orders.

I do not desire to conduct any post mortem to fix the responsibility for this great bureaucracy that has been built up in Washington. If the executive establishment is to blame for excessive zeal in bureaucracy, Congress, by the same token, must be condemned for ignoble complacency in too easily surrendering its powers. I do not desire to blame anybody but I do maintain that a situation is being created that must be corrected, if constitutional government, founded on rule by the people, is to survive.

As a Member of the present House of Representatives at Washington, I may say that the people are looking to this Congress now in session as never before to see that these untoward trends are corrected; to see that the operations of government are brought within the four corners of the Constitution and kept there; to see that the rights of the States, localities, and individual citizens are made secure—and this wish of the people is a challenge to all Congressmen, Democrats and Republicans alike. I do not believe that Congress will fail the people in this time of crisis. This is not a partisan question, and partisan politics should not be allowed to enter into it. It is a fundamental question of what is best for America now and for our children, and children's children down through the ages.

The people of America everywhere are turning away from the Tugwell bureaucratic type of thinking, with its ideas of killing little pigs and converting them into soap grease, plowing under every third row of cotton, and paying farmers for what they do not raise. That kind of thinking is not Democratic thinking. It is not Republican thinking. It is an exotic brand of thinking which can never successfully be transplanted to American soil. More and more—and I can sense it everywhere—the people of America, Democrats and Republicans alike, are turning to the sound thinking of Thomas Jefferson, who dwelt upon economy in government as a primal virtue and who asserted that "the government is best that governs least."

From out of the background of history comes Thomas Jefferson to aid us in the solution of the paramount problems of this tragic era. As to Congress, I feel that we Members will do well if we will sit at the feet of Jefferson and gain inspiration from his ideas of economy and constitutional government.

In the reconstruction of thought and procedure which must take place if we follow last year's election returns, I believe that this Congress is destined to have its important part. That is why I have asserted and do assert that if there was ever a time when Congress should rise to the height of its responsibilities as a defender of constitutional government against the encroachments of bureaucracy, that time is now, and I have faith to believe that this present Congress is going to make itself both known and felt as the instrumentality of government closest to the people. Indeed I believe we have already made a good start in that direction.

In this evolution the Appropriations Committee, of which I happen to be ranking member, presided over by Representative CANNON, of Missouri, an able and resourceful member, which has initial control of the purse strings, is in position to assert a wholesome and effective leadership, and I am sure that in the manner of its discharge of its heavy duties and responsibilities at this crucial time our committee will justify itself.

We will vote to the Commander in Chief every dollar needed to prosecute the war to a successful conclusion. There will be no niggardliness about war appropriations. But we will be watchful against waste in war as well as civil expenditures; and if I correctly sense the situation, nondefense, nonessential estimates will be cut as never before. Blanket check appropriations are out of the window.

At this important moment in our history the problem of food is an all-absorbing one. It is, of course, tied in with the manpower and the distribution problems. The farmer is confronted with a situation which is unprecedented in our national history. Nobody yet has found a golden formula to produce enough food at the same time for our brave soldiers abroad, and in our camps, for our allies and for the American citizen on the home front.

Many phases of the situation have come before us in the Appropriations Committee. The problem is still a most difficult one. The one outstanding fact that has hit the members of our committee squarely in the face is that there is an acute shortage of farm workers. The farmer must be given more help, and efficient help if he is to produce the food we need. It must be in the form of workers, of new machinery, and of fertilizer.

Between the fall of 1941 and the fall of 1942 a total of 1,600,000 workers is estimated to have left agricultural pursuits. The Secretary of Agriculture says that 60 percent of the labor that has left the farms has gone into industry and 40 percent has entered the armed forces. He also states that as of February 1 there were actually 200,000 less workers on the farms than there were on the same date a year ago.

I had a letter from my home city of Indianapolis the other day stating that in one big defense plant there were 6,000 farm boys employed. My correspondent also stated:

"I was asking some of these young farmers why they came to Indianapolis instead of staying on the farm. The answer from them all was that Dad couldn't pay them more than one or two dollars a day and that they were out after big money."

If we undertake to raise the price ceiling on farm products so that the farmer could pay higher wages in competition with defense plants we encounter the obvious fact that this would increase the cost of living, followed by a demand for higher industrial wages and that would create a vicious circle.

In fact nearly every proposal advanced before our committee carried more or less its own negation. It was hoped that 50,000 laborers might be brought from Mexico to work in the production of this year's crops but that hope is diminishing due in part to opposition of the Mexican government which holds that the labor is needed at home.

I believe the President has made a wise move in calling Chester Davis to take over-all charge of the food program. Mr. Davis is a man of vision and sound judgment who seems to have, and to deserve, the confidence of everybody.

I think myself it is too late to do very much for the farmers in 1943. The time we should have done it was when we passed the draft bill. Among others I worked for months trying to get a modification in the act but all in vain. Farmers were drafted right and left and now farms have been abandoned and herds of a lifetime sold. The fault lies with Congress which did not have the vision to look ahead and see what was going to happen.

If there is to be farm labor supplied in any quantity for the crop year of 1943 it must be done by local communities calling upon businessmen, professional men, children and after-hour workers to lend a hand in the necessary production of food.

But while I may criticize Congress for failing to foresee what would happen with the agricultural situation, this does not belie the fact that in Congress and throughout the country there is a wholesome disapproval of bureaucracy's attitude toward the farmer.

Jefferson said: "Were we directed from Washington when to sow and when to reap, we should soon want bread."

Yet the American farmer has been the world's prize guinea pig. In an effort to make him feel better, he has been salved and poulticed by bureaucratic panaceas until there is not a spot on his anatomy that is not red and blistered and inflamed. His pigs have been snatched from a normal and useful course of life and converted into soap grease, his cotton has been plowed under, and he has been told how many acres of this, that, and the other crops he can raise, and how many acres he cannot raise under the dire penalty of the law. He has been bossed and regimented and goosestepped by beardless boys in Washington who never saw a plow, and when his load of grief was heaviest and it seemed that he was the chosen goat of punishment, he has been miraculously rewarded by being paid for crops he did not raise. He has been caught in a maze of bureaucratic entanglements, directives, and ukases until he did not know whither to go or where to turn. When I see what has been doen to him by the boys in Washington, I cannot help exclaiming "God help the farmer" and I wonder whether the academicians who spend their time practicing their remedies on him will even come to realize that the very best way to help the farmer and to enable him to perform his full part in the Nation's economy is to lift him from under the mass of governmental restrictions and orders, cut down his taxes, and leave him alone. All of this is said without any impeachment of Secretary of Agriculture Wickard. The irrational policies of the Department of Agriculture were formulated before he became the head of that establishment.

Finally, let me say that temporary measures must be and will be found to sustain us in the present food crisis. America has never yet failed, and will not fail now. But in my opinion, the things which are fundamentally wrong with our present economic program will not be made right until bureaucracy has been trimmed to its bare and legitimate functions and we have returned to the constitutional principles upon which this great Republic was founded.

The Navy Department Strikes Out Against Anti-Semitism

EXTENSION OF REMARKS

OF

HON. VITO MARCANTONIO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 24, 1943

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks, I am placing into the RECORD an exchange of correspondence between officials of the Navy Department and myself. As a direct result of this correspondence the Navy Department has issued an official directive to all ships and stations, ordering all commanding officers to pay particular attention that no subject matter is used in service publications that will in any way offend the sensibility of any racial or religious group. This directive is aimed at anti-Semitic and anti-Negro utterances which have crept into these publications. The letters speak for themselves:

LETTER NO. 1

MARCH 9, 1943.

Hon. FRANK KNOX,
Secretary of the Navy,
Navy Department,
Washington, D. C.

DEAR SECRETARY KNOX: I call your attention to page 3 of the enclosed copy of The Bluejacket dated December 31, 1942, and published by the United States Naval Training School (Aviation Maintenance) at Memphis, Tenn. There is to be found on that page the following: "The first American to get 4 new tires was—Nathan Goldstein."

It will interest you to know that this statement is a part of a vicious campaign of anti-Semitism propagated by Nazi-influenced organizations in this country. It is surprising to me that such pro-Nazi propaganda could find a place in a paper published under the sponsorship of officers of the United States Navy.

I will appreciate hearing from you what action will be taken in this case.

Sincerely,

VITO MARCANTONIO,
Member of Congress.

LETTER NO. 2

NAVY DEPARTMENT,
OFFICE OF PUBLIC RELATIONS,
Washington, D. C., March 13, 1943.

DEAR MR. MARCANTONIO: In the absence from the city of Secretary of the Navy Frank Knox, your letter addressed to him under date of March 9, 1943, has been referred to this office for reply.

It was indeed unfortunate that some young bluejacket, while doubling as a station paper editor in between his chores of Navy training, was so thoughtless as to insert in the servicemen's paper of the Memphis, Tenn., United States Naval Training School the item in question. It was definitely an instance of individual thoughtlessness, in which connection, a clipping from page 2 of the publication is enclosed, stating the policy under which all such papers are published by the men at the various stations. The policy: "Statements made in the news columns of this publication under no circumstances are to be considered officially as those of the United States Navy. Articles submitted by officers and enlisted men represent personal opinion only, unless otherwise designated."

Station publications are issued at the discretion of, and with the permission of, the respective commanding officers. There is no central clearance for the numerous papers printed at the various centers of naval activity. For this reason the letter which your matter broaches is being referred immediately to the commanding officer of the United States Naval Training School at Memphis for his investigation and whatever action is deemed appropriate.

Thank you very much for calling the matter to the attention of the Navy Department, and be assured that it will be called to the Secretary's attention on his return.

Sincerely,

LELAND P. LOVETTE,
Captain, United States Navy, Director.

LETTER NO. 3

MARCH 27, 1943.

MY DEAR MR. MARCANTONIO: Reporting further on the subject of your letter of March 9, 1943, addressed to Secretary of the Navy Frank Knox, the commanding officer at the Naval Air Technical Training Center at Memphis, Tenn., has submitted an explanation of the printing of the particular item in the station paper, The Bluejacket.

The commanding officer explains that the article was printed good humoredly and with absolutely no ulterior motives. He expresses regret that it should have caused concern and reports that the personnel assigned to the work of publishing The Bluejacket have been instructed to guard against publication in the future of any items that may be misinterpreted or misunderstood.

It is hoped that the above explanation will convey to you that the incident was entirely without design on the part of the personnel involved.

Very truly yours,

LELAND P. LOVETTE,
Captain, United States Navy, Director.

LETTER NO. 4

MARCH 29, 1943.

DEAR CAPTAIN LOVETTE: I acknowledge your letter of March 27 reporting further on the subject matter of my letter to Secretary Knox under date of March 9. As I stated in this letter to Secretary Knox, the material complained of has its direct source in the propaganda agency of the Nazi government, an enemy of the United States. Consequently, regardless of absence of design or bad intent on the part of naval personnel responsible for its publication, the fact remains that this action gave aid and comfort to the enemy. Moreover, the admitted absence of over-all control of such publications makes me fearful lest there be repeated occurrences of a similar nature which will impair the morale of the men of our armed forces.

For the above reasons I most urgently suggest that a statement be issued in the columns of the offending journal apologizing for this pro-Nazi and anti-Semitic utterance and that the Secretary of the Navy issue an order explicitly directing all such publications to refrain from publication of any matter tending to degrade persons because of race, color, creed, or national origin. May I suggest that you bring this exchange of correspondence to the attention of the Secretary.

Sincerely,

VITO MARCANTONIO,
Member of Congress.

LETTER NO. 5

MAY 5, 1943.

DEAR SECRETARY KNOX: On March 9 I addressed a letter to you indicating that The Bluejacket, a publication of the United States Naval Training School, Aviation Maintenance, Memphis (Millington), Tenn., had published an anti-Semitic statement, disruptive of national unity and tending to impair the morale of men in our armed forces. I further called your attention to the fact that the particular statement had been widely circulated throughout the country in such a manner as to justify the suspicion that it had Nazi origin. You referred my letter to Capt. Leland P. Lovette, who replied on March 13 indicating that there was no central clearance for the numerous papers circulated throughout the country among naval personnel, and that matters contained in such papers are under no circumstances to be considered as those of the United States Navy. To this letter I replied expressing concern at such a state of affairs whereby it was possible for anti-Semitic utterances to appear in papers published by men in the United States Navy and to be broadly circulated among naval personnel. I urged that a general order be issued by you which would completely prevent the recurrence of such a situation, and asked further that a reprimand be given to those responsible for the statement published in the Bluejacket. To this letter I received a telephoned reply from Captain Lovette suggesting that the objectives sought in my letter could be achieved by instructions to Navy public relations officers at a meeting he was holding on April 26. I requested, and he agreed to send me, a copy of such instructions. Since then, Commander Berry has informed this office that no such transcript as promised me by Captain Lovette is available.

I cannot take, as lightly as Captain Lovette appears to have taken, this serious matter. I must, in consequence, renew my specific requests to you to issue a public order to all naval personnel directing them to refrain henceforth from publication of any derogatory comment against the Jewish people, or any other religious or racial group, in this country, who, with all other Americans, are giving such a clear indication of their patriotism; and that a reprimand be issued to those responsible for the publication in The Bluejacket. May I have your reply as soon as possible?

Sincerely,

VITO MARCANTONIO, M. C.

LETTER NO. 6

JUNE 16, 1943.

MY DEAR MR. MARCANTONIO: The Secretary of the Navy has directed that I reply to your letter of June 1, in regard to matter that was published in The Bluejacket issued by the United States Naval Training School, Memphis, Tenn.

You are informed that in a forthcoming issue of the Navy Department Bulletin an official directive will go to all ships and stations, ordering all commanding officers to pay particular attention that no subject matter is used in service publications that will in any way offend the sensibility of any racial or religious group. I believe that this directive will achieve just what you have in mind.

It is regretted that the semimonthly publication had already been printed, or it would have gone in the current issue. We will send you a copy of this restricted bulletin for your files.

Very truly yours,

LELAND P. LOVETTE,
Captain, United States Navy,
Director, Public Relations.

Importance of Sports in the War Effort

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, June 24 (legislative day of Monday, May 24), 1943

Mr. MEAD. Mr. President, in yesterday's Washington Evening Star there appeared an excellent article by Grantland Rice. In the article Mr. Rice quoted a British naval officer to the effect that spectator sports in Great Britain are vital both to the soldiers and to the war workers, and that experience has shown the value of sports in Great Britain.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BRITAIN RATES SPORTS BIG FACTOR IN TURNING TIDE IN WAR—REGARDED VITAL TO SOLDIERS, WAR WORKERS ALIKE—VALUE OF ATHLETICS, ONCE SPURNED, CITED BY NAVAL OFFICER

(By Grantland Rice)

NEW YORK, July 22.—In order to get a better line on how Great Britain handles her sporting arrangement, we looked up our young friend Lt. Jock Buchanan, of Glasgow and the British Navy.

Lieutenant Jock, now over here on official work, is a chunky Scot who knows and loves his sport, no matter what the game is. He is just in from north Africa, the Mediterranean, and a few other sections of the Seven Seas.

"I'll tell you how it is," Jock said. "When the first blitz blitzed us we thought we had to give up sport. We tried it. It didn't work. So we picked up about where we'd left off. Not quite. But not so bad, either. And what a difference it has made to us on the war-winning side.

"In the old days in football we had national leagues with divisions consisting of the best 22 teams in division 1, the 22 next best in division 2, and so forth. No limits to traveling. Of course, that has been all changed."

PLAYERS ARE SHIFTED ABOUT

"The wartime organization is different, although we have crowds up to 150,000. Now, our regional leagues consist of some 20 teams from each district. All players either are in the armed forces or defense work. We have an arrangement where any player under contract to a team can play for another team in the new district where he now lives.

"Training is arranged so that the player trains at the football park nearest his home or station with traveling cut to the minimum. This keeps them in good football shape. Interforce games and international games for the Red Cross and other war funds are extremely popular.

"The heads of the services realize the great value of football as a morale builder to the defense workers, who nearly all average a 72-hour week. I don't mean a 40- or a 48-hour week. I mean 72 hours. These welcome the relaxation that football and racing bring.

"Our games are broadcast and recordings made of the broadcast and played to our forces overseas. It is what our soldiers, sailors, and flyers want. Football games between the Air Forces and the Army teams are especially popular.

GREAT MORALE BUILDER

"The continuance of football and sport in general has been a great contributing factor to the high morale of the British people.

"I only wish America could realize how much it has meant. Four years of wartime football have not reduced the public's love of the game, despite the fact that their teams change constantly and often consist of 75 percent of players from other teams, even bitter rivals.

"By rearranging the competitions as above with mutual and free interchange of players, the standards of play have been lowered very little. Much new talent has also been discovered.

"I have heard rumors here in America that football will be discontinued at many places. I hope this isn't so. I know how much football and other games have helped the war effort in Great Britain. It would be a great pity over here if the authorities should make such an ill-timed decision against football, in particular. Body-to-body contact is a leading essential of modern warfare, as you can learn from the veterans who reach from Guadalcanal to north Africa."

Reverse Lend-Lease

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 24, 1943

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Post of June 22, 1943:

REVERSE LEND-LEASE

When, several years ago, President Roosevelt declared that America would serve as the arsenal for the democracies, and later when lend-lease was established, it was probably generally believed that lend-lease would be a sort of one-way street, through which all the goods would flow from America to the Allies, and that little or none would be received by us until a settlement was made after the war.

Even on that basis probably most of our people were satisfied so long as we could thus help destroy the Axis war power. But it has not worked out that way. On the contrary, what is described as reverse lend-lease, that is, reciprocal and we have received from our allies, has already run into very large amounts and will tend to increase from now on.

In the First World War the United States War Department spent more than $2,000,000,000 in Britain and France for supplies, equipment, and services for our troops. Now, in the present war, similar supplies and services are being furnished our troops, not for cash but as reciprocal payment for lend-lease aid furnished to our allies. As the number of our troops sent abroad increases the amount of these reciprocal payments in goods and services to our men will increase.

As an example, in the last 6 months of 1942, New Zealand and Australia furnished our troops with 235,000,000 pounds of food. Last year these two countries actually furnished us with more beef, veal, and mutton than we exported to all lend-lease countries.

In the last 6 months of 1942, Britain saved us an enormous amount of shipping through the dangerous submarine zones by furnishing directly to our forces in Britain a greater volume of supplies than we sent our troops from here. In addition, Britain supplied our men with new facilities costing over $500,000,000 in the form of airfields, barracks and hospitals, and, besides, most of our troops were transported across in British ships.

This year, 1943, Mr. Stettinius, lend-lease administrator, estimates Britain will furnish our men 44,000 tons of potatoes, 45,000 tons of fresh vegetables, 74,000 tons of flour, 27,000 tons of sugar, and so on through a large list of other items.

It is not implied that our Allies are by any means matching dollar for dollar the supplies we send them. This would be impossible under the war conditions and, of course, was not expected. We set out to aid them with materials in every way possible pending the building up of our own armed forces.

We sent 30 out of every 100 bombers we produced, 38 out of every 100 fighter planes, 28 out of every 100 light tanks, 33 out of every 100 medium tanks, and enormous amounts of other motor vehicles.

That these munitions, in addition to huge quantities of food, aided greatly in defeating Hitler at Stalingrad last fall and Rommel in north Africa this spring, there is, of course, no doubt. To that extent we have cut down the job our own boys would have to do at a cost in casualties we should hardly dare to estimate.

Telephones and Radios Are a Necessity in Rural Communities

EXTENSION OF REMARKS

OF

HON. JAMES V. HEIDINGER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 24, 1943

Mr. HEIDINGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to submit for the consideration of the Congress the following resolution adopted by the House of Representatives of the Illinois General Assembly on March 13 and concurred in by the senate of said assembly on April 14, 1943:

House Joint Resolution 24

Whereas telephones and radios in rural and farm communities are not only a great convenience and time saver but are absolutely necessary in securing information relating to farm work, markets, and community affairs related to the war effort; and

Whereas the restrictions and priorities placed on the various materials necessary to keep these utilities in repair by the Federal Government have resulted not only in a great inconvenience but an actual loss in valuable time, thereby retarding the war effort and food production: Therefore be it

Resolved by the House of Representatives of the Sixty-third General Assembly of the State of Illinois (the Senate concurring herein), That we respectfully urge and memorialize the Congress of the United States to foster the change of such priorities and restrictions insofar as they relate to batteries and other necessary material in order to keep such rural radios and telephones in an operative condition; and be it further

Resolved, That copies of this resolution be sent by the secretary of state to each United States Senator and Member of Congress from the State of Illinois and the War Priorities Board at Washington, D. C.

Adopted by the house March 31, 1943.

ELMER J. SCHNACKENBERG,
Speaker, House of Representatives.
R. R. RANDOLPH,
Clerk, House of Representatives.

Concurred in by the senate April 14, 1943.

HUGH W. CROSS,
President of the Senate.
EDWARD W. ALEXANDER,
Secretary of the Senate.

After This War Is Won, Which Way Lies "Our Way of Life"?

EXTENSION OF REMARKS

OF

HON. WALTER C. PLOESER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 24, 1943

Mr. PLOESER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following advertisement, published by the Gardner Advertising Co., 915 Olive Street, St. Louis, Mo., in the St. Louis Post-Dispatch on Tuesday, June 15, 1943:

AFTER THIS WAR IS WON WHICH WAY LIES "OUR WAY OF LIFE"?

Out of this wartime crucible our way of life will emerge uplifted, united, and inspired—or be transformed in an aftermath of post-war confusion.

What can you do—now—to protect your stake in post-war freedom?

Let's look at the thing—instead of the name. What are the materials of this edifice we call our way of life? Who were the architects and builders? Who did the job? Who paid the bills? Who holds the mortgage now?

IT DATES BACK TO AMERICA'S BEGINNINGS

This title search takes you back centuries. Eager Europeans brought their families to this land of Indians and incredible hardships. Avidly, they sought freedom, opportunity, a better way of life. They were the first to sanctify this land of ours with their "blood and sweat and tears." America was founded by builders.

Our forefathers brought the wheel to this soil—though it was a bronze age invention and a vital industrial tool 4,000 years ago. In the wheel you see the embryo of our way of life.

CAPITALISM FOUNDED ON HARD WORK

This Nation was cut, turned, and hammered out of a wilderness. The frail perished. The strong survived. They knew only necessitous invention, daring initiative, fanatical faith—and, by all current standards, insufferable work.

A few worked harder, thought longer, scrimped and saved with greater zeal. In time, they built bigger log cabins, ate better food, enjoyed leisure. They reaped the ripened fruits of toil, the profits of a free, competitive community—the essence of so-called capitalistic economy.

Thanks to their efforts—and their opportunities to enlarge those hard-won profits—expansion came fast in America.

They annihilated distance—and gave their methods to the world. They took the pain out of work—and paid higher wages.

They outstripped the work in development of creature comforts—and made available a standard of living no other nation can match.

For all who would heed them—they lit the twin lamps of human liberty and human dignity. They gave the world progress.

NATIONAL WEALTH IS THE PRODUCT OF MANY FORCES

The builders of this Nation knew no labor czars, no pressure groups, no paternal Government—as we know them. Their tools were few—but true. They built history's most imposing structure with burning desire, flaming courage—and productive money. Yes, our Nation is wealthy today—but not because it started that way.

America owes its industrial and financial prowess to the genius of ordinary men.

Men of vision.

Men who hammered ideas into useful goods.

Men who risked life savings on materials and machines—to put their goods in the market places.

Men who faced competition—and thrived on it.

Men who knew the evils of scarcity—and the blessings of abundance.

Men who reinvested profit to build better products—sold them at lower prices—and made the cornucopia a symbol of American life.

FROM ALL THIS HAS COME OUR WAY OF LIFE

Those are the materials, the bricks, and mortar of our way of life. Today as always, producers, men who get things done, are the men who give us our tempo, our direction, our destiny. Theirs is the responsibility—in common with millions of loyal workers—to create profits from production and keep this Nation in vigorous financial health.

Theirs is the shadow which stalks Hitler in his hideout. Conversely, theirs is the inspiration, the hope, the salvation of this embattled world. And come peace, theirs is the economic doctrine which must prevail—if we are to be strong, if we are to be free.

FREEDOM NOT THE PROPERTY OF ANY SINGLE GROUP

Fredom knows no distinctions of group or class. If America is to recapture her traditional freedom, then she must do so across the board!

Partial freedom for one group and full freedom for another won't work—socially, economically, or geographically. Every American must be free to earn, free to expand, free to match his talents against all men. That is the spirit of America.

HERE, THEN, IS AN ANSWER FOR EVERY AMERICAN

This is the gist of "capitalism"—the time-tested foundation of "our way of life." It's the story to tell everyone we know. It's the true story, the thrilling story, the crucial story which must be told—if we are to protect our stake in post-war freedom.

Tell it in these words or your own words. But tell it. That's one way to do your share in winning the peace.

California Zoot-Suit War

EXTENSION OF REMARKS

OF

HON. WILL ROGERS, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 23, 1943

Mr. ROGERS of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the June 21, 1943, issue of Time magazine:

CALIFORNIA ZOOT-SUIT WAR

For 2 nights the mobs of soldiers and sailors had found poor hunting. In long caravans of cabs and private cars they had toured the Mexican sections, armed with sticks and weighted ropes, crashing into movie houses, looking for zoot-suited pachucos, the little Mexican-American youths. But they had found only a few dozen, and not all of them even wore zoot suits. They had broken the jaw of a 12-year-old boy. Said the boy, in the hospital:

"So our guys wear tight bottoms on their pants and those bums wear wide bottoms. Who the hell they fighting, Japs or us?"

One panzer division of the cab-and-car attack had rolled down a Mexican district side street, past the rows of mean, ramshackle frame houses. But they had only found a few victims to beat. One of them was a 17-year-old Russian boy, Pete Nogikoss, talking on a street corner to two Mexicans. The Mexicans fled. Pete stood still. The sailors beat him to the ground.

Scores of Mexican youths had been stripped of their pants (some of them on the stages of movie houses), beaten and then arrested by the Los Angeles police for "vagrancy" and "rioting." (The police practice was to accompany the caravans in police cars, watch the beatings and then jail the victims. Their orders apparently were to let the shore patrol and the military police handle the rioting sailors. The service police were futile.)

But now the rioting seemed to be diminishing. The zoot-suiters lay low, the sailors and soldiers had seemingly wreaked sufficient revenge for the several occasions when zoot-hoodlums had attacked and robbed them.

HEARST MOVES IN

But then the press took up the story. The Hearst newspapers, the Los Angeles Examiner and the Herald & Express, and Harry Chandler's Los Angeles Times began to blaze. Late-afternoon editions printed black-faced leads about a purported anonymous call to headquarters: "We're meeting 500 strong tonight and we're going to kill every cop we see." The Hearst Herald & Express bannered: Zooters threaten L. A. police.

THE MOB MOVES IN

That night all Los Angeles stayed downtown to see the fun. When darkness came to the fog-chilled streets, the sidewalks and streets were jammed with expectant servicemen and civilians. Shore patrol cars, military police and police and sheriffs' cars patrolled in force.

Scores of cars loaded with soldiers and sailors poured into the area. Soon after dark a mob formed, surged down Broadway, crashed into the Orpheum theater, went down the aisles shouting for "pachucos" to stand up. In the balcony the mob found 17-year-old Enrico Herrera, sitting with his girl. He and others were dragged downstairs to the street; the citizenry pushed back to give them room while he was beaten and stripped naked. The crowd howled. When the sailors had finished, the police dutifully edged up, took Herrera to the hospital.

The mob went happily down Broadway, repeating in every theater, the Rialto, the Tower, Loew's. Others stopped streetcars, pulled off zooters, Mexicans, or just dark-complexioned males. On went the mob, ripping pants, beating the young civilians, into the Arcade, the Roxy, the Cameo, the Broadway, the Central, and the New Million Dollars theaters. The mood of officialdom (the shore patrol, the military police, the city police, the sheriff's office) seemed complaisant.

HOODLUMISM

The mob split all over Los Angeles, to Watts, Belvedere, Boyle Heights, El Monte, Baldwin Park, Montebello, San Gabriel—anywhere that Mexicans lived.

Hearst's Examiner kept pounding: "Police must clean up Los Angeles hoodlumism." The first paragraph of an editorial said: "Riotous disturbances of the past week in Los Angeles by zoot-suit hoodlums have inflicted a deep and humiliating wound on the reputation of this city."

California's zoot-suit war was a shameful example of what happens to wartime emotions without wartime discipline.

Some of Los Angeles' young Mexicans organized into zoot-suit gangs that were the equivalent of boys' gangs almost anywhere that had got out of hand. They had robbed and used their knives on some lone sailors on dark side streets. But probably the trouble could have been ended right there. One who thought so was Eduardo Quevedo, a plump, cigar-chewing, shock-headed amateur sociologist, president of the Coordinating Council for Latin Americans, member of the Citizens' Committee on Latin-American Youth.

Eight months ago, Goodman Quevedo went to work to stop youthful hoodlumism started a kind of grown-up boys club for the zooters. He knew that they represented a basic American problem—the second generation. Their fathers and mothers were still Mexicans at heart. They themselves were Americans—resented and looked down on by other Americans. Jobless, misunderstood in their own homes and unwelcome outside them, they had fallen into the companionship of misery. They dressed alike, in the most exaggerated and outlandish costume they could afford: Knee-length coats, peg-top trousers, yard-long watch chains, "ducktail" haircuts.

If the pachucos had asked for trouble, they got more than was coming to them last week. The military authorities were notably lax (all shore and camp leave could easily have been canceled), the Los Angeles police apparently looked the other way. The press, with the exception of the Daily News and Hollywood Citizen-News, helped whip up the mob spirit. And Los Angeles, apparently unaware that it was spawning the ugliest brand of mob action since the coolie race riots of the 1870's, gave its tacit approval.

Market Basket Too Vital for a Political Football

EXTENSION OF REMARKS

OF

HON. PEHR G. HOLMES

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 24, 1943

Mr. HOLMES of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Worcester (Mass.) Sunday Telegram of June 20, 1943:

MARKET BASKET TOO VITAL FOR A POLITICAL FOOTBALL

Folks standing in a potato line jostling its way in a grocery store where empty shelves mutely tell their own story of a national food shortage must be wondering these days just what is the trouble. Their minds are confused by a veritable tangle of reports, counter-reports and lofty thought of patriotism carefully nurtured by Government press agents to make them think they're really doing something for the boys by going without food. This they'll gladly do, but it's only a psychological step from a good-natured bantering potato line to a food riot if they begin to think they and the boys could both eat if the Washington politicians hadn't used the market basket as just another political football.

The pastoral vision of the United States as a giant cornucopia pouring out food in an endless flow is being dissipated in a fog of political incompetence, a "planned economy" which didn't work and a strange division of bureaucratic authority. Food will win the war. Food will follow the flag. Feed the world. Come and get it.

Feed the world indeed. Folks are beginning to wonder if we can feed ourselves.

Look at the headlines last week. Huge quantities of potatoes rotted en route from the South because of lack of refrigeration ordered by the Office of Defense Transportation. A Rhode Island farmer plowed under 800 bushels of spinach because of lack of help to harvest it. A dozen corn-processing plants may close because of the stoppage of corn shipments caused, a spokesman said, "by corn-hog policies of the Secretary of Agriculture." Canning crops off 10 to 76 percent as a result of "unworkable ceilings and differentials, doubts as to Government policies and inability to decipher various regulations." The Department of Agriculture reports crops to be even further behind last year's total than estimated. Bad weather blamed. Eastern milk and poultry producers faced with labor shortage, inability to get farm machinery and high grain costs closing down farms.

These stories of shortages and threats of shortages and ineptitude on the part of officials cannot be lightly dismissed. Government propagandists may work overtime trying to convince people the food is going to the Army; it is going to our allies; it is going to highly-paid war workers at home and it's going to newly-seized territories, but these stories do not shut out the grim fact of home-front bungling which would have done much to alleviate the food shortages now faced. After all, the 10,000,000 men or more in the armed forces did not suddenly rise from nowhere to be fed from our larder. They all existed 2 years ago with hungry mouths, and had to be fed then as civilians. Perhaps the reports that 20 percent of the food sent to the Army is wasted might account, in part at least, for our difficulties.

When the public first showed signs of impatience at food rationing, Edward R. Stettinius, Jr., Lend-Lease Administrator, said a loud "Not me" when it was suggested our food was going abroad to "Feed the English, to feed the Russians." Writing in a magazine—the usual formula by which many officials have released important news in this war—Mr. Stettinius said only six percent of our food supplies went to allies. Of 9,000,000,000 pounds of beef produced in 1942, he said, only 18,000,000 pounds went abroad.

What then is the trouble? The plain truth is that our agricultural economy, which should be the basis of our fighting strength, has broken down. The country is still suffering from the early Tugwellian theories of a planned economy. Nurtured in the ideas of an economy of controlled scarcity, the New Dealers in the Agricultural Adjustment Administration have scarcely yet discovered how to transform their thinking into a planning of abundance. Mark Sullivan, the writer, discovered that Texas farmers were still plowing under crops to collect Agricultural Adjustment Administration checks after the war started.

The food crisis offers a case history, well-documented, of the New Deal ability to plan the domestic economy. Joseph L. Weiner, former director of War Production Board's Civilian Supply Division, ordered the 80 percent slash in farm machinery. He sponsored also the concentration order dividing farm equipment makers into three sizes. The largest were stopped from making equipment except for tractors, combines, hand tools, and a few others. The smaller producers were then forced to convert their facilities to machines they had not previously made. The result was delay and general chaos. This month, alarmed by the wearing-out of farm machinery and the inability of farmers to get new machines, the War Production Board suddenly doubled the machinery quota. An Illinois farmer said: "It is too late."

It may be too late for 1943, but even Mr. Roosevelt must admit that a better 'ole for 1944 may be found in considering the food problem on a nonpolitical basis. Democrats as well as Republicans must eat. If there is Republican Congressman LANDIS declaring there may "be no canned goods at all for civilians next year unless administration methods are changed," there is a Democratic Congressman FULMER, chairman of the House Agricultural Committee, who, urging a real food czar, says: "Every administrator is still going his own way, pursuing his own racket, and agriculture is being treated like a stepchild."

There was general rejoicing in the land when Chester Davis was named Food Administrator by the President last March 25. Mr. Davis soon found he might be a czar in the headlines, but he was just another of the long list of administrators without power or well-defined authority in Washington. Herbert Hoover was certainly well-intentioned when he suggested Mr. Roosevelt make Mr. Davis a genuine agricultural czar to coordinate the loose ends of administrative inefficiency, but it is likely that any endorsement by Mr. Hoover may well mean a kiss of death for Mr. Davis as far as the White House is concerned. Mr. Davis even has accused the administration of bungling food.

Mr. Roosevelt's curious allergy to any outside interference should not for a minute blind him to the fact that Mr. Hoover is on sound ground when he discusses our food situation. Even Mr. Hoover's bitterest opponents concede his experience in food administration. Mr. Hoover's idea that food control—production and distribution—now scattered among nine departments, all working at sixes and sevens, should be concentrated in one is, of course, sound common sense. Yet Mr. Roosevelt is adamant in opposing a food administrator with power, is insisting on subsidies in the face of congressional opposition, and is inclined to let things drift along generally as they have been. This attitude is encouraged by the diverse pressure groups representing cattlemen, wheat growers, and what-all who have political power in their respective sections.

Agriculture last Fall estimated at least 30,000,000 more acres would be needed to provide the foreseeable food requirements. Whether it is to be through a czar, or through subsidies, or what, it is high time that adequate attention was paid to the job of producing more food. It would seem that concentrated power in one man, even at the risk of offending important groups and other administrators, might be able to commandeer enough farm machinery, allocate crops and labor, and produce some food. The 1943 food production battle has been lost. It is time to get going if 1944 isn't to be another year of defeat.

Pork Production

EXTENSION OF REMARKS

OF

HON. ALFRED J. ELLIOTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 24, 1943

Mr. ELLIOTT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

CALIFORNIA LEGISLATURE,
Lockeford, Calif., June 15, 1934.

Hon. A. J. ELLIOTT,
Washington, D. C.

DEAR AL: I am writing you just to give you just one point, a fact that some of us are not going to continue in the production of pork.

Sometime back Secretary Wickard gave us to understand that the Federal Government

wanted a 12 percent increase in pork over the 15 percent increase that I am sure that we met, and also gave us the assurance that a floor price could be expected up to June 1944.

The floor price is all right and perhaps too high for the consumer public, but the industry started out to meet the 12 percent increase, grain prices started to rise, and if grain had been in the hands of the farmer, the producer, it wouldn't have been so bad, but grain was in the hands of the speculators, and with Government buying mids, protein, and other hog and dairy feeds, the prices went beyond a price where we can feed our hogs to the weight that the Government wants, or even to bring them to a finished animal at any age. So younger and unfinished hogs are being disposed of, useful sows are going to the market, and yours truly, for one, has been unable to continue and must sell the 70- to 80-pound feeders at a much lower price than we were offered a months ago.

I heard Dr. Tom Slatts say just last Thursday that conditions such as taking over some 20,000 prisoners in Africa, and that we may have to practically take over and feed all Italy, make conditions change at Washington.

If we have more people to feed we must produce more, and that's our job, but Al, when they deliberately lie to us, and now offer roll-backs and subsidies, I tell you our farmer is not able to go ahead.

No labor and skid rows in our cities are filled with men who should be drafted for agriculture. No farmer can pay the wages that industry pays, and until we have a cost-plus I'm telling you that the dairy, poultry, and livestock industries are going to fall down on the Nation's food supply. I haven't had a man for over a month, and I can't get one short of $100 per month and board. The hog game won't stand this, at the price of grain, as feeding hogs only requires real work a few hours in the morning and evening, so I am doing my own feeding.

I should be planting corn or milo, but I can't get equipment, so I'm in a h—— of a mess, and it just looks like I've got to get out, just when I should be hitting the ball all over the lot, everyone of us should, but how can we when these spitball artists are pitching as they are.

I have never been afraid of work, and hard work, but now, at my age, I'd rather be in the front line than to try to do the impossible asked for by the bureaucrats in Washington.

I'd like to send a letter like this to all our California Members, but I just haven't the time, as I'm working about 16 hours a day, feeding and irrigating, and when I write letters it comes out of my time to sleep.

Sincerely yours,

JIM THORP.

The Cloakroom

EXTENSION OF REMARKS

OF

HON. WILLIAM P. LAMBERTSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 23, 1943

Mr. LAMBERTSON. Mr. Speaker, the U. S. A. goes on, but the F. S. A. goes out.

Only 1 more year till a national Republican convention. Be patient.

It is just 3 years since we rolled out the first billion under the national emergency.

When the snow flies is when the miners' work agreement ends—a more effective time to strike.

BELL, of Missouri, made one of the best speeches against $50,000,000 for school lunches in wartimes.

Last year Congress voted one hundred and forty billions, so far this year only one hundred and five billions, but still half of the year is left.

Unless subsidies prevent, Congress will soon recess. Certainly nothing else will keep us, not even the lifting of the noncombat draft age to 65.

Weather, roll-backs, and labor shortage may make us a low-crop year. There is not much we can do about the weather and the labor now.

The last W. P. A. funds approved are for Puerto Rico, only through October. This will give Mr. Tugwell time to think up bigger and better ways of spending.

N. Y. A. lost in the House committee 16 to 17 and in the Senate committee 8 to 9. No effort was made to restore it on the floor of the House. Watch the Senate floor.

Twenty-six blocks of broken windows in Detroit and 23 dead could reasonably be said to be the second inning of the 6 months of National and State idle sanction of the sit-down strike.

It is 9 o'clock Thursday night and in 27 hours we will know for sure if the antistrike bill is signed. He should have O. K'd. it the minute it reached his desk. The other thing will never become a law, and is not intended to become a law.

Our Campaign Against Run-Away Inflation

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 23, 1943

Mr. PATMAN. Mr. Speaker, I am inserting herewith a radio address delivered by me last night, June 24, 1943, 10:30 p. m., over a Nation-wide hook-up of the Columbia Broadcasting System on the subject Our Campaign Against Run-Away Inflation.

It is as follows:

The patriotic service of the Columbia Broadcasting System permits me to bring to you the first in a series of warnings against runaway inflation. Its threat is of such vital concern that I propose to speak to you with the same directness that I would if you and I, in your home, were wrestling with the problem.

ALL WILL SUFFER

One thing we both know with certainty is that inflation is preventable. We know also that if it is not prevented, all of us will suffer. We will suffer in varying degrees depending upon what we earn and what we buy—but no one will escape. If inflation is not kept under control, its ravages for most of us will be terrible.

One great advantage of our generation in dealing with war problems and the threat of inflation is that we can benefit by past experience. Our successes and failures during and since the last war are so fresh in our minds that they should instruct and benefit us.

WHAT IS INFLATION?

Inflation is an overworked word. In fact, for more than two decades, there probably has been no word in the dictionary more abused or less understood than this word inflation.

In its effect on you and me, inflation is just one thing—higher prices. Higher prices for things—the things we eat, the things we wear, the things we use. Higher prices for shelter—for rent, if you are a renter; for fuel and taxes and repairs if you are an owner. Higher prices for transportation, for luxuries, for services, for everything. In short, a higher price level brought about by pressure of many dollars competing for an inadequate supply of goods.

INFLATION NOT NEW

Although inflation is little understood, it is not new. In almost all wars during the last century and a half, every one of the principal belligerents have experienced serious inflation. The widespread inflation of the period of the last war and the years immediately following is still a tragic memory for many millions of people in Europe. In Germany, Hungary, and Austria, inflation carried the cost of living to astronomical heights. There it took a wheelbarrow load of money to buy a loaf of bread.

At home, too, in our earlier wars we felt the ravages of inflation. In the American Revolution the cost of living rose to great heights. It rose 150 percent during the War Between the States. During the last war and to the peak of the post-war inflation in May 1920, the cost of living rose 140 percent.

THREAT OF INFLATION

The threat of inflation is here again. About one month before Germany invaded Poland, prices began to climb. Between August 1939 and May 1943 our cost of living went up 25 percent.

Daily the threat grows stronger. Today it has reached such proportions that it is absolutely necessary for the welfare of the people and for the national well-being as a whole that we combat it with all the power at our command.

Various controls to keep prices down are already in effect, for example, most of our essential foodstuffs and shoes, oil and gasoline are rationed and prices have been fixed. Rents in many areas are under Government supervision.

Why then, you may ask, should we be in danger of runaway inflation?

The reason is this country has been turned into an arsenal—the arsenal of democracy. It is training soldiers and producing planes, tanks, guns, and ships in staggering numbers. The production of war materials means the production of less civilian goods. In plants producing war and essential civilian goods, more people are now working for more money than ever before. This increased volume of money competes for scarce civilian goods. Prices are forced up. This, in turn, shoots up the cost of living, requiring workers to seek higher wages to meet increased living expenses.

Higher prices and higher wages mean increased cost for businessmen. They try to meet these higher costs by charging still higher prices. The danger of inflation, therefore, grows out of the gap between the money the people have to spend and the limited quantity of goods.

GOVERNMENT SITTING ON THE LID

Your Government has already taken action by imposing certain controls. It is sitting on the lid in the way of rationing and price fixing. This sitting on the lid at least has been partially successful in spite of great difficulties.

However, the tremendously increased supply of purchasing power continues to exert pressure from beneath the lid and this pressure must be relieved.

COST OF THIS WAR

You and I know that already this war has cost more than the whole of the last war. The latest compilation shows we are spending at the rate of $235,000,000 a day, or about $8 every 24 hours for the average American family of four persons. During the fiscal year ending in the next few days, we will have spent $77,000,000,000 for war. For the next fiscal year the spending is expected to rise to at least $100,000,000,000.

One hundred billion dollars is a colossal sum. It means we will bridge the seas with transport and supply ships and dot the skies with winged forts. But it also means a colossal amount in individual incomes on the home front. In this respect, the Treasury has let me have a glance at its records. In them I found that the latest estimate of the sum total of individual incomes for the calendar year 1943 is $141,700,000,000, as compared with $115,500,000,000 for the calendar year 1942.

EXCESS PURCHASING POWER

Speaking in round figures, for the calendar year 1943 it is estimated the national consumer income will be $140,000,000,000. Not all of this, of course, will be used to buy things. Fifteen billion will probably be deducted for the payment of individual taxes. But the people will still have about $125,000,000,000 to buy an estimated $80,000,000,000 worth of goods and services. This difference of about $45,000,000,000 between the supply of goods and the money in people's pockets is the crux of the economic danger confronting the country.

This $45,000,000,000 in purchasing power is bound to exert tremendous pressure from beneath the lid unless we take almost immediate steps to drain it off.

This siphoning can be done by diverting a large portion of the 45,000,000,000 of excess dollars into channels which will help pay directly for the war and help to ensure a sound, stable America for our boys to return to when peace comes. Taxes, the payment of old personal debts, the purchase of War bonds, life insurance, and savings are the principal weapons to accomplish this. This is of primary importance. If prices are allowed to sky rocket, available goods would go to a few. On the other hand, millions of workers and members of the families of fighting men and others with fixed incomes would have to draw their belts still tighter.

INFLATION MAY LENGTHEN WAR

And let me be frank with you, a serious rise in prices and wages would increase the cost of war and could easily help to lengthen it. To the extent that we pay as we go through taxation and hold down on borrowing, our economic structure will be sounder after the war. We will have less of a burden of indebtedness to carry. Thus by taxing heavily now to draw off excess spending power, we make it easier to finance the war, we fight rising costs, and help build a sounder peace.

MANY MISTAKES MADE

We have made many mistakes in this war. One of the greatest was made several years before our entry into the war when we failed to help China; another when we failed to prepare ourselves against Japan. Some of those who blocked our aid to China and who prevented our preparation for war are now loudest in their criticisms of the conduct of the war. Although we should admit our mistakes of the past and try to avoid them in the future our No. 1 problem right now is winning the war; our No. 2 problem is preventing runaway inflation here at home.

CONGRESS HAS NOT DONE ITS PART

Frankness compels me to state that Congress has not done what it should have done to prevent runaway inflation. First, we have not passed laws that would help to siphon off excess purchasing power. That is necessary to any effective price control in our country. During the two most critical years so far, 1942 and 1943, an average taxpayer in the United States will individually pay only one-third of the amount of income taxes that a taxpayer in Canada will pay or a taxpayer in England will pay. In other words, a taxpayer in either Canada or England will pay 300 percent more taxes during the years 1942 and 1943 than a taxpayer in the United States will pay. Price control is much easier in Canada and England because the excess purchasing power in these countries is siphoned off in the form of taxes. Our Congress is to blame and we must accept the responsibility for not correcting this situation. Not only have we as a Congress not corrected it, we have even crippled the only agency of our Government, the Office of Price Administration, that is charged with the duty of keeping down inflation through price control. The House of Representatives recently reduced its appropriation and thereby made it less able to keep prices under control.

Congress has also done another thing to cripple the Government in its fight to prevent runaway inflation. Only recently the House of Representatives voted to eliminate entirely that division of the office of War Information which is charged with the duty of informing the people of the dangers of inflation through a campaign for that purpose. If that appropriation is not restored, its well-planned campaign against inflation will have to cease. Therefore Congress has in three ways not only failed to help in the fight against inflation but has actually contributed to a runaway inflation. First, by not siphoning off excess purchasing power through taxes; second, by crippling and hamstringing the Office of Price Administration which is charged with the duty of preventing inflation through price and rent controls; and third, by absolutely eliminating the only agency that is making the proper campaign to inform people of the dangers of inflation for the purpose of getting their support in this important fight.

INFLATION REDUCES VALUE OF MONEY TO FEW CENTS ON DOLLAR

Doubtless, some of you within the sound of my voice have suffered a financial sacrifice by reason of the enforcement of the laws on price and rent control. Some may find it difficult to pay increased taxes, but those who have suffered or will suffer most by reason of such controls are much better off than they would have been without such controls. They are less severe than a runaway inflation which makes dollars worth only a few cents.

WIN WAR AND PREVENT INFLATION

Ruinous inflation means reestablishing the four greatest evils that ever existed in our country—poverty, ignorance, disease, and crime. Runaway inflation means the destruction of the three greatest institutions on earth—the home, the church, and the school. Around these three our civilization is built. Without these we can be destroyed. It is our duty to uncomplainingly endure hardships and inconveniences to win the war and prevent the loss of our priceless possessions. There is a lot of grumbling, griping, growling, and gossiping, but we should not let these things divide us, we should not let these things distract us, we should not let these things deter us from winning this war—our No. 1 objective—and from preventing inflation here at home—our No. 2 objective.

One Explanation of the Detroit Riot

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 24, 1943

Mr. HOFFMAN. Mr. Speaker, from the Washington Times-Herald of this morning comes the following:

GOVERNOR KELLY LAUNCHES PROBE INTO DETROIT DISORDERS

(By David Charnay)

DETROIT, June 23.—A blueprint for collective racial behavior, designed to eliminate race riots and their underlying causes, will be made available to official Washington as a pattern for sociological peace throughout the Nation, Governor Harry Kelly revealed in an exclusive interview tonight.

The first step in creating the blueprint was taken today at a conference of State, city, county, and military officials in the Governor's emergency headquarters in the Book-Cadillac Hotel.

FIVE-MAN COMMITTEE

A governor's fact-finding committee to channel and coordinate for expeditious use all information relating to the outbreak of Detroit's bloody Sunday was created. The body, the Governor announced, will be composed of five men: Robert Rushton, attorney general of Michigan; Oscar Olander, commissioner of the Michigan State Police; William E. Dowling, prosecutor of Wayne County; John H. Witherspoon, Detroit police commissioner; and a military member to be assigned by Brig. Gen. William E. Guthner, of the Sixth Service Command.

"This conference was called," the Governor said, "for the purpose of ascertaining the best procedure for inquiry into the cause of the recent riot and for the bringing to justice in the speediest manner all persons responsible for or engaging in any inciting, planning, or active participation in the riot."

IMPARTIAL BODY

The broader sociological approach to the problem will be launched shortly, the Governor said in the interview, with the creation of an impartial committee composed of white and Negro leaders to investigate thoroughly and objectively all the elements involved.

"I am thoroughly cognizant of the expansion that has occurred in our city. This is the key city in the Arsenal of Democracy and it is naturally one of the first places to feel the congestion. There are many factors such as housing and recreation which are contributing factors to mass irritation.

"I do not intend in a short period of time to put my finger on the nub of the problem, but intend to have several complete and exhaustive studies made.

"The fact-finding committee will help me determine whether a grand jury investigation is necessary. The bi-racial sociological committee should help furnish remedies for the collective behavior problem."

COURSE OUTLINED

The Governor divided his course of action into three categories:

"1. Order must be established and maintained. This is the first step to be taken. Our industries must be kept rolling at high speed. Anything which defeats that, no matter how prompted, must be crushed. I intend

to crush any further outbreaks. I believe we have order now.

"2. The law must be enforced. The scores of cases being taken to court today are no criterion. The people in court are those who played minor parts in the disorders. The real inciters and the assaulters are the ones we are after. They will be found by sorting out more than 1,000 prisoners we have, and by seeking out the others in their hiding places. And when they are found their punishment will be fully commensurate with their crimes.

AXIS ROLE SEEN

"The fact-finding body, I trust, will be able to put its finger on the immediate cause of the riot. There have been many ugly rumors called to my attention. If this is Axis-inspired, I shall move every facility at my disposal and call upon our military to assist in ferreting out the fifth column in our midst. Reports that this was a planned riot have come to me. This report shall be tracked down thoroughly.

"3. Collectively behavior in all its sociological aspects will be studied. This is not a local problem. It is a national problem and will be treated as such. The biracial sociological committee will look into that problem."

Labor and civic leaders seemed to be agreed that the problem had been festering here for some time, the Governor declared. He indicated that he would seek the cooperation of labor and industry in coping with the racial question.

HOUSING PROBLEM

"There have been mass migrations of workers from one part of the country to another," the Governor said. "Certain groups have been thrown together in a manner which is entirely foreign to their social existence heretofore. Detroit facilities for living are being strained to the utmost. Fortunately it is a large city or the situation might have been worse."

"The feeling has been echoed here that these riots will spread throughout the country. I hope that I can ascertain the cause and, if I do, present my findings to those officials who can use it effectively to prevent a recurrence of this shameful outbreak which has profoundly decreased our war production."

This reporter, in a one-man survey, found Detroit today a city of frayed nerves, barked shins, and minor irritations. An inquiring reporter's tour of the no-man's-land of the riots, Paradise Valley (the Harlem of Detroit), and Washington Boulevard (the Fifth Avenue of Detroit), shed much light on the precipitating incidents.

The causes for irritation were abundant on both sides. The Negroes presented the following case for their side:

THE NEGRO EXPLAINS

The housing facilities in Detroit were inadequate to take care of the rising Negro population. The Negro was making more money than he ever made and he was willing to spend it in an attempt to better his living conditions.

In the Paradise Valley sector a number of swank "Harlem" clubs were operating at full blast with an equal patronage of whites and Negroes. There are several clubs, however, which do not admit white persons. A number of whites tried to break this ban with resultant clashes.

The Negro population eventually found itself seeking recreational surcease in white haunts. Ingrained resentments and prejudices made themselves apparent. These prejudices, the Negroes averred, were evident on trolley cars and in restaurants, night clubs, the factories, and around their homes.

THE OTHER SIDE

The white populace presented this case:

The better shops were frequented by Negroes, who arrogantly displayed new-found wealth. They paid as much as $65 for imported handbags, $15 for shoes, $100 for suits and dresses, and the highest prices asked for luxury items. At counters there were flare-ups between white and Negro women seeking the same exclusive Schiaparelli.

In the transportation facilities, strained to capacity, Negro men would rush aboard trolleys or busses, grabbing seats before white women could reach them. This situation resulted in daily fights aboard the conveyances.

The more fashionable night clubs found Negroes calling up for reservations and, when later they were refused admission, created disturbances.

"OKIES" BLAMED

Native Detroiters called attention to the influx of a white element better known as the "Okies and the Arkies." They are called hillbillies here and in some quarters are blamed for the flare-up. These, with an ingrained hatred for the Negro, resented most, Detroiters say, the arrogance of the southern Negro in his new found northern emancipation.

In contrast to the mass hysteria which permeated the city on Sunday and on Monday, there was a contemplative air here. The question uppermost was: Who and what caused the trouble? Some say the hillbillies, some say the Negroes, some say the Ku Klux Klan, some say teen-age hoodlums, and others say it was a fifth-column inspiration.

Governor Kelly said he intends to find out.

Coordinators' Cyclopedic Tax Service

REMARKS

OF

HON. JOHN TABER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, June 25, 1943

Mr. TABER. Mr. Speaker, I made a statement on June 15, 1943, on the floor with reference to a circular put out by a man named William KixMiller, indicating that he was urging banks to subscribe for a tax service known as the Coordinators' Cyclopedic Tax Service and which was supposed to have been authored in part by Randolph Paul, the general counsel of the Treasury, and James Mertens, Jr.

Mr. Paul has denied that he has any connection, financial or otherwise, with the publication of the so-called tax service. He has sent a telegram to Mr. KixMiller dated June 15, 1943, saying that a representation in the circular that he had some connection with, or interest in the authorship or publication of the so-called tax service was misleading, unwarranted, and untrue. Mr. Paul also demanded that Mr. KixMiller immediately discontinue further distribution of the circular and promptly take adequate action to retract its misleading representations. Callaghan & Co., the law publishers of a book that many years ago was written by Paul and Mertens state that the entire basis of Mr. KixMiller's circular "is wrong and misleading and it seems to have been expressed in such language as to convey the impression that both you and Mr. Mertens were supporting KixMiller in his publication and that we, as publishers, were also in some manner connected with it," and state that it was a venture of KixMiller without any support on the part of Paul or Mertens in connection with it.

I am satisfied that Mr. Paul was not in any way connected with the KixMiller circular or the so-called Coordinators' Cyclopedic Tax Service, but frankly I feel that Mr. Paul owes it to the banks and all other recipients of the circular to do everything in his power to see that a circular is sent out by KixMiller advising them that Mr. Paul is not involved in any way. These things Mr. Paul has agreed to do. Many banks, when they received the circular, felt that pressure was being put on them by Mr. Paul to buy the service and he owes it to them to clear himself with them now. Frankly, the circular put out by KixMiller has done great injustice to Mr. Paul and I hope that Mr. Paul will now take all possible action in every possible way to see that KixMiller's misrepresentation is thoroughly discredited.

Mr. Mertens, while there has been no criticism of him in connection with this situation, I understand, has nothing whatever to do with the KixMiller project, and undoubtedly his name has been used without authority and entirely without justification.

Stamp Commemorating Poland's Resistance to the Axis

EXTENSION OF REMARKS

OF

HON. THOMAS S. GORDON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 25, 1943

Mr. GORDON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article which appeared in the Chicago Daily Times and an address delivered by the Honorable Frank C. Walker, Postmaster General of the United States, at the main post office, Chicago, Ill., on Tuesday, June 22, 1943, formally placing on sale the stamp commemorating Poland's resistance to the Axis:

[From the Chicago Daily Times]

COURAGE OF POLES PRAISED BY WALKER IN DEDICATING STAMP

Stressing the spiritual kinship between all men who fight for the dignity of humanity, Postmaster General Frank C. Walker dedicated a postage stamp today commemorating Poland's resistance to the Axis.

In ceremonies at the new post-office building at Canal and Van Buren, the new issue was placed on sale, marking the first time in history that the flag of another nation has been represented on United States postage. Similar ceremonies were held in Washington.

A 5-cent stamp, it contains the flag, the name of the country, an engraving of a

phoenix symbolizing renewal of life and a kneeling woman from whose outstretched arms shackles have fallen, representing release from oppression.

Poland was chosen to be honored in the first of a series of new stamps dedicated to members of the United Nations because, Walker said, "she is in a sense the mother of the United Nations. It was Poland who took the initial blows of the enemy, faced him without flinching, and fought him alone while her friends were powerless to intervene."

Walker praised the contributions of Americans of Polish descent to the advancement of this Nation and remarked that the Poles' hardihood and their almost incredible courage compel the admiration of the world.

Carol Ripa, consul general of Poland, accepted the first stamp from Walker on behalf of his country, while Francis X. Swietlik, president of the Polish National Council and dean of the law school at Marquette University, served as master of ceremonies.

ADDRESS OF THE HONORABLE FRANK C. WALKER, POSTMASTER GENERAL OF THE UNITED STATES

Here in Chicago, our greatest center of Americans of Polish blood, we are gathered today in an act of homage without precedent in our history.

Today, when we dedicate the stamp in tribute to Poland, as the first of the overrun countries of the United Nations we are honoring, we make it the official paper of the United States. From this moment on, wherever the authority of the United States is recognized, the flag of Poland, as engraved on this new issue, will pass through our mails. Never before has the unfurled flag of another nation been represented on the postage of the United States.

We do this, not grudgingly, but with pride and assurance that what we do is right. Simple gratitude for what Poland and the Poles have done for America and for humanity has inspired this recognition.

Here in Chicago today, our hearts and minds are filled with the knowledge of what is happening thousands of miles away—as the aggressor who overran the peaceful hills and pleasant farm lands of Poland attempts with ruthless cruelty to break the hearts and the spirit of a people who refuse to submit to him. If he knew history, he would spare himself the pains. Sensible men who have read the record of the past know that some peoples cannot be vanquished—the flower of their youth may be cut down in battle, their cities may be reduced to rubble, but their spirit will survive the tyrant and emerge strong and vigorous when he has been overthrown.

Such a people are the Poles. Time and again throughout the ages their land has been occupied by invaders. Time after time Poland has broken her chains and taken her rightful place with her sister nations.

America long has had cause to be grateful to Poland. When we were engaged in our own struggle for independence she sent us two of her sons, Pulaski and Kosciusko. Pulaski gave his life in the Battle of Savannah. Kosciusko, hero of our Revolution and friend of Jefferson, returned to fight for the liberation of his own land.

There was spiritual kinship between all of these men who fought for the dignity of humanity. There is such a kinship today between all who fight the people's war for liberty.

Pulaski and Kosciusko epitomize what Poland has done for America, and, in stressing the glories of these heroes, we bring into focus the great achievements of the Poles who followed them to America.

Sprung from the stock which gave to the world Kopernicki and Mme. Curie, Chopin and Paderewski, they, with their achievements in the arts and sciences, have enriched the culture of America. In Chicago, and in the Nation, men and women of Polish descent have achieved places of distinction in every sphere of the community's life.

They came to us in great numbers. By the sweat of their brows and the goodness of their lives they paid America back in full measure for the freedom America gave to them. Thriving farms bear witness to their toil. Great manufacturing centers stand in testimony to the fact that no work proved too hard for the Poles. Theirs was one of the foremost parts in the industrial development of America.

This Nation has been blessed because so many races brought us the gifts of their homelands. The Poles brought us the rich traditions of a people who have known suffering through the ages, and yet are noted for their buoyancy of spirit. Poland is old in tragedy and sorrow, but she is forever young with new hope and new life. Poland is the land of the rainbow—the rainbow of hope after storms, the rainbow of living color and romance.

Many here today have sons in the armed services who have distinguished themselves in battle. The War Department recently honored two young Chicago flyers for meritorious achievements with the Eighth Air Force in England. All of you know other men of Polish descent who are fighting in the cause of humanity and worthy of all the honor that we can give them.

There is a world of symbolism in the stamp we dedicate today. Poland is selected as the first nation of the group to be honored because it was Poland who took the initial blows of the enemy faced him without flinching, and fought him alone while her friends were powerless to intervene. Poland is honored today because, in a sense, she is the mother of the United Nations. Poles typify the common cause as they fight side by side with the freedom-loving men of all nations, and their hardihood and their almost incredible courage compel the admiration of the world.

There is classic symbolism in the phoenix represented on the stamp. The ancients believed that this bird, after living for centuries, would be consumed by fire, and would rise in youthful freshness from its own ashes. At the right side of the stamp, there is a kneeling woman, with outstretched arms from which the shackles have fallen. It is between these figures representing immortality and liberation that the emblem of Poland waves.

My fellow Americans, let us draw inspiration from what we do here today. Let us, from the contemplation of the heroic deeds of the Poles, draw courage for the tasks we are called upon to perform for our country. Let us learn from Poland some of her faith in the triumph of right, and boldly face trials until that triumph is achieved. Let us learn from Poland, and from the Poles who fight for humanity wherever they can find a gun, a destroyer or a plane, that the struggle in which we are engaged is everyone's struggle. Having learned that, we will stand together as United Nations, remove the pall of fear that hangs over our homes and our shrines, and be worthy of the freedom which we have won.

Farm Security Administration

EXTENSION OF REMARKS

OF

HON. HAROLD D. COOLEY

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 25, 1943

Mr. COOLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolutions of the Business and Professional Women's Club of Raleigh, N. C.:

Whereas the Farm Security Administration is one of the agencies of the Department of Agriculture, and as such is charged with the specific responsibility of providing supervised credit for those farm families, tenants, sharecroppers, renters, and laborers who are unable to secure adequate financing from any other source, such as local banks, Production Credit Association, etc.; and

Whereas the program of the Farm Security Administration is based on supervised credit, which means that funds are lent to farm families on the basis of a sound farm and home management plan prepared by the families in consultation with technically trained field personnel of the Farm Security Administration, and the loans are secured by mortgages on crops and livestock and are still further secured by the technical advice and guidance given the borrowers by the local representatives of the Farm Security Administration; and

Whereas during the present emergency the Farm Security Administration has pointed its entire efforts toward increased food production through employing sound farm and home management practices, which result not only in increased production, but in conservation of the land and of the families on the land; and

Whereas the home-management phase of the program has resulted in the conservation of millions of quarts of home-produced foods, and more adequate and better-balanced diets and the general improvement of family health; and, in addition, the medical-care program has brought adequate medical services to thousands who previously were unable to provide such services for their families on an individual basis; and

Whereas the Farm Security Administration administers the Bankhead-Jones Tenant Purchase Act through which worthy farm families are enabled to purchase family-size farms and pay for them over a maximum period of 40 years; Therefore be it

Resolved, That the Raleigh Business and Professional Women's Club go on record as endorsing the program of the Farm Security Administration, particularly as it relates to the home-management practices, and increased food production and conservation; and be it further

Resolved, That the Raleigh Business and Professional Women's Club respectfully petition the Congress to continue the activities of the Farm Security Administration, at least for the duration of the present emergency.

Women in the Armed Services

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 25, 1943

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Atlanta (Ga.) Journal of June 10, 1943:

WAAC'S IMMORAL? POLICE HERE CALL 'EM PERFECT

(By L. P. Patterson)

"What's all this fiddle-faddle about immorality in the WAAC?" Atlanta police demanded Thursday with a spirited leap to the defense of service women of all branches.

A survey of police records of the past 12 months, Chief M. A. Hornsby reveals, shows

that the ladies of the armed forces have proven themselves gentlewomen of the old southern school in every respect. Not a one, he adds, has been arrested for any offense whatsoever, or even as much as warned to leave a disreputable place.

And as for disturbances on the streets, why, it's ridiculous, the chief avers.

BEHAVIOR IS PERFECT

WAAC's, WAVES, SPARS, and Lady Marines abound on the streets of Atlanta, Chief Hornsby notes, but regardless of what the scandalmongers would have you believe, their behavior has been nothing short of perfect.

Chief Hornsby's observation is seconded by Maj. James H. Hogan, the Army's provost marshal for Fort McPherson and Atlanta. Should any of the service girls be accused of misconduct, Major Hogan's corps of military policemen would be called upon to handle the situation. But Thursday the military police staff stationed at police headquarters said they have not even formulated plans for handling feminine prisoners at the downtown station.

Major Hogan believes that the WAAC's and other servicewomen have maintained such a marvelous law-abiding record because they know that they are in the military spotlight and that any indiscretion on the part of any one of them would bring more notoriety to their corps than if the same offense was committed by 100 male soldiers.

ALWAYS IN A HURRY

Atlanta's policemen on duty at train and bus terminals have also noticed the unimpeachable conduct of servicewomen. Their neat appearance, businesslike attitude, and always hurried pace were first to attract their attention.

"Whenever you see a WAAC around Atlanta," one officer said, "she gives the impression of being bound for somewhere in a big hurry. They don't hang around to kill time like the men do sometimes."

Atlanta's beer emporiums, policemen on the beat report, have never been much of an attraction to members of the Army Auxiliary.

Of course, military authorities concede, an organization as large as the WAAC cannot escape recruiting a few unsatisfactory members, but Atlanta's police department will testify that none of these have reached this city. And with a determined vice and public-drinking drive under way, it would be impossible for all of them to escape detection if the things some people say about them were true.

Farm Security Administration

EXTENSION OF REMARKS

OF

HON. HAROLD D. COOLEY

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 25, 1943

Mr. COOLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

THE PROGRESSIVE FARMER,
Raleigh, N. C., June 18, 1943.

Hon. HAROLD D. COOLEY,
Washington, D. C.

DEAR MR. COOLEY: Ever since Chester Davis asked me to serve on a committee to study the Farm Security Administration I have been trying to digest and assimilate long and formidable compilations of statistics, data, official findings, expert opinions, reports to congressional committees, etc.

A few days ago, however, I decided to do something I wish every other investigator would do. I decided to forget statistics for the time being and go out and talk with the real flesh-and-blood men, women, and children right around me, here in Wake County (all within a few miles of my own farm home) who have received Farm Security Administration assistance through the tenant purchase program. I sat down with them in their surprisingly neat, cleanly, and attractive and economically built cottages, walked over their crops, visited their barns and outbuildings, saw their cows and chickens and children.

In all my experience in agricultural investigations I have seldom had a more exhilarating and inspiring experience.

There was something in the light on the faces of these men and women, something of their new faith in themselves and their future, that mere statistics can never capture or reveal but which on the contrary made all Farm Security Administration statistics and reports seem definitely cold and lifeless by comparison. I was reminded of Walt Whitman's famous poem, "When I Heard the Great Astronomer"—when the great scientist made Whitman dizzy with a maze of theories and figures—" 'til I went out and looked up in perfect silence at the stars."

If the fine faith in themselves and their future was the deepest impression I got from seeing these Farm Security Administration clients, then the next deepest was the downright good neighborliness of these people. "We couldn't live in a better neighborhood" was an expression repeated by nearly every farmer; * * * and I have all my life observed that when a man says he lives in a good neighborhood, he is practically always himself a good neighbor. Nor can I escape the feeling that in part at least these people are good neighbors because they feel that the United States Government itself has played the part of a good neighbor to them. It has not coddled them or regimented them, according to the information given me, but it has given them a chance—a chance to help themselves—and they have responded in a truly noble way.

To the wives of these men especially it seemed to me that the opportunity to own their homes had brought a transforming inspiration. "That man has a smart wife," I found myself saying as I left almost every home. For women in preeminent degree are concerned about their children, the future generation, and to be able to lift their children from tenancy to home ownership seemed to raise the whole level of life for all these women. All are hard working, but of not one did I have the feeling that she was a drudge or felt her daily work to be drudgery. Hope lightened and brightened their labors. Perhaps their neat, cheery, compact, well-planned little kitchens—built or remodeled under Farm Security Administration plans—had much to do with it, the surprisingly bright, cheerful, airy living rooms, and the paint which colors and cheers every house. But even deeper than all this is the inspiration of being able to plan confidently for the future. As the wife said in the last home I visited:

"I wish everybody could have the chance Farm Security Administration has given us. It's the grandest thing in the world to have your own home and be able to plan for it as long as you live. When you are renting from somebody else you cannot plan anything ahead—not even a fall garden."

Of course, the impressions received on this trip to my own Farm Security Administration client neighbors may not be wholly typical, Mr. COOLEY, but in estimating for Farm Security Administration as a whole you could discount by 25, 30, 40, or even 50 percent the findings based on this sample near my own home and still have an overwhelmingly powerful argument for continuing Farm Security Administration. If the folks who are so much concerned about preserving "the American way of life" and "our system of free enterprise" only had sense enough to see it, they would realize that America's best safeguard against communism or any wild radicalism is by encouraging thrift and home ownership by the masses of our people.

I do not wish to prolong unduly my report of what I saw on this visit to Farm Security Administration clients and so will conclude briefly with these other things that impressed me:

1. "Live at home" practices including good gardens, milk cows, poultry.
2. Soil-improving practices.
3. Healthy children.
4. Careful record keeping.
5. Shrubbery around houses.

And finally this remark of one client: "A neighbor came to me at the week end and said, 'What are you going to do this afternoon?' 'Well, I have caught up with my work and had planned to go fishing.' Then I learned that if he didn't get help about cleaning out his cotton right away, he'd lose a lot, so I was glad to pitch in and help him."

My conclusion: The very best of all the fine things the Farm Security Administration is doing is something that can't be caught in statistics and official records. It is building good citizens.

Yours sincerely,

CLARENCE POE,
President and Editor.

Distribution of Petroleum

REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 25, 1943

Mrs. ROGERS of Massachusetts. Mr. Speaker, I have repeatedly asked that Mr. Ickes be given complete control of the petroleum situation in order to fix the responsibility, but that has not been done. I am very glad to note that Mr. Nelson has set up committees to let people know, and have the O. P. A., the P. A. W., and the O. D. T. know, what is going on in the different departments handling petroleum, and to bring about a more equitable distribution of that commodity.

Mr. Nelson, in answer to a question I asked him at a meeting of the east coast Members of Congress the other day, said that he had the power to straighten out this situation. He speaks of people on the east coast having to wear hair shirts. Certainly we on the east coast have worn nothing but hair shirts for months and months and months. We have had the rankest discrimination against us. I am overjoyed that Mr. Nelson has stated that this condition will be changed and that there will be a more equitable distribution. We are fighting very hard in our section of the country to help win the war. We are glad to do our share in every way, but there is no reason why we should be made to suffer unduly in comparison with the rest of the country. No other nation has discriminated against one section of the country in rationing of fuel. It is thoroughly undemocratic and completely unjust.

The article referred to is as follows:

IN THE NATION—MR. NELSON IMPROVES PETROLEUM CONTROLS

(By Arthur Krock)

WASHINGTON, June 24.—More equitable, effective and fewer hair-shirt methods of dealing with the supplies of motor and heating fuel that can be spared to civilians without harm to the military program can at last be reasonably expected. Donald M. Nelson, chairman of the War Production Board, has set up a coordinated system of distribution and allocation which will permit the left hand of Petroleum Administration for War to know at all times what the right hand of the Office of Price Administration is doing and enable Mr. Nelson to unify the movements of the two hands of Government.

The committees he has set up—one on petroleum requirements and the other on petroleum rationing—are intended to serve as clearing houses for the whole activity, exchanging information constantly and promptly appealing differences of policy to Mr. Nelson. By the terms of his commission he has the power to settle such differences and he has decided to retain it instead of turning it over to Secretary Ickes, in the latter's capacity as Administrator of Petroleum Administration for War.

What has been lacking is not an official with responsibility to match authority at the head of the petroleum program, but coordinating machinery for distribution and allocation that is workable, flexible, and ready at all times for service. The two committees should provide this machinery. And hope for more equitable and intelligent functioning springs from the fact that the Department of Agriculture and the Food Administration are to be represented.

PUNISHING FARM FOLK

One of the basic blunders of the off again-on again pleasure-driving ban has been the stubborn refusal of the Office of Price Administration to make any distinction between the uses of A cards allowed in the towns and in the country. Undiscriminating enforcement of the ban has condemned the farming population, producers of the essential war supply of food, to imprisonment on the farms. It has denied to them the normal and morale-sustaining recreations which are available to dwellers in the towns and cities and to those who live near adequate public means of transportation to sources of recreation.

Suggestions to the city-minded rule makers at the Office of Price Administration that country people should be put on some rationing plan that would open to them some of the privileges of the urban population have gone unheeded. But Mr. Nelson is both aware of and sympathetic to the inequality, and he believes in the tonic value to the war program of removing it. That is one reason why he has arranged for agricultural representation on the committees.

He does not propose—nor does anyone who has pointed out the discrimination—that any gasoline should be transported or used that will in any way slow up the most vigorous possible prosecution of the war. But, unlike Mr. Ickes, he thinks it may be possible to remove inequalities and devise a better system than the present one of issuing coupons for which no gasoline is available, or, when it is, of refusing to permit those who obtain the gasoline to use it as they wish. Fewer coupons, based on the amount of gasoline allocated, extinction of the black market, and more freedom of use is Mr. Nelson's basic policy.

WHAT IRRITATES THE EAST

An aspect of the situation which has set up resistance in the East to the rationing program is the immunity of the Midwest from the pleasure-driving ban and from the cut in coupon value. Not a traveler returns from that region to the seaboard who does not feel, express, and often carry out resentment against the discrimination. He is suspicious of the arguments advanced for its necessity, the more so after Governor Dewey recently drove a horse-and-wagon of fact through several of them.

One angry traveler brought to this department the following dispatch from Lansing, Mich., to the Detroit Free Press of June 15.

"Rumors that State police have been stopping Detroit and other motorists bound for northern Michigan vacations (taking up their ration books) and turning them back on the grounds that they were pleasure driving were branded untrue in every particular, Monday, by Capt. Laurence Lyon, head of the State police uniform division. * * * Captain Lyon said the rumors * * * became so prevalent among Ohio residents planning Michigan vacations that he wrote a letter denying the story to Ohio police authorities."

It takes more reasons than Mr. Ickes and others have been able to give thus far to bring persuasion to the East that A cards may not be used there without damage to the war program, but that Midwest motorists can drive 300 miles to vacation points without inflicting damage. And very few citizens in any part of the country are better reconciled to the various bans when they read (Joe Williams in the World-Telegram), "You see Mexico City, an ally, teeming with motor cars on the loose. There is all the gas, oil, and fuel you can handle. The libre, or taxi, will take you anywhere, literally from the Gulf of Mexico to the Pacific Ocean and back again. * * * How can you help asking yourself why one country at war must practice self-denial and another country engaged in the same war is subject to no restrictions?"

Mr. Nelson's intention is to gain respect and adherence to petroleum rationing by making it coherent and equitable.

Women in the Armed Services

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 25, 1943

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Post of June 11, 1943:

WHAT ABOUT WAAC'S AND WAVES?—WHAT SORT OF MEN ARE OUR SOLDIERS?

(By Vida J. Williamson)

These questions have been heard by everyone. They are, to put it bluntly, dumb questions.

Our soldiers are the same sort of people as our American youth and young men—because they are these; and almost all of them at that. They are good, they are bad, they are indifferent. Mostly through a long period of propaganda we kind of idolize them in a way—but that doesn't make them any different; they are still just all of our American men.

Then what about the WAAC's and the WAVES? Well, the same holds true; they are our American women. Not what women used to be—they are modern American women. Better? Worse? Well, who knows? But whether better or worse they are still our women, and no different in uniform than out, except that they have more careful training there, more careful supervision and much harder work.

"But I heard * * *" "You know they say * * *" "Have you heard * * *?" "Buzz-buzz-zzz * * *."

Yes, we've heard; and, yes, we know they say * * *. We also know that all such sayings and rumors should correctly close with a click of the heels, an outstretched arm, and a guttural "Heil."

Women of known bad character are not accepted in these organizations—but then neither are women of known bad character accepted in our clubs, schools, or colleges—yet in all of these there are the circumspect, the careless, and even the daring—the good, the bad, and the indifferent.

These same women are in our country's uniform; that you or I—any of us—should repeat a rumor that would besmirch the honor of that uniform is thoughtless treason. That any of us who are women should do this is double treason—treason against the uniform of our country and treason against our sex.

Certainly there will be isolated cases of indiscretion; I don't personally know of any and have not personally heard of any except the "propaganda type" described above; but, to quote our own editorial of a couple of weeks ago, the WAVES and WAAC's "are not God A'mighty." A woman must be 21 years old to join the WAVES. If you want to know what sort of women belong, then look about you at the women 21 years old and above; vision them with a little more energy, a little more vitality, a little more ambition, a little more love of country perhaps than most; add a lot of training, a lot of discipline, the effect of a lot of daily hard work on character, and you'll know what sort of women make up our "women in uniform."

Did you stop last week and pick up a soldier boy, ask him about his folks, and think, "Such a fine fellow, so far away from home; I just want to do something for him"? If you did, that was fine.

Did you see a lovely young woman in uniform walk down the street last week, and did you step back a little, stare curiously, and whisper to your companion—maybe snicker a little? If you did that—especially if you yourself are a woman—then shame!

Most of us in Carroll County have seen only a few women in uniform—occasionally at a patriotic meeting, in a railroad station, a bus station, or some eating place—but have you noticed the dignified bearing, the orderly appearance, the correctness of behavior that always characterizes them?

That's training—it's good training. We could stand a little of it for ourselves.

Irrigated Lands in Support of the Nation's War Effort

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 24, 1943

Mr. WHITE. Mr. Speaker, water is the lifeblood of agriculture and industry in the western third of the United States, and the recent announcement by Secretary of the Interior Harold L. Ickes that a good water year is in prospect for irrigation and hydroelectric power is definitely good news.

More than 70 percent of the food produced in the West for the sustenance of

more than 15,000,000 civilians and the increasing military population comes from irrigated land. The Bureau of Reclamation, under the Department of the Interior, is a major operator of irrigation projects in 15 Western States.

Better than 80 percent of the power that is turning the wheels of war industry on the Pacific coast and in the inter-mountain States is produced from the water resources of the region. The Bureau of Reclamation is the largest Federal operator of hydroelectric power facilities and last year produced more than 20 percent of the electric energy generated in the West.

Under these circumstances, the report on water conditions in the West by Commissioner John C. Page, of the Bureau of Reclamation, to Secretary Ickes is of prime importance.

A news release of the Bureau of Reclamation on the report as to the outlook for water in 1943 and one on the Bureau's contribution of the power requirements of the West are as follows:

GOOD WATER YEAR IN PROJECT

A good water year unquestionably is indicated for Bureau of Reclamation power and irrigation projects in the West, Secretary of the Interior Harold L. Ickes announced today. The forecast was based on summaries by Reclamation Commissioner John C. Page of snow surveys in the drainage basins of western streams which feed the Bureau's reservoirs, major suppliers for food and hydroelectric energy in the area.

In some basins, the run-off will be the greatest in a quarter of a century, Secretary Ickes declared.

"The Bureau's storage capacity of 61,600,000 acre-feet of water is more than 70 percent of the total capacity available for power and irrigation in the West," Mr. Page advised the Secretary. "Bureau projects are making major contributions to the prosecution of the war. They generate huge blocks of power and provide dependable supplies of water for industrial plants and military establishments costing more than half a billion dollars, and, in 1942, produced irrigated crops valued at $250,000,000. Adequate supplies for Boulder Dam in the Pacific Southwest and Grand Coulee Dam in the Pacific Northwest will insure in 1943 the largest power output by 70 percent in the Bureau's history.

"The snow surveys and irrigation forecasts definitely come under the heading of 'Good news,'" Mr. Page added. "This year more diligently than ever we are striving to expand the production of food for the armed forces and civilians and the generation of power for war industries. Maximum utilization of the high water content in the mountain snows will help reach the goal. Every acre of irrigated land and every kilowatt of power will be of greater importance this year than at any time in the Nation's history."

The run-off of the Columbia River in the Pacific Northwest is expected to equal or exceed that of the highest years on record. The Bureau's giant power plant at Grand Coulee Dam, as well as the plant at Bonneville Dam, depend on this stream. They serve aluminum plants producing more than one-fourth of the Nation's output of this important light metal. The run-off of the Yakima River may reach a peak surpassed only once in 24 years. A tributary of the Columbia, the Yakima River supplies the Yakima project in Washington, a heavy producer of food crops. The mountain snows of another tributary, the Umatilla River in northern Oregon, feeding the project of that name, are nearly 50 percent heavier than normal.

The accumulated precipitation of the Clark Fork in western Montana, which also discharges into the Columbia, is 57 percent above average. Irrigated lands of the Bureau's Bitter Root and Frenchtown developments receive their water from this stream.

Never in 25 years has the water content of the snow along the upper Snake River and tributaries, the Owyhee, Boise, and Payette, been as high as this year. These streams serve the upper Snake, Minidoka, and Boise projects in Idaho, and the Owyhee, Vale, and Burnt River in Oregon. The Minidoka and Boise projects are also important power producers in the inter-mountain region.

Present conditions indicate that the run-off of the Missouri and its tributaries will be much above normal. Snow cover on the Yellowstone is more than double that of a year ago, and on the Milk River, one-third above last year's figure. These streams in the Upper Missouri supply the Riverton and Shoshone projects in Wyoming, the Buford-Trenton (North Dakota), Belle Fourche (South Dakota), and the Montana projects of Sun River, Milk River, Huntley, Buffalo Rapids, and Lower Yellowstone (the latter also partly in North Dakota).

The outlook is very favorable for this season's run-off of the North Platte River and tributaries, from which the North Platte (Nebraska-Wyoming) project is supplied with water for power and irrigation, and the Kendrick (Wyoming) project for power. Principal reservoirs of the Bureau on the North Platte contain the largest carry-over since 1929.

The Elephant Butte reservoir on the Rio Grande will be full at the start of the irrigation season. It serves the Rio Grande project (New Mexico-Texas), a producer of food crops, cotton and power. On the Pecos River, serving the Carlsbad development in New Mexico, the snow cover is less than a year ago.

The water content of the snow on the headwaters of the Colorado above Grand Junction is 20 percent greater than last year at this time. In the headwaters of the Green River, a tributary of the Colorado, it is the greatest in many years and about two and one-half times that of 1942. The Gunnison project in Colorado, will be about average. The Grand Valley (Colorado) irrigation and power project is served by diversions from the Colorado. The Moon Lake, Strawberry Valley, and Sanpete irrigation projects in Utah are served by tributaries of the Colorado River where the indications are of a fair run-off.

The run-off in the headwaters of the Colorado, which is expected to be above average, is an important factor in power and food production in the Pacific Southwest. Lake Mead, the largest storage reservoir in the world, is fed from the Colorado and supplies Boulder power plant, the world's largest, which provides power to the war industries in Nevada and California. Water releases from Boulder Dam also produce power downstream at Parker Dam and on the Yuma project in Arizona. Boulder releases also assure an adequate irrigation supply for the highly productive areas of the Imperial Valley, California, and the Yuma Valley, Arizona.

POWER FROM WATER RESOURCES

The carry-over in the reservoirs of the Salt and Verde Rivers, Ariz., which provide water for the Salt River reclamation project, may be sufficient for this year's operations even though the snow coverage in the headwaters of these two streams is disappointing. Power from Parker Dam and stand-by plants will protect the power needs of that area in even water is not adequate.

Accumulative precipitation in the northern half of Utah assures an abundant water supply in 1943 for the reclamation projects served by that drainage area, the Hyrum, Ogden River, and Weber River.

An increase of 57 percent over last year is expected in the run-off of the Klamath Lake Basin. The Klamath project in Oregon and California, an outstanding potato-producing area in the West, will benefit from the additional supply.

BIG POWER CONTRIBUTION MADE

Bureau of Reclamation power plants provided 70 percent of the generating capacity added in 1942 to speed war production in the 11 far Western States, Secretary of the Interior Harold L. Ickes announced today. The greater part of the power capacity was installed at Grand Coulee Dam in Washington and at Boulder and Parker Dams in the Pacific Southwest. The statement was made on the basis of information just compiled and submitted to the Secretary by Reclamation Commissioner John C. Page.

Commissioner Page reported that the Bureau installed 393,500 of the 557,000 kilowatts added in the West last year. In 1943 the agency will contribute 500,000 of the 825,000 new kilowatts scheduled for installation. Bureau power is generated as a byproduct of multiple-purpose projects having as their primary function the conversion through irrigation of arid lands into productive farms.

"Farm lands in the West irrigated by reclamation systems are providing a substantial part of the war food requirements for the increasing civilian and military population which has resulted from the war," Secretary Ickes observed. "Commissioner Page advises me that the outlook for the 1943 contribution of food supplies is greater than that in 1942 if the farmers on reclamation projects can secure labor and machinery. I understand that transcontinental railroads are experiencing a heavy increase in the westward movement of foodstuffs to meet the growing demands for food."

In his report to Secretary Ickes, Commissioner Page stated: "Seven billion of the 31,000,000,000 kilowatt-hours generated in approximately 700 western power plants in 1942 came from Bureau projects, further emphasizing the war values of our facilities. Western generators produced 5,000,000,000 more kilowatt-hours in 1942 than in 1941, and 3,000,000,000 of this increase was delivered by Bureau plants. This year the Bureau's kilowatt-hour output will reach 12,000,000,000, 5,000,000,000 above the 1942 record.

"American industry, I am told, produced three and one-half times as many aircraft in 1942 as in 1941, six times as many guns, tanks, and ammunition, nearly three times as many naval vessels, and five times as many merchant ships. These are remarkable gains. The Bureau of Reclamation, through its multiple-purpose projects planned under your administration, was able to supply nearly one-fourth of all the electric energy generated in the West in 1942 and used in war industries.

"Reclamation installations today total 1,718,362 kilowatts, which by June 1944, will be increased to nearly 2,500,000 kilowatts, equal to the installation of all power plants on the Pacific coast in 1925. Further additions that would bring the capacity to 3,200,000 kilowatts by 1945–46 have been halted by the War Production Board.

"The increased power supply in the West has brought an unprecedented industrial growth there. According to the data of the War Production Board and the National Industrial Conference Board western industries have been granted Government war contracts totaling $14,000,000,000. The area's development, stimulated by the war, is expected to continue at the end of the hostilities when the vast facilities now devoted to filling war orders are converted to the production of peacetime necessities. Bureau generators will continue to serve these plants after the war.

"As a further contribution in the post-war period, the Bureau is prepared to provide employment and settlement opportunities for workers released from war plants and for ex-servicemen. If the Bureau of Reclamation is not permitted to start work sooner to add to war food supplies, it can resume construction at the end of the war on 20 irrigation projects now halted by the War Production Board, and begin work on 9 others authorized but deferred at the start of the war. Production of food on the irrigated lands of new and existing projects will continue to be as important at the conclusion of the war in meeting the needs of the United Nations as it is today."

The Subsidy Program

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 25, 1943

Mr. POULSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from a constituent which, in my opinion, strikes at the heart of this subsidy program:

LOS ANGELES, CALIF., *June 16, 1943.*
Congressman C. NORRIS POULSON,
Member, House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN POULSON: Strange as it may seem, I have never before written a letter to a Congressman. Many times I have felt the impulse to do so, but human inertia had its way, and the letter was never written.

I am not one of those dyed-in-the-wool foes of the present administration. Some things seemed right, and others wrong. The Supreme Court bill was an evil thing—and Congress so declared it and crushed out its life, and the American people gave a sigh of relief.

I believe that the present and impending subsidy program for wholesalers, and so forth, is likewise a very evil thing, and likewise presents a fight or die challenge to Congress which cannot be ignored. I say this in all sincerity. The manner in which this program was brazenly announced by the administration—the obvious contempt for public opinion on the subject—and the evil concomitants and end products of such a program now being forced upon the American people—all present a challenge to our American way of life.

We cannot roll back prices by bribing price fixers. Human greed, once fed and encouraged, becomes insatiable. This seems so obvious that the existence of some evil, ulterior motive behind such a program seems undeniable. So far as I am concerned, I would rather pay food prices twice or three times as high as those now prevailing rather than see such a program carried to its inevitable conclusion. And there are many defense workers and common laborers earning more money today than myself. Such a program, expanded to its natural limits, will soon result in socialism. I would rather see the money thrown into the Pacific ocean than go to food profiteers.

Food profiteers are today's greatest saboteurs of our wartime economy. Yet not one word is said against them, but instead I am told that constantly increasing prices—increasing every day—are inevitably the result of high wages and too much money in circulation. This is undoubtedly true, but there is a limit to all things. And when I discover that barracuda, a common local salt water fish, is purchased from commercial fishermen at Newport and Santa Monica for 12 cents and 15 cents a pound already cleaned, and sold for as high as 45 cents a pound by the same concern that purchased it from the fisherman—and then sold by the butcher to the public at 52 cents a pound—I don't need a Harvard economics professor to tell me that the wholesaler is in the same class as a robber. Yet, under the subsidy program, we are supposed to pay off the wholesaler so he will see his way clear to reduce his prices without affecting his 300-percent profit.

My sympathies in this matter are all with the farmer and the fisherman—the man who is doing the producing and who is providing us with our food supply. If this subsidy program could be of benefit to him, however, I still would not support it—nor would any proud American farmer ask or accept financial gratuities from the Government in exchange for his own economic independence. Some have, I admit, in the past—but always to their ultimate regret.

In writing the foregoing, I am thinking of actual cases which have come to my attention, as a lawyer and public servant. Evil as these things have been, I still believe that it is up to the American farmer, and the American fisherman too, to work out his own economic salvation to the ends that justice shall be done, and to the end that he shall receive a fair price for the product of his own hands. That is what builds men and that is what America stands for.

Respectfully yours,

CLARENCE OGG.

Address of Hon. Jack Nichols, of Oklahoma

EXTENSION OF REMARKS
OF
HON. JACK NICHOLS
OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 25, 1943

Mr. NICHOLS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech made by me May 28, at Muskogee, Okla.:

NICHOLS ANNOUNCES INTENTION TO QUIT FOR TRANSCONTINENTAL WESTERN AIR, INC., POSITION—DATE NOT SPECIFIED; MAKES NO ATTEMPT TO "PLACE HIS MANTLE"

Representative JACK NICHOLS of the second Oklahoma district last night officially announced his intention of resigning his seat in Congress to become vice president of Transcontinental Western Air, Inc.

The announcement was made at the conclusion of a dinner meeting in the Officers Club at the Hotel Severs at which approximately 100 of the key men in Nichols' political organization were his guests, and provided official confirmation of a report that had gained wide dissemination earlier in the week, climaxed by Thursday's announcement by Trancontinental Western Air, Inc. officials of his election as vice president.

The Congressman mentioned no specific date for his resignation, although previous reports had it as July 1—and he made no attempt to select his successor.

MATTERS TO CLEAR UP

After addressing his guests for more than an hour, during which time he lauded their loyalty and constancy and traced the building of the organization from the first day he announced his candidacy back in 1934 down to the present, the Congressman said:

"And now I come to perhaps the most difficult moment that ever has confronted me. Believe me when I say my heart is heavy as I tell you that it is my intention to tender my resignation from my seat in Congress.

"That I will do as soon as a certain election contest filed by a 'political accident' is disposed of—and I am confident that it will be disposed of within a short time—and as soon as the machinery has been set in motion to alleviate the great suffering caused in this district by the worst flood in history. (The first reference obviously was to the election contest filed by E. O. Clark, Stigler Republican, now pending before a House election committee.)

NO "CROWN PRINCE"

"To you, my loyal friends—and you are the faithful—I say this in all sincerity: This could only be bearable to me because I go, resting secure in the belief that most of you find yourselves in a position that offers you at least temporary security.

"There are no crown princes. There is no crown prince. I place my mantle on no one. If I were to attempt to select one to take my place, I would have to make that selection from among you. That I could not do, for I hold each one of you in equal high esteem; not one of you holds a higher place in my affection or in my regard than the other. It would be impossible for me to choose from among you.

"I will say this to you: You, as an organization, can elect anybody to Congress you choose to elect. I don't care who it is.

LITTLE TO SAY OF NEW JOB

"Whether or not I have any further political ambitions we will discuss at a later date. But I do have one last favor to ask of you, if you feel that you can grant it. I would like to be named a delegate to the 1944 Democratic national convention. I want to keep my finger on the political pulse of the Nation, of the State, and of the district, for this will ever by my home."

For the record, NICHOLS said only that his duties as vice president of the Transcontinental Western Airlines would have to do with the place of commercial aviation in both the present and post-war economy of the Nation. "Off the record" he elaborated slightly on that statement.

After the dinner the Congressman was presented to this "gathering of the faithful" by Kelly Brown, his close personal friend and political advisor, who acted as toastmaster.

NICHOLS began his address of farewell by declaring that never had he found himself given to hesitancy in any situation, under any circumstances, but "tonight I want for words."

FRIENDS PUT TO TEST

"This is a most difficult assignment," he said. "There is nothing stronger or bigger than friendship, and I feel very humble in the presence of all of you who have done what you have done for me—electing me to Congress and keeping me there for five terms.

"This is not the parting of the ways, but in a sense I feel that I am letting you down. I feel it the more deeply because I realize how fortunate I have been to have had friends like you as I climbed life's pathway. Ours has been a common alliance. Nobody could have put his friends to the acid test more times than I have you. Nobody could have responded each time more loyally. And even though I feel I am letting you down, my hope is that you will not feel that I am quitting in the middle of the stream. A desire to discharge a responsibility has always moved me, and I have come to my decision, which I will announce tonight, after long consideration and with the conviction that in accepting this new assignment I am

discharging a real responsibility to my country."

OFFERED SERVICES

NICHOLS then made direct reference to two pledges made in previous campaigns and revealed for the first time something he said "I never have told even you before"—the fact that he was within a few days of receiving a reserve commission as lieutenant commander in the intelligence department of the Navy.

"Back in 1938 I said I would never vote to send American boys to fight on foreign soil to settle a local quarrel; that I would never vote to send American boys to fight on foreign soil unless this Nation were attacked or in imminent danger of attack. I reiterated that statement in 1940. I was never more serious in my life, nor was I ever more serious than when I said if I ever did vote for war I would offer my services to my country in its armed forces.

"On December 7, 1941, when the Japs bombed Pearl Harbor I was in Muskogee and was given the privilege of speaking over KBIX on that black Sunday afternoon. I said then that when I got back to Washington I would offer my services to my country in the Army, the Navy, the Coast Guard, or the Marines, if my Government felt that I could be of more service there than in Congress. I was never more serious, although I was accused of making that statement for purely political purposes.

F. D. R. AGAINST RESIGNATION

"Early in 1941 I had been recommended for a reserve commission as lieutenant commander in the Navy. I passed all the physical and other examinations. Just a few days before I was to receive my commission, Admiral Chester W. Nimitz issued an order that no more reserve commissions should be issued to any Congressman.

"As soon as I got back to Washington after the Pearl Harbor attack, I went to see President Roosevelt. That was on December 10. I told him I wanted to resign from Congress to become part of the Armed Forces. He said, 'Jack, perish the thought.'

"I told him my very word was at stake; that I had promised my people that the minute we voted for war I had said I would offer my services for combat duty. He replied, 'Jack, everything now has to be measured by the yardstick of service. In my opinion, you can be of far greater service as one among 435 Members of the Lower House of Congress than you can as one among several million soldiers. Don't for a moment entertain such a wish.'

"I wrote to Chief of Staff Marshall. I wrote to the Secretary of War. But to no avail, and for a time I was sustained by the words of the President.

BROTHER TALKED "BRUTALLY"

"Then, several months ago, I was approached by an official of the Transcontinental & Western Air, Inc. He said that I had gained certain valuable knowledge of aviation and its ramifications. That I had been the outstanding champion in Congress of maintaining for the United States the supremacy in the air we had always held. He said I could be of great service both to his company and to the United States if I would put that knowledge to use in private activities with his company.

"Again and again I was importuned. Finally I had a long talk with my brother, Clark Nichols. He was as brutal with me as only a brother can be. He told me that I thought I was a great patriot; that while I thought I was doing the patriotic thing by trying to enter the armed forces, actually I was doing little more than indulge my own selfishness, that it was the glamor of the uniform that was appealing to me more than patriotism.

"That was pretty rough. But it set me to thinking. I had spent 9 years in constant study of aviation. The last 6 of those years had been spent in the study of the geographics of the world, and more recently to a study of the part aviation would play in this Nation's recovery from the shock of the war. It finally dawned on me that this was the thing about which I knew the most, and that, while it hasn't the glamor of an Army or Navy or Coast Guard or marine uniform, perhaps it was after all the medium through which I could best serve my country.

LEAVES FOR WASHINGTON

"So I tell you now that it is my intention to resign my seat in Congress to become associated with the Transcontinental & Western Air, Inc. I am telling you, my loyal friends, the people who put me in Congress and have kept me there, first, as I said I would. Circumstances over which I had no control let the rumor out before I could tell you as I had planned. I am sorry. But I know you would not have had me tell any one of you, individually, before I could tell you all at the same time. If I had told a single one of you, I would have been unfair to all the rest. I know you will agree and understand."

Congressman NICHOLS left last night for Washington to attend a meeting Monday of the entire State delegation to formulate plans for immediate relief to the flood victims.

Freight Rates

EXTENSION OF REMARKS

OF

HON. ROBERT A. GRANT

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 25, 1943

Mr. GRANT of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

LOUISVILLE & NASHVILLE
RAILROAD CO.,
Louisville, Ky., March 15, 1943.

Hon. SAM H. JONES,
Governor of Louisiana,
Baton Rouge, La.

MY DEAR GOVERNOR JONES: When I had the pleasure of a short visit with you in New Orleans a little while back, I mentioned the fact that Commissioner Jewell had brought to my attention the Saturday Evening Post of March 6, in which was printed your interview under the heading, "Will Dixie Bolt the New Deal?" I had not read the article at the time and could give no expression thereto. You remarked that perhaps I would agree with much of it, and perhaps disagree with some of it. That surmise is correct.

First, I want to say that the article is presented in a very interesting style and, no doubt, has held attention to the very end of every person who started to read it. Again, with one exception, which I shall mention later, I go along with you practically all the way. I was raised as a Democrat, and my father served in the Confederate Army. My mother was very bitter because of the things which happened during the war and in the reconstruction period and, for the reasons so admirably given by you, southerners took refuge in the Democratic Party. Too many of them still reside there because of the holding power of the mere name. The Democratic and Republican Parties have almost changed their position in the three essential matters you mention, and while I do not now class myself as a Republican, I have long since registered as an Independent and vote my convictions as I see them.

The matter upon which I do not agree with you is that the southern freight-rate structure constitutes an odious barrier which causes a discrimination of swindling proportions against the South and in favor of the industrial East, much to the detriment of the southern territory in developing industry. I do not question your sincerity of purpose in believing and saying that this is so. I do question whether you have fully mastered the intricacies of the situation so as to justify you in the strong statement you have made. I am hoping that you yet have an open mind, and that your conclusions have been based on information and presentations only by those who entertain the view now seemingly held by you.

I am attaching a memorandum from our traffic department dealing with your reference to some specific rates and situations. You will find it interesting and instructive.

It is not the purpose, however, of this letter to enter into a detailed discussion of the many things involved in the subject in question, because the essentials have already been ably expressed by both sides in the controversy. These discussions are embodied in a conference held under the auspices of the Southern States Industrial Council in Birmingham on December 10, 1941. A copy is sent you under separate cover. These proceedings present views which are worthy of a very careful reading, and even to a person not skilled in rate matters may now and then appear confusing. On the whole, however, the conflicting views are fairly well expressed, although I naturally lean to the arguments of those who present the views I personally hold. I am going to ask, therefore, that you read these proceedings carefully, and, even if you have read them, that you read them again.

Like you, I am, as stated, a son of the South, and my inherited sympathies and prejudices naturally incline me to a southern viewpoint, although I have long since tried to view our country as a unit, rather than as divided into sections, realizing, of course, that very different conditions prevail in the different regions, and that many of these, to the disadvantage of the South can be traced to the harmful effect of the War Between the States. More from the effects of this war than for any other reason, I feel the South has not measured up to the development in the East, but that during the last 25 years it has made remarkable progress, and bids fair to ultimately take its rightful place in a country of unparalleled technological and industrial development.

As the head of one of the great corporations which, in my judgment, has contributed tremendously to the South's development, I shall not herein claim for myself any motives prompted by my affection for the South, but merely those arising out of an effort to build and maintain the railroads for which I have served and am now serving. I hope you will give me credit, therefore, for having as keen an interest in doing the things which will be helpful to the South, and not doing the things which will be hurtful to it, as you and the other public representatives who occupy an entirely different field from a corporation head. I, therefore, shall say I want to build the South industrially, commercially, culturally, and otherwise, because I believe it is good business for my company to do so. This being true, would it not run at cross purposes to such a policy if I favored any arrangement which, through freight rates, would retard industrial development in the South?

Will you, therefore, not give me credit for sincerity, and believe that we both have the

same intent and purpose, namely, to do the helpful thing for the South although we are honestly in disagreement as to one of the methods?

If the present war has demonstrated one thing to a greater degree than another, it is that the railroads of this country are essential for defensive purposes in times of war and, consequently, they should be kept strong. Prior to the present war certain conditions existed which threatened the solvency of the entire railroad industry, and kept its managers from progress and improvements which they should have made. Whatever the rate scales in the different regions were, they did not produce a sufficient return to keep a number of railroads solvent. This was particularly true in the Southeast where a number of them were in bankruptcy, including one or two of the larger systems. Two or three more of the larger systems in the Southeast were very near to such a catastrophe. Now, since management has demonstrated its ability, it is reasonably clear that the volume of traffic and their net revenues had much to do with the poor condition of the railroads prior to the war. We cannot accept the oft-repeated statements by those not responsible for results that a general lowering of the rate scale will produce a better net result.

Whatever may be said of the cost of operation of the railroads in the different regions, and admitting, only for the sake of argument, that their operating costs are relatively the same, yet, the net financial results in moving a train, or from the railroad's entire operation, depends not only on the cost of operation but on the number of trains as well as on the volume of traffic handled in each train. This principle holds true in any business. Eliminating coal and some of the heavier tonnage of a few of the southern railroads, which is not common to many of them, traffic density of the southeastern lines is much thinner and the proportion of low-grade freight greater than in much of the industrial East. Hence the average level of freight rates must be higher in the South to produce a solvent return. Perhaps the most important consideration to the southern railroads of this entire question of rates is that they must have a level of rates which will permit them to remain solvent. They have never taken the position that rates in southern territory should be higher than or in anywise measured by rates in the North or East merely to maintain a differential, but solely because a higher level of rates in southern territory seemed necessary to maintain solvency. Even with this general principle adhered to, southern railroads have favored and made such specific rates as were necessary to enable a southern producer to market his wares in the North and East.

Neither do I agree with the premise that a freight rate is generally the controlling factor to locating an industry in the South. I say this from the experience of a manager of railroad properties, and with the practical experience and judgment of traffic officers who have an extensive organization and are continually engaged in undertaking to, and in actually locating, industry in the South. There are many reasons, some even more controlling than freight rates. First, there is the local market, then there follows, not necessarily in the order named, raw materials, labor and its attitude, climatic conditions, the cost of living, taxation, the attitude of public authorities with respect to corporate enterprise, and other reasons.

There is generally a lower scale of merchandise class rates in effect to and from points in the East than there is in the South. This condition is largely influenced by the traffic density above referred to. The rates to and from points in the South are generally higher than in the industrial East because of thinner traffic density.

The rates from the South to the North are generally lower than from the North to the South, as relates to tonnage actually moving. This statement has reference to all normal rates and movements, and takes into consideration that the South has many commodity rates which are included as class rates in the North and East.

It is true that in many instances rates from a point of production in the East to a point of consumption in the East, are lower than paper rates from a point of production in the South to a point of consumption in the East. These situations are, however, met by southern railroads where, in specific and individual instances, an equalization of the rate seems necessary to promote industry in the South. This does not mean, however, that southern railroads approve an intra-territorial rate scale in the South as low as that in the East, or that they are willing to adjust rate schedules to the East where it is not proven essential to promote southern industry. To do this would merely subtract from the revenues of the southern carriers without compensating advantages.

The decision of the Interstate Commerce Commission in the first southern Governors rate case (and in a few preceding cases) established the principle of satisfactory competitive rates from points of production in the South to consuming territory in the East, as compared with rates between such points in the East. Of the large number of rates first under consideration by the southern Governors, only 20 were presented to the Commission on which favorable decision of 10 was issued. It should be significant that the managers of much important southern industry were largely absent from this hearing. The hearing did establish, however, the precedent that satisfactory competitive rates can be had from the South to the eastern consuming territories where convincing representation is made. The southern railroads have always supported such a view, and will continue to do so. This does not mean that the southern railroads will always yield to a particular industry as to what rate the situation requires, or that they will support every effort of every southern applicant to obtain rates on an eastern level. The railroads cannot make their experience and informed judgment subordinate to the expressions or belief of a particular industry seeking such rates. They do, however, carefully consider each situation on its merits and act accordingly. Such a course is necessary for the preservation of revenues and solvency of the railroad industry in the South.

Much has been said in the press about the intraterritorial class rates in the South being 39 percent higher than similar rates in the East. In arriving at this conclusion, the lower commodity rates in the South have not been taken into consideration. If all traffic were similarly classified in the two regions, the average level of rates in the South would not be a large percentage higher than that prevailing intraterritorially in the East. In this connection, note the statement of Mr. E. L. Hart, secretary and traffic manager of the Atlanta Freight Bureau, on page 69 of the proceedings of the Birmingham conference, above referred to, where he says: "I know that the rate level in the South today as a whole is not much greater than maybe 5 percent, 6 percent, or 7 percent higher than it is in the North." Mr. Hart does not support the railroads' position in the controversy. I understand he is one of the traffic advisors of the Southern Governors Conference.

In one paragraph of your interview you make the statement that South American merchant ships find it cheaper to sail all the way up to the ports of the eastern seaboard rather than to land goods at New Orleans, behind the freight rate barrier. I take this to mean that you believe the freight rates from the Gulf ports to and from the interior points, are, mile by mile, higher than the prevailing rates to and from the eastern ports, mile by mile. If such is your thought, you have been given incorrect information, as inland rates to and from the southern ports are as low or lower than from and to the eastern ports. This does not mean that export and import rates to and from southern ports are sufficiently low to deprive any community of its nearer location to the seaboard. No one could reasonably expect that. On the whole however, Gulf ports are in a favorable situation with respect to export and import rates, distance considered.

The present rate case now under consideration by the Interstate Commerce Commission will, perhaps, determine the relation which shall exist between intra-territorial rates in the South and intra-territorial rates in the East or other territories, and inter-territorially between such territories. The southern railroads will, of course, undertake to show that to put the eastern scale in effect in the South will be detrimental to the continued solvency of southern carriers, and will protest against any such scale. We frankly believe that the establishment of similar scales in the East and the southern territories may ultimately cause a reclassification of some of the commodity groups and cause an increase in the existing rates on certain commodities, and that the general effect of such a leveling of rates will be harmful rather than helpful to southern industry and to the location of new industry therein.

Another feature is that the rates from both the northern and southern producing points to destinations in southern territory are substantially the same, distance considered, but are on the higher level in effect on southern railroads. Generally, the hauls from the northern producing points to southern consuming centers are longer, thus making the aggregate freight charge greater than that accruing against the southern producer because of the shorter distance to the same consuming territory. Reducing the level, therefore, would make the spread in the aggregate charge less and consequently favor the northern producer insofar as the freight rate influences the southern buyer and consumer.

The crux of the whole controversy seems to be whether it is just to southern railroads and helpful to southern industry to establish the general rate level as sought by certain elements in the South, or to adjust southern rate scales only when necessity and desirability arises, and thus protect the solvency of the southern carriers, as advocated by the southern railroads. Since it is the desire of both the southern Governors and the southern railroads to do the thing which will accomplish the most beneficial results for the South, then the controversy seems to resolve itself merely into a difference of opinion as to method. Naturally the railroads feel that expert opinion is on their side.

After all, is it not probable that other competition with railroads will ultimately have much to do with fixing all rate levels, both intra- and inter-territorially, in and between all sections? Highways and waterways seem to favor such a probability if these continue to be permanently favored by laws and regulations, subsidy and taxation.

I believe you and other southern Governors could profit much in a better appreciation of this entire question if you would seek the advice of the best informed traffic men of the larger industries in the South who, for the most part, I believe, represent a view not in harmony with what seems to be your own.

Frankly, it is my opinion that the wide dissemination of the statement that southern freight rates are seriously detrimental to the welfare of southern industry is very harmful advertising for the South. It will

take us some time to overcome the false impressions and misunderstandings which arise from such publication.

I realize this has been a very long letter, but it shows the difficulty of concisely discussing even just a portion of the problems involved. I do think, however, the matter is of sufficient importance to have the most careful consideration and a correct understanding. I attribute to you high integrity in the views you hold, but I also retain for the executives of the southern railroads an honest desire to build industry in the South because, if for no other reason than that it is good business to do so.

In all of this I invite your thoughtful consideration because only the truth will make us free. I have no means of knowing what the decision of the Interstate Commerce Commission will be growing out of the present hearing. I do believe, however, that that body is probably better qualified to pass upon the major merits of the case, than either interested side to the controversy which may have prejudiced views.

Now, my dear Governor, permit me to advance one more thought, only a phase of which is partially included in the freight-rate question. The general situation with the railroads prior to the p esent upsurge in war traffic was in many instances precarious. That the public views their future with uncertainty is indicated by the market price of their securities in this period of abnormal traffic. Railroad managers dread the day when the traffic shall again fall, when the greater competition by waterway, highway, airway, and pipe-line carriers comes again to the forefront. They believe railroad managers have proven their ability in the present emergency; that the industry has made a highly creditable contribution to the war effort; that it has been demonstrated that the railroads are absolutely essential in wartimes and therefore in peacetimes should be permitted to remain solvent and progressive. Railroad managers seek no favoritism as to laws, regulations, subsidies, or taxation. They ask only an opportunity under equal conditions, willing to swim or sink accordingly. We are not in politics, locally or nationally, except as defense against injustice or unfairness requires it. And I believe I speak for all southern railroad executives, whom I know well, that we have a high purpose to upbuild the South to its rightful place in the Nation. Our contribution thus far has been unmatched and our hope for the future is yet unshaken.

I am sending a copy of this letter to other southern Governors and some other interested persons.

With high good humor, good will, and assurances of esteem, I am,

Yours cordially,

J. B. HILL, *President.*

Farmers and Veterans Would Benefit Under Bills

EXTENSION OF REMARKS

OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 25, 1943

Mr. WICKERSHAM. Mr. Speaker, I desire to call attention to three major bills of vital importanc e that were placed in the hopper by me on June 22, 1943.

One bill seeks to provide a fund of $500,000,000 to be known as the Veterans' Farm Mortgage Insurance Fund to provide 30-year loans at 3 percent to any person who has served with the military or naval forces of the United States, its possessions or territories, during any war. Ninety percent of the cost of the farm would be advanced by the Government under the terms of the bill.

Another bill, if enacted, would guarantee to the producers of agricultural commodities a minmum price of not less than cost of production and further insure to farmers and livestock raisers an amount equivalent to the best price received therefor during the emergency. The bill seeks to guarantee this minimum for at least 5 years after the war to prevent a crash.

The third bill introduced by me provides that any Army materials determined by the Secretary of War to be surplus shall first be offered to farmers for sale or lease before such items are disposed of to tax-supported organizations or sold in domestic markets, foreign governments, or donated to counties and States.

Pap, Pie, and Patronage

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 25, 1943

Mr. SPARKMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Gladstone Williams, from the Atlanta Constitution of June 22, 1943:

WASHINGTON PARADE

(By Gladstone Williams)

"PAP, PIE, AND PATRONAGE"

WASHINGTON, June 21.—The best evidence that the Senate was out on a "pap, pie, and patronage" rampage when it passed the McKellar bill, requiring confirmation of all Government employees receiving $4,500 or more a year, is found in the vote on the measure itself.

Democrats supported the bill overwhelmingly, while the Republicans opposed it in a like ratio. Of the 42 Senators voting for passage, 34 were Democrats, and of the 29 recorded in the opposition, 20 were Republicans, with 1 Independent.

Now the reason for this more or less clear division along party lines is apparent. Ordinarily the Republicans would have seized upon the opportunity to support a bill which the administration was against. If for no other reason, they would have done so merely for the purpose of embarrassing the President, who has set his foot down firmly against the McKellar proposal.

By the same token, the Democrats ordinarily would be expected to vote against a bill which the administration opposed.

The fact that the vote was scrambled up the way it was is evidence enough the Democrats were more bent on patronage and pap than anything else. Republicans voted in the opposition because they were not counted to share in the patronage.

The effect of the legislation, if finally enacted, would be to give the Senate a voice in the selection of some 27,000 Federal workers who are not now subject to Senate confirmation.

Power to appoint

The power to reject is the power to appoint. Hence, if the bill were made a law, the Senate could insist on the right to be consulted over every one of the offices filled. Under the present system, the appointments are made either by the Civil Service Commission, the heads of the various departments and agencies, or by the President himself.

But even if Congress legislated to itself the authority to pass upon the appointments, the Republicans would have nothing to gain so long as the Democrats are in control. All of the patronage might be expected to go to the majority party.

That is the cold, unvarnished truth about the Republican attitude. The Democrats were out for a patronage grab and the Republicans were against it because they weren't scheduled to get a cut of the cake.

McKellar eye on Tennessee Valley Authority

As for Senator MCKELLAR, the sponsor of the legislation, he is credited with having his eyes on some 400 fat jobs in connection with the Tennessee Valley Authority, which operates mainly in his State. If he could throw out the present officeholders and put his own henchmen in those lucrative jobs, he would have the foundation for a highly effective political machine.

That, also, would be a good way to wreck Tennessee Valley Authority—filling it up with personal political appointees.

But, regardless of the Senate action, there doesn't seem to be much chance of the bill ever becoming a law. The lower House is against it on pretty much the same grounds as Senate Republicans. House Members realize they don't stand to share in the patronage, whether they are Democrats or Republicans.

Giving the Senate veto power over appointments clothes the upper Chamber with authority to demand a greater voice in the selection of Federal workers, but little of it seeps down to the House. The lower body would not be affected by the change.

House Members know all of this too well, of course, which explains the marked lack of enthusiasm for the bill in the lower Chamber. To pass the measure would merely be to pull the chestnuts out of the fire for the Senate.

Veto certain

Finally, if the bill should pass both Houses it is certain to meet a Presidential veto. Mr. Roosevelt has stated his opposition in no uncertain terms. Last February, when it was first brought before the Senate, he denounced it as "the very antithesis of the merit system," declared it would "sweep away years of civil-service progress," and "would lay all of us open to the charge that we are playing politics with the war program."

There is little likelihood of Congress passing it over the President's threatened veto.

Under the circumstances, all of the time spent by the Senate in considering the bill seems to be wasted effort. It is difficult to understand how the leaders could have made themselves a party to the program, unless it was they were only going along with Senator MCKELLAR to make him feel good.

Club ethics

The Senate is like that sometimes. It has a club atmosphere about it that makes it go along with individual Members at times when they are known to be wrong. Many a highly qualified Government appointee has been sacrificed on the altar of a "personally obnoxious" complaint filed by some Senator with no more than a personal grievance to square.

Senator MCKELLAR, long an enemy of the Tennessee Valley Authority, had his head set on putting through the present grab bill. His Democratic colleagues didn't feel like voting against him.

Patriotic and Loyal War Workers

EXTENSION OF REMARKS

OF

HON. SAMUEL A. WEISS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 25, 1943

Mr. WEISS. Mr. Speaker, we frequently listen to a tirade in this Congress against unwarranted strikes of an isolated group of war workers. We often hear certain Members of Congress condemn war workers because of their legitimate demand for increased wages to meet the increased cost of living. Now an occasion arises for us all—and in particular the aforementioned Members of Congress—to take time out to pay real tribute to the war workers of the McKeesport, Pa., industrial district.

A bus strike was on. The strike was a last minute affair with no advance notice to the public, but nevertheless the district's soldiers on the production line got to their jobs. They crowded into street cars and taxicabs. They thumbed rides; squeezed into their neighbors' cars. Most of them actually "hoofed" it. They all got to their work. They permitted no obstacle to interfere with their part in turning out Uncle Sam's fighting tools. This was truly the ideal answer to the plea of our soldier boys all over the universe during the recent coal strike not to let them down. The patriotism and loyalty of the war workers of McKeesport, Pa., stands out as a shining example to the people of America. A superintendent of one of McKeesport's war plants said:

It's marvelous—that's what it is. There's the answer to crepehangers' moans about absenteeism. We have very little at our plant, and I think that applies to the other McKeesport industries as well. Our men and women are getting here—and on time. I don't know how they do it, but they are here.

As your Representative in Congress, I salute you war workers of this great industrial district.

The splendid achievement by McKeesport war workers was a topic of discussion among outstanding leaders of our community and throughout the Pittsburgh steel industrial district. Full recognition of their accomplishment was given in an editorial which appeared in the McKeesport Daily News, leading newspaper in this district, and which I am happy to include as a part of my remarks.

THEY GOT TO WORK

McKeesport war workers so successfully met a test in patriotism, imposed by the bus tie-up, that a plant manager declared yesterday:

"It's marvelous, that's what it is. There's the answer to crepehangers' moans about absenteeism. We have very little at our plant, and I think that applies to the other McKeesport industries as well. Our men and women are getting here, and on time. I don't know how they do it, but they are here."

How did they do it? Some doubled up in automobiles and others got lifts at street corners. But the majority met the emergency the hard way. They walked.

Sidewalks along Walnut Street from the Christy Park Works were crowded at the turn changes. One stream of tired, hot, weary workers would flow from the plant and merge into the stream of workers moving toward their jobs. Occasionally a car stopped, picked up a load and cut into the stream. But there were not enough cars.

The same was true at the National Works and the other industries that together make McKeesport one of the vital industrial communities in wartime America.

The production drop that a stop in public transportation would normally entail failed to materialize. There was no lessening of this community's great contribution to the cause of victory. And it wasn't easy.

Four National Works employees were met by a reporter on Walnut Street. They were walking the 4 miles to their jobs. The street cars on Evans Street which run down town on the Glassport run served as a magnet, drawing workers from all sections of the Hill District. Down the streets to the plants marched the employees.

One hot mill worker who didn't miss a minute at work during the bus tie-up had this to say yesterday:

"It's not easy for a man of my age. In fact, after putting in 8 hours in front of a white-hot furnace, to be faced with that long walk home is just plain hell. But I have a boy in New Guinea, and he's been going through a little hell himself. I can't afford to let him and his buddies down."

He could have been talking for practically all of the foot-weary workers who today, with the strike over, deserve the praise of a Nation and the thanks of the boys at the fighting front for meeting a local company with such spirit that not one ton of steel was lost and not one shell held back.

Better Late Than Never

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, June 25, 1943

Mr. HOFFMAN. Mr. Speaker, from the Detroit Free Press of June 23 comes the following editorial on race riots. By inference it charges that those riots are in part at least the result of panty-waist politics. Unfortunately, the Detroit Free Press and other papers have advocated the same kind of conduct which the Free Press now deplores.

Many of us remember that, when the sitdown strikes and the accompanying violence flared in 1937, the Free Press warmly praised Governor Murphy for what it now calls and condemns as the kid-glove policy of Detroit's police commissioner. Down through the years, the Free Press has either lacked the courage or the inclination to insist that pickets refrain from violence, permit peaceable citizens to proceed about their lawful business.

One cause of the recent riots is, as the Detroit Free Press intimates, the leniency of public officials, who, had they acted with greater firmness, had they forced strikers and goon-squads, imported from other States, to obey the law of Michigan, would have lessened the opportunity for the recent riots.

The Free Press thought Governor Murphy did a wonderful job when he practiced panty-waist politics. Now it condemns Detroit's Commissioner for similar conduct. The editorial reads as follows:

PANTY-WAIST POLITICS AND RACE RIOTS

Two months ago everybody in Detroit familiar with the situation knew that race riots were inevitable. Events were rushing toward a climax. The Free Press then asked Police Commissioner John H. Witherspoon what provisions were being made to meet the outburst of lawlessness.

The commissioner declared that all plans were made. He spoke with the optimism of a young and inexperienced officer. He was asked what moves were being made to prevent such an outbreak. His answer was:

"We have given orders to handle it with kid gloves. The policemen have taken insults to keep trouble from breaking out. I doubt if you or I could have put up with it."

With all due respect to a sincere young man, it is just such a philosophy as the commissioner expressed which is the root of our troubles, locally and nationally.

This is not time for kid-glove treatment of law violation.

This is no time for panty-waist politics.

In the inexorability of all-out war the majesty and dignity of the law can only be upheld by exercising the power of the law.

The very moment that a police officer accepts the insult of a hoodlum he has established in the evil heart of that rat a contempt for the law.

That officer is not John Smith, citizen.

He is the law.

And when he is insulted the law is flouted. A hole has been made in the dike of public morale.

You will notice that none of these gangsters who swarmed over our streets all Sunday night and all day Monday passed on any insults to the soldiers of the United States Army when the troops rumbled into town at midnight. Instead, they scurried to their holes in keeping with their rattish nature.

It is the policy of the politician to avoid trouble, to soft pedal on principle so that votes will not be lost.

But, as day follows night, kid-gloving criminals leads to anarchy.

A good policeman who knows that he has the faith of his city behind him, who knows that he will be supported wholeheartedly in maintaining the dignity of the law, can keep his beat orderly. The lawless element knows he means business. That is why the murderers ran for cover when the Army came. They knew the soldiers meant business and would shoot to kill. A mobster is always a coward.

This newspaper holds no brief for Ed Kelly, mayor of Chicago. We do not approve of his political methods nor his boss rule. But this much can be said for him: Chicago's hoodlums know he means business.

He decreed, when this war started, that there would be no rioting of any kind in Chicago, either through strikes or racial discord. When rioting did start he gave orders to shoot to kill. There has not been any noticeable unrest in Chicago since. What few strikes there have been in that most unionized of all American cities have been orderly. There have been no racial disturbances.

One does not need to mention Napoleon's "whiff of grapeshot" which ended the reign of terror in the French Revolution. We have before us the cold, calm courage of the altogether nonmilitary Grover Cleveland, who boldly asserted the dignity of the law in the rioting of his day and his memory is still cherished for his courage.

Instead of being ready for the inevitable, Mayor Jeffries gave forth a statement that sounded like the pleadings of a frightened Sunday-school teacher: "I appeal to all citizens of Detroit to insist on maintaining our orderly routine. * * * These fights accomplish nothing except to upset our war efforts. Remember your country needs you."

That was like quoting "now I lay me down to sleep" to a man in a delirium. You cannot appeal prettily to mob-mad men turned into fiends. They know no reason. They have sneered at the law for so long, and have insulted the police as a daily exercise to such an extent, that the lust to kill is upon them unrestrained.

Only when they see a symbol of the law with all the majesty of its power rampant do they run for cover.

This situation is not peculiar to Detroit. It has grown into a national neurosis. When a lawbreaker sees one of his kind get away with it he follows suit and, as in the prohibition era, there develops a contempt for all law.

So we see John L. Lewis making a sucker out of the United States Government for the past 2 years and getting away with it. More, he has been idolized as a hero for doing just that, even as the prohibition era gangsters were lionized by American boyhood—until J. Edgar Hoover and his valiant G-men fought the outlaws to a standstill and restored some semblance of dignity and respect for law enforcement.

What America needs above all else is men of courage who can see beyond politics, who stand for fundamental principles and hold them inviolate.

The Nazis and the Japs are not using kid-glove methods in fighting our sailors, soldiers, and marines. Nor are our men in the death grapple thinking of votes. It is a bowelless conflict, without pity unto the end.

That is the disinterested, high-visioned courage we need on the home front—in Washington, in Lansing, in Detroit.

Then our streets will never again be stained with the blood of the innocent.

Cattle Raising in Oklahoma

REMARKS

OF

HON. PAUL STEWART

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 25, 1943

Mr. STEWART. Mr. Speaker, down in Oklahoma the enterprising citizens are now planning for the peace after the war. One very distinguished citizen, Mr. Roy Turner, who owns and operates one of the largest ranges of registered herds of Hereford cattle in the Southwest, near Sulphur, Okla., will this year, as he has for many successive years, entertain the F. F. A. and 4–H Club members at a field day. He will divide $500 among the boys and girls who are best able to tell a good type Hereford animal when they see one.

The public treasury has not been the only source to create the incentive to raise better Herefords in Oklahoma, we have other citizens who encourage with their own money better breeding, better types, and above all, a better market.

It is indeed sickening to have in charge of the price ceiling of cattle, officials who do not believe in encouraging a better breed of cattle by our youths. I learned this lesson back on March 25, 1943, when it took all the power of the Oklahoma delegation in Congress to get an amendment to M. P. R. 169 to exempt F. F. A. and 4-H Club animals from the custom slaughtering provisions of paragraph 1364.491 of MPR 169. After an appeal by the friends of the 4–H and F. F. A. boys and girls was turned down by the group of the so-called "professors and theorists" before their representative had an opportunity to present the case, a direct appeal was made to Hon. Prentiss M. Brown, Administrator of O. P. A., by the entire Oklahoma delegation, joined by Congressman MILTON H. WEST and Congressman RICHARD M. KLEBERG, of Texas, and it was then that Mr. Brown took jurisdiction and issued an amendment to MPR 169 which exempted 4–H and F. F. A. Club cattle from the custom slaughtering provisions of the above order.

Not until the passage of the agricultural appropriation bill has Congress had an opportunity, and then it was an amendment, adopted to replace these "professors and theorists" in O. P. A. pricing set-up with men having at least 5 years' business experience in the industries concerned.

An editorial appearing in the Daily Ardmorite commending Mr. Turner for his good work, is as follows:

ROY TURNER

For the fourth successive year, Roy Turner, owner of the Turner Hereford ranch east of Sulphur, will entertain Future Farmers of America and 4–H Club members at a field day. Turner has invited members of these two organizations to be his guests and to compete for cash prizes and appropriate trophies in club and individual judging of six clases of Hereford cattle.

He will divide $500 among the boys and girls and they don't have to do a thing to get part of this money but be able to tell a good type Hereford animal when they see one

Turner has done much to encourage youngsters on farms and ranches in Oklahoma to take keener interest in the production of better cattle. He realizes that the club members today will be ranch owners in the near future and he wishes every one of them to produce the kind of cattle that are found on his ranch.

If they approximate his own goal, they will have gone a long way in the Hereford cattle business.

Gasoline Rationing

EXTENSION OF REMARKS

OF

HON. PAUL CUNNINGHAM

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 25, 1943

Mr. CUNNINGHAM. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I am including a radio address of Hon. CLARENCE J. BROWN of Ohio.

Good evening, ladies and gentlemen of the radio audience. I am grateful to the Washington Star and to the Blue Network for this opportunity to join with my colleague, Representative HARTLEY, of New Jersey, in discussing the general subject of gasoline rationing, and the specific proposal that further limitations on the use of gasoline be placed upon the people of the States of the Union outside the eastern shortage area.

The present gasoline controversy results from the formation of a congressional bloc representing the 16 States along the east coast, where a real gasoline and oil shortage has developed as the result of transportation difficulties. Soon after its creation the press and radio carried stories of demands being made by the eastern group for the imposition of further restrictions on the gasoline users of the country. Public officials were called before Mr. HARTLEY's committee and urged to ban pleasure driving and reduce gasoline ration allotments all over the Nation. As a result motorists throughout the country became alarmed and apprehensive, and those of us in Congress from the States outside the eastern area were compelled to organize to protect the interests of our constituents.

Our group has in its membership practically every Representative in Congress from every State west of the Atlantic seaboard. So in discussing this problem with you I speak as the chairman of a committee representing a majority of the membership of the House of Representatives.

I agree with Mr. HARTLEY as to the situation which exists in the 16 Eastern States. I, too, regret and deplore the shortage of oil and gasoline that exists there, making necessary the ban on pleasure driving, the reduction of A card allotments to 1.37 gallons per week, and the cutting of B and C coupon values to 2½ gallons each. Now, as I understand it, Mr. HARTLEY and his colleagues want to make the rest of the country, regardless of the oil and gasoline available, accept the same strict rationing.

I am sure Mr. HARTLEY and the people of the East will agree their present troubles are almost entirely due to the lack of transportation necessary to convey oil and gasoline to them. Prior to the war practically all petroleum products used in these Eastern States were delivered by ocean tankers; a cheap form of transportation permitting the people of the East to enjoy gasoline prices much lower than the rest of the country. Incidentally, while this condition existed, I heard nothing from Mr. HARTLEY as to the wisdom or desirability of equalizing gasoline prices throughout the Nation by having eastern consumers pay a little more, and westerners a little less, for their motor fuel.

The Interstate and Foreign Commerce Committee of the House—of which I am a member—long ago realizing such tank ship deliveries would be endangered in case of war, authorized the construction of cross-country pipe lines to supply the East. This legislation was enacted by the Congress long before Pearl Harbor. Secretary of the Interior Ickes, now the Oil Administrator, urged the prompt building of these lines, but for some reason delay after delay ensued. However, I do not recall any eastern bloc being created at that time to hasten construction of these pipe lines. Seemingly, our friends were not interested as long as they were getting their gasoline delivered more cheaply by tanker.

Incidentally, two gigantic pipe lines to supply the East are now being rushed to completion at the expense of all the taxpayers of all the States. The Government is also paying—from tax money paid in by all of us—the increased cost of shipping gasoline by rail and truck to the eastern area. We are glad to help you bear the cost of meeting your emergency.

But war came, and the German submarines struck. The East was forced to look for other means by which to obtain needed gasoline

and oil. A frantic effort began to supply the eastern area by rail delivery. There were but 107,000 tank cars in the country, practically none of which had previously been used for hauling gasoline or oil to the East. Fourteen thousand of these cars were being used for transporting products, such as asphalt, which made them unfit for hauling oil and gasoline. Out of the 93,000 tank cars remaining, 74,000 are now busy hauling oil and gasoline to the East, and 6,000 more are distributing the precious fluid within the eastern shortage area. Only 13,000 usable tank cars remain to serve all the rest of the country. So, when you stop to consider that we have given to the eastern shortage area, which used practically no tank cars before the war, 80,000 out of the 93,000 tank cars we had available for our own use, I believe you will agree we have not been selfish—especially when it is remembered that many of the tank cars we have left are used for transporting vital war liquids other than gasoline. Today practically every drop of gasoline that moves from the refineries to distributors and consumers in the Midwest is hauled in tank trucks, and not in railroad tank cars.

Secretary Ickes, head of the Petroleum Administration for War, has flatly turned down the demand of the eastern group for the imposition of further restrictions on the rest of the country. He insists that further limiting gasoline use elsewhere would not increase the amount that could be sent to the eastern area and therefore no good could come from such an order. The only possible result would be unnecessary injury to the rest of the Nation, without any benefit whatsoever accruing to the people of the Eastern States. We must not forget that gasoline rationing was ordered in the East far ahead of the rest of the country simply because of the transportation shortage. When rationing was finally made applicable to the rest of the Nation it was explained as necessary to conserve rubber, not gasoline. There has never been any contention at any time by any public official that gasoline rationing is necessary outside the eastern area in order to save gasoline.

Why, bless your hearts! The ordinary type of gasoline used by motorists in these days is nothing more or less than a byproduct from the refining and distilling processes used in obtaining many vital war needs from crude oil. While our general crude oil reserves have been dropping, and the long term outlook is not good, reserves of gasoline outside of the eastern area have thus far actually been increasing, not decreasing.

For instance, Petroleum Administration figures show that gasoline stocks in the Indiana, Illinois and Kentucky area stood at 13,467,000 barrels on November 28, 1942, just 2 days before gasoline rationing went into effect in that section; and that by June 5, 1943 these stocks had risen to 18,372,000 barrels; an increase of approximately 38 percent in the gasoline reserve in these three States since rationing began. The same is true elsewhere throughout the country.

Let us use common sense. What good can possibly come from further restricting the use of gasoline, where such heavy increases in gasoline reserves have accrued under present rationing allotments, if the gasoline saved thereby cannot be transported to the eastern shortage area?

If transportation had been available, refineries in the Middle West would have gladly shipped to the East at least those 5,000,000 barrels of gasoline by which our reserve has been increased under rationing, rather than to place it in storage. Oil refiners are not philanthropists. They are always interested in selling, rather than in storing, their gasoline.

Further restrictions on the use of gasoline in the Midwest at the present time would not help the East in any way, but would simply increase our gasoline reserves, overflow our storage facilities, and eventually bring a reduction in refining operations, with resultant loss in the production of needed war requirements; or force the wasteful dumping of gasoline for lack of storage.

I cannot understand why some of the eastern spokesmen take such a dog-in-the-manger attitude as to say, "Inasmuch as we are suffering from cruel gasoline restrictions as the result of a shortage in transportation, the rest of the country must be made to suffer, too, regardless of the supply of gasoline available."

Why bless Mr. HARTLEY'S soul. The people who live out in the Middle West were glad to accept restrictions on the use of fuel oil last winter to help keep the people of the East from freezing. We have always been ready to share our all with our fellow countrymen. We will accept any restrictions that may be necessary or beneficial to the war effort. We will gladly give up all of our gasoline if it will save a single American boy's life to do so.

Oh, yes, Mr. HARTLEY, while we were not anxious to get into this war, we are out to win it, and we are giving our blood and treasure toward victory. We are also ready to give up every drop of gasoline and oil we have or can produce if such be helpful to the winning. But, Mr. HARTLEY, we refuse to accept unnecessary restrictions in the use of gasoline simply to satisfy those who are in misery and want company. We are willing to make sacrifices if it will help you to recover from the gasoline sickness with which you are suffering. But if we cannot help you, we refuse to listen to your plea that we crawl into bed with you and take the same disease ourselves.

No wonder every Government official to whom you have appealed for the imposition of further restrictions upon our people has turned down your plea. I predict the President will do likewise if you go to him. It is not the American way to drag others down to your level. Instead let us bring the East up to our level, as far as gasoline and oil are concerned. Devote your efforts to that cause, Mr. HARTLEY, rather than to attacking us, and we will cooperate and work with you—for that will be the American way.

Immigration Quota for Chinese

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 25, 1943

Mr. MASON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of the San Francisco Chamber of Commerce:

The San Francisco Chamber of Commerce has never questioned the policy of rigid restriction or exclusion of oriental aliens. The chamber has, however, questioned the method, and since 1924 has been committed to grant of quota.

Except for entry of students, merchants, and a few other classes, Chinese entry into the United States has been forbidden since 1882.

In 1924 Congress passed an act which reduced annual immigration to 2 percent of the number of foreign residents in 1890. Quota, however, does not apply to immigrants from Canada, Mexico, or the independent countries of Central and South America. During the depression the annual immigration from quota countries was further reduced to 10 percent of the 2 percent. Quota, however, was not granted to aliens ineligible to citizenship—Asiatics.

Were quota granted to Chinese aliens, only 105 would be admitted over and above those now excepted from exclusion—students, merchants, professionals, and a few other classes.

When the 1924 quota law was passed, with Asiatics debarred from quota, at least three other methods of exclusion were available:

1. By treaty.

2. As regards Japan, a tightening of the gentlemen's agreement.

3. By placing China and other Asiatics on a quota basis.

None of these three methods was used, and by qualifying immigration to those eligible to citizenship, offense was given to China and other Asiatic countries. Had restriction by quota been effected, 105 Chinese would have been admitted annually, 185 Japanese, and a minimum of 100 from other Asiatic countries. (Since March 24, 1934, the Philippines have been given an annual quota of 50.)

Our unfortunate method of restriction is being exploited by Japan in its approaches to China. China is conscious of the stigma our nonquota grant has placed upon her nationals. Not only for the war effort, but for the post-war period of reconstruction and trade development, nongrant of quota will be a barrier to best possible United States-China relations.

It is respectfully recommended, therefore, that the San Francisco Chamber of Commerce reaffirm its traditional position in favor of grant of quota, and specifically recommend to Congress that the basic quota of 105 be granted to China.

Respectfully submitted.

WM. L. MONTGOMERY,
Manager, World Trade Department.

Accepted and approved June 10, 1943 by the board of directors of the San Francisco Chamber of Commerce, and the San Francisco Chamber of Commerce thereby placed on record.

Food Versus Feed

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 25, 1943

Mr. MASON. Mr. Speaker, under leave to extend my remarks, I insert for the benefit of my colleagues an excellent editorial taken from the Washington Post of Thursday, June 24, 1943:

FOOD VERSUS FEED

Every day brings new evidence of the serious dislocations caused by the Office of Price Administration's bungling efforts to control food prices. Although meat is fast disappearing from retail stores, representatives of livestock growers assert that Government estimates indicate a surplus of 15,400,000 head of cattle by the beginning of 1944. Despite this immense potential meat supply, cattle are not being shipped to market in normal quantities. Moreover, many small packers are going out of business or threatening to quit because, they say, they lose money on

each pound of beef sold. Hogs likewise are being produced in great quantity, with a heavy increase in numbers in prospect, to be added to greatly increased existing supplies.

The explanation of this paradox of superabundant supplies of livestock coincident with a dearth of consumable meat is simple. The lack of a ceiling on livestock prices has led to heavy production of meat animals, while the imposition of ceiling prices on processed meats has discouraged slaughtering and limited sales of meat. Meat shortages, however, are not the only unfortunate consequence of the Office of Price Administration's mistakes of judgment. Gov. Thomas E. Dewey, of New York, called attention to another serious maladjustment in a recent address to the annual conference of Governors. The Office of Price Administration, he remarked, had "developed a theory that it would be a good idea to repeal the natural law of economics that corn and hog prices are tied together. The result is a ceiling price on corn of $1.05 at Chicago. Meanwhile the farmer can get $1.45 for the same corn right on the farm just by throwing it over the fence to his pigs." Consequently the New York dairy cow, dependent upon corn bought at the ceiling price of $1.05 per bushel, has a very poor chance of survival against an Iowa hog fattened on the farm.

Governor Dewey concludes that the Midwest ought to slaughter more pigs and use the released feed to aid New York's dairy and poultry producers, thereby making our limited grain supplies go further. He warned that meat animals are "eating into the precious food reserves which must be increased if we are even to begin saving the undernourished people of a rescued Europe." This is substantially the same sort of appeal as that put forth by former President Hoover in his criticism of the administration's food program.

Another significant indication of the disruptive effort of the Office of Price Administration's failure to link feed prices to livestock prices is supplied by the closing of a large plant manufacturing starch and dextrose sugar at Pekin, Ill., because of inability to obtain corn at ceiling prices. Any widespread closing of such plants will, it is said, have serious consequences, since many essential industries, including war industries, are dependent upon corn products. Here we find another paradox—an important industry compelled to close for lack of corn, although farmers are known to be hoarding large amounts of corn or feeding it to their high-priced hogs.

The dislocations already caused by setting ceiling prices for corn without imposing corresponding ceilings on livestock are minor calamities compared to what may lie ahead. If the dairy and poultry industries, for instance, are deprived of necessary feed supplies, shortages of milk, cheese, and poultry will ensue. For that matter, some cattle and hog producers complain that they, too, face a crisis for lack of feed and that wholesale slaughter of cattle and hogs not yet ready for market impends because of the inability to feed them. Nevertheless, the suggestion that corn ceiling prices be eliminated causes grave misgivings, because that would doubtless send prices of corn skyrocketing.

The basic issue confronting the Food Administration and Office of Price Administration was raised by Governor Dewey when he urged less meat production as a means of making our grain supplies go further. The Government must first decide whether its meat-production plans need revision before taking action to adjust feed prices and to arrange for the allocation of feed supplies. To continue the present policy of drift is to court disaster. Meantime, New York is turning to Canada for grain to feed her dairy herds and her poultry because, Governor Dewey says, "we cannot wait forever for Washington to discover the laws of economics. We have to get feed wherever we can find it."

Men Who Want a Free America

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, June 25, 1943

Mr. DONDERO. Mr. Speaker, I offer for the RECORD an editorial from the Pontiac Daily Press including resolutions passed by the Junior Chamber of Commerce of the United States at a recent meeting.

These young men are becoming conscious of what is happening to their United States and the principles of individual freedom and opportunity on which the country was built.

The editorial follows:

MEN WHO WANT A FREE AMERICA

What are the young men of the Nation thinking in respect to the position they are to occupy in the United States after the war?

What kind of a place is it going to be for ambitious, willing chaps whose future lies before them? Are they going to be regimented within an inch of their lives, or is free enterprise still to endure?

The men who make up the United States Junior Chamber of Commerce came to some conclusions at their annual meeting in Chicago last week.

There are 135,000 of these bright young fellows of which number 55,000 are in the military service. They are profoundly concerned with the problem of freedom—as they may well be. They want a normal opportunity for themselves and their members in the war and all other men, when peace has been established.

The following resolutions which were passed at Chicago give a quick insight into the doubts and fears that are filling the minds of young Americans. Their statement of principles follows:

We believe that in addition to the "four freedoms," we have a fifth freedom—the opportunity of enterprise—by which America has grown great and through which we can insure her future greatness.

We believe this freedom requires:

The right to an unfettered start in the race of life with no artificial handicaps.

The right to work as hard as we like and enjoy the fruits of that work as our own.

The right to go as far as we can, developing according to our capacities as individual American men and women.

We recognize that the fifth freedom—opportunity of enterprise—is limited by the similar right of others and that there is an obligation to extend these opportunities to all people who are willing and able to work.

What these young men are saying is that they want constitutional government in the United States, such as we had while we were making the Nation great and prosperous. They want the right to run their own affairs in their own way. They want the right to work as hard as they like, and they expect to be protected in the right to enjoy the fruits of that work. They don't want any over-all blanket which reduces all to a common level. They expect to develop according to their capacities as individual Americans.

These shrewd young men already have discovered what was going on in the United States, or they would not feel the need for this declaration. All they have to do is to stand firm on these aspirations and follow their inclinations seeking such political assistance as will help them to attain these laudable objectives.

In Providence Is Our Defense

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 25, 1943

Mr. SPARKMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following poem by Horace C. Carlisle:

Bless ye the Lord, all ye His hosts; ye ministers of His, that do His pleasure. (Ps. 103:21.)

IN PROVIDENCE IS OUR DEFENSE

O God, Thou art the light,
To earth's remotest bounds—
Thou makest day to follow night
On its recurring rounds.

When we trust and obey,
At night sweet is our rest,
And to the duties of the day,
Dear God, we give our best.

We know all that we need
To know of God's unknown—
Yea, when it's darkest, He will lead—
With Him no one's alone.

O God, in these dark days
Of trouble and despair,
Tune Thou our hearts to sound Thy praise
Through sermon, song, and prayer.

With statesmanship endow
These servants of Thine who
To Thy will in submission bow,
That their dreams may come true.

Our warriors sustain,
Beyond the frowning foam—
O God, may these not die in vain,
Because we've failed at home

—*Horace C. Carlisle.*

(Tune—Blest Be the Tie That Binds, 416.)

(Suggested by the prayer in the House by Navy Chaplain, Rev. Flynn Humphreys.)

Butter Subsidy

EXTENSION OF REMARKS

OF

HON. H. CARL ANDERSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 25, 1943

Mr. H. CARL ANDERSEN. Mr. Speaker, under leave to extend my remarks

in the RECORD, I include the following editorial by Mr. J. C. Morrison, publisher of the Morris Tribune, of Morris, Minn. One of the outstanding editors of the Northwest, Mr. Morrison's views on the subsidy question is worth reading by every Member of the House:

SUBSIDY IS ALL WRONG

The latest scheme to hold the badly shattered line against inflation is to pay a subsidy to the processors of butter of about 5 cents a pound in order to recompense then for the difference between the ceiling price of butter and the price paid farmers for butterfat. The same quackery is slated to be applied to the price of meat, and how can it possibly end there? Certainly the price of coal will be a likely candidate for attention as soon as the consumer has to bear the cost of the recent wage boosts granted to the coal miners. Ceiling prices on lumber and unsatisfactory wages in the woods have affected the production of logs and so here is another field for subsidy fertilization. Paper is another candidate. In fact the possibilities are endless, extending into every kind of production and distribution.

But now back to butter. As soon as the ceiling price of butter was lowered—the loss presumably to be made up by a subsidy, and presumably without disturbing the price paid to the farmer for butterfat—in spite of all this the price of butterfat began to sag. The full effect of the subsidy plan has not yet become apparent, but there is something happening that suggests that the processors are aiming to collect the subsidy from the Government in cash and from the farmer in reduction of price. It is only natural that the processors should attempt to protect themselves against the vagaries of the market on the one hand and the regulations and red tape of the Government on the other, but that isn't the way the scheme is supposed to work.

But why all this fuss about butter? The butter ration is 1 pound per month per person, and a saving of 5 cents a pound means an annual saving of 60 cents a year, which is the smallest kind of small change in the increases in the wages of industrial labor. For any sensible person, let alone a Government expert economist, to consider this a roll-back of inflation makes the folly of King Canute to sweep back the tide with a broom just a playful pastime.

Inflation cannot be rolled back. It cannot be stopped without stopping the cause and the cause has been the administration laws which have permitted industrial labor to hold up the country by demanding and demanding and demanding. The brave words in which the President has indulged have been meaningless, because wages do not freeze and the vicious circle of rising wages, more money to spend, and rising prices continues to whirl.

And the beautiful experiment of meeting the whole problem of inflation by granting subsidies is going to cost $80,000,000 for butter alone, and an additional $300,000,000 or more for meat, and the President estimates the total cost at from one and a half to two billions of dollars. All this is to be added to the already heavy tax burden. Then add the millions or billions which will be necessary if the subsidy plan is to be applied to hold the line in clothing, shelter, and scores of other consumer wants, and the subsidy method will fall of its own weight and is itself inflationary.

The subsidy method only saves the consumer money in one place, and gives him more money to spend in another place, which is inflation all over again.

Don't License This Racket

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, June 25, 1943

Mr. HOFFMAN. Mr. Speaker, under the foregoing captior, the Washington News of June 23 has the following editorial:

DON'T LICENSE THIS RACKET

The other day the National Labor Relations Board came right out and told the truth—that the war production program has been "perverted" by a "most lucrative labor racket."

Other Government agencies have been excessively coy about this matter. In the last 2 or 3 years hundreds of thousands of citizens have been compelled to pay many millions of dollars to closed-shop unions (principally American Federation of Labor unions) for the privilege of working on defense and war projects. The union initiation fees have been, and are, outrageously high. And in innumerable cases those who paid them obtained no more than temporary "work permits." But, beyond gentle appeals to the unions to be reasonable, the Government has done nothing.

The National Labor Relations Board asserts that this racket would be immunized by an American Federation of Labor-sponsored amendment, passed by the House, which would bar the Board from considering complaints arising from management-labor agreements that have been in existence more than 90 days.

The American Federation of Labor's immediate object is to prevent interference with closed-shop contracts between its metal-trades unions and 3 Kaiser shipyards in the Pacific Northwest. These yards, which had only 264 employees when the contracts were made, now have about 90,000, all paying the American Federation of Labor unions. And, according to the National Labor Relations Board, just one of the local unions concerned now enjoys an annual revenue of some $3,000,000. The Congress of Industrial Organizations wants to displace the American Federation of Labor unions, and the Board has been giving sympathetic consideration to Congress of Industrial Organizations charges that the American Federation of Labor contracts are illegal.

Without attempting to discuss the merits of the American Federation of Labor-Congress of Industrial Organizations jurisdictional row here involved, we agree with the National Labor Relations Board that the House made a serious mistake when it passed the American Federation of Labor's amendment. Its effect, as the Board says, would be to sweep away all restrictions on closed-shop contracts. Such contracts, made with company-dominated unions, or as a result of collusion or fraud, and even though a contracting union had no members at all among the employees affected, could easily be kept secret for 90 days. Thereafter they would be beyond the reach of any Federal agency, and employees would have no protection against discharge or other penalties if they refused to pay whatever fees, dues, and assessments the unions might demand.

This would amount to a license for racketeering labor organizers to prey on individual workers. Instead of that, we think, Congress should give individual workers at least a small measure of protection against the "most lucrative labor racket" by requiring all unions to file public reports of their fees, dues, and other financial affairs.

Mr. Speaker, for something like 7 years from the well of the House an effort to end the racket referred to above has been made by me. Perhaps some day one of the four freedoms—freedom from fear—will be restored to the American workingman and he will be permitted to accept and work at a job without being required to buy a work permit of a political ally of the administration.

Some Sound, Homespun Common Sense

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, June 25, 1943

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks, I insert a quotation from an address delivered by Mr. Frank Tripp, chairman of the Allied Newspaper Council, before the International Circulation Managers' Association at Cleveland, Ohio, on June 23, 1943.

The statements in this address are contrary to the new philosophy preached and advocated in this land. It is not yet too late for the American people to awaken to a realization that no one has invented a substitute for work or created a government superior to simple arithmetic. Social gains and the demanding of more wages for doing less in a shorter time was not the philosophy or principle on which our forebears established an empire in the wilderness.

Let the youth of the land understand that only through work, perseverance, ambition, and the right of the individual to better himself can real freedom from want and freedom from fear be realized.

Mr. Tripp gave the youth of the country to understand that America's next generation would be a servile, spineless race of dependents if it seeks only freedom from want and personal security. He did not hesitate to say that the newsboys of today will be the men of tomorrow on whom the future of America depends.

If that type of boy comes to think that all to which he aspires is the bunk and that freedom from want and personal security are the sum total of American life, then the jig is up and our next generation will be a servile, spineless race of dependents, no better off than the pitiful peoples for whom we fight.

Mr. Tripp asserted the Nation would return "to that day when public servants worked for the people and not the people for the public servant; when a pauper was just a pauper and not an able-bodied man leaning on a Works Project Administration shovel by the roadside; when 2 out of 10 people do not live off the public till half of them putting fool figures into fool books; when school teachers teach school and don't try to tell practical men how to do something they have spent their lives learning to do efficiently and well; when the workers' dollar will not be raided by indirect hidden taxes in order that millions of the faithful

may remain on the public pay rolls; when the newspaper boy of today may become the captain of tomorrow but knows that it can never be except by his own sweat and perseverance.

TRUTH WILL LEAD US BACK

We will go back to that day because the truth will lead us back. The truth of our own times the story of our folly revealed to us by that daily visitor to our fireside—the newspaper. That will lead us back because there never will be a Hitler who can muzzle or suppress it.

Facts the Bureaucrats Should Know

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, June 25, 1943

Mr. HOFFMAN. Mr. Speaker, from a practical farmer and canner comes the following letter, which I hope Members will read and, when they have read it, join in doing something to the bureaucrats that will enable farmers and processors of food to produce to their fullest capacity. The letter reads:

THE BURNETTE FARMS PACKING CO.,
Hartford, Mich., June 23, 1943.

Hon. CLARE E. HOFFMAN,
Washington, D. C.

DEAR MR. HOFFMAN: There are certain facts which every Government official who is interested in agriculture should know. I submit for your consideration certain conditions which prevail in this section of the country.

First, on our own family farms of more than 1,000 acres we have had four complete failures in our large orchards, namely; cherries, apples, pears and peaches. Nevertheless we must continue to cultivate and spray these orchards.

Regarding the other crops, we have had to prepare the soil two or three times before we could do our seeding on account of weather conditions. We have had to seed some of our crops on the lowlands twice. We have also had to revise our normal program of planting and put forth double the normal effort to get our crops under way.

You are doubtless very familiar with the muck soils around Decatur where great quantities of vegetables are grown. I made a personal survey of that section last Sunday. I would judge that at this time only about one-half of the muck soil has been seeded. Around Dowagiac it seems to me that about three-fourths of the muck soil is out of production this year because of the weather conditions, lack of farm workers and other unusual difficulties which the farmers are meeting in these times.

I think the drive of the administration for the subsidy program is extremely discouraging to most farmers on top of the other difficulties. The farmer knows that the processors will not venture to pay him more than they will be able to get out of his product. The cost of producing farm crops has increased greatly because labor is higher and less efficient than in normal times. Likewise, the cost of processing is higher for the same reasons.

There are many little things which enter into the cost of processing which the Government administrators will not be able to grasp in figuring out subsidies. The processors know this. For example, last year the price of cartons for canned goods were quoted at $52.50 a thousand. We cannot buy those cartons this year for less than $71 a thousand, and we are not sure of getting sufficient quantities at those prices.

I want you to know that I am giving you this information mostly for the good of the cause and not necessarily for my own personal benefit. We are in a better position than most farmers and processors because we grow the majority of crops we process and can get by through the interchange of labor and by holding down the quantity to what we can handle without taking risks that are too hazardous. Another big point in our favor is that we have an aluminum foundry where we can furnish work the year around to the breadwinners of the large families while their wives and children live in the community and can stand by for helping in the harvest of our crops. But these are advantages which other farmers and other processors do not have.

If the committees who are interested in the farm program will get authentic information from each section of the country they will be convinced that it would be dangerous to saddle the subsidy program on the farms and processors of this country for the purpose of pacifying the city workers or even for pacifying the consumers. Unless you give the farmers and the processors an incentive to put forth extraordinary effort to produce the food which the country needs, you will not get that food. It is not because we wouldn't do it, but because we couldn't.

I doubt if the average industrial worker and city dweller realizes that it takes a farmer about 4 years to add a milk cow to his herd. First he must breed his cow. Then wait for the calf to be born. Then the calf must be fed for at least 2 years and then bred and fed another year before the young cow freshens and begins to produce. That is 4 years from the time the farmer makes up his mind to add a new cow to his herd.

When I put out an apple orchard I know that it will be from 10 to 12 years before that apple orchard will begin to produce. Therefore, I have to plan to take profits from the other crops to invest in that apple orchard for 10 years.

I wonder if the Government administrators who are goading the farmers to get more food produced realize that the farmer must make these 4- or 10-year plans to produce what the Government wants? Do the subsidy advocators realize that it is going to cost the farmer more to plan and produce a new milk cow and a new apple orchard under the present conditions than it did in the past? If they don't, it will be just too bad to wake up like Rip Van Winkle a few years from now and discover what has been done to undermine the fundamental principles of farm planning and production. The farmer must have a profit to keep up his production from year to year, and from one generation to the next, just as a manufacturer must take into consideration the wear and tear replacement and obsolescence of his machinery and equipment.

It would be tragical for our elected representatives who are in a position to get the facts to apologize to this country some time in the future by saying that their intentions were good, but they simply made mistakes in judgment. Our resources of agriculture would be just as depleted, and the people of the world just as hungry as if that had been the intention of the men in position and power at the present time.

I know that you know the agricultural problems because you live in an agricultural district. I know that there are many other elective representatives who have this fundamental knowledge. I am rather proud of the fact that you and certain others in Washington have the courage to express your convictions. I believe that the people throughout the country appreciate this courage and that it gives them hope for the future.

Yours sincerely,

WILLIAM A. BURNETTE.

Salvage and Scrap Collection in Illinois

EXTENSION OF REMARKS

OF

HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 25, 1943

Mr. DIRKSEN. Mr. Speaker, when Pearl Harbor galvanized this Nation into action and it became necessary to marshal every resource in the victory effort, the cry went forth for vast quantities of scrap so that steel mills might continue to supply maximum quantities of steel for the instruments of war. But the scrap which had accumulated on farms and in fields, in attics and cellars was of little value unless it was collected and delivered to shipping points from which it could find its way to the mills. Scrap collection had to be organized. It required direction and publicity. It required the organization of counties and communities into militant collection units. It required the coordination of schools, clubs, and societies. It required the development of enthusiastic scrap campaigns. It required vigorous and unselfish direction.

The State of Illinois performed outstanding service in the field of salvage and scrap collection, and, in fact, lead the entire Nation in results. This achievement is due to the patriotic and enthusiastic way in which citizens and groups responded to the call of country and to the brilliant and energetic direction which was given to the work. I take pleasure in paying tribute to Nathaniel Leverone, of Chicago, who served as salvage director for the State of Illinois; to Ben Regan, who served as executive director for the State; and to William L. McFetridge, of Chicago, who served as salvage director for the metropolitan area of Chicago, for their remarkable accomplishments in this field, for the tireless way in which they served the cause, and for the patriotic service which they rendered on the home front in supplying scrap and salvage so that the weapons of victory might be kept rolling and flying. The editorial comment on their service by the Chicago American on June 24, 1943, is richly deserved:

DISTINGUISHED SERVICE

Nathaniel Leverone, resigning as Illinois salvage director, and Ben Regan, as his assistant, leave Illinois and the Nation in their debt.

These men, in cooperation with William L. McFetridge, salvage director of the Chicago metropolitan area, shaped the pattern for the Nation in methods of getting in vitally needed scrap for the war plants.

Under their leadership Illinois set the salvage pace for the States, leading in per

capita collection of some items and rolling up highest tonnages in others.

The organized patriotism of Illinois, millions, channeled skillfully, bore fruit in a tremendous flow of materials into the war industries and in a quickened response throughout the country, inspired by Illinois' example.

Because the Messrs. Leverone and Regan labored as they did, with enthusiasm and insight and tireless devotion, American fighting men and on fronts around the world got more weapons sooner than they would have had them otherwise.

It would be hard to imagine a finer service to America than that.

Nationalism Versus Internationalism

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Saturday, June 26 (legislative day of Monday, May 24), 1943

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD a talk made by me last night, June 25, over the national network of the National Broadcasting Co. on the subject of American nationalism today, with the introductory remarks of the station announcer.

There being no objection, the address and introductory remarks were ordered to be printed in the RECORD, as follows:

ANNOUNCER. The Honorable ROBERT R. REYNOLDS, United States Senator from North Carolina, speaks to you from Washington on the subject I Am a Nationalist. Senator REYNOLDS holds membership in the Committees on Foreign Affairs, Territories and Insular Affairs; and he is chairman of the important Military Affairs Committee.

Ladies and gentlemen, Senator REYNOLDS.

Senator REYNOLDS. Good evening, ladies and gentlemen. It is my pleasure this evening to talk with you concerning nationalism, a subject which should find interest with every American, native-born or naturalized, who has at heart the welfare of the United States.

Prior to our entrance into the present World War the outstanding question before the American people was isolationism versus intervention. I was an isolationist. I voted against the lifting of the arms embargo, the repeal of the neutrality laws, and the passage of the Lend Lease Act, knowing that all of them were steps toward war. The interventionists contended that they were steps away from war.

Today the question of the hour is nationalism versus internationalism.

What is nationalism? Nationalism is the law of self-preservation, nationally applied. The first law of nature is self-preservation as applied to man. The first law as applied to an individual nation should be self-preservation. Therefore, being interested in the preservation of the Constitution of the United States and the welfare of America, I am proud to declare to you that I am a nationalist.

Real nationalism must at all times be distinguished from fictional or bogus nationalism. The seizure of control over a people by a piratical group, such as the Communists over the Russian people, the Fascists over the Italian people, the Nazis over the German people, or the Black Dragonists over the Japanese people, may result in setting up a fictional or bogus nationalism, but never a real nationalism. A real nationalism must truly represent the people and have a real ideology which deserves the enthusiastic support of the people. Instead of real nationalism causing wars, no greater safeguard of peace, order, and prosperity can be conceived. Its people want neither war nor aggression, because any real ideology is necessarily opposed to both. Moreover, there is no proper place in any real nationalism for nonassimilable persons or groups. Fictional or bogus nationalism is usually a disguise for internationalism which requires the destruction of real nationalism, and, therefore, defames the latter as being responsible for the wars which are caused and manipulated by internationalism. Deliberate confusion of real nationalism with fictional or bogus nationalism in propaganda emanating from the camp of internationalism has been chiefly responsible for the recent progress of the superstate advocates toward the destruction of civilization. No nationalist can be an intrusionist or interventionist into the affairs of any other nation, nor can he be an isolationist in the sense of wanting his nation to have no relations with other real nations. If any such isolationism were a part of Americanism, the United States Constitution would not contain express provisions for treaties with other nations.

Regardless of the fact that we are at war, engaged in combat upon the seven seas and in every quarter of the earth, is no reason why we who are interested in the future of our country should not speak out boldly in the interests of our country.

We are winning this war. We are going to experience final victory. We shall triumph, and while our sons and the sons of our friends and neighbors are dying upon foreign fields we should here on the home front now carry on in the interest of those heroes who fight and bleed and die abroad.

Prior to Pearl Harbor I voted for every national defense measure. I insisted upon making America impregnable to the assault or assaults of any enemy. I not only voted for every defense measure, including the selective-service system and approval of unlimited appropriations totaling billions for the development of our national defense, but as early as 1938 I visited Alaska and the Aleutian Islands and then insisted upon the development of our fortifications and the installations of others in that area. I then proposed the construction of the Alaskan Highway. If my proposals had been carried out, there would be no Japanese on American territory today, and the highway leading to Fairbanks could have been constructed at one-fourth the cost when finally our Government took that step.

In the interest of national defense, I introduced a bill in the Congress of the United States providing that the hundreds of thousands of boys in the C. C. C. camps be given basic military training; and if my suggestion had been carried out then, at the beginning of this war we would have had as a civilian basis for national defense more than 1,300,000 young men who had been through the C. C. C. camps.

During the course of those days prior to Pearl Harbor I advocated the acquisition of islands in the Caribbean and the North Atlantic, from Trinidad (British) to Miquelon and St. Pierre (French). In other words, I strongly recommended and urged the welding of a band of steel around the Western Hemisphere, from the Panama Canal to the Arctic Zone, that would make our section of the world secure against attack of any enemy or enemies.

Now that we are in the war we must win the war, but little will we have gained to have won the war if we lose the peace. Therefore, I am firmly convinced that we should inquire of our friends and allies, those of the United Nations, as to our war aims. At a time when we are pouring millions of men into uniform, distributing billions of dollars throughout the world, and making the greatest sacrifice in the form of expenditures of time and wealth that any nation upon the earth ever made in any war or wars, we have a right to know for what we are fighting.

We have a right to know just who will get what and where, when victory has been won. As a nationalist, one who is interested in the welfare and the future of his country, I think it would be well now, while our allies need us, to find out from each of them their respective objectives.

Heretofore, I have felt that while the war is in progress we should devote our entire time and energy to the winning of the war, and not in the consideration of post-war matters, but I have changed my opinion. I believe that the leaders of all the United Nations should be brought together for the purpose of finding out just what is going to take place when the war has ended. In other words, after victory is won and the Japanese reptiles have been driven from Hong Kong, China, will we return Hong Kong to the Republic of China, now under the direction of our allied leader, Chiang Kai-shek, or will it be returned to the British who, seized it from China during the second opium war in 1856.

When we will have driven the treacherous Japs from the Dutch East Indies, Java, and Sumatra, and adjoining islands, probably at the cost of thousands upon thousands of American lives, will we deliver those islands over to the Javanese to administer as they see fit—since we fight to redeliver the Philippines to the Filipinos—or will this territory be turned back to the Netherlands?

When we will have succeeded in driving the vicious Japs from the Malay States, will this land be turned back to the British or will it be given to the natives thereof for their own administration?

When we have crushed the might of the German hordes and the Russians have overrun Finland, Latvia, Esthonia, Lithuania, and Poland, will the people of those countries be forced into the Soviet Union against their wishes, or will the peoples of these separate nations be provided the guaranty of freedom and self-government as enunciated in the Atlantic Charter?

To repeat, instead of awaiting the end of the war and settling these matters at the peace table, I am of the opinion that it is our duty to ascertain now the objectives of the United Nations. In other words—what are our war aims? As American citizens interested in the welfare of our country above the welfare of any other country, we should give consideration to these matters now.

I declare that many groups are taking advantage of the fact that we are at war to advance their own selfish motives and interests. There are those who are taking advantage of these critical hours to advocate the repeal of the Declaration of Independence, the dissolution of the United States of America, and to make our country a part of a world nation, thereby destroying our sovereignty for which our forefathers fought, bled, and died. There are those who are advocating "union now," a world-wide Work Projects Administration, and half a hundred other ideologies, all of which would tend to destroy our national sovereignty and reduce the standard of living of the American laboring man to the level of the coolies of China or the peons of many of our sister republics to the south. To all of these I am opposed.

Since the beginning of the present war in Europe in September of 1939, more than 480,000 aliens of all classes were admitted to the

United States from foreign countries, amongst whom were 324,000 who entered this country as temporary visitors, as transients, or students, etc. I protest these admissions. I criticize the admission of nearly half a million aliens into this country since the war began, at a time when we are sending our sons to their lands to fight their battles. While our men are on foreign shores, in uniform, in more than 70 different places throughout the world, those for whom they fight leave their battle zones and come to America to bask in the sunshine of safety and prosperity.

War or no war, the time has arrived when the citizens of the United States, native-born or naturalized, should look after the interests of their own country, and conserve, protect, and guard well here the "four freedoms" for which we are fighting in every part of the world.

When World War No. 1 ended, the national indebtedness was only 28 billion dollars, with 11 million of our citizens unemployed. When this war will have ended, the total indebtedness will probably exceed 500 billion dollars, with 15 to 20 million Americans walking the streets seeking employment, and with millions of American youngsters returning from foreign lands to be hospitalized, pensioned, and cared for.

With this picture before us, we should give consideration now to the future and the welfare of America, before considering a world-wide Work Projects Administration, a quart of milk every day to each of the 2,000,000,000 people upon the face of the earth, the admission of untold numbers of immigrants—Europeans and Asiatics—to compete with our millions of unemployed, and probably the policing of the entire world, at the expense of the American taxpayers.

When this war is won it seems to me that before we can make much progress in reshaping the destiny and future of the peoples of the world we shall have to put our own house in order and rid ourselves of all this confusion and mess of affairs within our Government, and come back to the fundamental principles of honesty and integrity, without regard to political expediency.

Yes; I am a nationalist, or, if you prefer, an American-Firster; and I am glad to be able to state that in this country, despite the smearing and the unlimited propaganda over the air and through the press, I share the opinion of millions upon millions of Americans who believe in saving America for Americans, be they native-born or naturalized.

To you who have done me the honor to listen in, may I say that if you should care to secure a copy of my talk, I shall on request be glad to send you a copy or copies thereof for your file or for distribution.

ANNOUNCER. You have heard the address, I Am a Nationalist, by the Honorable ROBERT R. REYNOLDS, United States Senator from North Carolina and chairman of the Military Affairs Committee.

Senator REYNOLDS spoke from Washington.

Tribute to Louis D. Brandeis

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Saturday, June 26 (legislative day of Monday, May 24), 1943

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very eloquent and able address delivered by the distinguished senior Senator from Illinois [Mr. LUCAS], at Chicago, Ill., before the Memorial Association of Chicago, in tribute to the late Associate Justice of the Supreme Court of the United States, Louis D. Brandeis.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, ladies and gentlemen, it is always a happy occasion when I can leave the manifold responsibilities of government in the Nation's Capital and associate with my friends in my native State. The legislative problems today are fourfold, and it is only through the return to the State for inspiration that we are able to get the answer to the many situations which confront us. I am doubly happy tonight in knowing that I could accept this kind invitation to come to the city of Chicago and speak before a group of citizens interested in forming a colony for refugees in Palestine as a perpetual tribute to the illustrious name of the late Justice Louis D. Brandeis.

Recently the President of the United States appointed me as one of the American delegates to attend the refugee conference on the island of Bermuda. After 10 days of constant labor in conjunction with the delegates from the British Isles, we made our findings, drew up our report, and submitted it to our respective Governments as a confidential document. The appointment of this delegation by the President of the United States grew out of the fact that in 1939 he called together certain world powers for a conference at Evian, France, the result of that meeting being the creation of what was known as an intergovernmental committee for the purpose of helping the Jews in Germany, Austria, and the Sudetenland, who were then being cruelly persecuted by Adolf Hitler. It is eloquent testimony to our President's humanitarianism and passion for justice, that even though he is the busiest man in the world he could find time, both before and since the war, to give his personal attention to this complex problem.

I should like to say to my friends in the city of Chicago and throughout the Middle West that the Bermuda Conference made substantial progress under the agenda as outlined by the American and British Governments. It must be thoroughly understood that this delegation appointed was one with limited jurisdiction. We had no power to make commitments for our governments. The best we could do was to make the findings and recommendations after the evidence had been submitted. Because of military implications involving neutral countries and the problem of shipping, I am unable to give to the country the total results of that historical gathering, but, suffice to say, the delegates examined the refugee problem in all its aspects, including the position of those potential refugees who are still in the grip of the Axis Powers without any immediate prospect of escape. Nothing was excluded from our analysis and everything that held out any possibility, however remote, of solution of the problem was carefully investigated, thoroughly discussed, and rendered available for our respective governments. We agreed upon a number of concrete recommendations, some of which already have become effective, and yet which I am unable to tell the public because of the military implications involved. The Palestine question was discussed pro and con with the English delegates. They, too, were more than sympathetic with the great refugee problem in Europe as the result of the savage and barbaric policy adopted by Adolf Hitler.

It is well for you to know that Palestine has absorbed over 40,000 refugees since the outbreak of the war, and it is no secret that the British Government is willing to take 39,000 more into Palestine between now and March of next year, if they can find the shipping capacity, or the available ways and means to do this humanitarian work. My earnest hope is that the terms of the white paper may be indefinitely extended by the British Government. My fervent hope is that all oppressed peoples everywhere may speedily find a place of haven and sanctuary.

A colony in Palestine in memory of the late Louis D. Brandeis will materially aid as another link in the chain of the upbuilding of the Jewish National Home in Palestine. However, before this can be made a permanent shrine, we all agree that Axis tyranny must be destroyed.

I would be sorely derelict in my duty here tonight if I did not emphasize the fact that America in this struggle fights for her very existence. Long have our enemies prepared for this all-out conflict. They thoroughly believe that they are supermen. The fury of their wrath remains unabated in this eventful struggle. It was on Monday of this week before leaving Washington that I learned that it is the consensus of opinion of the men who fought and captured Attu that this island was fortified and inhabited by Japanese soldiers long before their treacherous stab in the back at Pearl Harbor. This clearly indicates their well-defined plan of preparation which was in the making many years before the battle started.

This fight, my friends, is not on a one-way street. While at this moment our armies in the air, on the land, and over the sea are winning brilliant and glorious victories over the enemy, yet these victories should not be acclaimed by the American people with the idea that the end of the war is near.

It should be remembered that Germany, Italy, and Japan are fighting, too, for their existence. They realize as we do that if they are defeated in this war it will mean the end of their military and despotic powers forever. Their slogan is "Victory or destruction," and with that kind of propaganda constantly being broadcast over the air to their people, you can readily understand how much they will endure and the hardships they will suffer before they agree to unconditional surrender. Whether it is a long war or a short one will depend primarily upon the kind of high patriotic work the American people do here on the home front. The quickest way to alleviate the suffering of the remaining Jews in the conquered countries is the complete defeat of Adolf Hitler and his cruel clan.

The assurance that the Louis D. Brandeis colony will become a permanent fixture in the land of Palestine lies directly in the total defeat of the Nazi, the Fascist, and the Jap armies.

I think you will agree with me that if Rommel and his panzer divisions had been successful in conquering General Montgomery and his army, overrunning Libya, Egypt, Palestine, Syria, and the rest of the Middle East, and ultimately joining hands with the Japs coming in from the west, we probably would not be here tonight discussing the memorial for this great man, because today Palestine would be under the domination of the despotic and tyrannic rulers, who would have persecuted the Jews and the other people of Palestine as they have in other conquered countries. Yet, my friends, because Rommel failed, because we have driven the Nazi and Italian armies out of this territory, because we have been successful in taking a few islands in the Mediterranean, because the great Red Army of Russia has been able to hold the Hitler hordes on the Russian front, it does not mean that Hitler and his armies are finished.

For the first time Hitler and Mussolini are really on the defensive. It may be a short route to Italy but it is a long journey to Germany from any direction except through the air.

My plea tonight is that Americans forget their optimism when thinking about the end of the war. While this is bound to come, yet whether it comes sooner or later depends upon the cooperation of the American people at home in an all-out effort, of service, sacrifice, and unselfishness. Our young men have done and are doing their share. They have entered the service, seized arms, undergone physical training, learned to march, to shoot, to fly, in fact everything that has been asked of them—and done it with a magnificent thrilling spirit. One day last week I was privileged to listen to a speech in Washington off the record by a man who had come direct from one of the principal battle zones on this war. This officer said that the morale of the men in the Army was excellent, that they were willing to sleep in swamps, fight in the jungle, lie for hours in a wounded condition on the desert sands, and take it all with a smile. Nevertheless, these same soldiers were beginning to have their doubts as to whether all was well on the home front.

It is well to state that we have done a marvelous job of production. We have produced munitions and war machines and material at a pace that warps anything in history. To the manufacturers and to the laboring men in those plants, I take off my hat.

It was the great Samuel Gompers, revered by all organized labor, who said that war is essentially a contest between the tools and the tool makers of the respective countries involved, and at this point of my address I want to sincerely and wholeheartedly commend all loyal labor of this country who have done so much to give us the tools that have made it possible for us to now take the initiative in this global conflict. Loyal labor has given us the best tanks, the best airplanes, the best ships and guns in all history. Without the continuation of such loyalty of the men and women in the ranks of labor, America cannot win this war, America cannot survive.

The farmers produced more in 1942 than at any time in all of our history. To them I give great credit. The white-collared man, and the salaried individual, even though his lot is difficult, he has complained but little. And yet, with this record, there is still something radically wrong. We still aren't mad enough at our savage foes. We spend too much time in condemnation of one another instead of viciously lashing out at our enemies, who seek to destroy us all. We must back our heroic soldiers and sailors without stint or limitation; no profiteering, no strikes, no black markets, no hoarding, and the immediate elimination of much quibbling and quarreling in Washington. We must remember that while our individual problems are important, if we are to be successful in the end, we must view the national picture in its entirety and not from the selfish eyes of any single individual or interest. We must be able to give and take; we must be able to compromise; we must realize that the winning of the war is the primary purpose, and that unless we are successful, our problems now will be no more because we become slaves under the tyrannical rule of dictators. We must build behind our soldiers a wall of morale that will make each and everyone of them feel that all is well back home.

My friends, it is something to conjure with when we see and realize the sacrifices that our soldiers are willing to make in order that liberty may live. Representing the State which produced Lincoln, Douglas, and Grant, I plead with the American people, regardless of their station in life, regardless of what their annoyance may be, regardless of what their suffering is at this moment, to compare, if they will, their troubles with the hardships, suffering, and trials of the American boys in every part of the world. If Americans will do that, it should not be a difficult task to adjust themselves to a spirit of national unity that knows no bounds, in sacrifice, compromise, and service. I should like to see an era of good feeling come to the home front, which you and I know does not exist at this moment. We have gained the initiative in this war. We will soon open a second front in Europe. The time will not be long when we shall make an all-out assault against the unspeakable Japs. When all of this happens, the casualty list will be long. When that happens, the home front should be burning with a patriotic desire to back these soldiers to the very limit. It would be a sad day for America, indeed, if, while our armies were winning these brilliant victories on every front of the world, our conduct at home were such that it would impair or jeopardize the national economy and the national spirit of victory to the end that this same chaotic, semidefeatist spirit, might reach those who are doing the fighting, and the dying.

My friends, believe me when I say that, day after day, I am confronted with gigantic problems of legislation, but I refuse to look at any of these through the microscope of selfishness, or the microscope of one political party or the other. I am trying to follow the philosophy of the great liberal Justice Brandeis as I view these American problems in a crisis that means the continuation of this Republic or the destruction of it forever. You will agree with me that political parties and individual interests which have upheld the traditions of a free nation, would have no standing if the so-called Hitler new order became effective throughout the world. America, as we understand her, must live. Politicians may come and politicians may go, but the basic and fundamental principles upon which the country was founded and has prospered for a century and a half must live on. Her ideals must never die, even though we recognize at this moment that the blood bath of European torture and barbarism is literally shaking the pillars of civilization throughout the world. America must win in order that she may remain the living symbol for all the oppressed peoples throughout the world. America must win in order that she may play the leading part in winning the peace.

If Justice Brandeis were alive today, he would be fighting at the side of our Commander in Chief in the winning of the war. He would be at the side of Franklin D. Roosevelt in the winning of the peace. We must be ready and unified and certain in our minds and action the minute that the Nazis and Nipponese lay down their arms to set up international machinery that will prevent those savages from rising again. Their heavy industry must be curtailed; all of their machinery by which the weapons of war are fashioned must be removed from their lands; embargoes must be laid upon critical materials; their armament works must be dismantled, their airplane factories stripped, and watchmen put to police them for years to come, if we are to avoid another war in the next 15 or 20 years. I am certain that if the great jurist were alive today he would unequivocally approve of the basic principles of a policy that means to keep the peace. In conclusion, let me say that I was personally acquainted with this great jurist. I have read many of his opinions. He was one of those Americans who could take it in his stride. He was tolerant. He was patient. He was fair. He was generous. His opinions which he wrote during the 23 years he was on the bench have left their permanent imprint upon our national jurisprudence. As everyone familiar with the Zionist organization knows, he was deeply interested in that movement. He had great love for his fellowmen; a passionate sympathy for little children, the weak, and the oppressed. He had a true concept of basic humanitarianism. He displayed this trait in his public and private life. He was forever protecting the rights of the individual under the welfare and commerce clause of the Constitution. He thoroughly believed that the Constitution of our forefathers was made for man, and not man for the Constitution. If he were alive today, he would be a tower of strength to this country because of his noble traits and character. My prayer is that so long as America shall live the memory and the deeds of Justice Brandeis shall also live.

Transportation of Troops

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Saturday, June 26 (legislative day of Monday, May 24), 1943

Mr. REYNOLDS. Mr. President, on or about May 25, according to my recollection, members of the Military Affairs Committee visited the city of New York, at which time we were provided the opportunity of making a tour by boat around the port and terminals. We were joined by a number of Members of the House and several Members of the Senate, who are not members of the Military Affairs Committee. It was a very enjoyable and informative trip. One of my fellow North Carolinians, Col. K. W. Thom, delivered a very interesting talk, which I should like to have permission to have published in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The Port Transportation Division is charged with the movement of all supplies, troops, impedimenta and individuals traveling under orders into the port by all means, and with the movement of in-bound freight and personnel returning from overseas, including prisoners, wounded, captured material and salvage.

General Goodman has explained how supplies are made available for movement overseas—you have observed the ships and method of loading for the movement from the port. You have seen a staging area where troops are temporarily placed for final check-up and issue of last minute requirements, how they are moved into these areas and how they are moved out. I should like to explain briefly how our part of the job is done.

In order to make plain, I must make comparisons; each of the ships you have seen takes cargo involving the use of from 300 to 600 carloads of freight, depending upon the class of freight—we will use as an example a convoy of about 38 ships recently handled through this port; on account of the peculiar characteristics of the freight, we could not use freight cars to capacity, the average carload for this movement ran 17½ tons per car, requiring a train of cars which would reach from New York to a point about midway between Washington and Richmond—or Fredericksburg. These cars originate at perhaps 20 or more points of origin, and in order to coordinate their movement into the port, we must know where, when, and what freight is

desired at each particular ship berth, therefore, immediately upon learning the design of ships assigned to the port, we confer with the Army Transport Service and work with them, preparing loading and berthing plans. On account of the characteristics of this port, which involve a large movement by water, after reaching the port area, the movement of every pound must be coordinated in order to get it alongside the ship or available on the piers in the order that it goes into the ship. If the ship is not properly loaded it cannot be properly navigated.

On receipt of movement orders by the troop-movement division at this port, we confer as to where it is planned to billet the troops and when they should move to make designated convoy. The actual movement from home station takes place on order from the port commander following this conference, and the movement must be coordinated in much the same manner as the movement of freight. From staging area to ship gangplank is a distinct move. A recent move of 60,000 troops involving use of 71 trains moved in 36 hours, requiring much planning and coordination. On recent move of approximately 30,000 troops, more than 100 units were involved, moving from as many points of origin, ranging from Fort Lewis, Oreg., over through Minnesota and Michigan and the Mexican border, Florida, and several points in the lower Mississippi Valley. The organizational equipment cannot always move in the same trains with the troops. Troops may move across the continent in 4½ to 5 days, while their equipment requires 7 to 10 days. It is obvious that considerable planning must be done in connection with each movement.

In handling the movement as defined, we cannot lose sight of the fact that a gun without a carriage, a hospital without beds, or a telephone line without wire or telephones is no good. This division checks each shipment carefully and sees to it all units are "married up," also inspects each package for proper markings, packing, and crating—obviously the supplies must reach the user in usable condition. Through an intensive campaign for proper marking, packing, and crating, irregularities in this connection are being reduced to a minimum, resulting in saving of much time, money, and "paper work" at the port.

One word about records: General Goodman's people must know the status of their supplies at all times in order to efficiently use our facilities for the movement of essentials; also, you gentlemen will want to know lots of things after this affair is over. Therefore, careful essential records are kept, mostly by women. More than 50 percent of our entire force is composed of women, and, as you have seen, we are using women—and I hope using them well—in freight handling and as operators of heavy and light freight-handling equipment. Our clerical force is composed of more than 90 percent women, our entire force comprising 161 officers and 5,400 civilian employees.

We have a very cosmopolitan group of women in our division; for instance, a classmate of Mme. Chiang Kai-shek, dancers, school teachers, department-store clerks, waitresses, wives of professional men, and wives of servicemen who are "hell bent" on doing something for the war effort. All of them are doing a fine job, and I must admit the records are in their favor. Accidents and damage to personnel and property have been reduced to a minimum and the freight moves according to plan.

To sum it all up: The policy of this division, approved by the commanding general of the port, is to move the men and supplies, and we try to move the freight promptly, get it where it is wanted, when it is wanted, and in usable condition, and move the troops as comfortably as possible and get them where they are wanted, when they are wanted, and in condition to fight when they get there. So far we have been able to accomplish our mission, and I would be amiss if I did not say that we could not do our job properly without the wholehearted support and cooperation of the railroads who serve this port. In our group of more than 150 officers, I am the only professional soldier. Our officers are doing the job now which they have done remarkably well in civil life. The idea that we have tried to carry through here is that we know our job. We know what is desired and what is required. The railroad people know that we know, and also know that we will not request the impossible of them. However, they have performed the apparent impossible on several occasions since December 7, 1941.

Address by John A. Reilly, President of the District of Columbia Bankers Association

---

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Saturday, June 26 (legislative day of Monday, May 24), 1943

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address delivered by Mr. John A. Reilly, president of the District of Columbia Bankers Association, on the occasion of the twenty-fifth annual meeting of the association on June 4, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

This year marks the twenty-fifth anniversary of annual conventions of the District of Columbia Bankers Association. In happier days such an occasion would call for a silver jubilee program at either Hot Springs or White Sulphur. In former years our programs were planned just prior or subsequent to graduations. Happiness, peace, and contentment filled the atmosphere. Today we witness a far different scene.

Total global war has disrupted our economy and has left broken hearts and broken homes in its wake. As the shadow of this horrible conflict lengthens, its impact is felt by every household. When our boys reach the age when they would normally enter upon their business or professional careers they must leave for the battlefields. They are off to save America and our system of free enterprise.

I feel confident that, if we were to put the question to them tonight should our association suspend such meetings until victory has been achieved, their answers would be definitely "No." They would ask us to carry on and do our best to protect and preserve what they are fighting and dying for.

With this thought in mind, our council of administration decided to have this annual meeting. The program has been streamlined and all recreational events have been eliminated.

The year that is about to come to a close has been one of the most eventful in the history of our association. This was to be expected, because it was our first full year as a nation at war.

Our staff of officers, our council of administration, and the members of all standing and special committees have given generously of their time and talents during the year. They have brought prestige to our association and have been progressive and successful in increasing the usefulness of the private banking system to our community and to our Government.

Perhaps everyone within the hearing of my voice has heard the statement made that the private banking system is on the way out. The Government is about to move in. I challenge anyone to justify such a conclusion.

The private banking system is so close to the hearts and the happiness of our people that, like the air we breathe, we pay little attention to it, much less appreciate its importance and indispensability.

When Hitler marched into Poland in 1939 and thousands of our most important citizens were stranded, who facilitated their journey home? The banks of America.

When business executives desired to respond to the call to arms and found their enterprises and personal affairs involved, whom did they consult? The trust officers of our banks. By being prepared to take over in a fiduciary capacity immediately, we made these valuable men available to our armed forces. They also left for the battlefields of the world serenely confident that their interests would be protected and their loved ones taken care of.

When the economy of our country had to be transformed from peacetime pursuit to war production, many serious and perplexing problems were presented. Thousands of businessmen were confronted with expanding their modest plants. They neither had the money nor the experience for such a program. Our bank executives were wise and prudent counselors and not only gave advice, but backed the program with loans and took the leadership in negotiating for their customers with the Government for supplemental financing.

There are nearly 15,000 financial institutions in America and over 3,750 branch banks. These 18,750 units were sufficient to cover the banking needs of our country during normal times. After Pearl Harbor war plants and camps were being built in many outlying sections of our Nation. Our institutions installed bank facilities at these places, thus further aiding the war effort by a tremendous saving of time.

As Hitler pursued his murderous program, reducing one nation after another to slavery, serious questions arose concerning the title to assets belonging to foreign nations and foreign nationals in this country. The effectiveness of the program of freezing foreign funds was increased tremendously, due to the splendid service of the banking fraternity.

A war like the one we are waging can never be successful unless it is properly financed. The financing to date has been skillfully handled. The part played by American bankers in this phase of the war effort is too well known to bear repetition tonight.

The fundamental design for a rationed economy is to make available the fruits of the earth provided by God's graciousness to man to all of our people on an equal basis. Some have compared the black market now to the prohibition era. They will say, "What harm if I can get away with it?" There is no comparison, ladies and gentlemen. Violators of the eighteenth amendment may have denied the Government of some revenue, but they didn't take food from our soldiers or milk from our babies. The greatest threat of inflation today is provided by the black market. The excess purchasing power is finding its way into that market instead of going into War bonds. The bankers of America received one of the finest compliments possible when the Government of the United States designated our banks as its

agents to clear ration coupons and checks. We relieved the Government of the accounting complexities so essential to successful rationing. As a result Uncle Sam will have more time to police the black markets.

So that wherever we turn, the private banking system has responded in every phase of our war effort. It's the thread that ties together the destinies of all the United Nations.

These are a few of the high lights of our war activities. How may we expect to fit into the picture when victory is ours?

With the war yet to be won and the huge canvas of peace still to be painted, our thoughts naturally turn to the possibilities which will confront American banking during the post-war period.

We all recognize that immediately following the cessation of hostilities there must be a period of relief and rehabilitation. For a while, we must police the world and probably give away large quantities of food and medicine. Some may say, let's forget this and take care of our own people. Those who take this view are fortunately but a very small minority. Most Americans have proven beyond doubt that they are humanitarians at heart. From a purely business standpoint, however, any thinking person will see sound reasons for such a program because it is clearly to our interest to smother the flames of international anarchy.

The post-war period will bring new and powerful incentives in two directions.

FOREIGN TRADE

The greatest domestic market of all time. A market that has been unable to purchase the necessities and some of the normal luxuries of life for years.

I have placed them, as I believe, in the order of their importance. Some may disagree with this conclusion.

When the total and complete victory is won (any other outcome being unthinkable) what will we find:

An industrial machine, though temporarily dislocated by the magnitude of its conversion to military purposes—please God spared from physical destruction on our own soil—the mightiest instrument of production in the history of mankind.

The best equipped labor force on earth and managerial talent of the highest order.

Our young men—fresh home from all continents—supersalesmen of the American way of life, will advise us of the great markets overseas. They will know and understand the people of other lands and their desires and needs. They will want to help them achieve a higher standard of living.

The pressure of total global war has compressed into the space of months scientific and technological developments that may have taken generations to realize.

It took more than a century to bring crude rubber production of the world up to a million tons a year. Our country alone is now undertaking to accomplish this same feat in less than 2 years by the manufacture of chemical rubber from oil, alcohol, coal, and limestone.

ALUMINUM

The experts tell us that in 1943 our production of aluminum will be seven times greater than 1939. We will be recovering from brine, sea water, and other sources a hundred times the amount of magnesium that was produced in 1939, notwithstanding the fact that this industry in America is nearly a quarter of a century old.

Ever since childhood we have heard that the freedom of the seas has been essential to the life of any nation. Tomorrow it will be the freedom of the air that will be all-important. Our aviation industry is establishing facilities for the manufacture in 1 year of almost double the number of planes throughout the 37 years of its history prior to defense and war production. Meanwhile, largely as a result of chemical advances in fuels, plastics, and light metals aircraft engineers are designing planes capable of flying to Europe and back nonstop.

We must not forget the petroleum industry. As the petroleum chemist now sees it, all existing motors will be out of date in a few years. We will have gasoline that will yield 125 miles to the gallon.

Plastics were of sensational promise before Pearl Harbor. The newest and most versatile of plastics will be available after the war on a scale beyond all previous conceptions. The development of chemical fertilizer will revolutionize the farming industry. We will have glass that won't break and wood that will not burn. They tell us we will have shoes without leather, screens that contain no wire, and bearings with no metal.

All of these new inventions will have a direct bearing on our standard of living. The oncoming generation will be superbly challenged to the fullest use of its vision and initiative. With our people enjoying the highest per capita purchasing power in the world and a readiness to buy—a desire for new and better things—we should have business activity that knows no parallel.

If the private banking system of this country has the ingenuity that I think it has, and with a future of such tremendous possibilities, we as bankers can carve out anything that our imagination can picture.

This is an appropriate moment for the executives of our banks to take stock clearly and objectively of their responsibility in restoring the fabric of our civilization that the Axis Powers have attempted to destroy.

A warning may be in order at this point. America with all these possibilities may become selfish in its approach to post-war problems. Selfishness is not merely fundamentally wrong, eventually it destroys those who practice it.

While our people may not be internationally minded, they must realize that unless we think of our neighbors, we will not continue to be a top-flight nation. The oceans today are obsolete from a transportation standpoint, and our approach to international affairs will determine how well qualified we are to be the leader of the united victorious nations.

The industrial machine of our great country has grown entirely too big to be healthy within the confines of the United States. Many of the banking executives here this evening remember the problems of a decade ago, when a deathly silence enshrouded our factories. We must be big enough to lead and big enough to help others. We must have an enlightened self-interest toward the reduction of international trade barriers. We must turn to the seven seas—we must widen the scope of our activities. If not, we will suffocate in our own abundance.

May I make this final observation? Many have said that this war is different from previous wars in history. Most surely the machines are different, and the planes, guns, and tanks are more modern. It must be remembered, however, that courage, fear, and pain are present in an even greater degree and do not change.

The helmets may have changed, but not the heads and hearts of our boys under those helmets. They are out there giving their all and how little they are asking of us. It should be our proud privilege to do all within our power to prepare for them a real economy when they return.

As your retiring president, I can think of no more appropriate resolution for this annual meeting to adopt than to resolve to do our utmost to first and most important win the war and then preserve and develop our economy and our system of free enterprise so that the boys who are fortunate enough to return may proudly take their places in the business or professional world with a knowledge that their efforts will be rewarded in the normal wholesale functioning of a true representative democracy.

And to my associates in the District of Columbia Bankers Association, I should like to say that my appreciation of the honor that you conferred upon me 1 year ago transcends expression. I wish to assure you that so long as I live I will treasure the friendships that I have made and the loyalty that you have so generously provided.

It is needless for me to say that the experience and the knowledge that I have gained will always be available to the association and its members in the dark and uncertain years that may lie ahead.

International Investments

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Saturday, June 26 (legislative day of Monday, May 24), 1943

Mr. REYNOLDS. Mr. President, I have before me a letter under date of June 18, 1943, addressed to me by Hon. William J. Goodwin, attorney at law, of 233 Broadway, New York City, in regard to international investments. I am thoroughly of the opinion that the contents of the letter will be of interest to American laboring men, and, therefore, I ask unanimous consent that it be published in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

NEW YORK, *June 18, 1943.*

Hon. ROBERT R. REYNOLDS,
Senate Office Building,
Washington, D. C.

DEAR SENATOR: History shows us that a great many reform and humanitarianism movements have been smoke screens for power or money grabs. The broad campaign being waged at the present time for post-war improvement of other nations may be sincere or it may be a gag to cover such a similar grab for money or power.

The development of China, for example, on the surface, is a very laudable objective. On the other hand, it may be that China's four hundred millions of cheap labor and the absence of taxation have proved appetizing lures for those whose love of money exceeds their love of their native land. One does not have to have much imagination to visualize what would happen to the United States if China, with its hundreds of millions of 5- to 10-cent-a-day labor, and no taxation, were to be developed industrially (and ironically enough with our own money) to an extent where she could compete with us in the world's markets and, through the free-trade policy of Mr. Hull, in our own markets.

It does not take much imagination to visualize the impossible problems that would present themselves to American manufacturers to compete with this low-cost and tax-free production. Not only would it be impossible for American manufacturers to make any money under such conditions, but wages and the standard of American living would both be forced down relentlessly by the combination of this competition and the taxation necessary to pay off our tremendous debt. The impoverishment of the English people which resulted from Britain's free-trade policy, and from which the only beneficiaries were a few wealthy owners, would find a greatly magnified parallel in the United States.

Are we being conditioned for this, first, mentally, by the smoke screen excuse of humanitarianism; and secondly, physically, by regimentation and rationing? Mark you, no one objects to rationing during war, but when it becomes evident from current exposures that the world planners are determined to continue after the war such measures as regimentation and rationing, it does look as if we are being deliberately so "conditioned" for a much lower post-war standard of living.

Of course, international speculators and others, who move freely from one country to another, do not feel so distressed over this. They can move their money to, and take up citizenship in China, but for those who love and desire to remain in the United States of America, it is a very unpleasant prospect.

Sincerely yours,

WILLIAM J. GOODWIN.

Opening of Synthetic Rubber Plant in West Virginia

EXTENSION OF REMARKS

OF

HON. HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Saturday, June 26 (legislative day of Monday, May 24), 1943

Mr. KILGORE. Mr. President, it is a matter of great satisfaction to me to know of the great strides that America has made in the restoration of its rubber supply. We are all conscious of the dastardly attack made, without notice, by the Japanese upon Pearl Harbor, thus eliminating our contact with the natural rubber resources.

Through the enterprise of the great State of West Virginia which I have the honor in part to represent, there has been constructed at Institute, W. Va., a synthetic rubber plant of momentous size which materially aids by its production the demand for rubber for essential uses. The managers of the factory at Institute, W. Va., are much to be commended. This plant has been established on one tract of land. By this fact it is essentially well fitted to rapidly produce the much-needed commodity of synthetic rubber.

Before I ask that an article from the Reader's Digest entitled "Rubber—It's Coming at Last" be printed in the Appendix of the RECORD, may I comment upon the fact that probably more gasoline will be needed now that we are getting reestablished as to the supply of rubber. Not to express any extended eulogy of my State at this moment, I may say that if restraints are lifted and full cooperation of all concerned is given, West Virginia, as a source of supply, can very substantially, if not quite completely, aid in the furnishing of rubber, gasoline, and coal—three of the most needed of all commodities. The natural resources of West Virginia lend themselves very materially to aid the country in this national crisis.

Mr. Harvey S. Firestone, Jr., a recognized authority on the rubber industry, has recently, on a Nation-wide hook-up, commended the outstanding work of Rubber Czar Jeffers and the Secretary of Commerce, the Honorable Jesse H. Jones, in aiding in the production of rubber plants generally throughout the country; but West Virginia is the first to meet the emergency.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RUBBER—IT'S COMING AT LAST

(Condensed from the Christian Science Monitor)

(By Roger William Riis)

Our first rubber factory is in production and it is the world's largest. At Institute, W. Va., a superb plant 77 acres in area is turning out rubber at the rate of 90,000 long tons a year. That is almost one-sixth as much as we used to need in normal times—and as much as 100,000 Malay natives gather from 18,000,000 rubber trees. Other plants are coming in—at Louisville, Pittsburgh, Baton Rouge, Los Angeles. By August we shall be making rubber at the rate of 435,000 tons a year; by January we shall be making 750,000 tons a year—one-fourth more than we used to buy in pre-war days from the plantations of the Far East. (War's appetite for rubber, however, appears virtually insatiable and even now the outlook for tires for private use is uncertain.)

It is hard to visualize the magnitude of this achievement, described as the greatest industrial program ever undertaken. The United States set out to create within 2 years a brand-new industry which would produce enough rubber for swollen wartime needs. (Even in peace we used half of the whole world's rubber output.) It was much as if we had decided to create the automobile industry in 2 years instead of 40.

Staggering project though it was, we had no choice. Every Flying Fortress needs more than half a ton of rubber, every tank almost a ton, a battleship, 75 tons. We had to have rubber, or we should lose the war.

Now we know we're going to have it. We've succeeded because (1) the Government and the rubber industry had begun to study the problem long before Pearl Harbor; (2) American technical skill, the finest in the world, went "all out" into the struggle; and (3) contrary to the general impression, Government and industry cooperated to the full, despite intermittent squabbles.

Is this new rubber of ours as good as natural rubber?

"Yes," exclaims a young chemist at the West Virginia plant. "In many ways it is better. The tree can make only one kind of rubber. We can make many kinds. We have, not rubber, but rubbers.

"Manufactured rubber is improving so fast that one should not memorize any statements about it, because tomorrow they will be out of date. Already it is better than tree rubber in automobile tires at speeds over 60 miles an hour. It's better in airplane tires, too. The 30,000 items now made from rubber call for all sorts of different characteristics, and we are building into man-made rubber the characteristics we want, not just those the tree gives us."

Neoprene, thiokol, butyl, Buna S and Buna N, and their trade types such as perbunan, hycar, and chemigum are as diverse in properties as are the innumerable plastics. Some are much more resistant to air, to oxidation, than tree rubber is. Or they are more resistant to oil—the gasoline-station pump hoses have long been made of synthetic rubber.

"The chemists are cocky about it," says John P. Coe, head of the synthetic division of United States Rubber Co. "They are justified. There are better rubbers in the test tubes than any we now make. We have learned more in the last 30 months' research on synthetic rubber than in the last 30 years' research on natural rubber."

So far as the man on the street will know when he buys a tire, this new substance is rubber. In molecular construction, the chemists say, there is a slight difference, but neither eye nor hand can detect it. Rubber was so named by the English chemist, Joseph Priestley, when he found that it would rub out a pencil mark. By that symbolically important test, this product, too, is rubber.

The Institute plant makes Buna S—bu for butadiene, na the chemical abbreviation for sodium, and s for styrene. Butadiene and styrene are chemical cousins of philgas, the familiar tanked commodity. Styrene is made from benzine. The process used at Institute happens to make its butadiene out of alcohol. The alcohol now comes from corn. It takes about one and three-quarters bushels of corn to make rubber for one automobile tire, and 27,700,000 bushels a year used at Institute consume hardly 1 percent of our normal corn crop. But the chemists don't care what they make it from—molasses, potatoes, sugar, wood, coal tar, natural gas, or petroleum. Any or all of these may in time furnish us with our rubber tires and heels and golf balls and hot-water bottles. The chemists foresee such abundance of man-made rubber that they are even now speculating on many new uses for it, to add to the long list already known.

Nothing makes our triumph in rubber clearer than the plant at Institute. Having first decided to manufacture Buna S rubber out of alcohol, because that woud provide the most rubber quickest, the Defense Plant Corporation instructed the Union Carbide & Carbon Co. and the United States Rubber Co. to speed ahead, together, on the West Virginia site. The chemical company was to make the two essential ingredients, butadiene and styrene, in unheard of quantities; the rubber company was to make them into rubber.

First Government plans were for a 10,000-ton-a-year butadiene plant. Before the blueprints were finished came Pearl Harbor, and Washington ordered the project doubled. Then, as realization of the emergency grew, it was doubled again—and again. Each change meant starting a new set of plans.

The plant was built in 11 months, against unimaginable obstacles. A hundred draftsmen wrinkled brows over 35 acres of blueprints. The engineers had not only to think into being a plant which would be 5,000,000 times the size of the laboratory process—which was all we had to work from; they had also to design and buy or build all the thousands of items of equipment. When needed materials could not be obtained, they devised substitutes; when machinery could not be bought, they ordered the parts and put them together themselves. Young chemists (all these men are absurdly young) averaged a 70-hour week for a year.

Even the nature of the raw materials fought against the engineers. The tamest chemical to be handled was alcohol; the butadienes and styrenes and others were extremely violent and tricky.

In the severe cold of the first winter, the chemicals froze in the new pipes. The steam lines, installed to keep them warm, also froze. Insulation was unobtainable.

All the material factors were against success. But the invincible human factors insisted on success. Therefore we have today at Institute a superbly ordered plant. And a mammoth one. Its water supply would service Los Angeles; its electrical energy equals half that generated in all Delaware. The plant is outdoors; it is too big to be prisoned within walls. Its vistas of towers and pumps quiver and hum with a strangely elemental—and appropriate—intensity.

Institute, remember, is only the first rubber plant to come into production. Eighteen

months ago there were farms along Paddy's Run outside Louisville, where one of the four other plants is located. Today Paddy's Run has disappeared in a maze of chemical plants. Goodrich, Goodyear, Koppers, other big companies, are working together, sharing all their know-how among themselves and with the Government—to make rubber.

Japanese papers please copy.

The "Four Freedoms" Flag

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Saturday, June 26 (legislative day of Monday, May 24), 1943

Mr. REYNOLDS. Mr. President, someone several days ago sent me a clipping from the New York Sun of the issue of June 21, 1943, which contains an article entitled "The Four Freedoms Flag," by George E. Sokolsky. The article impressed me greatly, and I ask unanimous consent that it be published in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THESE DAYS

(By George E. Sokolsky)

THE "FOUR FREEDOMS" FLAG

The other night I was in the Radio City Music Hall and they put on an act that was prepared by the War Writers Board in honor of Flag Day and all the time the band was playing and a narrator was narrating and the sopranos and tenors were vocalizing—but there was not an ounce of inspiration in the whole business. It was well staged but not stirring. There were lots of flags but I have seen just one flag arouse greater human emotions. And when the curtain came down on that act, I thought that maybe they would play the Star-Spangled Banner or even Yankee Doodle or Dixie. But nothing doing. When the curtain went up again it was to a delightfully played Rachmaninoff concerto. The Star-Spangled Banner came long after the acrobats.

I was not really surprised because I had been listening to the radio for a couple of days and all the acts had apparently been instructed by the Office of War Information to plug the United Nations Flag Day and not the American Flag. Occasionally, somebody sneaked in a nice word about Old Glory but I heard nothing about Betsy Ross, for instance. I thought that the Cavalcade of America might have put on the Betsy Ross episode, but instead they told the story of Mary Putnam Jacobi, which was a fine tribute to a brave and daring American woman but it fitted the occasion like the eating of a ham sandwich on the steps of a synagogue on the Day of Atonement.

Now I see by the papers that a new flag is being projected. It is the "Four Freedoms" Flag, symbolic of the United Nations. It has four upright bars against a white background. I suppose the four bars represent the "four freedoms," although the Constitution of the United States provided dozens of freedoms. According to the United Press account:

"The two-flag system was arranged in unofficial discussions between Chairman Brooks Harding of the Four Freedoms Committee and representatives of all the United Nations. In ceremonies overseas, the United States will be represented in a "four freedoms" flag flown beside the standard of the nation in which the event is held."

The flag of our people was chosen by Congress on June 14, 1777. It was carried in the Revolutionary War, the War of 1812, the Mexican War, and since then has been hallowed in peace and war by the love of our people. It will not be replaced. It shall not be replaced.

Americans of old and new ancestry will rally round the flag and will permit no other flag to equal it. It is for our flag that lives are today being expended—the precious and irreplaceable lives of our children. The red on that flag is symbolic of the sacred blood of Americans that was and is being poured into making and keeping our country, our people, our land, our institutions the pride of our people, the hope of the world. We shall not forsake that flag. We shall not merge it. We shall not permit it to be assimilated. There will be no substitute. It shall become to us as the Ark of the Covenant, a cause, an ideal, a call to action—an eternal emblem of adoration.

There is no time to waste about this. The Sons and Daughters of the American Revolution, the American Legion, the Veterans of Foreign Wars, all the patriotic organizations of the American people should band together to protect the honor and dignity of the American Flag. The time to do it is now. And Congress must act now. A resolution should be passed by both Houses of Congress in defense of our flag. Let it be done before the Fourth of July—and let it be done to assure all the world that no four-barred flag will in any manner or by any authority take the place of the Stars and Stripes.

"Blest with vict'ry and peace, may the heav'n rescued land
Praise the Pow'r that hath made and preserved us a Nation."

Mr. Lewis and Congress

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Saturday, June 26 (legislative day of Monday, May 24), 1943

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the RECORD a very able analysis of the Connally-Smith bill by Walter Lippmann, appearing in the Washington Post of Thursday, June 24.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TODAY AND TOMORROW

(By Walter Lippmann)

MR. LEWIS AND CONGRESS

We must begin by recognizing the fact that in all respects but one the terms on which Mr. John L. Lewis has acted conform with the war labor policy laid down by Congress in the Connally-Smith bill.

The policy declared in that bill is to have the Government take possession of any plant to insure operation in the interest of the war effort. Mr. Lewis has now said that, at least until October 31, he will permit the miners to work provided the Government continues in control of the coal mines. The bill passed by Congress says that during the period of Government control the terms of employment shall be those in effect at the time possession is taken. Mr. Lewis says that the terms of employment shall be those now in effect; in other words, that Mr. Ickes shall not rescind the benefits he has granted since he became custodian of the mines.

The only point at which Mr. Lewis' action diverges from the principles of the Connally-Smith bill is in his implied assumption that he would resume the strike on October 31. According to the bill, he would go to jail if he connived at a strike while Mr. Ickes is custodian of the mines. On the other hand, if the Government had before October 31 returned the mines to the private operators, Mr. Lewis would be entitled under the bill to have the miners vote on whether they wished to strike. If after 30 days' notice, they did vote to strike, the only remedy the Government has under the bill to prevent the strike is once more to have Mr. Ickes take control of the mines.

Thus we find Mr. Lewis agreeing with majorities in both Houses of Congress, no doubt to their astonishment at finding that they are bedfellows, that strikes may be outlawed in war industries only when the Government takes possession of the war industries.

The first question we have to consider, therefore, is whether the Connally-Smith-Lewis war labor policy is a remedy for the defects of the Roosevelt-Green-Murray policy. That consists of a voluntary agreement not to strike in any important plant whether it is private or Government controlled. The Roosevelt policy is obviously inadequate. Mr. Lewis set out to prove it was inadequate by calling a strike, and having called the strike, it is plain that the voluntary agreement is not enough. But can the country be satisfied with the congressional substitute which authorizes strikes in war plants except when the Government takes possession of them? The answer is no. If the congressional policy were allowed to stand by itself, we should soon run short of Ickeses to be the custodians of our war plants.

Thus the question to which we have to find the answer is how to reinforce the general Roosevelt-Green-Murray no-strike agreement without being compelled by Mr. Lewis, or by anyone who chooses to imitate him, to take Government control of every threatened war industry. This will not be easy to do, and we shall need cool heads, and much more courage and wisdom than have yet been applied to this difficult and delicate problem.

By snapping up the terms which the Connally-Smith bill offered him, Mr. Lewis has exposed the weakness in the position at both ends of Pennsylvania Avenue. This is the refusal to face the fact that in a war of national survival every man's life and every man's work and every man's property is dedicated to the Nation.

All of the parties concerned shy away from the absolute prohibition of all strikes in war industries, and from the compulsory arbitration of all disputes. All of them either oppose or hesitate to accept a universal service act to back up the Selective Service under which men are conscripted to fight.

Yet the bold policy is the wisest policy—we should grasp the nettle firmly and it will sting us much less. We should enact the Austin-Wadsworth National War Service Act. We should also enact compulsory arbitration, preferably, it seems to me, under a new war labor tribunal which does not represent labor or industry, but is composed of judges who represent only the Nation as a whole. Mr. Lewis has acknowledged that he will not and cannot strike against the Government. Then the thing to do is to make it unlawful to strike during wartime, once every man and women is by law in the service of the Nation.

I know this policy will not commend itself quickly to the leaders of labor or their political friends. But they should stop and look and listen. They should keep an open mind when candid observers tell them that organized labor is riding for a fall. They are not

seeing clearly what is going on in this country, and they must, before it is too late, be willing to listen to those who can tell them the disagreeable but necessary truth.

The fact is that under the recent laws the labor unions have acquired rights, just rights, but without accepting the corresponding duties. At the same time they have acquired enormous economic power because there is an overwhelming demand for labor, and the Nation is absolutely dependent upon their work. The truth which they must face is that they now occupy a privileged position, not as compared with their employers, but as compared with the mass of small farmers, of white-collar employees, and above all as compared with the men in the armed forces.

The labor leaders and their firm friends—foremost among them the President—will be perilously blind to the realities if they refuse to see the elementary wisdom, indeed the sheer prudence and expediency, of putting the house of labor in order before there is an explosion of popular feeling.

Therefore, instead of resenting the reforms which are inevitable, they should initiate them. No one likes to be reformed. But the reforms will be more workable and more generous if the leaders of labor and their friends have the unusual good sense to participate in working them out.

Finally it must be said summarily, though its overwhelming importance is obvious, that no war labor policy, however constructive and comprehensive, will in the long run work if the stabilization of the cost of living with assured rations is not resolutely carried out.

Address by Governor Griswold, of Nebraska, at Governors' Conference, Columbus, Ohio

EXTENSION OF REMARKS

OF

HON. JOSEPH H. BALL

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Saturday, June 26 (legislative day of Monday, May 24), 1943

Mr. BALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address delivered by Gov. Dwight Griswold, of Nebraska, at the Governors' Conference, Columbus, Ohio, June 22, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

This conference of Governors, meeting in a war year, is very properly concerning itself largely with two matters. One has to do with finding new means of assisting with the winning of the war while the other relates to planning for the days of peace. My remarks have to do with the latter problem primarily.

In discussing planning I would like to quote a remark recently made by Mr. Charles Kettering, head of the Research Department of General Motors Corporation. He believes in planning but cautioned that much of what is now designated as "planning" is merely "wishing." He then went on to describe the difference between the two. "If," he said, "you are expecting human nature to change, that is merely wishing." I am one who agrees with him. I feel that the present is the time when we should be planning for the days to come, but I feel that this planning should be done by those in a position to know something of human nature, with all its strengths and with all its weaknesses.

I am also inclined to the belief that too much of our planning is restricted entirely to the post-war period. There is a tendency to proceed on the assumption that we can go on indefinitely as we are today and that suddenly there will be a declaration of peace—something like the coming of Christmas morning, when somebody turns on the lights and shouts, "Merry Christmas." There seems to be a feeling that there will be a signal like that and then we will all bustle around and open our packages of plans and begin living by them.

Actually, the facts are that this anticipated post-war era may be several years away and one of our great needs today is for better planning for what very well may be a long, drawn-out war. I think we should adjust our planning to be of immediate use in this current period—this period that begins now and continues until the day peace comes.

The young men who are fighting this war are anxious to finish their job so that they can return to the United States they love, the United States that offers them opportunities and all the hundreds of little freedoms and liberties they think of as a part of home in a peaceful democracy. But if we do not solve our manpower and inflation problems now, these young men will take off their uniforms and make the bitter discovery they have fought for a mirage.

I believe it is the first desire of our men in service, once this war is done, to return to a Nation whose domestic life is founded upon individual effort, whose economic system is based upon the working premise that private industry is able and eager to supply men and women with the material things they need for enjoyable, constructive living. In other words, I cannot believe that our returning soldiers want a jingle-jangle-jingle existence fed by synthetic work on a governmentally glorified Works Progress Administration program.

As we look about us today, we see that the war is being won, not because our Government is doing a good job of handling our domestic economic problems, but because our boys are proving to be valiant and courageous fighters and because private industry is producing the armament that is needed to win this kind of a war. In recent years no two groups have been so criticized and maligned as have been those engaged in business and as have been our young people, and yet during the past year and a half it is these two groups which have proven to be our country's real dependable source of strength. In spite of obstructions that have been placed in th path of business, our industrial leaders have gone ahead and done a splendid job, and today they are producing war goods at a peak above anything of which we ever dreamed.

But we need better planning for the financing of this war, with more of the necessary money raised by taxation and the balance raised by long-time bonds in the hands of individuals. Bonds, due virtually upon demand, can wreck our economy when the war is over, and bonds held by banks are directly inflationary.

We need to have demonstrated—as we have been told so often—that the people must sacrifice here at home. Up to date, our only financial sacrifices have been to pay back, in the form of taxes a portion of the increased pay and increased profits that the war has brought to us. There are very few civilians whose standard of living has really been lowered because of the war.

We need to fight inflation with a holy hate. We need higher taxes, lowered incomes; we must learn that we can't fight a world war and a war against inflation—and both successfully—without straining both our economic and our philosophical resources. But if we do not win this war against inflation, this war on the home front, then the country to which our victorious fighting men return will be one of defeat and desolation.

We need better planning today for the fighting of this home-front war. Our leaders must act as statesmen, not as demagogues, they must preach a life of individual responsibility, not of ease—and if they do not so act, they will be faithless to the trust our fighting men have left in their hands.

But it is proper also that we are—and should be—thinking of the special problems that will face us when the men are mustered out and turn into the paths of peace. Perhaps the word "planning" is overused, but there are some facts we had better face realistically.

Never has man seen such a large portion of the world completely torn from its previous standards as it has seen during the past few years. This very disruption of our way of living and of our habit of thinking forces us to do some planning for the future. Never before has there been a war which has caused such terrible physical destruction, but at the same time allowed science and technology to advance so rapidly. Peace will bring to the world the greatest problem of physical reconstruction in history, and just as mobilization for war here in our country has caused terrific readjustment, both of men and minds, so by the same token will a readjustment from war to peace bring other monstrous problems.

And we had better be realistic in our contemplation of this post-war future and recognize that deep as is the faith of the majority of our people in the doctrine of free enterprise, that sincere as is the desire of our young men for individual achievement, they will never again permit another period of terrific unemployment without demanding that the Government take control. Let us not blind ourselves, either, to the fact that a minority of our citizens already feels that socialism, or communism, or complete Government control in some form, is better than a system of private enterprise, and that its members are working to see their beliefs inaugurated. Another serious depression would recruit millions for their ranks. In short, the free enterprise system, the mighty champion of our present struggle for survival, may be pounded to pieces before it has a chance to catch its breath, may be tumbled to ruin by the shock of post-war adjustment. At least, such a danger is evident to me.

I am sure that no system of government operation can produce goods and raise living standards as does a system of private industry, but the political situation is such that we who feel that way, must see that private industry is prepared to furnish employment to people when this war is over. It requires some planning right now in order to make sure that the 10,000,000 men taking off their uniforms and the 20,000,000 men and women coming out of war plants shall have some place to go to work. I thank God that the leaders of American business are planning—planning now—to do this very thing. The Committee on Economic Development, the Manufacturers Association, the National Chamber of Commerce, and other groups are working constructively to meet readjustment problems that will arise.

Every element will be present in this country for a tremendous boom. New processes, new devices, new gadgets will be coming onto the market as a result of war development—thrilling stories are even now coming to us from modern industrial laboratories. The development of new alloys, especially the light metals, the use of plastics, new synthetic products—all of these scientific changes are going to bring onto the market new products—and they are going to bring into the market new demands. We will have available in our labor supply several million new

mechanics while people with money saved are going to be present with a large list of desires. They are going to want to buy new automobiles, airplanes, homes, home heating and cooling devices, tractors, farm machinery, jewelry, furniture, everything which they have been unable to buy during the war. One prominent banker told me a few weeks ago that he expected the 5 years following this war to be the biggest boom period this Nation has ever seen. He predicts instead of unemployment, a period when it will be impossible to find people to do the work that will need to be done.

But if industry following this war is to have a chance to make good, then certainly industry must have proper laws under which it can function. It needs tax laws which are written before the taxing period starts. It needs tax laws which are intended to help, not punish, and which permit industry to make a profit and use some of it for new developments. Our statutes must be in accord with economic law if our Nation is to prosper.

And private industry must also observe economic law, it must steel itself to reject the soft way of life, that of depending on the Government. If anyone is about to go broke because of some new development which promises threatening competition, he should not rush to the Government to keep this new product off the market. If the buggy makers of this Nation had kept the automobile builders from ever developing their machine, they would have only held back the progress of the world. We need the constant development of new products, perhaps making other items worthless, but it is all part of the great competitive industrial system that makes us strong.

We all realize that we will be living in a changed world. We are not going back to the good old days. In my judgment, we will have social-security laws, laws protecting the rights of employees; many kinds of Government regulations will be continued.

In connection with these regulatory laws, however, I call your attention to one matter the importance of which is often overlooked. It is this: that the general attitude and desire of the person administering any law can be a tremendous influence. I have found that if a person wants to do a certain thing, he will easily find excuses why it should be done. If he wants to find excuses why it should not be done, they are just as easy to discover. My wife even says that the same rule applies when I talk about going on a hunting or fishing trip. Under certain conditions, I can always find that I am not particularly busy and that anyway I have some business in that section of the country. By the same token, the attitude of the agency administering regulatory law is tremendously important. We need those in charge who are trying to use these laws to assist private industry to function more effectively. We do not need those who are looking for reasons why private industry must fail.

I have said that we must plan to give industry a chance to operate. Our statutes should recognize that he who makes a profit can be a good citizen, that in fact a reinvested profit is the source of new employ-

If we are to care for, perhaps, a million disabled veterans, if we are to provide a social-security program and freedom from want for those who do not work, then it means that those who do work must carry that load of expense. We will need to stimulate new industry, new processes, and new inventions. We will want to urge the development of better equipment and better machinery. We will need to provide for the selling of more items at a more rapid and continuous pace than ever before. In other words, there will have to be more business and it will need to be more dependable. Our lawmakers will need to be friendly toward industry, and our tax laws and other enactments must encourage and reward industrial growth.

Too many of the organizations now making plans for the post-war period are merely planning for the spending of wealth, and there is not enough attention to the creation of new wealth for everyone to share.

By now it should be an accepted truth that you cannot have more to divide among people when less is being produced. I am told that the decade from 1930 to 1940 is the only 10-year period in our history when this Nation made no net gain in wealth. Scarcity and an increase in our standard of living do not go hand in hand.

Following a war, it is natural that people should seek relaxation from its strain by desiring to return to the peaceful days they knew in the past. But if there be some in this country who expectantly look for a return to normalcy, to them I convey my condolence. The normalcy they thought they knew will not be back. Progress is a stairsteps of change, each step followed by a plane of new normalcy. The task we face is not one of return. It is rather to take from our past the things we feel certain will be most useful in the new normalcy ahead.

No statesman, and no political party, seeking added power, should advocate a policy of merely being against what has been done or what is being done today. What the people want, and must have, is an opportunity for better days than they have ever known. To merely oppose what has been done has no appeal. It holds no hope for future years. It is too abundant in sterility.

Is it not time for a clear-cut pattern of domestic enterprise? The rush of war postponed a climax in the festering problem of governmental control of business and industry, but let no one mistake, that problem is still with us. There is need for planning that has the courage to reach out and grip this issue—to take the firm position that private enterprise is not a whipping boy but is an asset vital to democracy and is to be treated as such. By now, certainly, it is evident that the American people expect their Government to insure them against acute want. It must also be made clear that the premiums for this insurance are to be treated as an expense to be paid out of the profits of private citizens. Business, and resulting profits, must be encouraged. We must meet this challenge, not by following a demagogue, but boldly by refusing preferment to those who desire authority so that they may hamstring our system of free enterprise.

And what of the distorting affliction that has attached itself to the labor movement? Why must our planners accept the premise that to say "No" to the scowling demands of a minority in the ranks of labor constitutes a vicious attack upon labor any more than saying "No" to the bigoted insistence of a minority in the ranks of management constitutes a vicious attack upon our industrial system? There is a middle ground, a fair ground, and it must be found or the laborer will be knocked down the long flight of stairs he has climbed so painfully.

To speak of "planning" is to speak of advancement. It is impossible, of course, to step forward and stand still at the same time. But elementary as is this natural law, it is the first realization that we must obtain if we are to pilot the course to lasting achievement in the years ahead.

In contemplating this change it is vital that we carefully safeguard those elements essential to retention of democratic fundamentals. I believe that individual rights should head this priority list of American possessions.

No matter how academic we make it sound, we cannot escape the final conclusion that the essence of our way of living lies in our insistence that in this country the individual is the important entity. It is the individual who is to have the right to control his destiny so long as he acknowledges the same right for others.

If the time ever comes when, through change, we alter this basic conception, we will no longer have the democratic life that we are fighting to preserve. It is important, then, that we keep the individual in mind as we plan for the solution of the tremendously complex problems we face. I am not one to contend that regulation of the individual to some extent can be entirely avoided. Surely, we must admit that such great problems as transportation, the integration of labor and industry, marketing and price controls—to cite a few—can be successfully attacked without sweeping regulations. But I insist that the way in which the regulation is applied is highly important. Many of these problems are so extensive that States cannot cope with them alone but it does not follow that we can successfully apply complete Federal regulation. The point is, We must take care lest the regulation rides roughshod over the individual and the best way to insure against this is by keeping the controlling authority close to the people. What is needed is a plan whereby the Federal Government will be the general director and the local levels of government the administrators.

Let us never forget that much of this Nation's greatness springs from our insistence that the hundreds of little desires of the individual have an opportunity for expression. Trivial as some of these desires seem—the urge to boo the umpire, to go fishing, to "tell off" the boss, to write the editor—trivial as they seem, the satisfaction of them, and hundreds like them, is the ingredient that gives our American life its zest, its flavor, and its desirability.

Our need is for men who appreciate that democracy is not a mechanical vehicle to be streamlined with engineering proficiency to transport its people with the greatest possible speed to some coldly efficient never-never land where living is done by national rote.

We can well afford now to fully grasp the plea of the poet:

"God give us men, a time like this demands
Great hearts, strong minds, true faith, and ready hands;
Men whom the lust of office cannot kill;
Men whom the spoils of office cannot buy;
Men who possess opinions and will;
Men who love honor; men who will not lie."

Our planning must include the demand for leaders who recognize democracy as a thing of beauty, of local color, gracious and decent and understanding. For it is within democracy that can be found our firesides and our families; for it is on every continent our men fight today; for its continuance we here at home have the duty to plan and work and pray.

The Danger of a Serious Rise in Prices Is Great in Time of Total War

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 25, 1943

Mr. PATMAN. Mr. Speaker, total war demands such a huge amount of goods and services that a large part of our productive capacity must be converted from the production of peace-

time goods to producing the materials of war.

The astronomical growth of total war's demand for goods and services is illustrated by the following figures:

Nineteen hundred and thirty-nine: We spent one and four-tenths billions to buy goods and services for war purposes—2 percent of our gross national income.

Nineteen hundred and forty: We spent two and seven-tenths billions—$3 out of every $100.

Nineteen hundred and forty-one: We spent twelve and five-tenths billions—$10 out of every $100.

Nineteen hundred and forty-two: We spent forty-nine and one-tenth billions—$32 out of every $100.

Nineteen hundred and forty-three: It is estimated—on the current rate of expenditures—that we will spend about ninety billions, or about $50 out of every $100.

Thus, in 1940, the year before Pearl Harbor, we spent only $1 out of every $33 of our national income for war purposes, $1 out of $10 in 1941, $1 out of $3 in 1942, and, according to present estimates, we will spend about $1 out of every $2 of our national income for our war against the Axis in 1943.

Obviously, such a huge diversion of our productive capacity to the war effort requires the conversion of a large percentage of our industry to war production. Such conversion also reduces the amount of available consumer goods and services.

Even Federal, State, and local nonwar expenditures were affected, as Government units converted to a wartime basis. In 1939 expenditures for this purpose were fourteen and six-tenths billions; in 1941, thirteen and one-tenth billions; and, in 1942, twelve and five-tenths billions.

But more people are working than ever before—working harder and working longer.

Thus, in 1939, there were 29,800,000 civilians employed in nonagricultural work; these figures exclude proprietors, self-employed persons, and domestic servants, military and naval forces, and emergency workers. But by 1942 this figure had risen to 37,000,000. Of these, 8,200,000 were engaged in manufacturing in 1939, as against 12,400,000 in 1942, the increase being due almost entirely to the war effort.

Not only were more people working, but they were working harder and for longer hours. In 1939, the average hours worked per week in durable manufacturing industries was 38 and in 1942 an estimated 45 hours. In 1939 the average workweek in nondurable manufacturing industries—textiles, foods, paper, chemicals, petroleum, rubber, and so forth—was 37.4 and in 1942, an estimated 40.3 hours.

Moreover, like the supply of goods, the supply of labor also is scarce; so that there is a pressure for the "upping" of salaries, wages, net income for farmers and business.

The results of this upward pressure are illustrated in the following figures:

In 1939 the average hourly earnings in durable manufacturing industries were 69.8 cents—in 1942, 94.7 cents.

In 1939 the average hourly earnings in nondurable manufacturing industries were 58.2 cents—in 1942, 72.3 cents.

Farm wage rates were 104 percent of the 1935–39 average in 1939—they were 158 percent of that average in 1942.

The net income of farm proprietors was $4,300,000,000 in 1939—$9,700,000,000 in 1942.

Net corporate profits—before taxes—amounted to $5,500,000,000 in 1939—to $19,700,000,000 in 1942. Net corporate profits after taxes rose from $4,200,000,000 in 1939 to $7,700,000,000 in 1941, and then remained comparatively stationary.

All of this means a tremendous increase of the amount of money in the possession of the public.

Thus, in 1939 income payments to individuals in this country amounted to $71,000,000,000; in 1941 to ninety-two billions; and in 1942, to one hundred and sixteen billions. The estimated income payments to individuals for 1943 is about $140,000,000,000.

People desire various kinds of goods and services and have plenty of money to pay for them. Thus they will want to use their portion of this huge supply of money to bid competitively for the limited supply available. In consequence, prices are forced up.

Compare the income of individuals with the available goods and services and you can see the pressure which is being exerted on prices even after taxes have been subtracted:

[In billions of dollars]

	1942	1943 (estimated)
Income payments to individuals	116	140
Personal taxes, etc	7	[1]15
Disposable income	109	125
Consumer goods and services	82	[2]80
Excess of disposable income over consumers' goods and services in 1942 prices	27	45

[1] Under present laws.
[2] In 1942 prices.

This pressure was so strong that, despite partially successful efforts to resist it, the cost of living was pushed up in 1942 to 18 percent above the August 1939 level; by May 1943, the increase was more than 25 percent.

Thus underlying conditions of an extensive price rise exist today in this country. Control of prices, therefore, is imperative.

The price structure of the country is complex and closely knit. A rise in the price of one commodity increases the cost of making or distributing other commodities and creates a pressure for raising the prices of these goods. Thus a mounting flood of price increases can be generated.

In discussing price we frequently forget that increased wage rates exert a heavy pressure on other prices. Wages are a part of cost. When they rise costs rise. If higher wages force up prices, the cost of living is increased and there is a pressure for even higher wages. This, too, helps to swell the mounting flood of price increases.

Therefore controls must be imposed on—

Prices of all products and raw materials.

Manufacturers', wholesale, and retail prices.

Wages and salaries.

Rents and the prices of services, such as transportation, power, and so forth.

PROFITS

Direct controls—ceilings on prices and wages—are not enough in themselves to hold down prices and the cost of living over any period of time.

Direct controls are "sitting on the lid." Meanwhile the tremendously increased supply of purchasing power continues to exert pressure from beneath the lid.

This pressure must be relieved by draining it off into channels which will help pay directly for the war—taxes and the purchase of War bonds.

This is of primary importance; for it relieves the pressure at the source and thus makes the task of price control easier.

Therefore, two means must be used to hold the line against a rise in prices.

First. The pressure of excess spending power must be reduced by putting these dangerous dollars to work in winning the war—by putting them into taxes and War bonds.

A large portion of the 45,000,000,000 of excess dollars, over and above the value of estimated available goods and services for civilians must be diverted into these channels if the pressure on prices is to be minimized.

Second. Prices and wages must be controlled.

How To Keep Country From Run-Away Inflation

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 25, 1943

Mr. PATMAN. Mr. Speaker, should we fail to hold prices down, most serious consequences can ensue.

(a) A serious rise in prices and wages would increase the cost of the war and could easily help to lengthen it.

If prices doubled it would raise the cost of the war from $250,000,000 a day to $500,000,000 a day—all of which would have to be paid out of taxes and the increased sale of War bonds.

If prices rose rapidly and unevenly—as they would if uncontrolled—the weekly wages of some 50,000,000 persons would have to be raised time and time again. That adjustment would take place unevenly, would create much confusion and conflict, would foster labor disputes and hurt morale; would impair the war effort.

Every business unit in the land would face such maddening uncertainties in every item of costs from a rapid upsurging in prices that businessmen would not know how to plan their operations. Confusions would result. The war effort would be slowed up.

(b) Few, if any, would benefit from a serious rise in prices; and practically all would suffer in the end.

Those with relatively fixed incomes—teachers, white-collar workers, veterans' families living on pensions, widows living on insurance payments, families of the men in our armed services—would suffer at once.

(c) Those who received increases in wages or prices would live in a fool's paradise for which the final day of reckoning would be swift and certain.

There would be no more civilian goods to buy than there are now. It merely would take more dollars to buy those goods—dollars which, if prices had not risen, could be put away to buy greatly improved goods after the war.

Prices usually start rising faster than wages, so that consumer purchasing power lags behind rising prices. Business also would have begun to stagnate under the weight of increased costs and mounting uncertainties of operation. At this point, it would take very little to knock down the house of cards which uncontrolled price rises had reared.

Material curtailment of Government expenditures for war production—once the war is over—would reduce business activity unless the manufacturing plants and their labor could be diverted to the production of peacetime goods.

However, with purchasing power squeezed by the high prices, the civilian market only could absorb these goods at reduced prices. Consequently prices would start to fall.

Once prices started down, they would come tumbling. The whole price structure would collapse like a house of cards. There would be panic and depression.

After the last war, inflation was followed by drastic deflation. From early 1920 to 1921 wholesale prices fell an average of 45 percent. The collapse following the last war brought industrial production and factory pay rolls down 30 percent, created widespread business losses and unemployment.

Such a rapid drop in prices would mean untold suffering for many.

For wage earners it would mean serious cuts in wage rates, reduced working hours and actual unemployment. There would be less money to pay off mortgages on houses bought at high prices; less money to meet insurance premiums on policies bought when prices and wages were high.

After the last great war employment fell by 5,000,000, wage payments in manufacturing industries fell from $13,600,000,000 to $8,300,000,000; average earnings in manufacturing fell from $1,464 a year in 1920 to $892 a year in 1921. In the great depression of the thirties the collapse was even worse. Salaries and wages in private industry fell from $47,500,000,000 in 1929 to $24,500,000,000 in 1933; about 15,000,000 people were thrown out of work out of a total of less than 50,000,000 who were employed in 1929. In manufacturing alone, pay rolls fell 65 percent.

For farmers it would mean less money coming in to pay for farms and equipment bought during the period of high prices. It would mean failure and foreclosure. Raw-material prices tend to drop even faster and further than do the prices of finished goods.

Farmers went through the same tragic experience. After the last war the prices they received dropped from 244 percent of the 1909–14 average in May 1920 to 113 percent in May 1921, a fall of 54 percent; the prices they paid, including interest and taxes, fell only 20 percent, while the debts they had incurred at high prices remained constant. In the great deflation of the '30's prices farmers paid, including interest and taxes, fell 33 percent, but farm prices fell 64 percent. Net income of farm operators, which was $5,200,000,000 in 1929, shrank to $1,500,000,000 in 1932. In the years from 1930 to 1933, 650,000 farms went under the hammer—distressed sales other than tax sales.

For businessmen—many of them—it would mean severe losses and financial readjustments; often receivership or bankruptcy.

In both deflations the businessmen suffered along with everyone else.

After the last war production fell 30 percent and corporate profits, which were $5,900,000,000 in 1919, crashed to $400,000,000 in 1921. Again, after 1929, production fell over 60 percent. Corporate profits in 1929 were $7,200,000,000; by 1932 not only had they been completely wiped out but they had been converted into losses of $3,600,000,000.

(d) A serious rise in prices and consequent later price collapse could rob us of many of the benefits of the peace to come.

The complete collapse of prices would bring business stagnation that would eat up all the savings of the high-price period and would rob people of the freedom from want for which we are fighting.

Interest charges on War bonds and the bonds themselves still would have to be paid. But the volume of these payments would be much greater than would have been necessary if prices had not been allowed to rise. These payments would require large amounts of taxes, involving much heavier sacrifices for those that paid them, now that prices, incomes, and wages had dropped.

All of this would take money and national energies which, if prices had not been allowed to rise in uncontrolled fashion, could have been used to build a strong, stable, prosperous nation.

The pressure of rising prices will not stop immediately after the war but will continue, because war production will not stop at once; because a large supply of consumer goods will not come on the market at once; because people will have large supplies of savings and bond investments which they will want to spend immediately for goods and services.

The more we do now to hold down prices the easier it will be for us to make the shift to peacetime.

Good for the Soul

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 28, 1943

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from today's Washington News:

GOOD FOR THE SOUL

To us, the only really refreshing thing in a hot and tense week of war on the home front and abroad was to see a Cabinet member admit a mistake. After all, there is a lot in the old saying that confession is good for the soul—for the soul of the confessor and for the souls of those who are given the rare privilege of observing a human being who can walk humbly and not claim all the tricks.

Frank Knox, Secretary of the Navy, who incidentally has quite a few things to worry about besides oil leases, appeared before the House Public Lands Committee to testify regarding that Elk Hills contract with Standard of California.

Washington literally crawls with officials, high, low, and medium, who, despite obvious "bickerings, muddlings, and confusions," would rather die than to say they were wrong in even so much as one slight instance. Hence the refreshing quality of what Knox did. He simply told the committee, "I muffed it."

Elk Hills has exuded an unpleasant odor since the days of Denby, Doheny, and Fall. Knox said his mistake was in not realizing that the case had a long history with unsavory connotations—and therefore should have been passed around to all who might want to raise an eyebrow.

Abe Fortas, Under Secretary of the Interior, who was the first to challenge the Elk Hills contract which Knox had agreed to, goes on record to say that there is "absolutely no basis for suspicion or charges of collusion or improper conduct"—merely a serious question of business judgment.

As to that Knox says, "I muffed it." Which, in the privacy of our consciences, we must concede we all do, frequently.

And that is why, in this era of experts and professors and slide-rule artists all of whom have all the answers, we find ourselves uplifted, as Diogenes would have been if he had ever found that honest man.

Recess of Congress

REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 28, 1943

Mr. MILLER of Nebraska. Mr. Speaker, I am asking unanimous consent to

proceed for 1 minute and to insert in the Appendix of the RECORD an editorial from the Omaha World-Herald. The editorial expresses alarm relative to the President's request for blanket authority over all the industries and individuals in America.

This Congress has expressed itself on several occasions relative to the further extension of powers to the fanatical bureaucrats. The President was ill advised in his veto message. He and his left-wingers should keep in closer contact with the American people.

Along that line, Mr. Speaker, I would advise that this Congress accept a recess during a part of this summer. There are men in this House who have been constantly on the firing line without proper rest and relaxation for the past 5 years. I cannot help but note that some of the men who carry the big burdens are beginning to look worn, haggard, tired, and even a little anemic. Tempers are becoming frayed, irritations develop which does not make for good legislation.

Yes, Mr. Speaker; we should recess, not adjourn, go home at our own expense, mingle with and talk with the folks at home. We will all get a certain amount of rest and change of scenery. We will understand what our folks are thinking about and what they expect of Congress. We can then come back on the proper call with new vision, courage, and new understanding of what our constituents and America desire.

Had the President and his advisers kept their ears to the ground this Congress would not have been called upon to cast a vote of no confidence in the decision of the President in his veto of the Smith-Connally labor bill. The bill was not perfect but should have been signed and then the imperfections corrected. It is unfortunate that the overriding of a veto, the first in wartime, was necessary. The people back home were disturbed about departing too far from our American system of government and demanded that there be a curb on the direction Government was going and are further demanding that their voice and wishes be reflected by their elected Representatives in Washington. There will be more head-on collisions unless this administration pays more attention to the wishes of the American citizen.

The editorial referred to follows:

A BILL TO AUTHORIZE

It is an ingenious antistrike plan which President Roosevelt now advances. It may have considerable appeal for people who are weary unto death of strikes and rumors of strikes—as who is not.

Yet there are certain aspects of the plan that will cause thoughtful Americans to wonder—to ask themselves serious questions.

The President's words are worth rereading:

"I intend to ask the Congress to raise the age limit for noncombat military service to 65 years. I shall make that request of the Congress so that if at any time in the future there should be a threat of interruption of work in plants, mines, or establishments owned by the Government, or taken possession of by the Government, the machinery will be available for prompt action."

The last clause is particularly interesting. "The machinery will be available." That would seem to indicate that the President has in mind another permissive act, "A bill to authorize the President of the United States" to do thus and so, when and if the spirit moves him.

In recent years the American people have wandered, or have been led, or have been driven, into ways far removed from the orthodoxy of the Republic.

And we believe they are beginning to yearn for a return of the old-time religion.

For a return to government by law. Law that it is the business of the Congress to enact; law that it is the province of the Supreme Court to interpret, if its meaning or constitutionality is disputed; and law that it is the duty of the Executive to administer and enforce, impartially and with even-handed justice, without distinction as to groups or classes, political friends, or enemies, and without regard to the effect on the next election.

Permissive enforcement of law isn't that at all. It is authoritarian. It is government by men who can do with law about as they please, construe it this way or that, apply it here, fail to apply it there. It leans more toward Stalinism, Hitlerism, than toward Jeffersonianism.

Government by men rather than government by law leaves the people always in a fog, always uncertain, for they can't read the law and conclude this is what it means. It may hit them—and it may not, according to a personal decision to be reached sometime later. Conflicting rules and regulations tread on one another's heels, and fears breed in great confusion.

Often these regulations, issued by inexperienced and impractical men without benefit of public consideration, backfire badly. That is one of the chief reasons why the Kilgore committee was obliged to bring in the sorrowful report that our civilian economy is beginning to come unstitched.

Yet now the President appears to be asking another grant of power—to enable him, as head man in the Republic, personally to grapple with and solve the most distressing problem now before the people.

That would be bad government, in defiance of the traditional creed of this representative Republic.

It would be bad government to make strikers subject to penalty, not according to the clear letter of congressional law but according to the will of Executive power.

If this be indeed what the President is to ask for, Congress should, and we believe will, deny the request. For Congress, like the people, is becoming weary—and frightened—of the consequences of too frequent and too far departures from the American system of government by law enacted and administered within the framework of the Constitution.

Is the Farmer Responsible for the High Cost of Living?

EXTENSION OF REMARKS

OF

HON. W. R. POAGE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 28, 1943

Mr. POAGE. Mr. Speaker, for many months the farmer has been held up to the American public as some kind of heartless profiteer who is responsible for the threat of inflation. Every day we hear the cry that wages must be increased in order that the laboring man might meet the increasing cost of food. We all realize that the cost of living is bearing heavily on everyone, laborer, farmer, clerk, and Congressman. I am just as anxious as anyone to make this burden as light as possible. Inflation profits no one. It should be avoided, but the fact that all citizens are being called on to accept a lower standard of living in order to win the war is not an evidence of inflation. Neither is it proof that our farmers are Shylocks. In fact, I know of no way whereby we can maintain our high living standards during the war without actually inviting inflation. We must be willing to sacrifice if we are to win the war and we should sacrifice equally.

I do not want the laborer's toil to buy less than the farmer's, but neither do I want the toil of the farmer to earn an unduly small share of the national income. It seems clear that the thing that is really important in determining whether the farmer is receiving an unfair price for food products is this: Does the farmer now demand and require that the laborer pay the wage earned from an unreasonably large number of units of labor in exchange for the goods he buys? For instance, the coal miners have complained that beef and butter are too high. Beef and butter are high in terms of dollars, and it would undoubtedly shock many Members of this House, as well as many labor leaders, if I were to suggest that the farmer who produces butter was more deserving of an increase in price than is the coal miner of an increase in wages, but when we calculate the number of hours the miner must work in order to buy butter, we find that he can today buy a pound of butter with less than half the effort he was compelled to exert 30 years ago. In the 1909–14 period—which period is generally taken as reflecting a reasonably normal and fair relationship—1 hour's work in the coal mines could be exchanged for 1.2 pounds of butter. Today 1 hour's work in the mines can be exchanged for 3 full pounds of butter. Who is justly entitled to an increase, if anyone, the farmer or the miner?

The example of the purchase of butter by a coal miner is but one illustration. I am inserting herewith a more detailed tabulation recently prepared by the Department of Agriculture showing the amount of various farm products that can now be purchased with 1 hour's wage in various industries as compared with the amounts that could be purchased in 1909–14. In almost every case an hour's work will buy twice as much of food or fiber as it would in the base period. In many cases it will buy several times as much. The only agricultural product that cannot be purchased with much less labor is tobacco, and it can hardly be classed as a necessary food.

The tabulation follows:

Estimated amount of respective farm products that could be purchased with average earnings from 1 hour's labor in selected industries, 1909–14 average and 1942

Industry	Cotton, pounds		Wheat, pounds		Corn, pounds		Dry edible beans, pounds		Potatoes, pounds		Peanuts, pounds		Rice, pounds	
	1909–14	1942	1909–14	1942	1909–14	1942	1909–14	1942	1909–14	1942	1909–14	1942	1909–14	1942

Source: The computations are based on (1) prices received by farmers as published by the U. S. Department of Agriculture; (2) hourly earnings as reported in Real Wages in the United States, 1890–1926, by Paul Douglas, for the 1909–14 average (with some series adjusted to the Bureau of Labor Statistics level); and (3) 1942 hourly earnings as reported by the Bureau of Labor Statistics.

Farm prices are those received by farmers for the period August 1909 to July 1914 and the season average for 1942. The 5-year average for hourly earnings is the calendar years 1910–14.

There will be those who will properly ask, "Even though the laborer has received an increase in purchasing power, is not the same thing true of the farmer?" This is a fair question, and if it were true, as many undoubtedly believe, that the farmer's buying power had increased in the same proportion as the buying power of labor and industry, the farmer would have no right to complain. Surely, we do not complain that the average weekly factory earnings are now 371 percent of what they were during the base period. The farmer would not object to the good fortune of the factory worker if his own prices had enjoyed a like advance; but on May 15, 1943, farm prices were only up to 187 percent. Unfortunately, I do not have available a very comprehensive tabulation of the amount of farm products required to purchase the things farmers must have, but I have been able to get a rather limited tabulation which was recently prepared by the Bureau of Agricultural Statistics. It shows a much more rapid rise in the cost of manufactured articles than in the price of most farmer's products. For example, in spite of the high price per bushel today, it takes nearly twice as many bushels of wheat to buy a binder now than it did in the base period. Here are the figures:

Quantities of farm products required to purchase specified commodities, United States, 1910–14 and 1942

Commodity	Unit	1910–14	1942
Grain binder, 7-foot	Bushel of wheat	156.1	280.9
Corn planter, 2-row	Bushel of corn	66.0	118.4
Cream separator [1]	Pound of butterfat	263.1	239.0
Overalls	Pound of cotton	7.1	9.5
Cultivator, 1-horse	Pound of cotton	38.5	49.7
Shoes, work [2]	Pound of beef cattle.	40.2	31.0
Hoe, 7-inch blade [3]	Pound of cotton	3.9	5.2

[1] 250-quart capacity, 1910–14; 500-pound capacity 1942.
[2] Shoes, brogans, 1910–14; shoes, work, 1942.
[3] Hoes, each, 1910–14; hoes, 7-inch blade, 1942.

Bureau of Agricultural Economics.

I did not make these figures. I am not responsible for the conditions that create these figures; neither are the farmers of this country. We did not even collect the figures. We do not claim to be economists, but I know, and the farmers know, what these figures show. I believe that the labor leaders of the country also know. In view of the fact that no one can continue to produce food no matter how much he desires to unless he can hope to get his costs out of the undertaking, I wonder just how much service the experts and the organizers are doing to the consumers of America when they insist on a wage-food price relationship that on its face will not enable the farmer to meet his costs of production. Do we want food at a fair price, or do we want "directives" without food?

Airplanes for Certain Officials and Our Secret Weapon, the O. W. W.—"One World Willkie"

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, June 28, 1943

Mr. RANKIN. Mr. Speaker, from my viewpoint the remarks of the gentleman from Michigan [Mr. HOFFMAN] criticizing us for providing bomber planes for certain officials was rather unkind, coming from the Republican side of the House. Does the gentleman not know that we have just furnished a bomber plane for a candidate for the Republican nomination for President to fly around the world? I know you will say that was for the O. W. W., our secret weapon against the Republicans, "One World Willkie."

We beat your ears down with that weapon in 1940, and it looks as if we might have to do it again.

The Navy-Standard Oil Contract

REMARKS

OF

HON. JAMIE L. WHITTEN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, June 28, 1943

Mr. WHITTEN. Mr. Speaker, there has been much righteous indignation among Members of the House about the so-called contract between the Navy Department and the Standard Oil Co. relative to the Elk Hills Naval Reserve since the Navy subcommittee, of which I am a member, made its report showing the unbelievable terms of this contract.

Since I largely developed the evidence with regard to the unfair and illegal features of this contract, pointing out the identical provisions on which the contract was held to be illegal, and brought out before the Naval Subcommittee on Appropriations the matters which have been the substance of the comment of my colleagues and of the press, for the benefit of the House I am placing in the RECORD today the evidence which I developed before the committee in April this year and which was reported to the House in our committee report in May, this year. On this evidence the subcommittee with the following Democratic membership, the gentleman from California [Mr. SHEPPARD] chairman, the gentleman from Texas [Mr. THOMAS], the gentleman from Washington [Mr. COFFEE], and myself

refused to make an appropriation which according to the testimony before us was necessary to consummate the contract. It was testified before our committee that the contract would be held pending consideration of the Justice Department as to its legality and pending an appropriation which my committee refused.

Mr. Speaker, from the standpoint of the Government this contract is atrocious. Doubtless those signing it on behalf of the Government acted upon advice. In my humble judgment they must have had terribly bad advice. As shown by the evidence I brought out in cross-examining Rear Admiral Harry A. Stuart, Director of Naval Petroleum Reserves, while this is purportedly a contract for the conservation of oil, it would permit the Standard Oil Co. to withdraw 15,000 barrels of oil per day from not only its part of the land in the reserve but Navy's as well, for 5 years, or more than 27,000,000 barrels of oil.

Claiming to provide an equitable division of oil between the Standard Oil Co. and the Government, the contract would give the Standard Oil Co. 36 percent of the oil obtained from the field, whereas Standard Oil Co. owned only approximately 18 percent of the land.

While the contract provided for repayment after 5 years to the Government for Navy's 64 percent of the total oil which would be taken by Standard in the first 5 years, such payment was to be at the rate of 90 barrels per day without interest and it would have taken approximately 450 years for the Government to have been repaid for its oil taken by Standard in the first 5 years.

While the contract was said to be in line with the act of Congress of June 1938, Public Law No. 786, which provided for the acquisition of the Standard Oil lands "by purchase or condemnation," in reality if made effective it was a partnership agreement between the Federal Government and the Standard Oil Co., and I might say under the terms of the contract the Federal Government was to be the "partner" while the Standard Oil Co. would get the "ship" because the Standard Oil Co. would get twice as big a percentage of the oil as it had land, and the exclusive right to handle the oil produced from the reserve from "here on"—a partnership in perpetuity, between the Federal Government and a private corporation.

The first I knew of this contract came in February of this year, when the Naval Subcommittee on Appropriations was requested to appropriate the sum of $1,750,000 to consummate the contract which had been agreed upon and signed by the Secretary of the Navy and the Standard Oil Co. This was at the time when we had up before our committee the supplemental appropriation bill for Navy. We refused the appropriation and continued the matter until we could investigate it, since it was said the contract would be inoperative without the appropriation and pending an opinion from the Justice Department.

Before we began our hearings on the regular Navy appropriation bill in April this year, I secured a copy of this contract. To my mind it was not in line with the authority granted in Public Law No. 786, and was so unfair to the Government as to be illegal for that reason. I developed the matter thoroughly before our committee in April of this year and this evidence was reported to the House in our report in May of this year when we again refused an appropriation.

For those Members who did not read our report, I submit the evidence I developed in April this year when cross-examining Rear Admiral Harry A. Stuart, Director of Naval Petroleum Reserves. I asked the following questions and the following answers were given by him, as is shown by copy of the hearings before the naval subcommittee on the regular 1944 naval appropriation, pages 675 to 685, and reported to the House in May this year:

Mr. WHITTEN. Admiral, I believe you stated, did you not, that this question of trying to work out the situation which faced the Navy Department, by reason of having certain lands within the naval reserve owned by other persons, has been pending for a number of years.

Admiral STUART. Yes, sir.

Mr. WHITTEN. And the act of June 30, 1938, was passed in an effort to permit you to work out some kind of arrangement or agreement to preserve the oil under that entire reserve?

Admiral STUART. That is correct.

Mr. WHITTEN. Now, your statement that you knew of no reason why the Attorney General or others could question this contract would not be intended to remove any question that might be raised as to whether the contract which you say was entered into was within the provisions of the act of 1938? In other words, you do not claim to be enough of a lawyer to determine whether that contract is authorized under the terms of that act?

Admiral STUART. No, sir. That is my opinion as a simple layman.

Mr. WHITTEN. That is right. Then you subscribe to the view that any law passed by Congress must be and should be interpreted by the Attorney General or some other person having the relation of attorney for the Government before it is actually entered into?

Admiral STUART. Yes, sir; that is right.

Mr. WHITTEN. Do you know of any reason why the Standard Oil Co. would not be advised that a contract of that sort would have to be approved by the Attorney General?

Admiral STUART. I do not know why it should be approved by the Attorney General; but as I say, I have no objection to the Attorney General passing on it.

Mr. WHITTEN. Now, in addition to that, was it not understood in your relationship with the president of the Standard Oil Co. that an appropriation would have to be made before this contract was finally and completely executed?

Admiral STUART. Yes, sir.

Mr. WHITTEN. It is set up in the contract, is it not, that a sum of money should be paid by the Government as part of that contract?

Admiral STUART. That is correct.

Mr. WHITTEN. And in your conversation with the president of the Standard Oil Co. and in your relationships with the company it was understood that the contract was dependent upon your ability to get the appropriation from Congress to put this contract finally into effect?

Admiral STUART. Well, I do not know exactly about putting it into effect because the agreement is in effect now. Before it was finally consummated; yes; we would have to have an appropriation of some sort.

Mr. WHITTEN. And that was understood and accepted by both parties?

Admiral STUART. I think it was mutually understood; yes, sir.

Mr. WHITTEN. Now, getting back to the terms of the contract—and that is what I want to go into to some extent—I believe the Government's oil reserve includes lands in fee, including the lands within the confines of the reserve which are owned by the Standard and certain other folks?

Admiral STUART. The Standard is practically the only fee owner on it. There is only one other piece there of about 322 acres which is owned in fee. The rest of the parcels are public lands, either owned by the Navy, under the supervision of the Secretary of the Navy, or under the supervision of the Secretary of the Interior.

Mr. WHITTEN. The all-over acreage of that land is around 43,000 acres, is it not?

Admiral STUART. A little over 43,000; yes, sir.

Mr. WHITTEN. Which includes all the Standard's land also?

Admiral STUART. That is right. Inside the reserve the Standard owns 7¼ sections, and outside about 6, or approximately 13 sections.

Mr. WHITTEN. How many acres is that?

Admiral STUART. The Standard owns about 8,300 acres.

Mr. WHITTEN. And the all-over limits, or the amount of it, is around 43,000 acres?

Admiral STUART. That is correct; 43,793 acres.

Mr. WHITTEN. Which gives the Standard approximately 18 to 20 percent of the lands involved in the whole reserve?

Admiral STUART. Of the whole reserve, yes, sir; but only the eastern part of the reserve has been developed.

Mr. WHITTEN. We will get to that. I am just trying to develop this as we go along. They own about 20 percent of the oil reserve that you are hopeful of getting for the Navy?

Admiral STUART. That is correct; yes, sir.

Mr. WHITTEN. Now, this contract that you mention is in reality a set-up whereby the Government and the Standard will jointly own the oil under the ground out there, and it is a working agreement and a partnership, more or less, between the Government and the Standard Oil Co.; is it not?

Admiral STUART. I would not call it a partnership; no, sir.

Mr. WHITTEN. Well, let us say a joint ownership.

Admiral STUART. You are a lawyer, and I do not want to put myself on record that it is a partnership from a legal point of view.

Mr. WHITTEN. Well, let us see what it does. It is a joint property so far as the oil is concerned. One of the parties owns a certain percentage of the oil if the contract becomes effective, and the other owns the remainder of it. Do they have a certain agreement whereby the oil will be taken out, handled and sold, and in all particulars handled under this agreement between the Standard Oil Co. and the United States Government?

Admiral STUART. Yes, sir. Under the agreement we get title to all of the land.

Mr. WHITTEN. You get title to the land, but I am talking about the oil.

Admiral STUART. The general idea of the contract was that we would get the oil belonging to us and the Standard would get the oil that belongs to them, but we would have the control as to when the oil would come out, and we were interested in the control. Roughly speaking, under this agreement we keep all of our oil in the ground, and after this 5-year period we control the time of taking out three-quarters of the Standard's oil.

Mr. WHITTEN. That is what makes it hard to understand some of the provisions of this contract, Admiral—your statement as to what your intention was. Now, the Standard, owning about 20 percent of the entire acreage, under the terms of this contract, got 36 percent of the oil, did they not?

Admiral STUART. No, sir. You must remember that all of the western half of this reserve is undeveloped land.

Mr. WHITTEN. That is right; but when it is developed what percentage of the oil will the Standard get?

Admiral STUART. As we own practically all of the undeveloped portion, our proportion will go up.

Mr. WHITTEN. You are not answering my question, though, Admiral. I am asking you when that land is developed what percentage of the oil will the Standard Oil Co. get?

Admiral STUART. It depends on the development. We cannot tell until it is developed.

Mr. WHITTEN. But the percentage operates even if you get only 1 gallon of oil. You can calculate how much or how little oil will come out.

Admiral STUART. No, sir. It depends upon whether that land proves productive. If it is productive, our proportion will go up and the Standard's will go down.

Mr. WHITTEN. Now, that is true only if the Government explores it at its own expense?

Admiral STUART. No, sir.

Mr. WHITTEN. Do you have a copy of that contract?

Admiral STUART. No, sir. I did not think I was going to discuss this just now. I did not bring it along.

Mr. SHEPPARD. You are entitled to discussion.

Mr. DITTER. Go ahead. You are doing a swell job, Admiral.

Mr. WHITTEN. Nobody is after the Admiral. We want to find out what this contract means, though, and what is involved in it.

Admiral STUART. Did you get a copy of the memorandum that I wrote to Mr. SHEPPARD?

Mr. WHITTEN. Well, after all, the contract is the best evidence of its contents.

Admiral STUART. Of course, you have to have a background to understand it fully.

Mr. WHITTEN. What section of the contract is this percentage division in?

Admiral STUART. That is section 4 (c) and (d).

Mr. WHITTEN. What is your statement, then, with reference to exploratory wells that the Navy may have placed on this undeveloped part of the property?

Admiral STUART. Under the contract we may direct the Standard to drill any exploratory well, and if it proves unproductive the Navy pays all of the cost. The Standard has the same right and privilege under the contract, but if the well proves commercially productive it will be placed under the proportional ratio as regards cost.

Mr. WHITTEN. In other words, the Navy will pay 64 percent, approximately, and the Standard will pay approximately 36 percent?

Admiral STUART. Yes; but as we develop farther to the westward our proportion will increase, and it may be that the proportion will shift from 64–36 to 75 or 80 percent to us and 25 percent to Standard, depending upon developments.

Mr. WHITTEN. What percentage of the land that belongs to the Standard and what percentage that belongs to the Navy has been developed already?

Admiral STUART. The developed area (surface area) is approximately 3,200 acres of which 55 percent is Navy's and 45 percent Standard's. However, there is no direct relation between the surface acreage and the subsurface acreage which contains the oil. Current estimates show that 64 percent of the remaining oil in the shallow-zone sands is under Navy acreage, and 36 percent is in sands under Standard's lands.

Mr. WHITTEN. Now, the reason for getting this right is to conserve the oil that is under the ground?

Admiral STUART. Yes, sir.

Mr. WHITTEN. And from that we may take it that the present wells will draw oil from under that undeveloped section of the naval reserve; will they not?

Admiral STUART. Which one are you thinking of?

Mr. WHITTEN. I mean that part that the Standard has now developed, and that part that the Government has developed; the wells on that property will draw oil from under the undeveloped sections of this naval reserve, and that is your whole reason for getting this land; is it not?

Admiral STUART. To a certain extent that is right.

Mr. WHITTEN. And the Standard gets 36 percent of that oil; does it not?

Admiral STUART. The Navy gets 64 percent and the Standard 36 at the present time.

Mr. WHITTEN. So under this contract Standard gets 36 percent of such oil as may be drawn from under the undeveloped section of the naval reserve, does it not?

Admiral STUART. No; because the drainage lines have been pretty well set up. But you must also remember, Mr. WHITTEN, that unless you have some sort of agreement, the Standard is perfectly at liberty to go ahead and drill all those wells.

Mr. WHITTEN. That is right; but the real danger is that they will draw all the oil out from under the naval reserve land?

Admiral STUART. That is right; a large portion of it.

Mr. WHITTEN. And you are coming in with a contract permitting them to draw it out and paying them 12 percent to draw it out?

Admiral STUART. No, sir. Prior to this contract we had a production of roughly 4,000 barrels a day from Navy leases, and the Standard had a production of 8,000 barrels. Now it is just the reverse. We are getting two-thirds and the Standard is getting one-third.

Mr. WHITTEN. Now, of course, whether this contract is an improvement over the way you are handling it now I have no way of knowing. Certainly you would know more about that than I would.

Admiral STUART. Certainly it is. It is far superior.

Mr. WHITTEN. I cannot take issue with you on that. But under this contract you give to Standard all the oil that is drawn off at the rate of 15,000 barrels per day for 5 years, do you not?

Admiral STUART. No, sir.

Mr. WHITTEN. Wait a minute. They get control and have the use of it for the first 5 years—15,000 barrels a day?

Admiral STUART. Yes, sir.

Mr. WHITTEN. Which amounts to approximately 27,000,000 barrels of oil which will go to the Standard?

Admiral STUART. That is right.

Mr. WHITTEN. Then at the end of 5 years the production under the terms of the contract is reduced to 750 barrels a day?

Admiral STUART. Yes, sir.

Mr. WHITTEN. And you provide that Standard shall repay the Navy for 18,000,000 barrels of Navy's oil which they have gotten, during this first 5 years?

Admiral STUART. It will only be actually about 12,000,000 barrels, because you have not taken out the cost of producing and developing. That will come to about 6,000,000 barrels.

Mr. WHITTEN. What percentage do you pay Standard for producing oil?

Admiral STUART. It is produced at cost, and the costs of drilling and producing will amount to about 30 cents a barrel.

Mr. WHITTEN. Then you provide that at the end of the 5 years, after it has been reduced to 750 barrels, under your present rate of division of 36 and 64, one-third of the Standard's 36 percent shall go toward repaying the Navy for its oil?

Admiral STUART. That is right.

Mr. WHITTEN. How many years would it take to repay that?

Admiral STUART. It will take a long time. But it does not make any difference. We want to save the oil. We want it in the reserve.

Mr. WHITTEN. All right. What is your purpose in providing at the start that 15,000 barrels of oil shall be taken out every day, if it is your purpose to conserve the oil in the reserve?

Admiral STUART. The Standard owned one-third of it. They had a stake in it. They get the use of that oil.

Mr. WHITTEN. That is right. What evidence do you have that there is any more than 27,000,000 under the Standard property?

Admiral STUART. We have a great deal of evidence; the evidence of all our geologists and petroleum engineers.

Mr. WHITTEN. Then you are in a position to show what oil the Standard has under the ground?

Admiral STUART. Yes, sir; to a limited degree—only an estimate.

Mr. WHITTEN. Why can you not take that into court, then, and arrive at the value of it?

Admiral STUART. What have we got to do that with?

Mr. WHITTEN. You have got a court to determine what the Standard's property is worth, and what the Government should pay them for it.

Admiral STUART. Also, they may have a better story than we have.

Mr. WHITTEN. And they may have a better contract here than you have, Admiral.

Admiral STUART. I do not think so. I do not agree with you on that, and I have not found anybody yet that does—anybody that knows anything about it.

Mr. WHITTEN. Well, with 20 percent of the land here belonging to the Standard and the whole purpose of entering into this contract being that you want to prevent the Standard from drawing oil out from under the naval reserve, when you come in here and give the Standard Oil Co. 36 percent of what you both get from under the naval reserve, it makes it very apparent that there might not be so much conservation in it.

Admiral STUART. No, sir. You must remember that at the end of 5 years we conserve it all.

Mr. WHITTEN. You conserve it all; that is right. But the Standard has gotten their part and gone.

Admiral STUART. No; not at all. They have only gotten about a quarter of theirs. The Standard has over 150,000,000 barrels anyhow. And another thing, Mr. Whitten, you should realize that this deeper sand—which we do not know any too much about, but know there is a lot of oil there—under this agreement they cannot touch that at all. There is not to be a well drilled in this deeper sand without the Navy's permission—not a single well.

Mr. WHITTEN. But in addition to the terms of this contract that we have mentioned, you provide that the Standard Oil Co. shall be the sole agent of the Federal Government from here on in handling all the oil under this 43,000 acres of land?

Admiral STUART. That is true only to a certain extent.

Mr. WHITTEN. To what extent?

Admiral STUART. For the first 5 years.

Mr. WHITTEN. For the first 5 years, they would get all of the oil. I am talking about after that; who else can the Government permit or bargain with or employ to develop the Government's property?

Admiral STUART. We have a clause in there whereby, if we do not like their price, we can call for bids.

Mr. WHITTEN. Call for bids for development?

Admiral STUART. No, sir; for the sale of oil, not for the development.

Mr. WHITTEN. Not for the development?

Admiral STUART. No, sir.

Mr. WHITTEN. How much gas is involved? I notice 50 percent of the gas shall go to Standard Oil. Is this a gas field?

Admiral STUART. No, sir; there is very little gas. But you are mistaken about 50 percent of the gas going to Standard.

Mr. WHITTEN. What is the provision?

Admiral STUART. The provision is, if it is processed in a plant on the reserve, that we share that according to our relative proportions; but if for any reason it should be processed off of the reserve in a plant entirely owned and operated by Standard, then and only then is Standard to get 50 percent.

Mr. WHITTEN. Admiral, the real reason or the real purpose for entering into this contract is conservation, is it not?

Admiral STUART. That is correct; yes, sir.

Mr. WHITTEN. That being true, there would be no desire or present intention on the part of the Navy to develop this undeveloped part of your reserve, would there?

Admiral STUART. No, sir. The only reason would be to find out if we have got oil there. We hope there is, and I think there is.

Mr. WHITTEN. If you sink wells, you would not sink a well for the purpose of finding out and then close it up, would you?

Admiral STUART. I would not; no, sir.

Mr WHITTEN. It is rather an expensive process and, if you do that, it is for the purpose of drawing out oil?

Admiral STUART. Yes.

Mr. WHITTEN. So that we may reasonably expect you to keep that undeveloped land undeveloped?

Admiral STUART. That is correct.

Mr. WHITTEN. So that we could anticipate your percentage division to continue approximately 36 and 64?

Admiral STUART. That is for the present; yes, sir.

Mr. WHITTEN. Getting back to what I said awhile ago, it provides if there is any danger of drawing oil out from under the undeveloped part of your reserve, which is the sole purpose of your trying to get Standard's land, Standard would draw 36 percent of such part as was drawn out from under the undeveloped part of the naval reserve?

Admiral STUART. Yes. But you must remember that Standard owns 36 percent of the oil in that area.

Mr. WHITTEN. No; they own 20 percent.

Admiral STUART. Oh, no, sir; not at all, not of the developed part here.

Mr. WHITTEN. I know, but we are talking about the oil that flows out from the undeveloped part.

Admiral STUART. We know it is not going to draw oil from away off there.

Mr. WHITTEN. But it is going to draw some oil out from under this portion out there under the oil reserve?

Admiral STUART. I do not think they will draw a barrel of oil out of that western part of the reserve. It is 5 or 6 miles away.

Mr. WHITTEN. Then, after you find Standard is drawing out 27,000,000 barrels of oil, when they start repaying you one-third of their 36 percent, it still leaves them as big a percentage as they have in the entire land area, does it not; approximately 24 percent will be left to Standard after they pay you one-third of their 36 percent?

Admiral STUART. After they pay one-third.

Mr. WHITTEN. Which amounts then to you paying Standard a premium of 64 percent of the oil taken out in the first 5 years?

Admiral STUART. No, sir; they owe us that oil they are paying us for.

Mr. WHITTEN. They owe it to you and they pay for it to you in approximately 450 years?

Admiral STUART. No; if we are keeping it as a reserve, we do not care whether it ever comes out or not.

Mr. WHITTEN. You do not care whether they do, but some might.

Admiral STUART. All right, if we desire to produce it they will pay us back.

Mr. WHITTEN. All right, but what I am getting at is that the one-third they will pay you is the difference between 20 percent of the land they have and 36 percent of the oil you give them under this contract.

Admiral STUART. I do not follow your reasoning.

Mr. WHITTEN. The point I am getting to is you are giving them a permit to draw out 27,000,000 barrels, and when they take out the one-third of their 36 percent that they will pay you, they still have left a larger percentage than Standard has in the reserve?

Admiral STUART. No; they only get their proportion of the oil—we get our proportion of the oil. The only thing is we loan it to them for 5 years. If they produce at the end of the 5 years, they will start paying us back, and the more they produce the more they will pay.

Mr. WHITTEN. But under the 750 barrels per day—it will be 27,000,000 barrels—that is what Standard gets. Have you figured what the interest on that 27,000,000 barrels less approximately 9,000,000 barrels that the Standard would own, will be during the 450 years?

Admiral STUART. You will have to offset that interest on this basis—that we are not allowing them to produce at the end of the 5 years. We are keeping that oil in the ground.

Mr. WHITTEN. You are keeping it all in the ground except the amount they get in the first 5 years.

Admiral STUART. Which is one-quarter; it is less than a quarter of the oil they own. The other three-quarters we keep in there indefinitely, if we do not want to produce it. In addition to that, we keep all of this oil in this lower sand, which is 100,000,000 barrels, or more.

Mr. WHITTEN. This matter is not being delayed, so far as you know, for the purpose of providing this initial payment of approximately $1,750,000 can be paid in oil rather than your coming to Congress and getting an appropriation?

Admiral STUART. Oh, no. I think it is up to Congress. I have no idea of keeping this thing from Congress. It is wrong in principle to take that much more oil out. We would have to take out approximately 2,000,000 more barrels.

Mr. WHITTEN. If that is wrong in principle and your purpose in this thing is to conserve the oil, what is the excuse—I won't say reason—but what is the excuse for taking out 27,000,000 barrels?

Admiral STUART. Standard wants the oil. They are in the oil business and they own a third of the oil there—that is our estimate—and they have some rights in the matter. They own a third of it and, in making a contract like this, you have to give and take.

Mr. WHITTEN. Well, we have the right of condemnation in the courts.

Admiral STUART. You have the right of condemnation and going through litigation.

Mr. WHITTEN. And the reason you have not resorted to that is because Standard does not want you to do it that way?

Admiral STUART. Of course it is not. Naturally they do not want and we do not want litigation.

Mr. WHITTEN. Well, if this was some little farmer out here who had a strip of land and you wanted to put a naval station out there, you would not be disturbed about going ahead and condemning, would you, Admiral?

Admiral STUART. That is hardly a good analogy.

Mr. WHITTEN. The point I am getting to is if you pay Standard what it is worth, and that is the only way I would justify taking any property, I cannot see why they would have a right to complain, can you?

Admiral STUART. Yes; I do. They are in the oil business. They want the oil, and it is awfully hard to find that, too. You would get different estimates; you would have a battle of experts running over the years.

Mr. WHITTEN. And the only way to keep out of a battle of experts is to give Standard the kind of contract they want; and apparently they want this one, do they not?

Admiral STUART. I do not know. We want it; we wrote the contract.

Mr. WHITTEN. If you relied on your experts in this contract, why cannot you rely on them in a court of law, where they would pass on what it is worth?

Admiral STUART. We know what we have here; we do not know what the courts are going to do.

Mr. WHITTEN. You do not mean to intimate that the courts will be unfair to the Federal Government, do you?

Admiral STUART. No; I do not mean to intimate they would be unfair, but it would take a long time and then we would be tied up again.

Mr. WHITTEN. Now, there is certain other property in that field that you take by condemnation, do you not?

Admiral STUART. I do not think so.

Mr. WHITTEN. How about the 322 acres?

Admiral STUART. We are under negotiation with them now to make a similar contract to the one that Standard has. We did condemn it, but we are holding up condemnation proceedings to see if we can come to an agreement.

Mr. WHITTEN. You are holding it up to see if you can justify this contract with Standard?

Admiral STUART. Not at all; no, sir. We want to come to some agreement with them.

Mr. WHITTEN. To keep the record straight, though, wasn't it that, Admiral?

Admiral STUART. No, not that; but because we would save the Government money. They asked $2,000,000 for it and, under this agreement with them, we would only pay $30,000 and give them a proportion of the production if and when produced. And it is in the deep sands only, so we hope it will never be produced, or at least in the distant future.

Mr. WHITTEN. Well, it is not your purpose here to defeat the property owners from anything that is theirs; you want to pay what it is worth?

Admiral STUART. That is right. They say it is worth $2,000,000; we do not think so. We are pretty far apart on the actual value.

Mr. WHITTEN. By this series of questions I may have asked you, I do not mean to intimate that everything is not open and aboveboard. So far as I know, it is.

Admiral STUART. Yes, sir.

Mr. WHITTEN. Also, may I add, apparently you are giving Standard 36 percent of the oil produced, whereas they have approximately 18 to 20 percent of the land area, and the purpose in doing it is to prevent them from drawing oil out from under your reservation?

Admiral STUART. Yes. It goes further than that. At the present time, Standard gets one-third of the oil that is being produced——

Mr. WHITTEN. But Mr SHEPPARD has called attention to the fact that you have ample law if the Government wants to go into the courts. And I know what they did in my country when they wanted a forest reserve—they went out and took it.

Admiral STUART. This would cost you something over $200,000,000. I think we have saved some money by not making an appropriation of this size.

Mr. WHITTEN. Taking the verbiage of this contract, it reads like the Government pays $1,750,000, but all of that money ($200,000,000) is tied up in this same contract.

Admiral STUART. What contract?

Mr. WHITTEN. This contract involves some amount of property and some amount of money, but it is just kind of a sugar coating and it really does not protect the Navy's reservation.

Admiral STUART. No, sir; under the contract we get the oil that belongs to us and they get the oil that belongs to them.

Mr. WHITTEN. And if the oil is ever taken out, they will get their $200,000,000, won't they?

Admiral STUART. Yes; they get whatever its value is, and we would know what the value is.

Mr. WHITTEN. That is right. But if you would go out and condemn, we would know what you are paying for it, but the way you are paying under this contract, you, nor I, nor nobody else can tell except that Standard gets the first 27,000,000 barrels.

Admiral STUART. Certainly; you can tell more about it this way than by guessing at the contents.

Mr. WHITTEN. We are paying them for 36 percent of the oil, whereas they have but 18 percent of the land.

Admiral STUART. No, sir. They have 36 percent of the oil in the part developed right now, and that is what they are getting.

Mr. WHITTEN. That is right, and you want to stop them because they are drawing oil out from under the naval reserve?

Admiral STUART. That is the general idea.

Mr. WHITTEN. And hereafter any oil that is drawn out under the Navy's reserve they get 36 percent of it?

Admiral STUART. They are still getting just what belongs to them, and we are getting what belongs to us, and they are paying a part of that cost.

Mr. WHITTEN. If we sign this contract, we are giving them that percentage, though?

Admiral STUART. No, sir; we are giving them nothing.

Mr. Speaker, it was testified by Rear Admiral Harry F. Stuart, Director of Petroleum Reserves, before my committee that this contract would be held up pending an opinion from the Justice Department as to its legality, and further that an appropriation was necessary before this contract could be or would be consummated. My committee refused such appropriation and, I am sure, has no intention of making such appropriation in the future. When the committee report was filed showing the evidence and facts, the contract was called to the attention of the several legislative committees.

From the press it appears that certain persons have stated that the contract was in operation. If this be true, it is in direct conflict with the testimony of Rear Admiral Stuart before our committee. He, as Director of Naval Petroleum Reserves, testified that the appropriation which we refused was necessary before the contract would be or could be consummated. If the contract was in effect and operation, we would like to know it, that we may take proper action with regard to witnesses who appeared before us and testified to the contrary. I hope the legislative committees may determine just what is behind the signing of such a contract.

Mr. Speaker, I make no comparison between this contract and the so-called Tea Pot Dome contract. In my humble judgment, the present contract is bad enough in its own right without comparison with anything.

If there be need for securing the Standard Oil lands within the confines of the naval reserve for the purpose of conserving the oil—and apparently there is good reason to obtain such lands—the Government should proceed to purchase or condemn them as it would if the lands were owned by an individual and as was provided by Public Law No. 786, act of June 20, 1938, as I pointed out to the Navy Department in February and April when the appropriation was refused.

Would Have Voted "Nay"

EXTENSION OF REMARKS

OF

HON. CECIL R. KING

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 28, 1943

Mr. KING. Mr. Speaker, last Friday I was on the Pacific coast in the performance of official business of the House of Representatives. At that time the President's veto of the Connally-Smith bill was, without notice to the leadership, presented to the House for the constitutional action of determining whether this House, upon reconsideration, would agree to pass this bill, notwithstanding the objections of the President of the United States to the contrary. If present, I would have voted "nay." I have consistently paired against this bill during my official leave and would have been so paired Friday if the pair clerk had not overlooked the pair requests I left with him prior to my departure with the Subcommittee on Production in Shipbuilding Plants. As you know, Mr. Speaker, this committee is presently concerned with the matter of increasing the production of ships to hasten the winning of this war.

Lea-Bailey Aviation Bill

EXTENSION OF REMARKS

OF

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, June 28, 1943

Mr. BROWN of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Wichita (Kans.) Beacon of June 20, 1943:

AERIAL FUTURE RESTS HEAVILY ON MEASURE

(By Betsy Jager)

WASHINGTON, June 19.—Wichita's aviation future for the next 7 or 8 years depends greatly upon the speedy passage of the Lea-Bailey bill which proposes post-war legislation affecting aviation development, Col. Edgar S. Gorrell, president of the Air Transport Association of America, asserted here last week.

The bill is now before the House Committee on Interstate and Foreign Commerce for consideration.

Stressing the need for speedy passage of this bill designed to prepare the United States to meet the challenge of international air transport after the war, Colonel Gorrell warned in an interview:

"Unless it is enacted, and enacted wisely, there is grave danger that private flying will be crippled, the aeronautical training schools of the country will go bankrupt and close with the signing of the armistice; the aircraft manufacturers will be practically out of business for 7 or 8 years subsequent to the war; the air lines of the country will be subject to destructive competition; our Nation's largest industry of today will be headed for the rocks of destruction; and our returning pilots, mechanics, and other skilled heroes will be destined to walk the streets jobless."

NO GREAT CHANGES

The alert-eyed, agile-moving aviation leader leaned back in his desk chair, there in his office in the large gray stone air-transport association building, and explained that the bill proposes no great changes in the matters dealt with by the Civil Aeronautics Act of 1938.

Twisting the spectacles he was holding, Colonel Gorrell added that what the bill mainly does is to extend the act to persons and into areas not now covered, and adds to the legislation affecting the industry certain new provisions dealing with matters which demand attention.

The bill proposes that Federal regulations be extended to all air commerce whether between points within a single State or between points in different States.

"Few steps to assure the sound development of aviation are as essential as this," declared this man who was largely responsible for the plans worked out for the work now being done by America's air lines in connection with the war.

Adding that the assurance points to a strong aircraft manufacturing industry was of vital importance now and in the future, Colonel Gorrell pointed out that the Lea-Bailey bill contains a provision for the substantial encouragement and promotion of private and miscellaneous flying—a new and important departure from Federal legislation in the past.

"The bill provides for the continuation of a flying educational system. Flying will continue to be taught in the schools, so that our new generation will be air-minded.

"So far as our air lines in domestic and foreign commerce are concerned, it is to be earnestly hoped that they will come out of this war with sufficient financial resources readily available so that they can immediately begin giving large-scale orders—important to a proper transition from a wartime to a peacetime economy for the manufacturing industry," he declared.

Colonel Gorrell asserted that the importance of the Lea-Bailey bill to the expansion of Wichita's commercial aviation in the future could not be overestimated.

He praised the interest Kansas' Representative, TOM WINTER (Republican), member of the House Interstate and Foreign Commerce Committee, has taken in aviation and the support he has given the Lea-Bailey bill, which is still being considered by the committee.

Wichita is a city with which Colonel Gorrell is well acquainted. He remembers with pride that he was in the party which, on what is now the Transcontinental Western Airlines, made the first landing at Wichita's newly opened airport in 1929.

Representative CLARENCE LEA (Democrat, California), chairman of the House Interstate and Foreign Commerce Committee, has

said of Colonel Gorrell: "I think no man in the United States, over a long period of years, beginning before World War No. 1, has been more intimately in touch with and has had more to do with the wise planning and execution that has led to the splendid cooperation with and work the air lines are doing for the branches of the armed services today."

Born in Baltimore, Md., in 1891, he was educated at Baltimore City College and Military Academy. He later received degrees from Massachusetts Institute of Technology and Norwich University, Northfield, Vt.

From 1912 to 1914 he served as a lieutenant in the Infantry, and then transferred to the aviation section, Signal Corps, in 1914. He joined the First Aero Squadron as lieutenant at San Antonio, Tex., in 1916, and participated in the Punitive Expedition to Mexico under General Pershing. Then detailed to Massachusetts Institute of Technology, he went from there to headquarters at Washington, D. C., where he was promoted to a captain in 1917. He was one of the first men to go to Europe in World War No. 1, and was sent there by President Wilson as a member of the Bolling mission, to visit the Allies to determine what aircraft material should be produced in the United States and what purchased in Europe.

He served as a chief engineer officer of the Air Service, American Expeditionary Forces, and became a colonel in the Air Service in October 1918, and later Assistant Chief of Staff. He has represented the United States at more than 200 international conferences.

Having participated in campaigns on all fronts during World War No. 1, he was eventually promoted to Chief of Staff of the Air Service, American Expeditionary Forces, with rank of colonel.

In March 1920 he resigned from the Army and became associated with the automobile industry, being director and president of the Stutz Motor Car Co. from 1929 to 1935.

Since January 1936 he has served as president of the Air Transport Association of America

Since April 1940 he has also served as president and director of Air Cargo, Inc.

The air transport industry, which Colonel Gorrell so well represents, today has three vital roles in America's war effort. The industry (1) is under contract to the United States armed forces to transport arms and ammunition, men and essential supplies to any military stations wherever they may be; (2) trains pilots and ground personnel for the Army and Navy and performs other vital military and naval services; (3) continues operations as common carriers with schedules serving the important war production centers.

Furthermore, the Air Transport Association continues its peacetime roles, such as promoting aviation safety in general, promoting closer relations among the members and with the public, improving transportation service rendered by the members, promoting establishment of necessary terminals, and connecting schedules.

One-Thousandth United States Liberty Ship Named for Pioneer Judge Lowry

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 28, 1943

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article from the Fort Wayne (Ind.) Journal-Gazette, concerning the naming of the one thousandth United States Liberty ship after the late distinguished Robert Lowry, former Congressman from the Fort Wayne district.

Congressman Lowry served as a member of the Forty-eighth and Forty-ninth Congresses, 1883 through 1887, under President Garfield and President Cleveland. Prior to entering Congress, he had a brilliant career as a jurist and public servant.

Congressman Lowry was a friend of my late father, James Gillie. As a young lad I delivered milk to his home, and I recall to this day the high regard and beloved esteem in which he was held by all whom knew him.

Citizens of Fort Wayne and the Fourth Indiana District are proud of the honor which has been bestowed upon the memory of this great Hoosier and splendid American.

The article follows:

ONE-THOUSANDTH UNITED STATES LIBERTY SHIP NAMED FOR PIONEER JUDGE LOWRY—VESSEL'S MASTER AND CREW INTERESTED IN HISTORY OF FORMER CONGRESSMAN

The name of one of Fort Wayne's distinguished early residents is now sailing the seven seas on the bow of the steamship *Robert Lowry*, the one-thousandth Liberty vessel to be launched.

The ship has been named after Judge Robert Lowry, former Congressman from this district and father of Mrs. H. Brooke Sale, of this city.

In order to find out just who the man was that was famous enough to have a ship named after him, M. J. Fleckenstein, captain of the vessel, himself a native of Fort Wayne, wrote the Fort Wayne Chamber of Commerce for additional information.

"The entire crew, including myself, would be interested in hearing more of the man who was celebrated enough to have a vessel of the Liberty class named for him," Captain Fleckenstein wrote to Clare L. Johnson, secretary of the chamber. "People in foreign ports always question us about the names of ships and we want to give intelligent answers."

CAPTAIN A FORT WAYNE NATIVE

The master of the ship wrote that he is more than interested since he himself was born at 524 Riverside Avenue, Fort Wayne, August 3, 1898, the youngest child of Henry and Ellen Fleckenstein.

Captain Fleckenstein lived in Fort Wayne until he joined the Army in 1917. After his return from the war he wandered around the country and finally settled in Galveston, Tex., where he started his sea career. More than that he was bound for foreign ports on the *Robert Lowry* with supplies for the Army and Navy, he could not say.

"Since our combined merchant crew and Navy armed guard numbers about 70 men, it can readily be understood how well the fame of Robert Lowry could be spread if we knew more about this famous man."

The information obtained on the pioneer resident "will be the main topic of our discussion at sea when we return to our quarters after long hours of watching for enemy subs and planes," he wrote.

Captain Fleckenstein's sister, Mrs. Thomas Gordon, still resides in the old family home at 524 Riverside Avenue. A brother, Robert H. Fleckenstein, died last September, but the wife resides at 1306 Taylor Street with eight sons, five of whom are in the armed forces. After the death of his brother no further word was heard from the Liberty ship captain, at that time master of a tanker. Another brother lives in Pontiac, Mich.

Captain Fleckenstein's letter has been referred to Mrs. Sale, who will provide him and his crew members more information about her father, who died here on January 27, 1904.

JUDGE LOWRY CAREER COLORFUL

Judge Lowry had an outstanding career in Fort Wayne and Goshen. He was born in Killeleigh, County Down, Ireland, April 2, 1824, and emigrated to the United States and settled in Rochester, N. Y. He was educated in private schools and had partial academic courses. He served as librarian of the Rochester Athenaeum and Young Men's Association. He studied law and moved to Fort Wayne in 1843.

Judge Lowry was city recorder in 1844 and 1845 here. In 1846 he was admitted to the bar and started practice in Goshen. He continued in public service and served as auditor of Elkhart County in 1852 and was also named circuit judge in the same year.

Active in Democratic politics, he was president of the Democratic State convention, and served as delegate to the National Democratic Convention at Baltimore in 1860 and 1872. He was again circuit judge from 1864 until January 1875, maintaining his headquarters in Goshen until about 1867 when he moved back to Fort Wayne, according to Mrs. Sale. He resigned as circuit judge and in 1877 and 1878 was judge of superior court here. As a further honor he was named the first president of the Indiana State Bar Association in July 1879.

Judge Lowry was elected as a Democrat to the Forty-eighth and Forty-ninth Congresses, March 4, 1883, until March 3, 1887, and was unsuccessful as a candidate for reelection in 1886 to the Fiftieth Congress. Following this campaign, he resumed the practice of law here.

Besides Mrs. Sale, there are two other members of Judge Lowry's family living. They are two nieces, Mrs. Lloyd Ballard, of Beloit, Wis., and Mrs. Benjamin Bristol, of Foxboro, Mass., daughters of Mrs. Sale's sister, Mrs. Lida Lowry Branon.

Post-War Planning—A World Monetary System—Morgenthau Versus Keynes Versus Sound Money

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Monday, June 21, 1943

Mr. WHITE. Mr. Speaker, there is submitted herewith for the consideration of post-war planners and the students of money and international finance the recently proposed plan for an international monetary system by Secretary of the Treasury Morgenthau and the so-called Keynes plan of the Bank of England, together with the earlier plan adopted by the statesmen in the Congress of the past and placed upon our statute books in a declaration of monetary policy. With these plans there is submitted the monetary plan of the European convention of 1865—the so-called Latin Union—which was in successful operation until destroyed by the act of Germany after the defeat of

France and the organization of the German Empire in 1870:

THE MORGENTHAU PLAN

I. PURPOSES OF THE FUND

1. To stabilize the foreign exchange rates of the currencies of the United Nations and nations associated with them.

2. To shorten the periods and lessen the degree of disequilibrium in the international balance of payments of member countries.

3. To help create conditions under which the smooth flow of foreign trade and of productive capital among the member countries will be fostered.

4. To facilitate the effective utilization of the abnormal foreign balances accumulating in some countries as a consequence of the war situation.

5. To reduce the use of foreign exchange controls that interfere with world trade and the international flow of productive capital.

6. To help eliminate bilateral exchange clearing arrangements, multiple-currency devices, and discriminatory foreign exchange practices.

II. COMPOSITION OF THE FUND

1. The fund shall consist of gold, currencies of member countries and securities of member governments.

2. Each of the member countries shall subscribe a specified amount which will be called its quota. The aggregate of quotas of the member countries shall be the equivalent of at least $5,000,000,000.

The quota for each member country shall be determined by an agreed-upon formula. The formula should give due weight to the important factors relevant to the determination of quotas, e. g., a country's holdings of gold and foreign exchange, the magnitude of the fluctuations in its balance of international payments, and its national income.

3. Each member country shall provide the fund with 50 percent of its quota on or before the date set by the board of directors of the fund on which the fund's operations are to begin.

4. The initial payment of each member country (consisting of 50 percent of its quota) shall be 12.5 percent of its quota in gold, 12.5 percent in local currency and 25 percent in its own (that is, Government) securities. However, any country having less than $300,000,000 in gold need provide initially only 7.5 percent of its quota in gold, and any country having less than $100,000,000 in gold need provide initially only 5 percent of its quota in gold, the contributions of local currency being increased correspondingly. A country may, at its option, substitute gold for the local currency or securities in meeting its quota requirement.

5. The member countries of the fund may be called upon to make further provision toward meeting their quotas pro rota at such times, in such amounts and in such form as the board of directors of the fund may determine, provided that the proportion of gold called for shall not exceed the proportion indicated in II-4 above, and provided that a four-fifths vote of the board shall be required for subsequent calls to meet quotas.

6. Any changes in the quotas of member countries shall be made only with the approval of a four-fifths vote of the board.

III. POWERS AND OPERATIONS

The fund shall have the following powers:

1. To buy, sell, and hold gold, currencies, bills of exchange and government securities of member countries; to accept deposits and to earmark gold; to issue its own obligations and to discount or offer them for sale in member countries, and to act as a clearing house for the settling of international movements of balances, bills of exchange, and gold.

All member countries agree that all of the local currency holdings shall be free from any restrictions as to their use. This provision does not apply to abnormal war balances acquired in accordance with the provisions of III-9, below.

2. To fix the rates at which it will buy and sell one member's currency for another and the rates in local currencies at which it will buy and sell gold. The guiding principle in the fixing of such rates shall be stability in exchange relationships. Changes in these rates shall be considered only when essential to correction of a fundamental disequilibrium and be permitted only with the approval of four-fifths of member votes.

3. To sell to the treasury of any member country (or stabilization fund or central bank acting as its agent), at a rate of exchange determined by the fund, currency of any member country which the fund holds, provided that:

A. The foreign exchange demanded from the fund is required to meet an adverse balance of payments on current account with the country whose currency is being demanded.

B. The fund's holdings of the currency of any member country shall not exceed during the first year of the operation of the fund the quota of that country; it shall not exceed during the first 2 years 150 percent of such quota; and thereafter it shall not exceed 200 percent of such quota; except that upon approval by four-fifths of the member votes the fund may purchase any local currency in excess of these limits, provided that at least one of the following two conditions is met:

(1): The country whose currency is being acquired by the fund agrees to adopt and carry out measures recommended by the fund designed to correct the disequilibrium in the country's balance of payments, or

(2): It is believed that the balance of payments of the country whose currency is being acquiredby the fund will be such as to warrant the expectation that the excess currency holdings of the fund can be disposed of within a reasonable time.

C. When the fund's net holdings of any local currency exceed the quota for that country, the country shall deposit with the fund a special reserve in accordance with the regulations prescribed by the board of directors. This provision does not apply to currencies acquired under III-9 below.

D. When a member country is exhausting its quota more rapidly than is warranted in the judgment of the board of directors, the board may place such conditions upon additional sales of foreign exchange to that country as it deems to be in the general interest of the fund.

E. A charge at the rate of 1 percent per annum, payable in gold, shall be levied against any member country on the amount of its currency held by the fund in excess of the quota of that country. Abnormal war balances acquired by the fund (in accordance with III-9 below), shall not be included in the computed balance of local currency used as a basis for this charge.

F. When the fund's holdings of the local currency of a member country exceed the quota of that country, upon request by the member country the fund shall resell to the member country the fund's excess holdings of the currency of that country for gold or acceptable foreign exchange.

4. The right of a member country to purchase foreign exchange from the fund with its local currency for the purpose of meeting an adverse balance of payments on current account is recognized only to the extent of its quota, subject to the limitation in III-3 above and III-7 below.

5. With the approval of four-fifths of the member votes, the fund in exceptional circumstances may sell foreign exchange to a member country to facilitate transfer of capital, or repayment or adjustment of foreign debts, when in the judgment of the board such a transfer is desirable from the point of view of the general international economic situation.

6. When the fund's holding of any particular currency drop below 15 percent of the quota of that country, and after the fund has used for additional purchases of that currency—

(a) Gold in an amount equal to the country's contribution of gold to the fund, and

(b) The country's obligations originally contributed,

the fund has the authority and the duty to render to the country a report embodying an analysis of the causes of the depletion of its holdings of that currency, a forecast of the prospective balance of payments in the absence of special measures, and, finally, recommendations designed to increase the fund's holdings of that currency. The board member of the country in question should be a member of the fund committee appointed to draft the report. This report should be sent to all member countries and, if deemed desirable, made public. Member countries agree that they will give immediate and careful attention to recommendations made by the fund.

7. Whenever it becomes evident to the board of directors that the anticipated demand for any particular currency may soon exhaust the fund's holdings of that currency, the board of directors of the fund shall inform the member countries of the probable supply of this currency and of a proposed method for its equitable distibution, together with suggestions for helping to equate the anticipated demand and supply for the currency. The fund shall make every effort to increase the supply of the scarce currency by acquiring that currency from the foreign balances of member countries. The fund may make special arrangements with any member country for the purpose of providing an emergency supply under appropriate conditions which are acceptable to both the fund and the member country. The privilege of any country to acquire an amount of other currencies equal to or in excess of its quota shall be limited by the necessity of assuring an appropriate distribution among the various members of any currency the supply of which is being exhausted. The fund shall apportion its sales of such scarce currency. In such apportionment, it shall be guided by the principle of satisfying the most urgent needs from the point of view of the general international economic situation. It shall also consider the special needs and resources of the particular countries making the request for the scarce currency.

8. In order to promote the most effective use of the available and accumulating supply of foreign exchange resources of member countries, each member country agrees that it will offer to sell to the fund for its local currency or for foreign currencies which it needs all foreign exchange and gold it acquires in excess of the amount it possessed immediately after joining the fund. For the purpose of this provision including computations, only free foreign exchange and gold are considered. The fund may accept or reject the offer. To help achieve this objective each member country agrees to discourage the unnecessary accumulation of foreign balances by its nationals. The fund shall inform any member country when, in its opinion, any further growth of privately held foreign balances appears unwarranted.

9. To buy from the governments of member countries abnormal war balances held in other countries, provided all the following conditions:

A. The abnormal war balances are in member countries and are reported as such (for the purpose of this provision) by the member government to date of its becoming a member.

B. The country selling the abnormal war balances to the fund agrees to transfer these balances to the fund and to repurchase from

the fund 40 percent of them (at the same price) with gold or such free currencies as the fund may wish to accept, at the rate of 2 percent of the transferred balances each year for 20 years beginning not later than 3 years after the date of transfer.

C. The country in which the abnormal war balances are held agrees to the transfer to the fund of the balances described in (B) above, and to repurchase from the fund 40 percent of them (at the same price) with gold or such currencies as the fund may wish to accept, at the rate of 2 percent of the transferred balances each year for 20 years beginning not later than 3 years after the date of transfer.

D. A charge of 1 percent, payable in gold, shall be levied against the country selling its abnormal war balances and against the country in which the balances are held. In addition a charge of 1 percent, payable in gold, shall be levied annually against them on the amount of such balances remaining to be repurchased by each country.

E. If the country selling abnormal war balances to the fund asks for foreign exchange rather than local currency, the request will not be granted unless the country needs the foreign exchange for the purpose of meeting an adverse balance of payments not arising from the acquisition of gold, the accumulation of foreign balances, or other capital transactions.

F. Either country may, at its option, increase the amount it repurchases annually. But in the case of the country selling abnormal war balances to the fund, not more than 2 percent per annum of the original sum taken over by the fund shall become free, and only after 3 years shall have elapsed since the sale of the balances to the fund.

G. The fund has the privilege of disposing of any of its holdings of abnormal war balances as free funds after the 23-year period is passed, or sooner under the following conditions:

(1) Its holdings of the free funds of the country in which the balances are held fall below 15 percent of its quota; or

(2) The approval is obtained of the country in which the balances are held.

H. The country in which the abnormal war balances are held agrees not to impose any restrictions on the use of the installments of the 40-percent portion gradually repurchased by the country which sold the balances to the fund.

I. The fund agrees not to sell the abnormal war balances acquired under the above authority, except with the permission or at the request of the country in which the balances are being held. The fund may invest these balances in ordinary or special government securities of that country. The fund shall be free to sell such securities in any country provided that the approval of the issuing government is first obtained.

J. The fund shall determine from time to time what shall be the maximum proportion of the abnormal war balances it will purchase under this provision. Abnormal war balances acquired under this provision shall not be included in computing the amount of foreign exchange available to member countries under their quotas.

10. To buy and sell currencies of nonmember countries, but shall not be authorized to hold such currencies beyond 60 days after date of purchase, except with the approval of four-fifths of the member votes.

11. To borrow the currency of any member country, provided four-fifths of the member votes approve the terms of such borrowing.

12. To sell member-country obligations owned by the fund provided that the board representative of the country in which the securities are to be sold approves. To use its holdings to obtain rediscounts or advances from the central bank of any country whose currency the fund requires.

13. To invest any of its currency holdings in government securities and prime commercial paper of the country of that currency, provided four-fifths of the member votes approve, and provided further that the board representative of the country in which the investment is to be made approves.

14. To lend to any member country its local currency from the fund for 1 year or less up to 75 percent of the currency of that country held by the fund, provided such loan is approved by four-fifths of the member votes.

15. To levy upon member countries a pro rata share of the expenses of operating the fund, payable in local currency, not to exceed one-tenth of 1 percent per annum of the quota of each country. The levy may be made only to the extent that the earnings of the fund are inadequate to meet its current expenses, and only with the approval of four-fifths of the member votes. The fund shall make a service charge of one-quarter of 1 percent or more on all exchange and gold transactions.

16. The fund shall deal only with or through—

A. The treasuries, stabilization funds, or fiscal agents of member governments;

B. The central banks, only with the consent of the member of the board representing the country in question; and

C. Any international banks owned predominantly by member governments.

The fund may, nevertheless, with the approval of the member of the board representing the government of the country concerned, sell its own securities, or securities it holds, directly to the public or to institutions of member countries.

IV. THE MONETARY UNIT OF THE FUND

1. The monetary unit of the fund shall be the Unitas, consisting of 137½ grains of fine gold "equivalent to $10 United States." The accounts of the fund shall be kept and published in terms of Unitas.

2. The value of the currency of each member country shall be fixed by the fund in terms of gold or Unitas and may not be altered by any member country without the approval of four-fifths of the member votes.

3. Deposits in terms of Unitas may be accepted by the fund from member countries upon the delivery of gold to the fund and shall be transferable and redeemable in gold or in the currency of any member country at the rate established by the fund. The fund shall maintain a 100 percent reserve in gold against all Unitas deposits.

4. No change in the value of the currencies of member countries shall be permitted to alter the value in gold or Unitas of the assets of the fund. Thus if the fund approves a reduction in the value of the currency of a member country (in terms of gold or Unitas) or if, in the opinion of the board, the currency of a member country has depreciated to a significant extent, that country must deliver to the fund when requested an amount of its local currency equal to the decreased value of that currency held by the fund. Likewise, if the currency of a particular country should appreciate, the fund must return to that country an amount (in the currency of that country) equal to the resulting increase in the gold or Unitas value of the fund's holdings. The same provisions shall also apply to the government securities of member countries held by the fund. However, this provision shall not apply to currencies acquired under III-9 (abnormal war balances).

V. MANAGEMENT

1. The administration of the fund shall be vested in a board of directors. Each government shall appoint a director and an alternate, in a manner determined by it, who shall serve for a period of three years subject to the pleasure of their government. Directors and alternates may be reappointed. In all voting by the board, the director or alternate of each member country shall be entitled to cast an agreed upon number of votes. The distribution of voting power shall be closely related to the quotas of member countries, although not in precise proportion to the quotas. An appropriate distribution of voting power would seem to be the following: Each country shall have 100 votes plus one vote for the equivalent of each 100,000 unitas ($1,000,000) of its quota. Notwithstanding the approved formula for distributed voting power, no country shall be entitled to cast more than one-fourth of the aggregate votes regardless of its quota. All decisions, except where specifically provided otherwise, shall be made by a majority of the member votes.

2. The board of directors shall select a managing director of the fund and one or more assistants. The managing director shall become an ex officio member of the board and shall be chief of the operating staff of the fund. The managing director and the assistants shall hold office for two years, shall be eligible for reelection, and may be removed for cause at any time by the board.

The managing director of the fund shall select the operating staff in accordance with regulations established by the board of directors. Members of the staff may be made available, upon request of member countries, for consultation in connection with international economic problems and policies.

3. The board of directors shall appoint from among its members an executive committee to consist of not less than 11 members. The chairman of the board shall be chairman of the executive committee, and the managing director of the fund shall be an ex officio member of the executive committee. The executive committee shall be continuously available at the head office of the fund and shall exercise the authority delegated to it by the board. In the absence of any member of the executive committee, his alternate shall act in his place. Members of the executive committee shall receive appropriate remuneration.

4. The board of directors may appoint such other committees as it finds necessary for the work of the fund. It may also appoint advisory committees chosen wholly or partially from persons not employed by the fund.

5. The board of directors may at any meeting by a four-fifths vote authorize any officers or committees of the fund to exercise any specified powers of the board. The board may not delegate, except to the executive committee, an authority which can be exercised only by a four-fifths vote. Delegated powers shall be exercised only until the next meeting of the board and in a manner consistent with the general policies and practices of the board.

6. The board of directors may establish procedural regulations governing the operations of the fund. The officers and committees of the fund shall be bound by such regulations.

7. The board of directors shall hold an annual meeting and such other meetings as it may be desirable to convene. On request of member counties casting one-fourth of the votes the chairman shall call a meeting of the board for the purpose of considering any matters placed before it.

8. A country failing to meet its obligations to the fund may be suspended, provided a majority of the member votes so decides. While under suspension the country shall be denied the privileges of membership but shall be subject to the same obligations as any other member of the fund. At the end of 2 years the country shall be automatically dropped from membership unless it has been restored to good standing by a majority of the member votes.

Any country may withdraw from the fund by giving notice, and its withdrawal will take effect 2 years from the date of such notice. During the interval between notice of withdrawal and the taking effect of the notice, such country shall be subject to the same obligations as any other member of the fund. A country which is dropped or which withdraws from membership shall have returned to it an amount in its own currency equal to its contributed quota, plus other obligations of the fund to the country, and minus any sum owed by that country to the fund. Any losses of the fund may be deducted pro rata from the contributed quota to be returned to the country that has been dropped or has withdrawn from membership. The fund shall have 5 years in which to liquidate its obligation to such a country. When any country is dropped or withdraws from the fund, the rights of the fund shall be fully safeguarded.

9. Net profits earned by the fund shall be distributed in the following manner:

a. Fifty percent to reserves until the reserves are equal to 10 percent of the aggregate quotas of the fund.

b. Fifty percent to be divided each year among the members in proportion to their quotas. Dividends distributed to each country shall be paid in its own currency or in unitas at the discretion of the fund.

VI. POLICIES OF MEMBER COUNTRIES

Each member country of the fund undertakes the following:

1. To maintain by appropriate action exchange rates established by the fund on the currencies of other countries, and not to alter exchange rates except with the consent of the fund and only to the extent and in the direction approved by the fund. Exchange rates of member countries may be permitted to fluctuate within a specified range fixed by the fund.

2. To abandon, as soon as the member country decides that conditions permit, all restrictions and controls over foreign exchange transactions (other than those involving capital transfers) with other member countries, and not to impose any additional restrictions without the approval of the fund.

The fund may make representations to member countries that conditions are favorable for the abandonment of restrictions and controls over foreign exchange transactions, and each member country shall give consideration to such representations.

3. To cooperate effectively with other member countries when such countries, with the approval of the fund, adopt or continue controls for the purpose of regulating international movements of capital. Cooperation shall include, upon recommendation by the fund, measures that can appropriately be taken:

A. Not to accept or permit acquisition of deposits, securities, or investments by nationals of any member country imposing restrictions on the export of capital except with the permission of the government of that country and the fund;

B. To make available to the fund or to the government of any member country full information on all property in the form of deposits, securities, and investments of the nationals of that member country; and

C. Such other measures as the fund shall recommend.

4. Not to enter upon any new bilateral foreign exchange clearing arrangements, nor engage in multiple currency practices, except with the approval of the fund.

5. To give consideration to the views of the fund on any existing or proposed monetary or economic policy, the effect of which would be to bring about sooner or later a serious disequilibrium in the balance of payments of other countries.

6. To furnish the fund with all information it needs for its operations and to furnish such reports as it may require in the form and at the times requested by the fund.

7. To adopt appropriate legislation or decrees to carry out its undertakings to the fund, and to facilitate the activities of the fund.

In comparison with the Morgenthau plan there is inserted herewith the plan proposed by the economist John Maynard Keynes for the Bank of England:

THE KEYNES PLAN—PROPOSALS FOR AN INTERNATIONAL CLEARING UNION

PREFACE

Immediately after the war, all countries which have been engaged will be concerned with the pressure of relief and urgent reconstruction. The transition out of this into the normal world of the future cannot be wisely effected unless we know into what we are moving. It is therefore not too soon to consider what is to come after. In the field of national activity occupied by production, trade, and finance, both the nature of the problem and the experience of the period between wars suggest four main lines of approach.

1. The mechanism of currency and exchange.

2. The framework of a commercial policy regulating conditions for exchange of goods, tariffs, preferences, subsidies, import regulations, and the like.

3. Orderly conduct of production, distribution, and price of primary products so as to protect both producers and consumers from the loss and risk for which extravagant fluctuations of market conditions have been responsible in recent times.

4. Investment aid, both medium and long term, for countries whose economic development needs assistance from outside.

If the principles of these measures and the form of institutions to give effect to them can be settled in advance, in order that they may be in operation when need arises, it is possible that taken together they may help the world to control the ebb and flow of the tides of economic activity which have, in the past, destroyed security of livelihood and endangered international peace.

All these matters will need to be handled in due course. The proposal that follows relates only to the mechanism of currency and exchange in international trading. It appears on the whole convenient to give it priority, because some general conclusions have to be reached under this head before much progress can be made with other topics.

In preparing these proposals care has been taken to regard certain conditions, which the groundwork of an international economic system to be set up after the war should satisfy if it is to prove durable.

(1) There should be the least possible interference with internal national policies, and the plan should not wander from the international terrain. Since such policies may have important repercussions on international relations they cannot be left out of account. Nevertheless, in the realm of internal policy, the authority of the governing board of the proposed institution should be limited to recommendations, or, at most, to imposing conditions for more extended enjoyment of the facilities which the institution offers.

(2) The technique of the plan must be capable of application irrespective of the type and principle of government and the economic policy existing in the prospective member States.

(3) Management of the institution must be genuinely international, without preponderant power of veto or enforcement lying with any country or group. And the rights and privileges of smaller countries must be safeguarded.

(4) Some qualification of the right to act at pleasure is required by any agreement or treaty between nations. But in order that such arrangements may be fully voluntary so long as they last and terminable when they have become irksome, provision must be made for voiding the obligation at due notice. If many member States were to take advantage of this, the plan would have broken down, but if they are free to escape from its provisions if necessary, they may be more willing to go on accepting them.

(5) The plan must operate not only to the general advantage but also to the individual advantage of each of the participants, and must not require a special economic or financial sacrifice from certain countries. No participant must be asked to do or offer anything which is not to his own true long-term interest.

It must be emphasized that it is not for the clearing union to assume the burden of long-term lending which is the proper task of some other institution. It is also necessary for it to have the means of restraining improvident borrowers. But the clearing union must also seek to discourage creditor countries from having unused large liquid balances which ought to be devoted to some positive purpose. For excessive credit balances necessarily create excessive debit balances for some other party. In recognizing that the creditor as well as the debtor may be responsible for a want of balance, the proposed institution would be breaking new ground.

I. THE OBJECTS OF THE PLAN

About the primary objects of an improved system of international currency there is, today, a wide measure of agreement:

(a) We need an instrument of international currency having general acceptability between nations, so that blocked balances and bilateral clearings are unnecessary; that is to say, an instrument of currency used by each nation in its transactions with other nations, operating through whatever national organ, such as a treasury or a central bank, is most appropriate, private individuals, businesses and banks other than central banks, each continuing to use their own national currency as heretofore.

(b) We need an orderly and agreed method of determining the relative exchange values of national currency units, so that unilateral action and competitive exchange depreciations are prevented.

(c) We need a quantum of international currency, which is neither determined in an unpredictable and irrelevant manner as, for example, by the technical progress of the gold industry, nor subject to large variations depending on the gold reserve policies of individual countries; but is governed by the actual current requirements of world commerce, and is also capable of deliberate expansion and contraction to offset deflationary and inflationary tendencies in effective world demand.

(d) We need a system possessed of an internal stabilizing mechanism, by which pressure is exercised on any country whose balance of payments with the rest of the world is departing from equilibrium in either direction, so as to prevent movements which must create for its neighbors an equal but opposite want of balance.

(e) We need an agreed plan for starting off every country after the war with a stock of reserves appropriate to its importance in world commerce, so that without due anxiety it can set its house in order during the transitional period to full peacetime conditions.

(f) We need a central institution, of a purely technical and nonpolitical character, to aid and support other international institutions concerned with the planning and regulation of the world's economic life.

(g) More generally, we need a means of reassurance to a troubled world, by which any country whose own affairs are conducted with due prudence is relieved of anxiety, for causes which are not of its own making, concerning its ability to meet its international liabilities; and which will, therefore, make unnecessary those methods of restriction and discrimination which countries have adopted hitherto,

not on their merits, but as measures of self-protection from disruptive outside forces.

2. There is also a growing measure of agreement about the general character of any solution of the problem likely to be successful. The particular proposals set forth below lay no claim to originality. They are an attempt to reduce to practical shape certain general ideas belonging to the contemporary climate of economic opinion, which have been given publicity in recent months by writers of several different nationalities. It is difficult to see how any plan can be successful which does not use these general ideas, which are born of the spirit of the age. The actual details put forward below are offered, with no dogmatic intention, as the basis of discussion for crticism and improvement. For we cannot make progress without embodying the general underlying idea in a frame of actual working, which will bring out the practical and political difficulties to be faced and met if the breath of life is to inform it.

3. In one respect this particular plan will be found to be more ambitious and yet, at the same time, perhaps more workable than some of the variant versions of the same basic idea, in that it is fully international, being based on one general agreement and not on a multiplicity of bilateral arragements. Doubtless proposals might be made by which bilateral arrangements could be fitted together so as to obtain some of the advantages of a multilateral scheme. But there will be many difficulties attendant on such adjustments. It may be doubted whether a comprehensive scheme will ever in fact be worked out, unless it can come into existence through a single act of creation made possible by the unity of purpose and energy of hope for better things to come, springing from the victory of the United Nations, when they have attained it, over immediate evil. That these proposals are ambitious is claimed, therefore to be not a draw-back but an advantage.

4. The proposal is to establish a currency union, here designated an international clearing union, based on international bank money, called (let us say) bancor, fixed (but not unalterably) in terms of gold and accepted as the equivalent of gold by the British Commonwealth and the United States and all the other members of the union for the purpose of settling international balances. The central banks of all member states (and also of nonmembers) would keep accounts with the international clearing union through which they would be entitled to settle their exchange balances with one another at their par value as defined in terms of bancor. Countries having a favorable balance of payments with the rest of the world as a whole would find themselves in possession of a credit account with the clearing union, and those having an unfavorable balance would have a debit account. Measures would be necessary (see below) to prevent the piling up of credit and debit balances without limit, and the system would have failed in the long run if it did not possess sufficient capacity for self-equilibrium to secure this.

5. The idea underlying such a union is simple, namely, to generalize the essential principle of banking as it is exhibited within any closed system. This system is the necessary equality of credits and debits. If no credits can be removed outside the clearing system, but only transferred within it, the union can never be in any difficulty as regards the honoring of checks drawn upon it. It can make what advances it wishes to any of its members with the assurance that the proceeds can only be transferred to the clearing account of another member. Its sole task is to see to it that its members keep the rules and that the advances made to each of them are prudent and advisable for the union as a whole.

II. THE PROVISIONS OF THE PLAN

6. The provisions proposed (the particular proportions and other details suggested being tentative as a basis of discussion) are the following:

(1) All the United Nations will be invited to become original members of the international clearing union. Other states may be invited to join subsequently. If ex-enemy states are invited to join, special conditions may be applied to them.

(2) The governing board of the clearing union shall be appointed by the governments of the several member states, as provided in (12) below; the daily business with the union and the technical arrangements being carried out through their central banks or other appropriate authorities.

(3) The member states will agree between themselves the initial values of their own currencies in terms of bancor. A member state may not subsequently alter the value of its currency in terms of bancor without the permission of the governing board except under the conditions stated below; but during the first 5 years after the inception of the system the governing board shall give special consideration to appeals for an adjustment in the exchange value of a national currency unit on the ground of unforeseen circumstances.

(4) The value of bancor in terms of gold shall be fixed by the Governing Board. Member States shall not purchase or acquire gold, directly or indirectly, at a price in terms of their national currencies in excess of the parity which corresponds to the value of their currency in terms of bancor and to the value of bancor in terms of gold. Their sales and purchases of gold shall not be otherwise restricted.

(5) Each member State shall have assigned to it a quota, which shall determine the measure of its responsbility in the management of the Union and of its right to enjoy the credit facilities provided by the Union. The initial quotas might be fixed by reference to the sum of each country's exports and imports on the average of (say) the 3 pre-war years, and might be (say) 75 percent of this amount, a special assessment being substituted in cases (of which there might be several) where this formula would be, for any reason, inappropriate. Subsequently, after the elapse of the transitional period, the quotas should be revised annually in accordance with the running average of each country's actual volume of trade in the 3 preceding years, rising to a 5-year average when figures for 5 post-war years are available. The determination of a country's quota primarily by reference to the value of its foreign trade seems to offer the criterion most relevant to a plan which is chiefly concerned with the regulation of the foreign exchanges and of a country's international trade balance. It is, however, a matter for discussion whether the formula for fixing quotas should also take account of other factors.

(6) Member States shall agree to accept payment of currency balances, due to them from other members, by a transfer of bancor to their credit in the books of the clearing union. They shall be entitled, subject to the conditions set forth below, to make transfers of bancor to other members which have the effect of overdrawing their own accounts with the Union, provided that the maximum debit balances thus created do not exceed their quota. The Clearing Union may, at its discretion, charge a small commission or transfer fee in respect of transactions in its books for the purpose of meeting its current expenses or any other outgoings approved by the Governing Board.

(7) A member state shall pay to the reserve fund of the Clearing Union a charge of 1 percent per annum on the amount of its average balance in bancor, whether it is a credit or a debit balance, in excess of a quarter of its quota; and a further charge of 1 percent on its average balance, whether credit or debit, in excess of a half of its quota. Thus, only a country which keeps as nearly as possible in a state of international balance on the average of the year will escape this contribution. These charges are not absolutely essential to the scheme. But if they are found acceptable, they would be valuable and important inducements toward keeping a level balance, and a significant indication that the system looks on excessive credit balances with as critical an eye as on excessive debit balances, each being, indeed, the inevitable concomitant of the other. Any member state in debit may, after consultation with the governing board, borrow bancor from the balances of any member state in credit on such terms as may be mutually agreed, by which means each would avoid these contributions. The governing board may, at its discretion, remit the charges on credit balances, and increase correspondingly those on debit balances, if in its opinion unduly expansionist conditions are impending in the world economy.

(8) (a) A member state may not increase its debit balance by more than a quarter of its quota within a year without the permission of the governing board. If its debit balance has exceeded a quarter of its quota on the average of at least 2 years, it shall be entitled to reduce the value of its currency in terms of bancor provided that the reduction shall not exceed 5 percent without the consent of the governing board; but it shall not be entitled to repeat this procedure unless the board is satisfied that this procedure is appropriate.

(b) The governing board may require from a member state having a debit balance reaching a half of its quota the deposit of suitable collateral against its debit balance. Such collateral shall, at the discretion of the governing board, take the form of gold, foreign or domestic currency or government bonds, within the capacity of the member state. As a condition of allowing a member state to increase its debit balance to a figure in excess of a half of its quota, the governing board may require all or any of the following measures:

(i) a stated reduction in the value of the member's currency, if it deems that to be the suitable remedy;

(ii) the control of outward capital transactions if not already in force; and

(iii) the outright surrender of a suitable proportion of any separate gold or other liquid reserve in reduction of its debit balance.

Furthermore, the governing board may recommend to the government of the member state any internal measures affecting its domestic economy which may appear to be appropriate to restore the equilibrium of its international balance.

(c) If a member state's debit balance has exceeded three-quarters of its quota on the average of at least a year and is excessive in the opinion of the governing board in relation to the total debit balances outstanding on the books of the clearing union, or is increasing at an excessive rate, it may, in addition, be asked by the governing board to take measures to improve its position, and, in the event of its failing to reduce its debit balance accordingly within 2 years, the governing board may declare that it is in default and no longer entitled to draw against its account except with the permission of the governing board.

(d) Each member state, on joining the system, shall agree to pay to the clearing union any payments due from it to a country in default toward the discharge of the latter's debit balance and to accept this arrangement in the event of falling into default itself. A member state which resigns from the clearing union without making approved arrangements for the discharge of any debit balance shall also be treated as in default.

(9) A member State whose credit balance has exceeded half of its quota on the average of at least a year shall discuss with the governing board (but shall retain the ultimate decision in its own hands) what measures would be appropriate to restore the equilibrium of its international balances, including—

(a) Measures for the expansion of domestic credit and domestic demand.

(b) The appreciation of its local currency in terms of bancor, or, alternatively, the encouragement of an increase in money rates of earnings.

(c) The reduction of tariffs and other discouragements against imports.

(d) International development loans.

(10) A member State shall be entitled to obtain a credit balance in terms of bancor by paying in gold to the Clearing Union for the credit of its clearing account. But no one is entitled to demand gold from the Union against a balance of bancor, since such balance is available only for transfer to another clearing account. The governing board of the Union shall, however, have the discretion to distribute any gold in the possession of the Union between the members possessing credit balances in excess of a specified proportion of their quotas, proportionately to such balances, in reduction of their amount in excess of that proportion.

(11) The monetary reserves of a member state, viz, the central bank of other bank or treasury deposits in excess of a working balance, shall not be held in another country except with the approval of the monetary authorities of that country.

(12) The governing board shall be appointed by the governments of the member states, those with the larger quotas being entitled to appoint a member individually, and those with smaller quotas appointing in convenient political or geographical groups, so that the members would not exceed (say) 12 or 15 in number. Each representative on the governing board shall have a vote in proportion to the quotas of the state (or states) appointing him, except that on a proposal to increase a particular quota, a representative's voting power shall be measured by the quotas of the member states appointing him, increased by their credit balance or decreased by their debit balance, averaged in each case over the past 2 years. Each member state, which is not individually represented on the governing board, shall be entitled to appoint a permanent delegate to the union to maintain contact with the board and to act as liaison for daily business and for the exchange of information with the executive of the union. Such delegate shall be entitled to be present at the governing board when any matter is under consideration which specially concerns the state he represents, and to take part in the discussion.

(13) The governing board shall be entitled to reduce the quotas of members, all in the same specified proportion, if it seems necessary to correct in this manner an excess of world purchasing power. In that event, the provisions of 6 (8) shall be held to apply to the quotas as so reduced, provided that no member shall be required to reduce his actual overdraft at the date of the change, or be entitled by reason of this reduction to alter the value of his currency under 6 (8) (a), except after the expiry of 2 year. If the governing board subsequently desires to correct a potential deficiency of world purchasing power, it shall be entitled to restore the general level of quotas toward the original level.

(14) The governing board shall be entitled to ask and receive from each member state any relevant statistical or other information, including a full disclosure of gold, external credit, and debit balances, and other external assets and liabilities, both public and private. So far as circumstances permit, it will be desirable that the member states shall consult with the governing board on important matters of policy likely to affect substantially their bancor balances or their financial relations with other members.

(15) The executive offices of the union shall be situated in London and New York, with the governing board meeting alternately in London and Washington.

(16) Members shall be entitled to withdraw from the union on a year's notice, subject to their making satisfactory arrangements to discharge any debit balance. They would not, of course, be able to employ any credit balance except by making transfers from it, either before or after their withdrawal, to the clearing accounts of other central banks. Similarly it should be within the power of the governing board to require the withdrawal of a member, subject to the same notice, if the latter is in breach of agreements relating to the Clearing Union.

(17) The central banks of non-member states would be allowed to keep credit clearing accounts with the union; and, indeed, it would be advisable for them to do so for the conduct of their trade with members states. But they would have no right to overdrafts and no say in the management.

(18) The governing board shall make an annual report and shall convene an annual assembly at which every member state shall be entitled to be represented individually and to move proposals. The principles and governing rules of the union shall be the subject of reconsideration after 5 years' experience, if a majority of the assembly desires it.

III. WHAT LIABILITIES OUGHT THE PLAN TO PLACE ON CREDITOR COUNTRIES?

7. It is not contemplated that either the debit or the credit balance of an individual country ought to exceed a certain maximum—let us say, its quota. In the case of debit balances this maximum has been made a rigid one and, indeed, countermeasures are called for long before the maximum is reached. In the case of credit balances no rigid maximum has been proposed. For the appropriate provision might be to require the eventual cancelation or compulsory investment of persistent bancor credit balances accumulating in excess of a member's quota; and, however desirable this may be in principle, it might be felt to impose on creditor countries a heavier burden than they can be asked to accept before having had experience of the benefit to them of the working of the plan as a whole. If, on the other hand, the limitation were to take the form of the creditor country not being required to accept bancor in excess of a prescribed figure, this might impair the general acceptability of bancor, whilst at the same time conferring no real benefit on the creditor country itself. For, if it chose to avail itself of the limitation, it must either restrict its exports or be driven back on some form of bilateral payments agreements outside the clearing union, thus substituting a less acceptable asset for bancor balances which are based on the collective credit of all the member states and are available for payments to any of them, or attempt the probably temporary expedient of refusing to trade except on a gold basis.

8. The absence of a rigid maximum to credit balances does not impose on any member state, as might be supposed at first sight, an unlimited liability outside its own control. The liability of an individual member is determined, not by the quotas of the other members but by its own policy in controlling its favorable balance of payments. The existence of the Clearance Union does not deprive a member state of any of the facilities which it now possesses for receiving payment for its exports. In the absence of the Clearing Union a creditor country can employ the proceeds of its exports to buy goods or to buy investments, or to make temporary advances and to hold temporary overseas balances, or to buy gold in the market. All these facilities will remain at its disposal. The difference is that in the absence of the Clearing Union, more or less automatic factors come into play to restrict the volume of its exports after the above means of receiving payment for them have been exhausted. Certain countries become unable to buy and, in addition to this, there is an automatic tendency toward a general slump in international trade and, as a result, a reduction in the exports of the creditor country. Thus the effect of the Clearing Union is to give the creditor country a choice between voluntarily curtailing its exports to the same extent that they would have been involuntarily curtailed in the absence of the Clearing Union, or, alternatively, of allowing its exports to continue and accumulating the excess receipts in the form of bancor balances for the time being. Unless the removal of a factor causing the involuntary reduction of exports is reckoned a disadvantage, a creditor country incurs no burden but is, on the contrary, relieved, by being offered the additional option of receiving payment for its exports through the accumulation of a bancor balance.

9. If, therefore, a member state asks what governs the maximum liability which it incurs by entering the system, the answer is that this lies entirely within its own control. No more is asked of it than that it should hold in bancor such surplus of its favorable balance of payment as it does not itself choose to employ in any other way, and only for so long as it does not so choose.

IV. SOME ADVANTAGES OF THE PLAN

10. The plan aims at the substitution of an expansionist, in place of a contractionist, pressure on world trade.

11. It effects this by allowing to each member state overdraft facilities of a defined amount. Thus each country is allowed a certain margin of resources and a certain interval of time within which to effect a balance in its economic relations with the rest of the world. These facilities are made possible by the constitution of the system itself and do not involve particular indebtedness between one member state and another. A country is in credit or debit with the Clearing Union as a whole. This means that the overdraft facilities, whilst a relief to some, are not a real burden to others, for the accumulation of a credit balance with the Clearing Union would resemble the importation of gold in signifying that the country holding it is abstaining voluntarily from the immediate use of purchasing power. But it would not involve, as would the importation of gold, the withdrawal of this purchasing power from circulation or the exercise of a deflationary and contractionist pressure on the whole world, including in the end the creditor country itself. Under the proposed plan, therefore, no country suffers injury (but on the contrary) by the fact that the command over resources, which it does not itself choose to employ for the time being, is not withdrawn from use. The accumulation of bancor credit does not curtail in the least its capacity or inducement either to produce or to consume.

12. In short, the analogy with a national banking system is complete. No depositor in a local bank suffers because the balances, which he leaves idle, are employed to finance the business of someone else. Just as the development of national banking systems served to offset a deflationary pressure which would have prevented otherwise the development of modern industry, so by extending the same principle into the international field we may hope to offset the contractionist pressure which might otherwise overwhelm in social disorder and disappointment the good hopes of our modern world. The substitution of a credit mechanism in place of hoarding would have repeated in the international field the same miracle, already performed in the domestic field, of turning a stone into bread.

13. There might be other ways of effecting the same objects temporarily or in part. For example, the United States might redistribute her gold. Or there might be a number of bilateral arrangements having the effect of providing international overdrafts, as, for example, an agreement by the Federal Reserve Board to accumulate, if necessary, a large sterling balance at the Bank of England, accompanied by a great number of similar bilateral arrangements, amounting to some hundreds altogether, between these and all the other banks in the world. The objection to particular arrangements of this kind, in addition to their greater complexity, is that they are likely to be influenced by extraneous, political reasons; that they put individual countries in a position of particular obligation toward others; and that the distribution of the assistance between different countries may not correspond to need and to the real requirements, which are extremely difficult to foresee.

14. It should be much easier, and surely more satisfactory for all of us, to enter into a general and collective responsibility, applying to all countries alike, that a country finding itself in a creditor position against the rest of the world as a whole should enter into an arrangement not to allow this credit balance to exercise a contractionist pressure against world economy and, by repercussion, against the economy of the creditor country itself. This would give everyone the great assistance of multilateral clearing, whereby, for example, Great Britain could offse favorable balances arising out of her exports to Europe against unfavorable balances due to the United States or South America or elsewhere. How, indeed, can any country hope to start up trade with Europe during the relief and reconstruction period on any other terms?

15. The facilities offered will be of particular importance in the transitional period after the war as soon as the initial shortages of supply have been overcome. Many countries will find a difficulty in paying for their imports, and will need time and resources before they can establish a readjustment. The efforts of each of these debtor countries to preserve its own equilibrium, by forcing its exports and by cutting off all imports which are not strictly necessary, will aggravate the problems of all the others. On the other hand, if each feels free from undue pressure, the volume of international exchange will be increased and everyone will find it easier to reestablish equilibrium without injury to the standard of life anywhere. The creditor countries will benefit, hardly less than the debtors, by being given an interval of time in which to adjust their economies, during which they can safely move at their own pace without the result of exercising deflationary pressure on the rest of the world and, by repercussion, on themselves.

16. It must, however, be emphasized that the provision by which the members of the clearing union start with substantial overdraft facilities in hand will be mainly useful, just as the possession of any kind of reserve is useful, to allow time and method for necessary adjustments and a comfortable safeguard behind which the unforeseen and the unexpected can be faced with equanimity. Obviously, it does not by itself provide any long-term solution against a continuing disequilibrium, for in due course the more improvident and the more impecunious, left to themselves, would have run through their resources. But if the purpose of the overdraft facilities is mainly to give time for adjustments, we have to make sure, so far as possible, that they will be made. We must have, therefore, some rules and some machinery to secure that equilibrium is restored. A tentative attempt to provide for this has been made above. Perhaps it might be strengthened and improved.

17. The provisions suggested differ in one important respect from the pre-war system because they aim at putting some part of the responsibility for adjustment on the creditor country as well as on the debtor. This is an attempt to recover one of the advantages which were enjoyed in the nineteenth century, when a flow of gold due to a favorable balance in favor of London and Paris, which were then the main creditor centers, immediately produced an expansionist pressure and increased foreign lending in those markets, but which has been lost since New York succeeded to the position of main creditor, as a result of gold movements failing in their effect, of the break-down of international borrowing, and of the frequent flight of loose funds from one depository to another. The object is that the creditor should not be allowed to remain entirely passive. For if he is, an intolerably heavy task may be laid on the debtor country, which is already for that very reason in the weaker position.

18. If, indeed, a country lacks the productive capacity to maintain its standard of life, then a reduction in this standard is not avoidable. If its wage and price levels in terms of money are out of line with those elsewhere, a change in the rate of its foreign exchange is inevitable. But if, possessing the productive capacity, it lacks markets because of restrictive policies throughout the world, then the remedy lies in expanding its opportunities for export by removal of the restrictive pressure. We are too ready today to assume the inevitability of unbalanced trade positions, thus making the opposite error to those who assumed the tendency of exports and imports to equality. It used to be supposed, without sufficient reason, that effective demand is always properly adjusted throughout the world; we now tend to assume, equally without sufficient reason, that it never can be. On the contrary, there is great force in the contention that, if active employment and ample purchasing power can be sustained in the main centers of the world trade, the problem of surpluses and unwanted exports will largely disappear, even though, under the most prosperous conditions, there may remain some disturbances of trade and unforeseen situations requiring special remedies.

V. THE DAILY MANAGEMENT OF THE EXCHANGES UNDER THE PLAN

19. The Clearing Union restores unfettered multilateral clearing between its members. Compare this with the difficulties and complications of a large number of bilateral agreements. Compare, above all, the provisions by which a country, taking improper advantage of a payments agreement (for the system is, in fact, a generalized payments agreement), as Germany did before the war, is dealt with not by a single country (which may not be strong enough to act effectively in isolation or cannot afford to incur the diplomatic odium of isolated action), but by the system as a whole. If the argument is used that the Clearing Union may have difficulty in disciplining a misbehaving country and in avoiding consequential loss, with what much greater force can we urge this objection against a multiplicity of separate bilateral payments agreements.

20. Thus we should not only obtain the advantages without the disadvantages of an international gold currency, but we might enjoy these advantages more widely than was ever possible in practice with the old system under which at any given time only a minority of countries were actually working with free exchanges. In conditions of multilateral clearing exchange dealings would be carried on as freely as in the best days of the gold standard, without its being necessary to ask anyone to accept special or onerous conditions.

21. The principles governing transactions are, first, that the Clearing Union is set up, not for the transaction of daily business between individual traders or banks but for the clearing and settlement of the ultimate outstanding balances between central banks (and certain other supernational institutions), such as would have been settled under the old gold standard by the shipment or the earmarking of gold, and should not trespass unnecessarily beyond this field; and, second, that its purpose is to increase freedom in international commerce, and not to multiply interferences or compulsions.

22. Many central banks have found great advantage in centralizing with themselves or with an exchange control the supply and demand of all foreign exchange, thus dispensing with an outside exchange market, though continuing to accommodate individuals through the existing banks and not directly. The further extension of such arrangements would be consonant with the general purposes of the Clearing Union, inasmuch as they would promote order and discipline in international exchange transactions in detail as well as in general. The same is true of the control of capital movements, further described below, which many states are likely to wish to impose on their own nationals. But the structure of the proposed Clearing Union does not require such measures of centralization or of control on the part of a member state. It is, for example, consistent alike with the type of exchange control now established in the United Kingdom or with the system now operating in the United States. The union does not prevent private holdings of foreign currency or private dealings in exchange or international capital movements, if these have been approved or allowed by the member states concerned. Central banks can deal direct with one another as heretofore. No transaction in bancor will take place, except when a member state or its central bank is exercising the right to pay in it. In no case is there any direct control on capital movements by the union, even in the case of 6 (8) (b) (ii) above, but only by the member states themselves through their own institutions. Thus the fabric of international banking organization, built up by long experience to satisfy practical needs, would be left as undisturbed as possible.

23. It is not necessary to interfere with the discretion of countries which desire to maintain a special intimacy within a particular group of countries associated by geographical or political ties, such as the existing sterling area, or groups, like the Latin Union of former days, which may come into existence covering, for example, the countries of North America or those of South America, or the groups now under active discussion, including Poland and Czechoslovakia or certain of the Balkan states. There is no reason why such countries should not be allowed a double position, both as members of the clearing union in their own right with their proper quota, and also as making use of another financial center along traditional lines, as, for example, Australia and India with London, or certain American countries with New York. In this case, their accounts with the Clearing Union would be in exactly the same position as the independent gold reserves which they now maintain, and they would have no occasion to modify in any way their present practices in the conduct of daily business.

24. There might be other cases, however, in which a dependency or a member of a federal union would merge its currency identity in that of a mother company, with a quota appropriately adjusted to the merged currency

area as a whole, and not enjoy a separate individual membership of the Clearing Union, as, for example, the States of a federal union, the French colonies, or the British Crown colonies.

25. At the same time, countries which do not belong to a special geographical or political group, would be expected to keep their reserve balances with the Clearing Union and not with one another. It has, therefore, been laid down that balances may not be held in another country except with the approval of the monetary authorities of that country; and, in order that sterling and dollars might not appear to compete with bancor for the purpose of reserve balances, the United Kingdom and the United States might agree together that they would not accept the reserve balances of other countries in excess of normal working balances except in the case of banks definitely belonging to a sterling area or dollar area group.

VI. THE POSITION OF GOLD UNDER THE PLAN

26. Gold still possesses great psychological value which is not being diminished by current events; and the desire to possess a gold reserve against unforeseen contingencies is likely to remain. Gold also has the merit of providing in point of form (whatever the underlying realities may be) an uncontroversial standard of value for international purposes, for which it would not yet be easy to find a serviceable substitute. Moreover, by supplying an automatic means for settling some part of the favorable balances of the creditor countries, the current gold production of the world and the remnant of gold reserves held outside the United States may still have a useful part to play. Nor is it reasonable to ask the United States to demonetize the stock of gold which is the basis of its impregnable liquidity. What, in the long run, the world may decide to do with gold is another matter. The purpose of the clearing union is to supplant gold as a governing factor, but not to dispense with it.

27. The international bank money which we have designated "bancor" is defined in terms of a weight of gold. Since the national currencies of the member states are given a defined exchange value in terms of bancor, it follows that they would each have a defined gold content which would be their official buying price for gold, above which they must not pay. The fact that a member state is entitled to obtain a credit in terms of bancor by paying actual gold to the credit of its clearing account, secures a steady and ascertained purchaser for the output of the gold-producing countries, and for countries holding a large reserve of gold. Thus the position of producers and holders of gold is not affected adversely, and is, indeed, improved.

28. Central banks would be entitled to retain their separate gold reserves and ship gold to one another, provided they did not pay a price above parity; they could coin gold and put it into circulation, and, generally speaking, do what they liked with it.

29. One limitation only would be, for obvious reasons, essential. No member state would be entitled to demand gold from the clearing union against its balance of bancor; for bancor is available only for transfer to another clearing account. Thus, between gold and bancor itself there would be a one-way convertibility, such as ruled frequently before the war with national currencies which were on what was called a gold exchange standard. This need not mean that the clearing union would only receive gold and never pay it out. It has been provided above that, if the clearing union finds itself in possession of a stock of gold, the governing board shall have discretion to distribute the surplus between those possessing credit balances in bancor, proportionately to such balances, in reduction of their amount.

30. The question has been raised whether these arrangements are compatible with the retention by individual member states of a full gold standard with two-way convertibilty, so that, for example, any foreign central bank acquiring dollars could use them to obtain gold for export. It is not evident that a good purpose would be served by this. But it need not be prohibited, and if any member state should prefer to maintain full convertibility for internal purposes it could protect itself from any abuse of the system or inconvenient consequences by providing that gold could only be exported under license.

31. The value of bancor in terms of gold is fixed but not unalterably. The power to vary its value might have to be exercised if the stocks of gold tendered to the union were to be excessive. No object would be served by attempting further to peer into the future or to prophesy the ultimate outcome.

VII. THE CONTROL OF CAPITAL MOVEMENTS

32. There is no country which can, in future, safely allow the flight of funds for political reasons or to evade domestic taxation or in anticipation of the owner turning refugee. Equally, there is no country that can safely receive fugitive funds, which constitute an unwanted import of capital, yet cannot safely be used for fixed investment.

33. For these reasons it is widely held that control of capital movements, both inward and outward, should be a permanent feature of the post-war system. It is an objection to this that control, if it is to be effective, probably requires the machinery of exchange control for all transactions, even though a general permission is given to all remittances in respect of current trade. Thus those countries which have for the time being no reason to fear, and may indeed welcome, outward capital movements, may be reluctant to impose this machinery, even though a general permission for capital, as well as current transactions reduces it to being no more than a machinery of record. On the other hand, such control will be more difficult to work by unilateral action on the part of those countries which cannot afford to dispense with it, especially in the absence of a postal censorship, if movements of capital cannot be controlled at both ends. It would, therefore, be of great advantage if the United States, as well as other members of the Clearing Union, would adopt machinery similar to that which the British Exchange Control has now gone a long way toward perfecting. Nevertheless, the universal establishment of a control of capital movements cannot be regarded as essential to the operation of the Clearing Union; and the method and degree of such control should therefore be left to the decision of each member state. Some less drastic way might be found by which countries, not themselves controlling outward capital movements can deter inward movements not approved by the countries from which they originate.

34. The position of abnormal balances in overseas ownership held in various countries at the end of the war presents a problem of considerable importance and special difficulty. A country in which a large volume of such balances is held could not, unless it is in a creditor position, afford the risk of having to redeem them in bancor on a substantial scale, if this would have the effect of depleting its bancor resources at the outset. At the same time, it is very desirable that the countries owning these balances should be able to regard them as liquid, at any rate over and above the amounts which they can afford to lock up under an agreed program of funding or long-term expenditure. Perhaps there should be some special overriding provision for dealing with the transitional period only by which, through the aid of the Clearing Union, such balances would remain liquid and convertible into bancor by the creditor country whilst there would be no corresponding strain on the bancor resources of the debtor country, or, at any rate, the resulting strain would be spread over a period.

35. The advocacy of a control of capital movements must not be taken to mean that the era of international investment should be brought to an end. On the contrary, the system contemplated should greatly facilitate the restoration of international loans and credits for legitimate purposes in ways to be discussed below. The object, and it is a vital object, is to have a means—

(a) of distinguishing long-term loans by creditor countries, which help to maintain equilibrium and develop the world's resources, from movements of funds out of debtor countries which lack the means to finance them; and

(b) of controlling short-term speculative movements or flights of currency whether out of debtor countries or from one creditor country to another.

36. It should be emphasized that the purpose of the overdrafts of bancor permitted by the Clearing Union is, not to facilitate long-term, or even medium-term, credits to be made by debtor countries which cannot afford them, but to allow time and a breathing space for adjustments and for averaging one period with another to all member states alike, whether in the long run they are well placed to develop a forward international-loan policy or whether their prospects of profitable new development in excess of their own resources justifies them in long-term borrowing. The machinery and organization of international medium-term and long-term lending is another aspect of post-war economic policy, not less important than the purposes which the Clearing Union seeks to serve, but requiring another, complementary institution.

VIII. RELATION OF THE CLEARING UNION TO COMMERCIAL POLICY

37. The special protective expedients which were developed between the two wars were sometimes due to political, social, or industrial reasons. But frequently they were nothing more than forced and undesired dodges to protect an unbalanced position of a country's overseas payments. The new system, by helping to provide a register of the size and and whereabouts of the aggregate debtor and creditor positions respectively, and an indication whether it is reasonable for a particular country to adopt special expedients as a temporary measure to assist in regaining equilibrium in its balance of payments, would make it possible to establish a general rule not to adopt them, subject to the indicated exceptions.

38. The existence of the Clearing Union would make it possible for member States contracting commercial agreements to use their respective debit and credit positions with the Clearing Union as a test, though this test by itself would not be complete. Thus, the contracting parties, while agreeing to clauses in a commercial agreement forbidding, in general, the use of certain measures or expedients in their mutual trade relations, might make this agreement subject to special relaxations if the state of their respective clearing accounts satisfied an agreed criterion. For example, an agreement might provide that, in the event of one of the contracting States having a debit balance with the Clearing Union exceeding a specified proportion of its quota on the average of a period, it should be free to resort to import regulation to barter trade agreements or to higher import duties of a type which was restricted under the agreement in normal circumstances. Protected by the possibility of such temporary indulgences, the members of the Clearing Union should

feel much more confidence in moving toward the withdrawal of other and more dislocating forms of protection and discrimination and in accepting the prohibition of the worst of them from the outset. In any case, it should be laid down that members of the Union would not allow or suffer among themselves any restrictions on the disposal of receipts arising out of current trade or invisible income.

IX. THE USE OF THE CLEARING UNION FOR OTHER INTERNATIONAL PURPOSES

39. The Clearing Union might become the instrument and the support of international policies in addition to those which it is its primary purpose to promote. This deserves the greatest possible emphasis. The union might become the pivot of the future economic government of the world. Without it, other more desirable developments will find themselves impeded and unsupported. With it they will fall into their place as parts of an ordered scheme. No one of the following suggestions is a necessary part of the plan. But they are illustrations of the additional purposes of high importance and value which the union, once established, might be able to serve:

(1) The union might set up a clearing account in favor of international bodies charged with post-war relief, rehabilitation, and reconstruction. But it could go much further than this. For it might supplement contributions received from other sources by granting preliminary overdraft facilities in favor of these bodies, the overdraft being discharged over a period of years out of the reserve fund of the union, or, if necessary, out of a levy on surplus credit balances. So far as this method is adopted it would be possible to avoid asking any country to assume a burdensome commitment for relief and reconstruction, since the resources would be provided in the first instance by those countries having credit clearing accounts for which they have no immediate use and are voluntarily leaving idle, and in the long run by those countries which have a chronic international surplus for which they have no beneficial employment.

(2) The union might set up an account in favor of any supernational policing body which may be charged with the duty of preserving the peace and maintaining international order. If any country were to infringe its properly authorized orders, the policing body might be entitled to request the governors of the Clearing Union to hold the clearing account of the delinquent country to its order and permit no further transactions on the account except by its authority. This would provide an excellent machinery for enforcing a financial blockade.

(3) The union might set up an account in favor of international bodies charged with the management of a commodity control, and might finance stocks of commodities held by such bodies, allowing them overdraft facilities on their accounts up to an agreed maximum. By this means the financial problem of buffer stocks and "ever-normal granaries" could be effectively attacked.

(4) The union might be linked up with a board for international investment. It might act on behalf of such a board and collect for them the annual service of their loans by automatically debiting the clearing account of the country concerned. The statistics of the clearing accounts of the member states would give a reliable indication as to which countries were in a position to finance the investment board, with the advantage of shifting the whole system of clearing credits and debits nearer to equilibrium.

(5) There are various methods by which the Clearing Union could use its influence and its powers to maintain stability of prices and to control the trade cycle. If an international economic board is established this board and the clearing union might be expected to work in close collaboration to their mutual advantage. If an international investment or development corporation is also set up together with a scheme of commodity controls for the control of stocks of the staple primary products, we might come to possess in these three institutions a powerful means of combating the evils of the trade cycle, by exercising contractionist or expansionist influence on the system as a whole or on particular sections. This is a large and important question which cannot be discussed adequately in this paper; and need not be examined at length in this place because it does not raise any important issues affecting the fundamental constitution of the proposed union. It is mentioned here to complete the picture of the wider purposes which the foundation of the Clearing Union might be made to serve.

40. The facility of applying the clearing union plan to these several purposes arises out of a fundamental characteristic which is worth pointing out, since it distinguishes the plan from those proposals which try to develop the same basic principle along bilateral lines and is one of the grounds on which the plan can claim superior merit. This might be described as its "anonymous" or "impersonal" quality. No particular member states have to engage their own resources as such to the support of other particular states or of any of the international projects or policies adopted. They have only to agree in general that, if they find themselves with surplus resources which for the time being they do not themselves wish to employ, these resources may go into the general pool and be put to work on approved purposes. This costs the surplus country nothing because it is not asked to part permanently, or even for any specified period, with such resources, which it remains free to expend and employ for its own purposes whenever it chooses; in which case the burden of finance is passed on to the next recipient, again for only so long as the recipient has no use for the money. As pointed out above, this merely amounts to extending to the international sphere the methods of any domestic banking system, which are in the same sense "impersonal" inasmuch as there is no call on the particular depositor either to support as such the purposes for which his banker makes advances or to forego permanently the use of his deposit. There is no countervailing objection except that which applies equally to the technique of domestic banking, namely, that it is capable of the abuse of creating excessive purchasing power and hence an inflation of prices. In our efforts to avoid the opposite evil, we must not lose sight of this risk, to which there is an allusion in 39 (5) above. But it is no more reason for refusing the advantages of international banking than the similar risk in the domestic field is a reason to return to the practices of the seventeenth century goldsmiths (which are what we are still following in the international field) and to forego the vast expansion of production which banking principles have made possible. Where financial contributions are required for some purpose of general advantage, it is a great facility not to have to ask for specific contributions from any named country, but to depend rather on the anonymous and impersonal aid of the system as a whole. We have here a genuine organ of truly international government.

X. THE TRANSITIONAL ARRANGEMENTS

41. It would be of great advantage to agree to the general principles of the Clearing Union before the end of the war, with a view to bringing it into operation at an early date after the termination of hostilities. Major plans will be more easily brought to birth in the first energy of victory and whilst the active spirit of united action still persists, than in the days of exhaustion and reaction from so much effort which may well follow a little later. Such a proposal presents, however, something of a dilemma. On the one hand, many countries will be in particular need of reserves of overseas resources in the period immediately after the war. On the other hand, goods will be in short supply and the prevention of inflationary international conditions of much more importance for the time being than the opposite. The expansionists tendency of the plan, which is a leading recommendation of it as soon as peacetime output is restored and the productive capacity of the world is in running order, might be a danger in the early days of a sellers' market and an excess of demand over supply.

42. A reconciliation of these divergent purposes is not easily found until we know more than is known at present about the means to be adopted to finance post-war relief and reconstruction. If the intention is to provide resources on liberal and comprehensive lines outside the resources made available by the Clearing Union and additional to them, it might be better for such specific aid to take the place of the proposed overdrafts during the relief period of, say, 2 years. In this case credit clearing balances would be limited to the amount of gold delivered to the union, and the overdraft facilities created by the union in favor of the Relief Council, the International Investment Board, or the Commodity Controls. Nevertheless, the immediate establishment of the Clearing Union would not be incompatible with provisional arrangements, which could take alternative forms according to the character of the other relief arrangements, qualifying and limiting the overdraft quotas. Overdraft quotas might be allowed on a reduced scale during the transitional period. Or it might be proper to provide that countries in receipt of relief or lend-lease assistance should not have access at the same time to overdraft facilities, and that the latter should only come available when the former had come to an end. If, on the other hand, relief from outside sources looks like being inadequate from the outset, the overdraft quotas may be even more necessary at the outset than later on.

43. We must not be overcautious. A rapid economic restoration may lighten the tasks of the diplomatists and the politicians in the resettlement of the world and the restoration of social order. For Great Britain and other countries outside the "relief" areas the possibility of exports sufficient to sustain their standard of life is bound up with good and expanding markets. We cannot afford to wait too long for this, and we must not allow excessive caution to condemn us to perdition. Unless the union is a going concern, the problem of proper "timing" will be nearly insoluble. It is sufficient at this stage to point out that the problem of timing must not be overlooked, but that the union is capable of being used so as to aid rather than impede its solution.

XI. CONCLUSION

44. It has been suggested that so ambitious a proposal is open to criticism on the ground that it requires from the members of the union a greater surrender of their sovereign rights than they will readily concede. But no greater surrender is required than in a commercial treaty. The obligations will be entered into voluntarily and can be terminated on certain conditions by giving notice.

45. A greater readiness to accept supernational arrangements must be required in the post-war world. If the arrangements proposed can be described as a measure of financial disarmament, there is nothing here

which we need be reluctant to accept ourselves or to ask of others. It is an advantage, and not a disadvantage, of the scheme that it invites the member states to abandon that license to promote indiscipline, disorder, and bad neighborliness which, to the general disadvantage, they have been free to exercise hitherto.

46. The plan makes a beginning at the future economic ordering of the world between nations and "the winning of the peace." It might help to create the conditions and the atmosphere in which much else would be made easier.

In contrast to the monetary schemes proposed in the Morgenthau and Keynes plan, we have on our statute books the monetary plans of the great statesmen of the past.

THE DECLARED POLICY OF THE UNITED STATES

As a result of the long-sustained effort to establish an international monetary system by a series of international monetary conventions during the period following the close of the Civil War and the repeal of the Silver Purchase Act of 1893, the Congress enacted and placed upon our statute books a declaration of monetary policy embodied in section 311 of the United States Code:

SEC. 311. It is hereby declared to be the policy of the United States to continue the use of both gold and silver as standard money, and to coin both gold and silver into money of equal intrinsic and exchangeable value, such equality to be secured through international agreement, or by such safeguards of legislation as will insure the maintenance of the parity in value of the coins of the two metals, and the equal power of every dollar at all times in the markets and in the payment of debts. And it is hereby further declared that the efforts of the Government should be steadily directed to the establishment of such a safe system of bimetallism as will maintain at all times the equal power of every dollar coined or issued by the United States, in the markets and in the payment of debts. (Nov. 1, 1893, ch. 8, 28 Stat. 4.)

THE MONETARY CONVENTION OF 1865

On the 23d day of December 1865, France, Belgium, Italy, and Switzerland united in the monetary treaty "to regulate the weight, title, form, and circulation of their gold and silver coins," whereby they agreed to coin of gold only the pieces of 100, 50, 20, 10, and 5 francs in eight, standard, tolerance, and diameter, and of silver only the 5-franc pieces of standard weight and fineness, with unlimited coinage and legal tender for such coins; and further agreed to coin in amounts as herein prescribed for each State, silver coins of 1 and 2 francs, 50 and 20 centimes, of reduced fineness and limited in legal tender to 50 francs; and that any nation could join the convention by adopting its monetary system in regard to gold and silver coins, and that the convention should remain in force until January 1, 1880.

Senator F. M. Cockrell, in presenting the record of this International Monetary Convention and the subsequent negotiations to have the United States join the convention and standardize its money with coinage of the European nations, has this to say in his famous speech on money, recently printed in the CONGRESSIONAL RECORD:

Here was a bimetallic system (of money) upon the ratio of 15½ to 1 maintained by France since October 30, 1785, and all we had to do was simply to subscribe to it. There was no international complication connected with it; nothing to do but simply subscribe to it, and agree that we would coin certain coins. In order to come to that, we only had to strike out about 12½ grains of our standard silver dollar, reduce it to 400 grains, and thus bring it down to the ratio of 15½ to 1.

Here was a standard perfected, tested for nearly a hundred years, already agreed to, with an open clause, with an open door for any nation to join in it.

That was the only time the United States was ever offered an opportunity to become a member of an international bimetallic union.

If the monetary metals, gold and silver, are to be used at all in our post-war monetary system, then some plan must be devised and put into operation that will provide for the standardization of the relative value of the monetary units of the several nations to the value of basic money—money of ultimate redemption—the kind of money that will conform to the provisions of economic law and have a stable value, by increasing evenly with the growth of population and commerce. The experience of the ages teaches us that this kind of money can best be obtained by the adoption of international bimetallism. The production of gold and silver taken together at their natural ratio automatically increases in volume with the growth of population and commerce.

Time for Action

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 24, 1943

Mr. HOFFMAN. Mr. Speaker, with a threatened shortage of food; with more and more businessmen being forced out of business; with the tax burden ever growing larger; with those who follow the administration's orders, as did the operators of the coal mines, being deprived of their property by the Government, while the miners, who disobeyed those orders, are being rewarded with increased compensation; with Government bureaus putting forth penal regulations which the Supreme Court now says have the force of laws, it is time—yes, long past time—for the people to insist that their Representatives in Congress give us a government under law, do away with a government by men who have no authority to create law.

The lower branch of Congress has endeavored to cut appropriations, eradicate the Reds from Federal jobs, but the other part of the legislative branch still balks. The only exception to the upper branch's consistent compliance with organized labor's demands was when it overrode the President's veto of the Smith-Connally antistrike bill. The people should direct some of their criticism toward the upper House.

In years gone by, the people took Congress more or less as a matter of course, regarding it as the insurmountable, ever-existing barrier between them and the loss of their liberties.

With the advent of the New Deal and the subservient yielding by what came to be known as a rubber-stamp Congress, to the demands made by President Roosevelt for additional powers, those functions formerly exercised by the Congress alone fell one by one within the grasp of the Chief Executive and those subordinates appointed by him and acting under his control.

Gradually at first, under the guise of one emergency and then another, the President succeeded in gathering into his own hands greater powers, more authority, than had ever been exercised in peacetime by the Chief Executive. Then came the war and the final excuse for further demands fell to the use of the President. Only at the risk of being charged with impeding the war effort, of aiding the enemy, dared a voice be raised in opposition to any demand made by the administration for money or authority.

That great American, Lincoln, once said:

There is an important sense in which the Government is distinct from the administration. One is perpetual, the other temporary and changeable. A man may be loyal to his Government and yet oppose the peculiar principles and methods of the administration.

Forgetting or intentionally disregarding that truth, the New Dealers have endeavored earnestly and unceasingly to build up in the minds of our people the belief that the terms administration and government are synonymous, and that the administration is all-wise, all-good, and can act only in the best interests of these United States and its citizens.

That horde of bureaucrats which promulgates the multiplicity of orders, rules, regulations, and directives which are governing every phase of the lives of our people have presumed to take solely unto themselves the prerogative of interpreting the intentions of the Congress; of reading into its enactments meanings never even thought of by the Congress when those measures were adopted into law.

The extent to which the power to control has been taken over by the Executive and those acting under him, the extent to which we are now governed by men rather than by law, and the necessity for Congress without delay recovering that power unto itself is clearly and ably set forth by that eminent writer, David Lawrence, in an editorial appearing in a recent issue of the United States News, a publication which bears an enviable reputation for fair reporting. Permit me to quote a few pertinent paragraphs from Mr. Lawrence's article:

Overseas our boys were fighting last week. Some of them were killed. Some of them were wounded. More will be killed and wounded in the months ahead.

They have been told again and again that this is a war to preserve our freedoms—our liberties.

But last week six justices appointed by President Roosevelt, constituting a majority of the Supreme Court of the United States, took away a basic liberty—the right of every citizen to be governed by laws and not by the

arbitrary power of a bureaucrat, the right of every citizen to know explicitly what are the punishments incurred for violations of a statute.

Our boys are not fighting to a sustain the privilege of officials in any Government agency to fix whatever punishments they please for a violation of law.

Yet the Supreme Court majority decided, in effect, that a Government agency can fix any punishment it desires although not explicitly mentioned in the statute that is broken. The precedent is fixed. The die is cast. Only a constitutional amendment can abrogate a decision of the Supreme Court. Only a change in the membership of the Court over a long period of years can reverse it.

* * * * *

The latest case minces no words. It frankly empowers a governmental agency to select whatever punishment it pleases so long as in the judgment of that agency the punishment "effectuates the policies of the act."

* * * * *

The time has come to play fair with the boys overseas. Instead of worrying, as did our Vice President the other day, whether Russia might be double-crossed in the post-war period, let's worry a little during the war about double-crossing the American people who are today making the supreme sacrifice in giving the blood of their sons to fight a war so often sloganized as a war to preserve our "four freedoms."

If Congress adjourns or takes a summer recess without restoring this Government to the people, there may be little left of a representative republican form of government when Congress reconvenes in the fall.

It is time that the people make themselves heard.

The O. W. I. Is Helping To Win the War

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Monday, June 28 (legislative day of Monday, May 24), 1943

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able and illuminating address entitled "The O. W. I. Is Helping To Win the War," delivered by the distinguished senior Senator from Utah [Mr. THOMAS], and broadcast over the Columbia Broadcasting System on Saturday, June 26, last.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I have come here tonight to tell you a personal story about one of the ways in which the United States is fighting this war. For security reasons, I cannot tell you all I would like to. But what I can tell you is something I think the wives, mothers, and fathers of our fighting men, our workers on farms and in plants—in other words, you who are listening to my voice right now—will be interested to hear.

It saddens me to have to open my story by saying that in spite of the military advances our forces have made on various fronts during the past 10 days, the United States has suffered one definite set-back in the war. The leaders and the people of Japan, Germany, and Italy are gloating over it. Their newspapers and broadcasting stations have been telling them about it, bringing a ray of hope to the discouraged Axis populations, and casting doubt in the minds of the peoples of occupied nations.

You, too, have heard of this set-back, which is the attempt to cripple the work of the Office of War Information, popularly called the O. W. I. It is because of the chance that the attempt may produce ruinous results that I am speaking to you tonight.

Let me quote to you some of the happy words which Tokyo has been broadcasting all over the world. Last Tuesday the Tokyo radio said, and I quote: "There's a wide divergence of views between the elected representatives of the American people and the salaried appointees who wield so much power in the Government. Thus, over the week end, the House of Representatives cracked down on a budget for domestic propaganda which was submitted by the Office of War Information. * * * Almost any way you look at it, the whole thing looks bad, smells bad, and is bad. The propagandists disagree with the elective representatives of the American people who, in turn, disagree with the elected and appointed leaders. Everybody is out for the selfish gratification of his own desires and to heck with the American people who are paying for all this with blood, sweat, and tears."

Those are the exact words with which we were taunted and other people were told of this action.

I have had the privilege of participating actively in the work of the Office of War Information and its predecessor ever since the attack on Pearl Harbor on December 7, 1941. Due to the fact that I lived in Japan for a number of years, and that the Far East has been one of my main interests for nearly 40 years, I was asked to address messages to the people of Japan for short-wave broadcast. Not less than once a month I have done this ever since. What the effect of this and other messages may be I cannot tell. We can judge, to some extent, by the beatings, the jailings, the torture, and the death sentences that are inflicted by the Axis nations upon their citizens and people of occupied countries who dare to listen.

Last March Kiwao Okumura, Vice Chief of the Japanese Board of Information, said in an address, and I quote: "There is no need to mention the importance of the mission of the radio broadcast used as propaganda for overseas countries and against enemy countries. All belligerent nations in the world are now relying on radio. * * * It is especially necessary to wipe out the false propaganda of America and Britain, and every effort is being concentrated toward this end."

My own feeling in the matter I expressed in my very first message, as follows: "I do not know how many of you are listening to this message to the people of Japan, because the repressions which your Government practices on you keep you, as far as it can, from knowing the truth. But if only one Japanese hears my words and learns the tragic story of the way in which you have been betrayed by your war lords, who have sold themselves to Hitler, then it will be worth while to speak."

To continue my personal story, beginning with the messages to Japan, I was asked to address messages to many other nations. What I have written has gone into the newspapers of countries all over the world and has been heard by radio in many lands across the Atlantic and Pacific Oceans. Numerous colleagues of mine in Congress have done the same. The messages from Members of Congress and other individuals have gone forth in a stream and form an important part of the work of the Office of War Information.

I tell you this because these efforts of mine have naturally made me well acquainted with the Office of War Information, with its staff, with its methods, with its purposes, and with its earnest zeal. And I can say to you, on the basis of my personal knowledge, that the Office of War Information is a real part of the war and is helping to win the war.

I can say more than this. It is my belief that everyone who really knows the O. W. I., who is really close to its work, approves and endorses its work with the possible exception of a few individuals in whose case private antagonisms may be involved. That is why, since the vote in the House of Representatives which would abolish a vital part of the O. W. I., there has been a veritable flood of protests, without exception, from everyone of the private information groups of the United States who actually work with the O. W. I. day in and day out. The very people and organizations who are alleged to be suffering because of the O. W. I. are the ones who are demanding that it be continued and made even more strong in its work.

My personal contacts with the Office of War Information have not been restricted to its work overseas. Some confusion has arisen in the minds of many people because the Office of War Information has what is called an overseas branch and a domestic branch. The impression has been given by the enemies of the Office of War Information that these two branches are separate organizations which happen to be under the same roof and headed by the same chiefs. In this way, it is possible to say with apparent innocence: "The overseas work of the Office of War Information is all right, but let's cut out the domestic branch. That won't hurt the overseas work at all."

The fact is that the overseas branch and the domestic branch are not two separate groups working along parallel lines. Their work is integrally connected. To abolish or curtail the work of one branch is to abolish or curtail the work of the other automatically, for the domestic branch is the main source of information which feeds the overseas branch with the raw material out of which the overseas branch fashions its finished product.

To abolish the domestic branch or to cut down its work is exactly the same as cutting off or shortening one wing of a flying fortress on the theory that it can get along very well with the other wing.

Moreover, it is not only the material which the domestic branch obtains for use by the overseas branch which is important in this matter. That same material is the story of what the United States Government is doing in this war, and the American people, through their radios and their newspapers, are entitled to know that story. It is unthinkable that the Congress of the United States will tell the people, who elected its members, that from now on they forbid the American Government to inform the American people of what is being done to win the war.

We Americans already know the value of the Office of War Information to us. I know much more today and you know much more today about our military efforts and about every other phase of war activity than we knew a year ago, when the Office of War Information was founded. And it is conceded by all media of news that the Office of War Information is largely responsible for this.

I have said that those who know the Office of War Information and who work closely with it are in favor of it. Here in Washington there is an organization called the War Agencies Correspondents Association. It is made up of the newspapermen and radio reporters from all over the United States who

cover the Washington war news. Last Monday they passed a resolution saying in part:

"It has been the experience of members of the War Agencies Correspondents Association, who have daily contact with the Office of War Information, that the agency has consistently tried to get the facts about the home-front war operations and to present them in a fair and competent manner. A more vigorous, not a dead, Office of War Information is needed."

What does the radio industry think about the Office of War Information? Besides the many commentators like Maj. George Fielding Eliot who have come to its defense, the radio stations and the networks are speaking in vigorous tones. Radio Daily, the newspaper of the industry, carried this headline last Wednesday: "Industry for domestic bureau. Trade executives favor radio branch as clearing house for Government shows."

The same thing is true of the motion-picture industry, which has endorsed the Motion Picture Bureau, of magazine and book publishers, and so on down the line.

Newspapers all over the United States have carried editorials endorsing the Office of War Information in the last 10 days. The New York Times wrote that it has "done much useful work. It has succeeded in making available to the public much more information much more promptly, about the activities of the military and naval services than was available before Mr. Davis went to work. It has eliminated a good deal of the duplication and confusion which formerly prevailed in the public announcements of the Government."

I want to say to the American people what you already know, that this is a war we are fighting and not a game we are playing. War means killing people. Some of those people are the enemy. Others are our sons and brothers and husbands whom the enemy kills. When we discuss the Office of War Information we are talking about life and death. Today there are thousands of American soldiers alive who would be dead had it not been for Office of War Information operations. There are many more thousands whose life or death hangs in the balance today, depending on whether or not the Office of War Information continues its work.

If Adolf Hitler, Premier Tojo, and Benito Mussolini should make up a list of the 10 Americans whom they would most like to see done away with, it is my belief that Elmer Davis would stand high on that list.

Reduction of Appropriations for the O. W. I.

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Monday, June 28 (legislative day of Monday, May 24), 1943

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Movie Industry Backs the O. W. I." written by Peter Furst and published in PM of the issue of June 23, 1943, and also an article entitled "A War Service in the Balance" written by Bosley Crowther and published in the New York Times of June 27, 1943. Both articles relate to the proposal to reduce appropriation for the Office of War Information.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From New York PM of June 23, 1943]

MOVIE INDUSTRY BACKS THE OFFICE OF WAR INFORMATION

(By Peter Furst)

HOLLYWOOD, June 28.—Movie people have long denied that stranger things happen in Hollywood than anywhere else, but the fact that the entire movie industry has come vigorously and bravely to the defense of the Office of War Information, now that its very existence is threatened, is certainly the surprise of the year.

Many times since the Office of War Information's film bureau was created last year, the big producers have started campaigns against it, trade journals have blasted it, studios have screamed "interference" and "propaganda" and "we won't be dictated to by a bunch of bureaucrats who have never been nearer film production than an orchestra seat in a movie theater."

The Hays office in particular was often said to be one of the chief enemies of the Office of War Information's film bureaus in Washington and here.

Now, Congress has so drastically cut funds for the Domestic Bureau of the Office of War Information that unless the Senate reverses the House action, all the Office of War Information activities in this country, including its Hollywood film office, will be suspended.

Will Hays, president of the Motion Picture Producers Association (Hays office), and thus the spokesman of the entire film industry, has sent a wire to Chairman CLARENCE CANNON, of the House Appropriations Committee protesting the cut and declaring that "We have been greatly pleased by the understanding shown by the picture bureau and the complete lack of effort on its part to dominate our operation. I know the industry's feeling is one of genuine appreciation for the service being rendered."

The industry, judging from Will Hays' wire and general comment in the studios on the House sabotage of the Office of War Information's activities today, would like to keep the Office of War Information's movie advisors—all former newspapermen, incidentally—in Hollywood and on the job.

[From the New York Times]

A WAR SERVICE IN THE BALANCE—CONGRESSIONAL THREAT TO THE OFFICE OF WAR INFORMATION PLACES IN SERIOUS JEOPARDY OUR SOLE COORDINATING AGENCY FOR FILMS

(By Bosley Crowther)

When the gentlemen of the House of Representatives killed the budget the other day for the Office of War Information in all its domestic activities, they put a potential quietus on a sizable wartime service of the screen. For the blow, if it proves to be mortal, would entirely eliminate the Bureau of Motion Pictures, among others, of the Office of War Information—and that is an eventuality which even the industry's least receptive view with pause. As these lines are being written, the matter is still in doubt; the Senate may make up the budget which its neighbor across the Capitol withheld. The Office of War Information's domestic torso may be saved. But bedside watchers are predicting that, at best, its movie arm will be in a sling. They say that any economies which Congress may compel will first be made, most likely, in the outsidish bureau of films.

It is well that the general public should understand exactly what this means and know how such a curtailment would affect what we see on our screens—for the public, after all, is the body which the screen, in one way or another, serves. In the first place, the film producing unit of the Office of War Information would be cut, if not completely abolished—which means that such information films as this unit has been making over the past year would henceforth be out or curtailed. It means that the Hollywood office of the Office of War Information would be dropped, this being the office which gives producers advice on the tone and content of war films. And it means that the numerous activities of the bureau in organizing the use of films for their most effective impact on the public with war information would be scotched. In short, it means that the making of motion pictures with war purpose would depend entirely upon the individual producers (or service units) with no coordination at all.

GENERALLY AGREED

Unless a lot of people are saying things they don't mean, this is not a situation which the industry desires. And it is certainly not a situation which, in wartime, is logical. There has been a lot of criticism of the Office of War Information's performances in this field—criticism with which this writer has frequently agreed. There have been those persons who have felt that Lowell Mellett, the chief of the bureau of films, has been too bold in his efforts at persuasion; others have felt he wasn't bold enough. Some have maintained that the production of information films was not a Government job; others have argued that the Government should be the sole executor of this task. And a great deal of shifting and adjusting has been going on for the past year. But no one (except the men in Congress) have come out flat-footedly against a film coordinating agency, with the sentiment holding for a Government one. Will H. Hays wired to Congress shortly after its action the other day that the industry has been "pleased by the understanding shown by the Bureau of Motion Pictures of the Office of War Information and by the complete lack of any effort on its part to dominate our operation." And when Mr. Hays made such a statement, he spoke for the coolest element.

A SIGNIFICANT FUNCTION

No, there is every reason to view the action of Congress with concern, and the possibility of the film unit's abolishment with undisguised alarm. For this writer, after careful observation, has noted that the Office of War Information's short films have fulfilled a very significant function in their place on the Nation's screen programs. Such films as "Mission Accomplished," "Doctors at War," "Right of Way," and "Troop Train"—freely distributed and played in thousands of theaters on the pledge of the exhibitors—have slipped a real informative 10 minutes into many an otherwise frivolous show. And although they have not been the best films in every case by far, they have shown a very realistic concept of wartime problems which has had its influence on commercial films.

Right now, the peremptory abolition of film production by the Office of War Information would toss a tremendous responsibility for war-conscious shorts upon the industry—which, from present indications, it is not prepared to assume. There are some excellent pictures currently being made by straight commercial producers. The "This is America" series of two-reelers, made by Pathe, is one of the best and most dependable reality series of the day. The March of Time is an old war horse in the factual-informative line, and the World in Action series from the Canadian National Film Board offers good, consistent two-reelers. Warners, Metro, and Paramount turn out occasional sharp war shorts, and the British Information Services pass some good ones along at intervals for commercial release. But the fact that all

these films are commercial means that their distribution is thereby limited. And many of the Hollywood-made war shorts have been atrociously bad. From the purely numerical standpoint, the Office of War Information's films are covering the land. Furthermore, they are being released far and wide in the non-theatrical field—in schools and granges and factories—which would miss them if the Office of War Information went.

—OR ELSE

Of course, there is still that marginal element which, for reasons of its own continues to agitate loudly that the screen is no place for cold reality and facts. This is the element which wishes it could go into the theater and shut out the world. And that might be partially accomplished by the elimination of the Office of War Information. But the greatest majority, as indicated by the public response to good war films, wants, along with entertainment a visual contact and conception of things as they are. It wants to get through motion pictures, which reproduce actuality most vividly, the feeling and knowledge of what is happening in this tremendous world. For the screen to serve that function there must be point and coordination toward that end. This is as obvious in the field of motion pictures as it is in the production of arms. If the Office of War Information should be abolished, another agency would have to be formed to do the job it is now doing. And it's pretty late to start all over again.

Blood on Her Hands

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 28, 1943

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Jackson (Miss.) Daily News of June 22, 1943:

BLOOD ON HER HANDS

It is blood on your hands, Mrs. Eleanor Roosevelt.

More than any other person, you are morally responsible for those race riots in Detroit where 2 dozen were killed and fully 500 injured in nearly a solid day of street fighting.

You have been personally proclaiming and practicing social equality at the White House and wherever you go, Mrs. Roosevelt.

In Detroit, a city noted for the growing impudence and insolence of its Negro population, an attempt was made to put your preachments into practice, Mrs. Roosevelt.

What followed is now history. Streets ran red with blood until the President of the United States, who happens to be your husband, declared martial law and sent troops to the scene.

No sort of camouflage or false claiming can hide the ugly facts of what happened in Detroit.

It isn't pleasant to say this concerning the First Lady of the land. It isn't pleasant for millions of people to be living in daily fear of being killed or injured in racial clashes, either.

Claim of the National Association for the Advancement of Colored People was the result of Axis propaganda isn't even decent nonsense. Axis propaganda had nothing whatever to do with it.

It was inevitable that something of this sort should happen. Authorities in scores of our large cities, especially industrial centers, have been for many months in hourly fear of such outbreaks. There is some melancholy gratification in the fact that it happened in one of our northernmost cities, just across from the Canadian border, and not in the deep South or even the middle South. Down this way we have tried to use patience, tolerance, and forbearance in dealing with all phases of the race problem.

Blood on your hands, Mrs. Roosevelt! And the damned spots won't wash out, either.

Valedictory Address by Charles S. Russell at the Capitol Page School Graduation Exercises

EXTENSION OF REMARKS

OF

HON. BURNET R. MAYBANK

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, June 28 (legislative day of Monday, May 24), 1943

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Charles S. Russell at the Capitol Page School graduation exercises in the New House Office Building, on June 16, 1943. Personally, I am proud of the excellent address which was made by one of the former pages of the Senate, and I hope that every Senator will have the opportunity and take the trouble of reading this remarkable address.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is perhaps to be expected that these words convey a message of farewell, of farewell to Capitol Hill, to school life and to the warmest of friendships. Indeed, we feel all of this, together with the noblest of sentiments toward this citadel of freedom in which we have worked and dreamed of our futures.

And yet, to step beyond these thoughts, there appears a goal so shining that its brilliance almost obscures anything else of which we might think at this moment. For indeed, this must be to us no mere farewell, but a dedication of our very lives and of every spark of energy in our beings to victory in the struggle which confronts us all.

Within a very short time most of the members of this class will be in the armed forces of the United States. We go forth into an anguished and chaotic world from a school which has striven to develop in us those qualities which best fit us to fight the battles of tomorrow. Our never-to-be-forgotten contacts with the world's great and near great bring to us most forcibly the tremendous task which lies before us. And so we are challenged by this thorough training and by the sacred heritage of our homes and families to render our true account as members of a rising generation.

Yet, if we are not to betray this trust we must remember that to win a war and lose the peace is but a hollow victory. We are now mainly concerned with defending the principles of democracy on the battlefield. But in the years which follow, when we will have matured in strength and wisdom, it will become apparent to us that the responsibility does not cease when the world, bleeding and exhausted, settles back once more to peace. Then we will find that these principles which have been saved only by the sacrifice of so much blood, are ours to defend. And so the struggle must go on through the years until our forefathers' dreams are realized and until those shining ideals are secured.

The love we bear our country has not been inspired by flag-waving and by what we read in the newspapers or hear on the radio. We the members of this class, stood silently, scarcely breathing, while the President addressed the joint session of Congress December 8, 1941. We have seen history made, step by step, each day. And so we do not look behind us as we step into the flame. Our course is clear and our cause is just. We have no fear of what tomorrow brings; ours is a rich heritage and with faith and courage we dedicate our lives to its protection.

Salute to the Flag

EXTENSION OF REMARKS

OF

HON. KARL M. LeCOMPTE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 28, 1943

Mr. LECOMPTE. Mr. Speaker, under leave to extend my remarks, I desire to include a resolution of the Leo R. Farmer Post, No. 19, of the American Legion, Department of Iowa. This post is located at Sigourney, Iowa, one of the important county seat towns in Iowa, in the heart of the Corn Belt. This post is made up of outstanding patriotic citizens who served in the First World War. In addition to supporting every war effort, this post has performed outstanding service for the community. It was instrumental in erecting one of the finest community buildings in Iowa, which is occupied jointly with other organizations of Sigourney. Some of the members of the post are leading citizens of the State of Iowa.

The following resolution was adopted by this post on June 16, 1943:

Whereas on the 15th day of June 1943, it has been brought to the attention of Leo R. Farmer Post, No. 19, Sigourney, Iowa, American Legion, that the Supreme Court of the United States has delivered an opinion and made a ruling that the members of the Jehovah Witness sect shall not be required to salute the flag even though it may be required of others; and

Whereas it is the belief of the members of this post of the American Legion that no one should be exempted from the salute of our flag; and

Whereas upon motion it was unanimously voted to protest this ruling of the Supreme Court of the United States; and

Therefore formal protest is hereby made.

HOWARD I. SHEPHERD,
Commander of Leo R. Farmer Post, No. 19, American Legion.

SIGOURNEY, IOWA, *June 16, 1943.*

Livestock or Cash Crops

EXTENSION OF REMARKS

OF

HON. ROSS RIZLEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 24, 1943

Mr. RIZLEY. Mr. Speaker, at the late Virginia conference some of the food specialists advised plowing up the grass on the plains of the Southwest and planting—among other things—soybeans and peanuts. They advocate as a better diet for the hardy people of the plains peanut butter, soybean oil, and corn flakes—rather than juicy beef steaks.

I doubt very much whether the professors at Cornell and Columbia will be able to sell their idea to the people of Oklahoma, Texas, New Mexico, and other sections of the country to which they would apply their philosophy.

I include as a part of my remarks, a very interesting article written by the editor of the Oklahoma Farmer-Stockman, which appears in the July issue:

TALKS WITH OUR READERS

LIVESTOCK OR CASH CROPS

If you are forced to sell out your beef-, dairy-, and pork-producing herds and poultry flocks in the next few months you may well ask: "Is this a deliberate policy on the part of the Government to force us out of livestock and into cash crop production?"

There are many influential groups whose thinking and planning apparently is aimed in that direction. The theory advanced is that we can feed more people by growing vegetable and cereal crops than we can by converting grass and grain into the luxury form of meat.

Nutritionists and economists at Cornell University, New York, have found that a human can utilize more calories from a bushel of soybeans or peanuts if he eats the peanut butter or roasted soybeans than if he feeds the crops to a steer and eats the steer. They say that 1 acre cropped for soybeans produces as many calories as 11 acres devoted to henfeed for eggs.

So, they argue, let's grow more soybeans and less beef, more calories and fewer eggs, plow up the grass and plant peanuts.

Many Washington officials are listening to the argument. Fortunately, some are not yet convinced, so there is some hope. Lt. Col. Jay L. Taylor, Deputy War Food Administrator, recently told the new nine-man War Meat Board at Chicago:

"I want to bring you assurance direct from Administrator Davis that there is no intent to make drastic cuts in output of animal products and replace them in large part in the American diet with vegetable foods."

DANGEROUS SPECULATION

Obviously, the speculation and type of planning Lieutenant Colonel Taylor referred to is being done mainly by theorists from back East who seem to consider any place this side of the Hudson River to be way out west and who think Corn Belt farming and livestock production is typical of the entire country.

Fortune magazine, widely circulated among influential eastern industrialists, recently emphasized: "The point does come clear that in a wartime emergency the economic superiority of vegetable foods over livestock products should be major considerations in planning the pattern of our agriculture."

How would that affect the southwestern range country?

It would be disastrous if such a scheme were put into effect, either directly or indirectly by such means as price juggling to wipe out profits of livestock, dairy, and poultry producers and subsidize price increases for vegetables and cereals.

OUR LIVESTOCK COUNTRY

When the Southwest was settled, farmers brought with them from all directions the crops and farming systems they used back home.

Slowly and painfully and with tremendous loss of soil and fertility, we have learned that the successful farmer in this country must build his operations around livestock in one form or another.

After a thorough study of the Great Plains country, the Soil Conservation Service published a bulletin in 1939 called "Land Facts on the Southern Plains." This bulletin pointed out that to hold our soil, we should put more land to grass, which everybody knows can be utilized only by livestock.

In classifying some ninety-seven million acres for proper use, 65,000,0000 acres of which was already in grazing and forest land, the Soil Conservation Service proposed retirement to grass of an additional six and one-half million acres of cultivated land.

Farmers have found the trend to grass to be the better way for southwestern agriculture, as evidenced by the greatly increased acreage of grass and larger numbers of livestock of all kinds, ready to be turned into meat and other food products if regulations will permit.

GRAIN GOES WITH GRASS

The nutritionists argue that an acre of corn is more valuable as corn than if converted to beef. That might be true, if you had only one acre on which to produce your food. Then you should plant corn or other crops. But when you have many millions of acres of grassland and a few million acres of cropland, it doesn't add up that way.

To clarify this point I obtained the following information from Louis E. Hawkins, vice director of Oklahoma agricultural experiment station:

"The acreage requirement for maintaining a breeding beef cow and the production of a market calf from calfhood to 2 years old under range conditions, varies widely, increasing from east to west.

"A common allowance for a cow and calf for 12 months in central Oklahoma would be 10 acres, mostly grass but including necessary minimum of hay or other winter roughage. Allow 5 acres for the calf the second year as a yearling and 7 acres the third year as a 2-year-old, sending him to the feed lot in the autumn of that year.

"Allow 20 to 25 bushels of corn to put this kind of steer into such slaughter condition that the beef would be usable. This would mean a carcass grade of commercial to good, not choice and certainly far below prime.

"Assuming that 1 acre of good corn would yield 60 to 75 bushels and finish 3 such steers, this would mean that one 1 such acre would be required to make good use of the produce from 65 to 70 acres of range land.

"Without the acre of corn, this range land would contribute very little to the food program since grass and feeds grown thereon could not be utilized for human consumption and since the range steer would not be in slaughter condition until he received this minimum of grain finishing.

"Certainly the 70 acres of range land plus the one acre of corn would yield much more food in the form of beef than the one acre of corn land possibly could yield in such foods as soybeans, peanuts, dried beans, edible cereals, etc."

DANGEROUS SHIFT

Maybe Cornell nutritionists don't know it but every person familiar with southwestern agriculture knows that most of the cultivated land in Oklahoma and Texas cannot be used to grow soybeans, peanuts, or other favored cash crops without laying it bare to wind and water erosion and robbing it of fertility. Plowing up grass land would be worse.

To make such a change would be a shift from livestock farming to cash crop farming, the system that has been tried and proved undesirable. Without cattle, hogs, poultry, and sheep, we would have no need for our large acreages of grain sorghums, no need for the acres which can grow only grass, no way of utilizing our small grain pasture.

Moreover, where would we get the labor and machines it would take to convert to the kind of cash crop farming proposed?

We do not condemn the growing of increased acreage of wheat, peanuts, soybeans, or any other needed crop on land suited to them but we are opposed to any steps which would force southwestern farms to quit producing beef, milk, pork, mutton, wool, poultry, and eggs. Those are commodities that our farms are equipped to produce and we must keep on producing them along with the variety of vegetable crops that also are needed.

FERDIE DEERING.

Address of Lt. Gen. Brehon Somervell

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 28, 1943

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Lt. Gen. Brehon Somervell, commanding general, Army Service Forces, before the Women's National Advisory Council to the Women's Interests Section, War Department Bureau of Public Relations, at the Mayflower Hotel, Washington, D. C., Friday, June 25, 1943:

It is a most welcome opportunity and a privilege for me to talk with you ladies today. This gathering of the leaders of the great national women's organizations makes it possible for me to fulfill a twofold mission. Through you I want first to make a report to the women of America, and secondly, as you probably have suspected, to ask for your help.

The duties that I am charged with as the commander of the Army Service Forces in a sense have placed upon me and my command an obligation to fill the needs that in times of peace are rightfully yours.

Your men who have joined the Army must still be fed, clothed, housed, taken care of when they are sick, and their spirits lifted while they are well.

I am not fool enough to tell the women of America that we are doing as well as they have at this task, but we've done the best we can. That best, I can report to you in all sincerity, is the best that has ever been known in military history.

The best food, the best clothes, and the best medical care of any army in the world is being given to our great new citizen Army. They are armed with the best guns, planes, tanks, and equipment that any nation has ever produced, and we are grimly determined

that this shall continue to be so. Without your help we shall fail.

Don't mistake me, and think that I say this in any spirit of flowery courtesy and flattery. It is the unvarnished truth.

You women hold the power to make or break our national morale. You represent one of the most essential factors on the home front and of our soldiers on the fighting front. The nature of this war is such that it has wiped out the separate problems of manpower and woman power. They have become inseparably fused into the single will of our Nation to fight our way toward a victory that will free this earth forever of the terror of the Nazi and the Jap.

It is useless for us to train and equip fighting men and transport them to the battle lines over the globe if within our own borders that they fight to hold secure we are not united with a resolve to match their sacrifice.

The first bomb that was dropped on December 7, 1941, didn't declare war on only the eligible males between the ages of 18 and 38. That bomb imperiled the lives, the hopes, the futures of every man, woman, and child in America.

Hundreds of thousands of American women have faced that fact. Obviously, by your presence here today you have faced it and are doing something about it. In industry, in the homes where the men have gone, in the great volunteer organizations, and in the armed services themselves those women are serving in countless ways to carry us through.

Under the pressure of war you have discovered new strengths, new outlets for your skills and talents. Fields of activity have opened to women that always before had been regarded as solely man's province. The production lines over the Nation give daily proof of the new and vital part they are taking.

Aircraft production, manufacture of small arms and artillery ammunition, communications, electrical machinery, even tank, truck, and shipbuilding activities. All have opened to women, along with farming, lumber milling, oil refining, and many others. You could safely say there are practically no fields of endeavor in which women have not proved their ability to carry out a man's job and do it well. The Army Service Forces is the largest employer of women in the United States today. Among a total of a million civilian employees on our books May 1, 1943, 379,300, or almost 38 percent, were women. Among our personnel here in the Washington area 67 percent are women. In the field, outside of Washington, in essential manual labor formerly done by men, women constitute 33.6 percent of our employment strength.

Let us consider for the moment a woman's organization that is making a record of sacrifice and service. I prophecy that it will win the deserved recognition as one of your greatest contributions to your country. I speak of the Women's Army Auxiliary Corps, known to us all as the WAAC's.

From their modest beginning shortly over a year ago they have grown to a corps 65,000 strong. The Army is asking you individually and collectively today to do everything in your power to help them grow to their allotted strength of 150,000 and then to multiply that over and over again.

Why do we ask that you give this splendid organization your support? I'll tell you why. And it is an answer in which you can all take pride.

When the WAAC's came into being they asked to serve as motorcar drivers, secretaries, telephone operators, cooks, and bakers. That's all. Simple jobs they knew they could do as well as men. Through their efficiency, their proved capabilities, they have been pushed by their own sheer competence into more than 140 different Army occupations. There is no evidence that they have any intention of being stopped. Do you realize what that means to the Army that frankly wondered a year ago how it would all work out? It means that 65,000 combat troops have been released by these WAAC's. More than four full divisions can carry our fight to the Axis. The vital work that had to be performed by these men before is now in the firm hands of capable women.

The WAAC's today are engaged in a drive for more recruits. You can help them immeasurably. Meet them, talk with them, learn to know them and what they are doing. No web of lies spread by the crafty, malicious tools of our enemies will ever again be given a moment's credence.

The other recruiting drive that you can help with is that for the Army Nurse Corps.

The Army Medical Department needs nurses and it is unnecessary for me to tell you that wounded men are going to need the ministering that only a woman nurse can give. Please get behind the Red Cross organization that is charged with the recruitment of nurses for the Army. As individual citizens in your communities, spread the awareness of this need. Convince your friends and neighbors and your organizations that private duty nurses of this country are going to be needed by the men who will fall in battle. If we cannot make small sacrifices in this problem and by our attitude release these women, the magnificent structure of the Army Medical Department will be endangered. Your men are receiving care that is the wonder of the world of medicine. Thanks to the development of the sulfa drugs and the miraculously efficient system of evaluation of casualties from the moment they fall in battle, back through the whole network of medical care, the dangers from infections and complications have been brought to unprecedented lows. The loss of life from shock is being counteracted everyday and many of you have become blood brothers of these stricken men in the great work of the collection of blood plasma. Carry on with renewed intensity and lend a helping hand in forging the Army Nurse Corps link in this medical chain. It means so much to you and your men in the armed forces.

We hear much on every hand of morale. In these past months that word has been used in so many ways to cover so many things that it has almost lost significance. Morale for a soldier is a simple thing. It is his attitude toward the job that he has to do. It can be only good or bad.

We know that your husband's, your son's, or brother's morale cannot be good if he is worried about those he left back home.

The Office of Dependency Benefits is a little known activity of tremendous importance in offsetting this worry. Here is a huge bureau, entirely hidden in one of our departments, which clears all allotments and allowances to the families of soldiers. Every month millions of checks are cleared. Every effort is made to see that not a single allotment check among the millions handled is delayed for so much as an hour. The soldier's mind is freed from worry about this detail. More than two million soldiers are helping to provide for their families through the family allowance plan. Financial worry would impair the work of the soldier at the front and weaken the morale of the family at home. The Army has circumvented both of these dangers successfully through the efficient work of the Office of Dependency Benefits.

Army insurance is another morale factor of the utmost importance. More than 90 percent of the men in the Army have taken advantage of the protection offered by Government insurance. The generous provisions of the policy have given the soldier added confidence that the Army really is looking out for his welfare. The total value of the insurance being carried exceeds $52,800,000,000.

In great measure these provisions have helped but there are many more or less tangible factors that influence the morale of a soldier.

The news that filters through to him from home counts for so much, and it is there that you can in many womanly ways shape and mold the nature of that news.

Your influence on the grumblers, the chiselers, and the cheaters who selfishly undermine the efforts to gear this Nation to a total war, should be used every hour of every day.

Through your organizations you are in a position to render valuable service to the Army and to our whole war effort by spiking false rumors. Many of these lies that work like termites destroying confidence are deliberately planted by our enemies. However, there are men and women who consider themselves patriotic and loyal citizens who daily contribute to the Axis cause by repeating and elaborating on dangerous drivel. Mrs. Blank, who tells you confidentially that the Army is taking all your food and just letting it rot away in warehouses is not only sowing seeds of dissension, but she happens to be lying as well. The extra food required to sustain our Army is a small factor in our Nation's food supply. The Army will require about 2,750,000,000 pounds of fresh and canned meats of all kinds during 1943. This will amount to approximately 12 percent of the total 22,500,000,000 pounds of meat available to the whole Nation for this period. This will provide slightly more than eight-tenths of a pound of meat per day for each soldier in the Army, and includes proper allowance, for loss from cargo ship sinkings and other war action, shrinkage, and reserves along the line of supply. Those reserves are vital to insure uninterrupted flow of food to our soldiers in the theaters of operations as well as at home. Mr. Nitwit, a very solid, but misguided citizen, will tell you how he saw some of our supply points as he was going by on the train. To his misunderstanding eye there were acres of war equipment backed up, piled up, just being wasted. He didn't notice that they had vanished when he passed again, if he ever did, before he started talking. He has no conception of the incredible vastness of operations of supply and transport that go on day and night to move men and arms to our battlefronts. He looks and draws his own conclusions and then proceeds to spread them. If later he sees that he was in error, how many of you have heard him admit that he was wrong?

Rationing, curtailment, sacrifice are all necessary if we are going to win this war. The sooner we stop measuring our sacrifice against that of the cheat who is getting away with something and individually measure ours against the boy down the street who is now standing grimly waiting for the order to move against the artillery fire of Europe and Asia the sooner we will bring an end to this struggle. Make it your mission to seek out the truth and nail these lies before they go on their destructive rounds.

There is a dangerous tendency throughout the Nation to look on this war as practically won. On every side evidence of this belief is apparent. A slacking off of effort and dissension rising from the scuffle to grab a soft seat in the bus back to peaceful prosperity is one of the greatest dangers we have ever faced.

This war is a long way from over, a way filled with sacrifice. Say so, think so, act so in every thought and deed if you would keep faith with the men who have to fight it through to the finish.

Japanese Resettlement

EXTENSION OF REMARKS

OF

HON. RICHARD J. WELCH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 28, 1943

Mr. WELCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following representations and recommendations of California State Senate fact-finding committee on Japanese resettlement:

Whereas the California State Senate on May 2, 1943, adopted Senate Resolution No. 122 relative to appointment of a Senate fact-finding committee on Japanese resettlement under which the members of the State senate whose names are attached to this resolution were regularly appointed as members of such committee; and

Whereas under the terms of said resolution this committee is empowered to make representations and recommendations to the Federal Government as it may be advisable on any subject relating to the subjects of its investigation during such times as the legislature may not be in session; and

Whereas the committee has held meetings whereat many witnesses have testified before the committee and evidence has been introduced relative to the subject under investigation from which this committee has formed definite conclusions which impel the committee to forward to the Federal Government the result of such investigation and its conclusions therefrom, insofar as such investigation pertains particularly to the inadvisability of allowing the return to the Pacific coast area of any Japanese during the period of the war with Japan; and

Where we find from such evidence the following facts to be true:

1. The return of any Japanese, alien and native-born, to the Pacific coast area would be dangerous to our military safety because (a) there is no test by which the loyalty to our Government can be determined in the case of any individual Japanese; (b) to permit Japanese to return enables the infiltration of alien enemy Japanese, who would be indistinguishable from such returned Japanese; (c) practically all alien-born Japanese and a large percentage of American-born Japanese residing in California prior to their evacuation gave their primary loyalty to the Japanese Government and to the purposes and practices of that Government, and that the menace determined by the military authorities, enunciated by Gen. John L. DeWitt, to our security because of the presence of these people in our midst that led to their concentration and evacuation would be recreated by their readmission into this Pacific coast area;

2. That within the last few months there has grown among our people such a strong antagonism to all Japanese because of the treachery, barbarities, and inhumanities practiced by Japanese soldiers that to permit the return of any Japanese to this area will undoubtedly result in riots and breaches of the peace;

3. That the drains upon the manpower of our police forces have been so heavy and the extra burden caused by the war upon our undermanned police forces that they will be greatly handicapped in the added work of maintaining law and order and guarding against sabotage and espionage that would result from the reintroduction of any Japanese in the Pacific coast area during the period of this war: Therefore be it

Resolved, (1) That this committee is unalterably opposed to the reintroduction of any Japanese into the Pacific coast area; (2) that this committee strongly recommends to the Federal Government that all Japanese now in relocation centers be retained therein until the termination of the war; be it further

Resolved, That copies of this resolution be forwarded to each Member of the California delegation in both Houses of the Congress of the United States, and to D. S. Meyer, Director of War Relocation Authority, Washington, D. C.

HUGH P. DONNELLY, *Chairman.*

Statement of Harry Farr Before Annual Meeting of National Meat Board

EXTENSION OF REMARKS

OF

HON. WILLIAM S. HILL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, June 28, 1943

Mr. HILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a statement by Harry W. Farr, chairman of the National Livestock and Meat Board, made at the annual meeting in Chicago, Ill., June 17, 1943:

[From the Record Stockman, Denver, Colo., of June 24, 1943]

STATEMENT OF HARRY FARR BEFORE ANNUAL MEETING OF NATIONAL MEAT BOARD

Following is the statement of Harry W. Farr, chairman of the National Live Stock and Meat Board, made at the board's annual meeting in Chicago, Ill., June 17 and 18.

"With America participating in a global war, the outstanding role of the Nation's livestock and meat industry in helping to win this war cannot be overestimated.

"Meat is a weapon of war. Army men tell us that it is a number 1 food in the meals of America's fighting men. All branches of the livestock and meat industry, livestock growers and feeders, livestock marketing agencies, the meat packers and the Nation's retail meat dealers have stepped up their efforts to fill the wartime demand for more and more meat.

"Meat is needed to supply three major groups, our armed forces, our civilian population, and our fighting allies overseas. In order to fill the needs of these groups, we are producing meat in record-breaking quantities. From a production of about 19,000,000,000 pounds in 1940, our meat output rose to 19,500,000,000 pounds in 1941 and last year our estimated production of 22,000,000,000 pounds. This is 6,500,000,000 pounds more than was produced in the average year of World War No. 1. We produced meat last year at the average rate of 60,000,000 pounds per day, 21 tons per minute.

"The shipments of meat to our allies overseas under the Lend-Lease plan were greater than the shipment of any other food. About three-fourths of our meat went to England and about one-fifth to Russia. In recent months, however, shipments to Russia have been increasing. Figures for the first 3 months of this year show that the shipments of meat to our allies are somewhat greater than in the first 3 months of 1942. They indicate, for example, that we shipped 5 times as much beef, 48 times as much lamb and mutton and 13 percent more pork than was shipped in the same period of a year ago. Lard, a major product of our industry, is playing an important part in the war effort. Shipments of lard overseas have been heavy.

CATTLE SLAUGHTER DECLINES

"I have just been checking United States Department of Agriculture reports on livestock slaughter at federally inspected plants for the first 5 months of this year as compared to the same 5 months of 1942. I find that cattle slaughter is 9 percent and calf slaughter, 23 percent below a year ago. Sheep and lamb slaughter is 1 percent above a year ago and hog slaughter shows a gain of 9 percent. The slaughter of meat animals has thus far this year fallen far short of anticipated slaughter.

"I am frank to say that I don't know whether or not the meat production goal of 25,700,000,000 pounds for 1943 will be reached. There are certain handicaps as far as production on farms is concerned, including shortages of certain feeds, labor, machinery and other essentials to maximum production. The weather is of course one of the unknown factors and a very important one. Floods this spring in some of our major meat-producing sections have delayed the planting of corn and other crops necessary for feeding livestock.

"The National Live Stock and Meat Board, which represents the entire industry, has geared its activities to serve in this war emergency. I would like to refer to some of these activities. First, the meat program in the Army."

TEACH ARMY PERSONNEL

"The work we are doing for our armed forces is one of our outstanding contributions to the war effort. This program has been under way for more than 2 years. It includes instruction in all phases of the subject of meat as it relates to Army use—cutting, cooking, carving, conservation and food value. The work also involves the training of the Army's meat specialist personnel.

"In connection with this program, the board has written and produced eleven meat publications for use in the Army in the training of its mess personnel.

"The board has cooperated with Quartermaster Corps during the year in supervising the production of six meat-training films which will be used at Army posts throughout the country. These films are now ready for distribution and they cover all phases of the handling and utilization of meat in the Army.

"We have also been working with the Navy in helping to solve its meat problems. Navy meat problems are somewhat different than those of the Army. We have conducted as many meat lectures as time would permit.

"Our part in the national fat-conservation the national nutrition program is one of our major activities. The Government asked for our help in this program. So far as I know, no other food industry was in a position to assume similar leadership in this worthy effort."

PREACH PUBLIC HEALTH

"Through our nutrition program we have assisted educators, professional groups, and others in the public health and nutrition field who are carrying on national activities. We have reached the Nation with a program in which the importance of meat and other food products in the well-balanced diet has been emphasized. We have published meat and nutrition literature and given it national distribution.

"Our part in the national fat conservation program is worthy of special mention. Fats are recognized as of vital importance in America's war effort. When the Government announced the need for fat conservation, the board enlisted the services of its various departments in the national program. This fat-conservation program has been carried on among civilians as well as in the Army.

"The launching of the national share-the-meat program afforded the board a most excellent opportunity to serve the industry, the Government, and the consuming public. We have used every possible facility in an educational campaign to explain this program. We have emphasized to consumers the need for their cooperation."

HOLD FOOD DEMONSTRATIONS

"In connection with the share-the-meat program, a representative of the board served on a committee which was appointed to draw up plans for conducting food demonstrations throughout the Nation. The purpose of these demonstrations was to teach the conservation, preparation, and utilization of food. Since the share-the-meat program had just been launched, the committee decided that the meat demonstration which it developed should be used as the pattern for all food demonstrations.

"It is fortunate that results of meat research which the board has conducted in past years have been available in this time of emergency. I am thinking, for example, of our research in the field of vitamins. When the National Research Council was searching for facts on the vitamin B content of various foods, we had these facts about meat as a source of the B vitamins. We were able to present the results of studies showing that meat is one of the richest sources of this important vitamin.

"We were also able to give them this information regarding cooked meats. And we can take some credit for the fact that the board was one of the pioneers in the food field in discovering the B vitamin content of its product on a cooked basis.

"We have been able to make valuable use of the figures on the vitamin B content of meat in our new nutrition yardstick. This yardstick, as you know, has won national popularity in the nutrition field. It gives a more complete story on the nutritive value of meat than for any other food."

INFORMATION ON MEAT

"In reading the reports which we received from time to time I have been impressed with the fact that so many governmental agencies have come to us for help in this wartime emergency. In my opinion this speaks well for the standing of the board as a source of information about meat.

"These are some of the major activities we have carried on in the interests of giving meat its rightful place in the war effort.

"I do not know what the coming year holds in store. We must put forth every effort to help win the war. Our board has a big responsibility in that it represents an industry which is producing food vital to the war effort—on the battle front and on the home front. We must be ready to solve new problems as they may arise and to meet new emergencies. We must serve the industry in every possible way, now as well as in the days that lie ahead. I am sure that as an organization we will measure up to our responsibilities."

The Home Front

EXTENSION OF REMARKS

OF

HON. FOREST A. HARNESS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 28, 1943

Mr. HARNESS of Indiana. Mr. Speaker, under leave to extend my remarks, I include a letter written by a prominent and patriotic citizen of Marion, Ind., under date of June 22, 1943, relative to our home front. This letter is just one of many illustrating the disappointment of patriotic American citizens in the lack of a firm domestic program, which is interfering with the war effort. These people desperately want to win the war as quickly as possible and with the least loss of blood and treasure and are alarmed and disturbed at the inefficiency and bungling of the national administration. The letter follows:

MARION, IND., *June 22, 1943.*

HON. FOREST A. HARNESS,
House Office Building,
Washington, D. C.

DEAR FOREST: I am writing this letter to you not as a friend, not as a Republican or Democrat, but as a citizen of this great Republic who is represented in the Halls of Congress by you. I listened with horror to the reports coming from Detroit this morning of bloody revolution within our own country. I listened with equal horror and disgust to the reports coming from the labor front, and tried to make myself believe I am still living in America. But I must realize, as many millions of other citizens of this country must, that we are now beginning to reap the crops that have grown from the seed so widely and so wildly broadcast during the past few years.

As a citizen who respects his country and his flag, who believes in law and order and the functioning of legal and constitutional authority, I am embarrassed by and ashamed of an administration that bows to an ultimatum and accepts a deadline set by an individual or group without governmental authority. I try to find reason or excuse for the head of the greatest nation in the world humbly bowing to the demands and orders of an individual, and am forced to concede that this humiliation is the product of a sale made a few years ago involving a half million dollars and a political term in office. To the recipient of the office this price may be satisfactory, but to a patriotic American it is beyond all calculation.

We are on the verge of a victory years in advance of original expectations. United power and effort and enormous production, plus the dedication of millions of lives of young men, forecast this earlier victory. Our lives, our homes, our future, our national honor, everything we have or hope to have, depend upon these men who represent us on the field of battle. And yet we have a man, and a group of men, willing to sacrifice all that, willing to lose country and honor, willing to sacrifice thousands of precious lives needlessly, willing to do all that for a dollar a day additional pay. And we see an administration accepting ultimatums, granting truces, appeasing, conciliating, hoping to retain a few votes no matter what the cost. What a spectacle.

When we see all that has come from the un-Godly New Deal, total economic collapse of everything to which the name has been applied, we have a right to ask, Shall we sacrifice the Nation as a whole merely to preserve such a thing? Shall we ape and imitate everything that has ruined the Old World and expect to do other than ruin the new?

And now, in Detroit, we see horrible dividends coming from the new social order and we see bloody revolution in our midst. What a gory price we have paid for votes to give and maintain power. What must our sons overseas think of us at home?

Sincerely,

RALPH ROESSLER.

The Meat Situation

EXTENSION OF REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 28, 1943

Mr. STEFAN. Mr. Speaker, under leave granted me, I include in my extension the following recommendations of representatives of 60 livestock-producing counties in Nebraska and Iowa regarding our meat situation for the information of the membership of the House:

The critical emergency confronting the livestock producing and feeding industry has grown rapidly more acute day by day, threatening not only the continued existence of the industry, but also the Nation's supply of its No. 1 wartime food—meat.

Due to continued failure of the Office of Price Administration, and other Government bureaus, administrations, and officials to work out a price structure which will cover cost of production of beef, the Nation faces an increasing beef shortage, despite the fact that total cattle numbers are the greatest on record.

Instead of protecting the consuming public, the Nation, and our allies by insuring an adequate supply of meat, the policies adopted to date have resulted in scarcity that threatens an actual Nation-wide meat famine in the very near future. Moreover, they are rapidly forcing the producing interests, on which future supplies depend, to the point of quitting business entirely.

This threatened meat famine is not due to any lack of willingness on the part of producers to continue their functions, but is the result of handicaps that have been placed upon them by regulations issued without knowledge, or at least without consideration, of producers' needs.

In order to rectify this situation and to restore the confidence on the part of producers that is necessary to prevent a collapse of the livestock industry and encourage future production, we, the representatives of 60 livestock producing counties in Iowa and Nebraska, offer the following recommendations:

1. A simple, positive, informed and forthright policy on the part of the Government on the production of beef is at least 12 to 15 months over-due. The present chaotic conditions in the livestock and meat industry results largely from the negative, confused, and indecisive policies followed since Pearl Harbor.

2. The uncertainty in the cattle market, aggravated by the illegal subsidy roll-back program, continues. The light receipts of the past 2 weeks have protected the feeder to some extent. In order to promote stability in the cattle industry and to insure a regular, adequate supply of beef, it is imperative that cattle be carefully marketed as long as this uncertainity continues.

3. The first step toward improved conditions in the livestock industry is the restoration of confidence among producers in the ability of men directing Government agencies affecting the production and distribution of meat and animal products, and in their integrity and loyalty to fundamental American principles and institutions; confidence that they will use their necessarily great powers fairly and honestly and to promote the production and distribution of food in harmony with our war needs, and not to

secure a stranglehold on the livestock industry. The recent unfortunate proposal to use subsidies has created more confusion and still further lessened confidence in the purposes back of Government control as they affect the livestock industry. We are, unalterably, opposed to the subsidy roll-back program as proposed for the meat industry, but if we must have the roll-back we are still opposed to the subsidy.

4. We recommend that a single agency be charged with the responsibility of directing the national production, distribution, and price policies as they affect food. That the War Meat Board be given full authority to carry out its program. That every possible action be taken by the Government to keep legitimate packing plants operating and to stamp out the illegal slaughtering of livestock and marketing of meat.

5. Government policies should be directed toward the production of meat and animal products in keeping with the most efficient use of our feed resources for the prosecution of the war. A frank statement of the kind and relative amounts of meat and other animal products needed and within our probable productive capacity should be made and the reasons back of the decisions given. It is recognized that some errors may be expected, conditions may change, and modification of the program from time to time may be necessary.

6. It appears probable that our supply of feed grains in relation to our use of them has been overestimated and that it is a physical impossibility to maintain livestock production at present levels, if this is correct the country should be apprised of the fact fully, frankly, and promptly and not forced to readjust livestock production under the pressure of artificially manipulated prices. If readjustments in food production programs are necessary it should be remembered that present programs are the result of policies initiated and supported by Government agencies and because of this fact the Government is obligated to protect the interests of producers in connection with livestock now in the process of production.

7. Consequently, changes in policies should be planned and announced far enough in advance that producers who have cooperated with the national war food production program will not be penalized nor those who have refused to cooperate benefited.

For example, the Government has an obligation to support the prices of hogs, including heavy hogs, until the fall of 1944. If feed conditions require the marketing of hogs at lighter than contemplated weights, say at lighter than contemplated weights, say 220 pounds, then common honesty requires that swine producers be given the facts present holders of heavy hogs be given time to market them; and swine producers told that after a certain date the price of hogs above a certain weight will no longer be supported by Government agencies.

If beef-cattle prices prior to the decline caused by the subsidy-roll-back program were higher than justified by Office of Price Administration ceilings, the higher prices were possible because of failure of Government regulations to function as planned or anticipated. Cattle feeders who have cattle fed on the basis of actual existing conditions should not be penalized by arbitrary, abrupt reduction in prices. Any reduction by decree in prices paid for cattle should be announced some months in advance of their effective date.

8. If available feed supplies require further modifications in cattle-feeding methods, as may very well be the case, then that fact should be made public. Holders of the current crop of cattle should be protected until the cattle are marketed or time given to modify feeding methods on cattle not too far along. The weight of carcass and degree of finish desired should be stated, and the price level at which carcass beef of the desired weight and finish will be supported, together with ceiling prices, should be made known some months in advance of effective date of such prices.

9. If beef must be produced on relatively larger amounts of roughage and relatively smaller amounts of concentrates, this should be announced as a production policy and the State experiment stations, extension services, and cattle feeders called upon to suggest possible production plans adapted to their respective States.

10. If, as seems probable, it is desirable to reduce somewhat the degree of finish of slaughter cattle, we recommend that the Office of Price Administration AA grade of beef be eliminated and the price of A grade increased to the present price of AA grade with corresponding increases for other grades and the price reflected back in the price of slaughter cattle.

11. Government officials and the consuming public should come to understand that it is only through beef cattle that a large part of our agricultural production can be made available for human needs and that governmental policies should encourage the maximum utilization of such production. This is essential if we are to be reasonably well fed.

12. The beef producer should recognize that the primary function of beef cattle is the conversion of roughages and grass to human use and that he can produce a tremendous amount of beef and other products by the proper use of grass and roughages plus a limited amount of concentrates, if the war effort requires it and if Government policies permit it.

Further, that the supply of beef can be increased and the producer kept in better position by closely culling nonproductive and long-age cows, and by the replacement of older animals of poor quality by younger animals of good quality, the use of good sires, extreme care in guarding against disease, and the efficient use of feeds.

13. The Government should take the initiative in selling all classes of the American public on the idea that we are now at war; that when we divert a large part of our total production to war, normal living standards can no longer be maintained; that there are many reasons why what we buy, including food, is costing and will cost more; and that the prices of agricultural products were relatively low at the beginning of the war and should be expected to increase more than the prices of other products which were relatively higher in price at the beginning of the war.

14. Our supply of beef during the emergency depends upon the total number of cattle, available feed supplies, and Government policies. The total number of cattle is the largest on record. It is important that Government policies encourage the use of feed supplies available for cattle production to their maximum efficiency and encourage the marketing of cattle. This will insure a maximum supply of meat during the emergency and a reduction in the total number of cattle in the United States by the end of the emergency.

Policies of the Government as to Resident Japanese

EXTENSION OF REMARKS
OF
HON. RICHARD J. WELCH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 28, 1943

Mr. WELCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolutions which demonstrate fully the position of the California delegation in Congress, the California State Legislature, and the people of that particular section of California where the per capita population of Japanese had its highest ratio.

The people who know the treacherous characteristics of the Japanese best are almost unanimous in their opposition to the return of the Japanese to the Pacific coast area. These resolutions reaffirm the stand taken by General DeWitt with reference to the Japanese.

POLICIES OF THE GOVERNMENT AS TO RESIDENT JAPANESE

RESOLUTION ADOPTED BY THE CALIFORNIA DELEGATION, WASHINGTON, D. C., JUNE 14, 1943

Whereas the California delegation in the House of Representatives in January 1942 initiated its effort to secure the evacuation from critical areas of all enemy aliens and their families whether or not aliens; the internment of such evacuated aliens; that no evacuated aliens be permitted to return to critical areas without a special license; that such critical areas be enlarged to include the three Pacific Coast States and Alaska:

Whereas Gen. John L. DeWitt, commanding the Western Division, subsequently put into effect a protective plan of evacuation and internment consonant with the plan urged by this delegation:

Whereas an effort is being made to remove and relax some of the provisions made under General DeWitt's administration for the protection of the public against subversive enemy efforts:

Therefore, the California delegation in the House of Representatives recommends: That in order to guarantee the security and continued safety of all persons of Japanese ancestry residing in the United States, and protect against any sabotage, espionage, or disruption of our efforts to destroy the war machine of the government of Japan, which so ruthlessly attacked the United States,

1. That should the War Department continue to recruit Japanese for military service—

(a) Such Japanese troops should not be utilized anywhere in the Pacific theater;

(b) Such Japanese troops should not be admitted into any areas where the Government of Japan might attempt the landing of any saboteurs or invasion forces; and

(c) That no Japanese women should be recruited for use in any of the women's organizations attached to or a part of the armed services.

2. That all known subversive Japanese be immediately segregated and removed from existing relocation camps and be confined in special detention camps for the duration of the war with Japan.

3. That such Japanese as can be utilized, be employed in agriculture and industry in areas outside the defined restricted zones, but that only such Japanese shall

be so employed who are reasonably believed to be loyal to the United States after having been investigated and so certified by the Federal Bureau of Investigation. That all Japanese so employed shall be subject to the direct supervision and to such rules and regulations as may be deemed necessary by the Federal Bureau of Investigation.

4. That all remaining Japanese, whose loyalty to the United States cannot be definitely certified by the Federal Bureau of Investigation, shall be retained in war relocation camps for the duration of the war with Japan.

5. That no persons of Japanese ancestry, whether in the military service, related to persons in the military service, or formerly resident within the existing restricted areas of the Pacific coast, shall be permitted to enter any such designated restricted area without the direct individual authorization in writing of the commanding officer of such area.

6. That every effort be made with the Government of Japan to exchange all interned Japanese, subversive and disloyal Japanese, and such other Japanese desiring such exchange, for American citizens now interned or held as prisoners of war by the Government of Japan.

Outland, Jerry Voorhis, Norris Poulson, Thomas F. Ford, John M. Costello, Will Rogers, Jr., Cecil R. King, Ward Johnson, Chet Holifield, Carl Hinshaw, Harry R. Sheppard, John Phillips, Ed. V. Izac.

Report on Taylor Grazing Act

EXTENSION OF REMARKS

OF

HON. ROBERT F. ROCKWELL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, June 28, 1943

Mr. ROCKWELL. Mr. Speaker, 1 year ago I reported to this House on the progress of the Taylor Grazing Act approved June 28, 1934. As my personal interest is in the livestock industry, I have an opportunity to keep in touch with events in the range country with respect to the program of the Grazing Service. I desire at this time to commemorate the birthday of the act which brought new vigor and purpose to the public domain.

The Taylor Grazing Act put an end to certain injurious range practices, stopped the threat of ruin to the range livestock industry, laid a firm foundation to what is one of the most hazardous yet one of the most essential of human pursuits. That was 9 years ago.

In my own State of Colorado, as well as in the other Western Range States, there is a fine spirit of cooperation in grazing districts. The livestock business is slowly but surely getting on a sound footing and much has been accomplished toward making the range more useful and productive, although the war has caused many new problems which make the livestock man's business more difficult than ever before. The Grazing Service is driving steadily toward the goal that Congress had in mind and in so doing is working with the people and getting a good understanding of their problems.

Stabilization of the livestock industry dependent on the public lands is viewed from the standpoint of successful cooperation with livestock operators in an attempt to remove as far as possible the uncertainties from their year-to-year operations. That seems like good business not only for those who produce meat but also for those who consume it. To determine the highest use of the private and public lands requires a study of local conditions, customary practices, and an analysis of the results of this joint effort between government and industry. It likewise requires a search for new and better methods that may be introduced or stressed to get the most out of the land in the face of shortages of manpower, tires, gasoline, and operating equipment brought about by the demands of war. It places into practice a concept of conservation with use and enlists the producers as partners in a natural effort to preserve the range for present and future generations. It recognizes that the use of the public domain is so tied to the life of the West, is such an integral part of the livestock industry that the stock-ranch and the range allotment must be considered together in the over-all plan of public-land management.

During the present world crisis our main strength lies in our ability of producing plenty of wholesome food for our own troops, our allies, and our civilian population. Today the range is producing more meat and wool per unit of livestock and area than ever before.

Although there has been some reduction in the numbers of livestock that used the range formerly, the over-all production of meat and wool has been increased in the last few years by millions of pounds. Sample statements from stockmen in each of the grazing districts indicate that death losses on the range have been reduced by about 3 percent. Calf crops have been increased 15.3 percent, lamb crops by 9.2 percent, wool clips one pound per animal, marketing weights are heavier; all of which means more meat on the butcher's block. A permittee in one of the Colorado grazing districts had this to say:

> The Grazing Service policy of subdividing the range into individual allotments which can be fenced and used by the operator at a designated time has been responsible for a decrease in the loss of stock from straying and has assured a supply of meat during the period when it is most needed. Increased production with less operation cost will permit more time to be devoted to taking better care of the stock and to devote more time to raising food crops, an acute situation due to the labor shortage that confront every farmer and stockman.

The Department of the Interior has announced a program inaugurated by the Grazing Service that aims to serve the Nation's food-for-war program by:

First. Authorizing a 10-percent increase of stock on the range under temporary war emergency licenses.

Second. Intensifying range improvements to promote increased calf and lamb crops and heavier weights of animals.

Third. Reducing death losses from predatory animals and poisonous plants.

Fourth. Diverting to meat production all excess game animals and unclaimed horses on the Federal range.

The production from 11,000,000 livestock on the Federal range in 1942 totaled about 800,000,000 pounds of meat and 80,000,000 pounds of wool. By good husbandry and other features now operating on the range, 80,000,000 more pounds of meat and 8,000,000 more pounds of wool can be added to the Nation's larder. We need every pound of meat, wool, and hides to meet military and civilian demands.

In placing the open public domain under administration, the Grazing Service was in much the same position as the individual who, upon acquisition of a tract of undeveloped land is confronted with the need for certain facilities such as water, fences, and trails to make his land more useful and productive. Nine years ago it is conservatively estimated that less than 50 percent of the public range was supplied even superficially with stock water. Many stockmen had to depend on winter snow, a hazardous venture to say the least. Approximately one-fifth of the 142,000,000 acres of public domain afforded little or no use by cattle and sheep because it was unwatered or inaccessible. This is one factor that led to overuse and abuse of areas adjacent to water. Two alternatives of policy faced the Grazing Service at that time, either to reduce livestock numbers to the actual carrying capacity of the usable range or to accept the condition as it existed at the time and push a program of range development to provide for gradual redistribution of livestock over all parts of the range. Since great and sudden reduction in numbers would have been disastrous to the livestock industry the second alternative was chosen. By pushing the improvement program along with the elimination of tramp-sheep outfits and by encouraging good husbandry practices, this policy proved sound and farsighted in the light of subsequent world events.

On the basis of present indications, the demand for increased production of livestock and livestock products will remain acute for some time. The Grazing Service has anticipated this problem and has considered ways and means of how this could be accomplished without overstocking the range and without detriment to the soil and forage resources. Already there have been encouraging results through improved care and management of stock and range; but there are other ways in which the Federal range can contribute more to the immediate high demands for livestock products. Due to water development and other improvements, along with better moisture conditions, certain areas of

range can stand increased stocking without detriment; in others there would be no increase, and in still others, it may be necessary to decrease the stocking. The entire matter is being worked out carefully with the local advisory boards, unit by unit, aiming at the broad general objective of producing more while the need is so great. By encouraging better range practices, individual carcass weights can be increased in some instances as much as 10 percent. The unclaimed useless horses on the Federal range can be removed and diverted to channels of trade, thus affording additional range for herds and flocks. The removal of these horses, which has already started in a big way, will make room for other animals whose products are so important in the everyday life of us all. The surplus big-game animals can be harvested without seriously depleting the game herds or endangering conservation gains already made.

The original intent of this act, giving the policy-making decision to local boards elected by men who know and use these ranges, was outlined and promulgated by my very good friend, Farrington R. Carpenter who resides in my congressional district. His policies have been continued and developed under the liberal policies of Harold L. Ickes and the able direction of Richard H. Rutledge.

Resolutions of the Montana State Association of County Commissioners

EXTENSION OF REMARKS

OF

HON. JAMES F. O'CONNOR

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 28, 1943

Mr. O'CONNOR. Mr. Speaker, under leave to extend my remarks, I include in the RECORD two resolutions received from the Montana Association of County Commissioners, now in session at Billings, Mont., one of which favors the enactment into law of Senate bill 73, under which the Government of the United States would pay to the counties wherein Government-held lands are located some taxes upon these lands, and the other favoring the passage of H. R. 2426, to authorize appropriations for the post-war construction of highways and supplementing the Federal-Aid Road Act of 1916, as amended.

The resolutions follow:

Resolution 4

Whereas in Montana there is between 38 and 50 percent of our landed area which is held by the Government in proprietary or trustee capacity for Indian reservations, forest reserves, wildlife refuge, grazing lands, and other governmental purposes and objects, none of which lands contribute very much in the form of taxation to the school districts, counties, and State government, which furnish services to such lands and their occupants; and

Whereas such areas are increasing, and the taxation burdens upon sparsely settled communities of our State are becoming more serious; and

Whereas these areas should bear some part of the tax burden comparable to that imposed on lands of our own taxpayers; and

Whereas there is now before the Congress of the United States a bill known as Senate bill 73, under which the Government of the United States would pay to the counties wherein Government-held lands are located some taxes upon these lands: Now, therefore, be it

Resolved, That the Montana State Association of County Commissioners, in convention assembled, do hereby heartily and unqualifiedly endorse the provisions of Senate bill 73, now before the Seventy-eighth Congress of the United States, and respectfully request of the Congress the enactment of this legislation and its approval by the President of the United States; and be it further

Resolved, That this association do hereby oppose any further transfer of privately or corporate-owned lands to the Federal Government except under the terms and provisions of Senate bill 73 above, unless such transfer is absolutely essential for the successful prosecution of the war effort; be it further

Resolved, That a copy of this resolution be sent to Senator MCNARY, the author of the bill, with the request that he present it to the Senate of the United States; and be it further

Resolved, That each member of the Montana congressional delegation be sent a copy of the resolution, and be earnestly requested to use their best efforts to assist in passage of the same.

BEN ZIMMERMAN,
President.

Attest:

B. H. MCCARTY,
Secretary.

Resolution 7

Whereas there is now pending before the Seventy-eighth Congress of the United States, H. R. 2426, to authorize appropriations for the post-war construction of highways and supplementing the Federal-aid Road Act of 1916, as amended; and

Whereas the purpose and design of this measure is not only to cushion the post-war conversion to peacetime economy but is likewise a forward step in the direction of providing an adequate highway system for all the people; and

Whereas section 4 of this measure provides that 50 percent of the sums apportioned shall be available to urban areas and feeder roads in the proportion which the population within cities of 10,000 or more shall bear to the total population of the State, according to the latest available Federal census; and

Whereas the definition of urban areas in the measure is limited to cities and the area immediately surrounding the same with a population of 10,000 or more, which results in a fair and equitable distribution of Federal-aid highway funds made available under the measure; and

Whereas the measure makes available the sum of $1,000,000,000 for each of the 3 years immediately following the war, which will mean that Montana's share will be $16,564,000, which, in turn, will aid our State and our counties in providing employment for our men in service when they return, and thus aid in the rehabilitation of our citizens; and

Whereas there is a real and urgent need for more and better feeder roads in Montana, which this measure will provide for our people: Now, therefore, be it

Resolved by the Montana State Association of County Commissioners, in wartime conference assembled, That we endorse H. R. 2426 as introduced in the Seventy-eighth Congress of the United States, and request that it be enacted in its present form without amendment; and be it further

Resolved, That a copy of this resolution be forwarded to Representative ROBINSON of Utah, its author, the Public Roads Administration, and to each of the Representatives and Senators representing Montana in the Congress of the United States.

BEN ZIMMERMAN,
President.

Attest:

B. H. MCCARTY,
Secretary.

Rationing in Lucas County

EXTENSION OF REMARKS

OF

HON. HOMER A. RAMEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, June 28, 1943

Mr. RAMEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter received from Aloysius A. Konczal, chief clerk of rationing board 34-48.7, Indiana School, Detroit and Indiana Avenues, Toledo, Ohio, June 25, 1943:

OFFICE OF PRICE ADMINISTRATION,
Toledo, Ohio, June 25, 1943.

Hon. HOMER RAMEY,
Congressman, House of Representatives, Washington, D. C.

FRIEND HOMER: It was nice to talk to you the other day and in response to your request, here is a true picture of the situation of ration board 34-48.7.

The board has a population of approximately 68,000 people, and the paid help in the office numbers 13. There are 18 board members, and we have an army of approximately 110 volunteers, upon whom we call for help at various times. This is the force that handles the rationing and everything now on the rationing list.

We have approximately 15,000 B and C applications which are constantly being worked on. We have at present approximately 23,000 A books to renew 4,000 fuel-oil applications to renew, the truck gasoline renewal, and a constant stream of miscellaneous matters to handle. As for instance, yesterday we took care of approximately 150 soldiers who were home on furlough, dealing out gasoline stamps and food checks to them, in addition to the regular civilian business which we have daily. We have approximately 250 to 300 requests daily from civilians alone for some sort of rationing service. So this will give you a rough idea of the volume of work that daily goes through our board. We have been hampered by lack of equipment of every kind and up to a month ago, a considerable portion of our filing was done in orange crates because of the inability to procure files. The bulk of the furniture which we have at the board is borrowed from either board members or other volunteers who assist the board.

I have been recently very much astounded by the opposition noted in the newspapers to increase the funds for the Office of Price Administration, and due to the experience I have had at the board, it is to me amazing that Congress does not realize the magnitude of the job which the Office of Price Administration has to do. The clerks who work with me have for months worked overtime. I myself have averaged approximately 14 hours a day since I began on this job and many of the

under clerks have averaged 12 hours. Of course, there is no time and a half or overtime of any kind. It is merely the desire to accomplish the job that prompts most of them to keep on. However, they have reached the point, most of them, where the work is too tough I, therefore, wish you would use your good offices to present the real picture to the Congress, because there is a real need for at least a large increase of the present paid staff at this board. The volunteer help which we have is very helpful. However, it is undependable, and many times we have found that when we most need it we were unable to get any. This is especially true in warmer weather. The only remedy is to increase the number of employees.

A further reason for this is rationing is, of course, becoming tougher each day as the shortages increase and the public, of course, are now becoming ration conscious, and when they come in to the board it is necessary to give good reasons for any cuts in either gasoline or other items which are rationed. There is an entirely different atmosphere at the board now than there was even 2 months ago. It is becoming increasingly difficult as people are becoming more and more resentful of further rationing. I know of no single other thing which so profoundly effects civilian morale as rationing. It is something that should be given every possible assistance by the Federal Government because of this. There is under the circumstances under which we are working no possibility of administering in the efficient, prompt manner which it should be. We have neither the number of high-class employees nor the number of other types of employees and it may be well possible that unless steps are taken to correct this that civilian morale may further ebb to a dangerously low ebb. This would, of course, have a profound effect upon our war effort and should be religiously guarded against, and one of the best ways that we can assure of a sound home front merely is by expertly handling the rationing program.

In conclusion, may this serve as an invitation for you to personally contact me when you are next in Toledo, and I will give you a larger and more detailed picture.

Yours truly,

LUCAS COUNTY WAR PRICE AND RATIONING BOARD 34-48.7,
ALOYSIUS A. KONCZAL,
Chief Clerk.

Our Flag

EXTENSION OF REMARKS

OF

HON. ROBERT F. ROCKWELL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, June 28, 1943

Mr. ROCKWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following poem by one of my constituents:

OUR FLAG

Made of bunting with stripes and bars,
A field of blue with assembled stars.
Colors—red, and white, and blue,
Our national emblem to be loved by you.
Every stitch in it firmly sewn,
Binding together the flag we own.
Each star a State in its proper place
Pledging freedom to the human race.
Back up this banner with power and might,
Revere it always both day and night.
Prize your heritage—you must, you can,
It's an honor to be an American.
Floating high in its heavenly dome,
It represents you, your loved ones, home.
Betray your flag you will live in shame,
Always be true and play the game.

Raise Old Glory on halyards high,
Keep it floating 'neath God's blue sky.
Show your patriotism with might and main,
Help bring peace to our world again.
Bac' up our colors on land and sea,
Do your full share for victory!
Made of bunting, red, white, and blue.
Keep it flying says I—says you.

—*J. C. Glassford.*

H. R. 2837—To Provide for Central Responsibility for the Production and Distribution of the Nation's Food by Establishing a War Food Administration in the Department of Agriculture

EXTENSION OF REMARKS

OF

HON. HAMPTON P. FULMER

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 28, 1943

Mr FULMER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting an editorial carried in the State paper, Columbia, my district, South Carolina, concerning my bill H. R. 2837, which has for its purpose giving absolute and definite power to the Food Administrator in connection with production, distribution, rationing, and price fixing of food.

Section 2 of my bill provides as follows:

SEC. 2. The War Food Administrator is authorized and directed, notwithstanding any other provision of law (including title I of the First War Powers Act, 1941), exclusively and finally to exercise on behalf of the United States, either directly or through such other officers or agencies as he may designate, all powers, functions, and duties conferred or imposed upon any officer or agency of the United States by any law, order, regulation, or directive with respect to the Nation's food program in the United States and its Territories, including the production, processing, distribution, rationing, procurement, requisitioning, allocation of, priorities, storage, exportation and importation of, provisions of labor and facilities for, and the establishment, maintenance, and adjustment of prices for food and food facilities.

The editorial follows:

MAY BE A BEACON

Congressman FULMER'S measure calling for the creation of an all-powerful food czar may be a beacon light in a dark and threatening night.

The State congratulates the gentleman from South Carolina on what has all the earmarks of a constructive idea concerning a critical problem.

Everywhere there are evidences of food shortages in a Nation whose potentialities for production should be unlimited—and where they are. The indications are that mismanagement is largely the cause of the trouble. Food is still plentiful, but it is not where it is needed and in some cases is going to waste, due, to all appearances, to the jumbled policy of the Government which has dispersed the problem among nine agencies.

Straws in the wind are the statements of Fred H. Sexauer, president of the Dairymen's League Cooperative Association, and Farmer-Author-Thinker Louis Bromfield. Sexauer said that so far as milk is concerned city people will learn that the Office of Price Administration is their enemy No. 1, because the present system of food price fixing "has all the elements of a national scandal and the making of a ghastly tragedy. * * * Subsidies are the tangled net in which a free people become * * * helpless pawns of a dominating centralized government," and inflation is an administration bogeyman aimed at "social reform, regimentation, and limitation of opportunity and incentive."

Mr. Bromfield, whose opinions are sufficiently well thought of to be quoted regularly in commentary periodicals, declared: "They haven't any real farm policy down there in Washington. One word can describe the one big mess they've made: Bedlam."

A war-food administrator, such as described in Mr. FULMER'S bill, with all powers, functions, and duties relating to production, processing, distribution, rationing, procurement, allocation, and so on, if permitted by the administration to carry out his duties and powers should go far toward straightening out the tangled situation. There certainly must be a man in this country with sufficient understanding and executive ability to make a vast improvement on what has been done up to now. And it is devoutly to be hoped that the act will become law and put to a trial at the earliest possible date. For present barometrical readings point to a very rough national voyage from now on out.

Mr. Speaker, I highly appreciate this editorial, and the many letters, telegrams, and newspaper articles that are coming into my office, backing me and my committee in our efforts to put an end to the disastrous situation confronting farmers, various lines of business, as well as our war efforts, because of the manner in which the food program is being administered.

Weekly Report to the People of My District

EXTENSION OF REMARKS

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 28, 1943

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me over station WNBF, Binghamton, N. Y., on June 26, 1943:

Men, women, and young people of Binghamton, Johnson City, Endicott, and the Thirty-fourth Congressional District, for the past month there have been whisperings in Congress about a recess. As the typical Washington summer, with all its oppressive heat and humidity descends upon the sweltering membership of the House, everybody

begins to get the yen to go home. But since 1939 Congress has stayed in the boiling Capital in continuous session because the folks they represent expected them to remain on the job. Every year at this time we whisper about a recess but nothing is ever done further than that. Some dutiful Member always raises an objection and the idea is dropped.

But this year many of my colleagues feel they owe it to their people to go home for a few weeks, look around their districts, talk with their friends and constituents in order to get a better slant on the way the country is feeling. They realize Congress has been in session steadily 4 long years. A lot of water flows over the dam in that length of time. Changes take place at home; changes in living and changes in thinking. Members of Congress want to keep abreast with this new living and new thinking. In order to accomplish this they must mingle with their fellow Americans back home. They must listen to their reactions, opinions, and advice upon vital questions. They will get a liberal education by listening to the people. After all we in Congress are simply the people's hired men. We owe it to our boss, namely, the people, to follow their instructions.

So perhaps we will take a recess after all. Certainly it will be a good thing for Congress, and if it makes for better representation by the reasons I mentioned, it will be well worth while.

Personally, I would welcome a recess. I want to accomplish a lot of things back home this summer. First, I want to investigate the agriculture situation. I would like to visit several hundred farms in my district for the purpose of getting information from my farmer friends. They have a great deal to tell me I am sure. The farmers of my district are working harder than they ever worked before. Their wives and children are doing a man's work in most cases. I am anxious to know just how much cooperation my farmers are receiving from Uncle Sam. My investigation will be first hand and will be accurate because I will go straight to the farms of my district. I loo' forward to an enlightening experience.

I also wish to spend a time this summer visiting the defense plants and war industries of the triple cities, of Norwich, and also of Chenango and Madison Counties.

When one observes the gigantic amount of war work being done in the Triple Cities and elsewhere in my district, is it small wonder that I swell with pride when I realize what a patriotic body of Americans I have the honor of representing? There is no limit to the productive power of the Southern Tier. When we consider the capacity of Endicott Johnson, International Business Machines, Agfa, Remington Rand and a hundred other similar plants in the Thirty-fourth District, it is not hard to visualize what would happen if our locality were not included in the present scheme of American war enterprise. I am not far afield in saying our Nation's production would be crippled without the Southern Tier's mighty contribution in manpower and materials.

Therefore, I intend to make an extended tour of these war plants. I want to see the men and women I represent in Congress at work in these great war factories. I want to have the pleasure of meeting the management of the plants which are turning out weapons of war with such amazing speed.

At this time, I would like to pay a special tribute to the workers and entrepreneurs of our local war industries for the magnificent job they are doing toward winning the war. We are second to none in the whole country here in the Triple Cities, here in the Thirty-fourth District. We are responding to Uncle Sam's call to arms and we are united in our efforts.

As you well know, I am deeply concerned over the serious food shortage which has threatened all America for the past several months. I have repeatedly asked the Government to take some positive action. Further words of mine seem unnecessary at this time but I received a letter recently from my good friend Mr. Frank Gannett, the new and able publisher of the Binghamton Press which describes the food situation better than I can. Mr Gannett says:

"The food crisis is too real, so serious, that those who have specific knowledge of it cannot be silent.

"Last September I saw the food crisis coming. In November on a broadcast I warned: 'Unless our farm policy is changed, we face disaster.' Disaster is now here.

"In the last 6 months I have devoted much of my time to obtaining facts on the subject. I sought opinions from farmers, processors and editors in every state. I made inquiries of 30,000 individuals and 12,000 editors. My conclusions are based on their replies and the statistics from every reliable agency I could consult.

"We face an inevitable food shortage at home, needless prolongation of the war through lowered national morale and slowed production of war materials by ill-fed workers.

"The people of America are looking to you and the Members of Congress to save this country from one of the gravest threats which it has ever faced. I mean, of course, the mishandling of our food problem and the adoption of a subsidy program as a substitute for fair food prices.

"The proposed subsidies will not increase our food supply nor make any more of our food available for consumers. On the contrary, this subsidy plan will discourage food production. The food producers of the Nation are vigorously and almost unanimously opposed to it.

"Subsidy is a political juggernaut that never rolls backward. The first billion dollars of subsidy, without a doubt, would grow to whatever peak vote-seeking bureaucrats figured necessary to perpetuate their rule. Any subsidy plan is sure to add billions to our taxes and national debt. Administration of a subsidy plan will be enormously costly. It will add countless thousands more to the Government's pay rolls.

"In my opinion, the public sees through this attempt to deceive them in regard to the cost of their food.

"It is too late now to increase food production for this year. The blame for the present shortage must be placed where it belongs—on the present regime, which not only failed to heed the repeated warning, but which now is choosing to play fourth term politics with proposals which will endanger food production in the coming year. Now, when unity is most needed, it is arraying class against class, arousing bitterness between food producers and consumers; particularly, it hopes by doling out unlimited funds, to win the support of labor. Working men, however, must realize that they will suffer most from this costly and destructive program, the subsidy plan. You can't solve an economic problem merely by spending billions of dollars.

"Before Pearl Harbor, representatives of agriculture appealed to the President to regard food as important as planes, ships, and guns and to encourage maximum food production. Not only was nothing done to give us more food but the policies adopted restricted and discouraged production and brought about the present alarming situation.

"Fred Sexauer, of New York, representing over 30,000 milk producers, warned that there will be a milk shortage in our large cities next winter. Policies now being followed have brought about the slaughter of vast numbers of milk cows that cannot be replaced in 3 years. The wrath of mothers who, as a result, may not be able to get milk for their children can be foreseen.

"The alleged pretext for subsidies is that they will prevent inflation. Nothing could be more absurd or ridiculous. As Mr. Sexauer said, 'The threat of inflation is being used as a bogeyman to induce the Nation to accept social reform, regimentation, limitation of opportunity, and incentive. Before the war ends, it will be used to hide social and economic mistakes and to conceal from the public the sad state of economic affairs into which the Nation has been thrown.

"Our food supply is of vital importance to everyone. It must not be manipulated by politicians for the purpose of winning votes. Food production and distribution must be divorced from New Deal politics in all its phases and be placed in the control of one competent man whose sole purpose will be to give us more food at fair prices. He must know food production and distributing problems, and merit the confidence of our farm population. He must be free from the restrictions and interference of New Deal theorists and have real authority to do the job.

"The people look to you men in the Congress to deal with this great problem vigorously and immediately. The programs of our impractical bureaucrats, who know nothing about food production and prices, are hourly making the situation worse. There must be a complete change in policy and a thorough house cleaning of those who have helped to bring about our present sad plight. Without a doubt, the country will rise up in overwhelming protest against any effort to cover up the administration failures in regard to the food situation by granting any subsidy.

"Emperors of ancient Rome subsidized their people with free bread. That must not happen here, and I hope that you will do your full part in stopping this threatening disaster and help check this further step toward a totalitarian government."

In reading Jim Ottaway's column, Heard About Town, in the Endicott Bulletin, I ran across an interesting poem written by Corp. James H. Lainhart, of Endwell. It sounds a little like Rudyard Kipling's Road to Mandalay. However, its title is "Somewhere in New Guinea." I will repeat it now:

"Somewhere in New Guinea where the sun is like a curse
And each dull day is followed by another slightly worse;
Where the brick red dust blows thicker than the shifting desert sands
And the white man dreams and wishes for the greener, fairer land.

* * * * *

"Somewhere in New Guinea where the mail is always late,
Where a Christmas card in April is considered up to date,
Where we never have a pay day, we never have a cent,
But we don't miss the money, 'cause we never get it spent.

"Somewhere in New Guinea, where the ants and lizards play,
And a hundred fresh mosquitoes replace every one you slay;
So take me back to Frisco, let me hear the mission bells,
For the God-forsaken outpost is a substitute for hell."

Once There Was a Carpenter

EXTENSION OF REMARKS
OF
HON. HAMPTON P. FULMER
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 28, 1943

Mr. FULMER. Mr. Speaker, under leave to extend my remarks in the REC-

ORD, I am inserting a very timely article written by Dr. Montgomery, the Chaplain of the House:

"ONCE THERE WAS A CARPENTER"

(By the Rev. James Shera Montgomery, D. D., Chaplain, House of Representatives)

On my study table this morning is an old scrapbook. As I open the thumb-marked pages, memories begin to crowd my thoughts; on one page my eye is arrested. I read a brief note of a young carpenter, an applicant for the Christian ministry. He was without standing or learning, but was deeply sincere and thoroughly industrious. He was examined by the church council, and when he learned their decision he was pained to hear that he had been rejected on the ground of his lowly station and lack of influence. As he looked back on the members of the council he remarked: "There was once a Carpenter!" His simplicity and lowly spirit drove into their hearts; he was recalled and accepted.

It is not conformity that always works successfully in the art of human redemption; as to the outcome there is but little difference between a groove and a grave. The human spirit must be rescued from certain artificialities which are often cloaked in the garb of respectability. This young man had a credential from almighty God. His memory lingered long as a beautiful song in the lives of those he had enriched. It is no further to heaven from a peasant's porch than from a king's palace. The council lacked the common touch; greet the poor man without making him conscious of his poverty and the unschooled without reminding him of his ignorance.

"Once there was a Carpenter." He was born in a borrowed stable, refused lodging in a neighbor's inn, died on a felon's cross, and was buried in a borrowed tomb. These words echo in my thought like soft waves on a sandy shore, as comforting as though the mellow moonlight had found a voice. There is no work so lowly that a lofty soul cannot transfigure it from drudgery into a divine mission; when one lives in this spirit, labor loses its bitterness and becomes glorified by a high and lofty purpose.

I wonder if there is not in many lives today the tendency to identify usefulness and happiness with some prerogatives of wealth or station, unmindful that character is an achievement rather than an endowment. To underestimate the plain, simple gifts of life which the world so much needs and for which it is appealing, is a grievous blunder and a thoughtless illusion. We are a selfish, spoiled people; since the beginning of our fair land we have never been compelled to pray for our daily bread; the manna has fallen into our laps without sacrificial effort, and we failed to say, "Thank you, Lord." When young and old gather about the tables of plenty and security, which have been purchased by some midnight vigil, perhaps by tears and striving, I would have them feel the stupendous worth of sturdy character, honest toil, and the value of the man with an unwritten and uncalendared name. His is the fortitude of the endless ranks of privates in the battle lines, of the myriads of toilers of earth, sea, and air. Upon them rests the very foundation upon which our Republic must forever stand.

Today, I look straight into the soul of this young man and hear his words: "Once there was a Carpenter." He is a symbol, a living type of what we should be in our daily lives. O America, let us stop complaining, make lean the daily waste and emanicipate ourselves from false pride and self-indulgence. When we stoop to serve, every hardship, every pain will be registered, remembered, and honored. I recall the words of a distinguished gentleman when he said to me: "Chaplain, when I first came to Washington, I had two ambitions—to become great and get rich. Long since these have been replaced by two others: To conform my will to the will of Almighty God and to serve my country to the best of my ability." The good Lord forgive the absurdity of our complaints and let us reckon ourselves as debtors to a stained and crippled world. We have tarried at the Tomb of the Unknown Soldier and looked about where was bivouacked the army of the dead and the very earth seemed hallowed. Who was he? I do not know; but I do know that he was some mother's boy who had loved the things a boy loves—to play ball, to swim, and climb the hills. His country called and he answered; he was "lost in action"; his is not a name, but a memory. Like the lowly Carpenter, may he live in the heart of America.

We men of earth have here the stuff
Of Paradise—we have enough.
Here on the paths of every day,
Here on the common human way
Is all the stuff the gods would take
To build a heaven, to mold and make
A new Eden.

The Forestry Bureau Audits Its Books

EXTENSION OF REMARKS

OF

HON. JOHN PHILLIPS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 28, 1943

Mr. PHILLIPS. Mr. Speaker, in view of the somewhat unusual appropriations, that is unusual so far as the amount of money is concerned, which are now in the process of going through this Congress, I am sure the Members of Congress, on both sides of the House, will be interested in a letter I have just received from a constituent of mine. It is always encouraging to know that agencies of the Government are on their toes and that even though we deal in large figures today, small figures are not being overlooked.

My friend, Mr. Raymond T. Forbes, who now owns the largest motor court in my home city, Banning, was appointed as a forest clerk, in the Dixie National Forest, on May 26, 1917, at a salary of $1,100 per year. Eleven months later, on April 16, 1918, he was recommended for a promotion to $1,200 per year, effective as of that date. He was paid for the period from April 16 to April 30, 1918, at the $1,200 rate, plus increased compensation allowances. Unfortunately, actual approval of the promotion did not become effective until May 1, 1918, and Mr. Forbes was therefore technically overpaid $4.38.

Under date of April 30, 1943, he has received a letter, by registered mail, from the Regional Fiscal Agent of the Forest Service, asking him to forward his remittance in the amount of $4.38 to reimburse the United States for this overpayment of 25 years ago.

As I say, I am sure the Members of Congress will be pleased to learn that there are agencies of the Government which do not overlook the pennies as well as the billions, and I know we are all glad to learn that the Forest Service audits its books at least once every 25 years.

Get the Communists Off the Federal Pay Roll

EXTENSION OF REMARKS

OF

HON. MARION T. BENNETT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, June 28, 1943

Mr. BENNETT of Missouri. Mr. Speaker, after 6 months of hard grind, the Seventy-eighth Congress is about to take a brief recess so that Members can return to their home districts and report to their constituents. I think that this will be a good thing for the country. The Congress should keep in close personal touch with the people. In no other way can it hope accurately to reflect their needs and desires in legislation.

I am glad that I will be able to tell my constituents I have been on the job each day from early until late and have often worked on Sundays. There are no time clocks or 8-hour days on Capitol Hill. I have not only been on the job in my office but have attended to my duties on the floor of this House. The record will show that I am recorded on the roll call votes. I have supported each and every measure to hasten our victory in this war. I have lost no opportunity to strike against boondoggling and extravagance in nonwar expenditures. I have attended all of the meetings of my Committee on World War Veterans' Legislation and am proud of what we have done through that committee for the soldiers of this and the last World War. I have also been active in support of all legislative attempts to simplify, ease, or abolish red tape restrictions on American private enterprise and small business, as imposed by the bureaucrats in the executive department. Although I expect to return to my district for this recess, my office in Washington will remain open and my able staff will continue to serve any constituent who addresses a letter to me at Washington or who requests me in person, in the district, for service which can be obtained for him only in Washington.

THE BATTLE OF WASHINGTON

Mr. Speaker, some of the victories won on the congressional front are just as important to the people of this Nation as victories won on the battle fronts abroad. After all, if we do not preserve at home the principles for which we fight abroad we will have lost the war and victories on the battlefield are empty ones. One of our greatest responsibilities as Members of Congress is to see that our men in the service return after this war to the same free land they left. We have been losing one of these battles on the congressional front the last few months. This battle is the one to get the Communists off the Government pay roll. The House of Representatives has repeatedly refused to make appropriations to pay the salaries of some of these Communists. But, the United States Senate will not concur in our action. To paraphrase the words of Gen. U. S. Grant, "We should fight it out on this line if it takes all summer."

There are many good citizens who think we should not criticize the American Communists. With this I cannot agree. If it embarrasses the Russian Communists I cannot help it. Russia is a valuable ally in this war but she is not fighting for us. She is fighting because she was invaded by our common foe. I am for America first, just as Russia is for Russia first. I don't object because Russia will not allow anybody but Communists on her government pay roll. That's her business. But, I do disagree with the argument of those who say we should not take Communists off of our own pay roll because it might offend Russia. I believe that those men and women who love this Government of ours, and who believe in its legal and constitutional powers, should have the responsibility of running it and that those who foster and associate with any organization, whatever its name, which has for its purpose the overthrow of this Government and our free institutions, should have no official responsibility and draw no pay from the American taxpayers.

Of course, communism is legal in our country. If a Communist is elected to office he can espouse his theories in government and that is all right. But, Communists will not be elected in important numbers if the people know the truth about them. It is evident, therefore, that Congress has a responsibility of making public all information which can be obtained about them. Also, Congress should refuse to make any appropriation for salaries for these people who, filling jobs by appointment, seek to overthrow our form of government, just as would the Nazi enemy. The people have no opportunity to vote directly for or against these appointees.

How can these bureaucrats overthrow the Government? They would seek to do it just the same way Hitler did. They create distrust of parliamentary procedure and of all free institutions. They are smear artists. They spread lies, sometimes through newspapers they can bribe, about their opponents in Congress whom they have the nerve to accuse of disloyal sympathies. In important positions of public trust they gather information of value in sabotage and so weaken the structure of government from within that it is ultimately ripe for revolution or will collapse when hit by a strong military power from without.

CONGRESS INVESTIGATES

Congress has appropriated since 1938 over $800,000 for investigation of subversive activities. The House of Representatives established a special committee to make these investigations. Recommendations of this committee have caused us to refuse to make appropriations for the salaries of several Reds it has investigated and about whom we have been furnished with detailed information. Of course, the President should fire them. They work in the executive department, of which he is head. Congress should not have to take time to single out individuals from among the 3,000,000 civilians working for the Government and fire them by the indirect method of cutting them off at the pockets. But that is all we can do under the circumstances. Each Member of Congress took a solemn oath to defend the Constitution against enemies, foreign and domestic."

Mr. Speaker, recently this House authorized appointment of a second committee from this body to investigate the subversive characters previously investigated by another committee of this same House. While this is a duplication of effort, it certainly would appear that when these two separate committees independently arrive at the same judgment with respect to those being investigated, we should follow their advice. This goes for the Senate too, for it has not been curious enough to make its own investigation. I am not going to take up the time of the House or space in the CONGRESSIONAL RECORD to enumerate the long list of highly paid revolutionaries working for Uncle Sam and attempting, under cloak of the war, to undermine the Republic. Their names and salaries already appear in the RECORD. That RECORD is available to any citizen who asks his Congressman for it. I stand by my votes against keeping these Bolsheviks on the taxpayers' backs. I will not surrender in this fight, regardless of what they and the front organizations behind which they operate, try to do to me in my district at succeeding elections. The people I have the honor to represent are—to use the vernacular of western Missouri—Americans, straight out, and they will continue to stand behind me on this issue.

Connally Bill

EXTENSION OF REMARKS

OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, June 28, 1943

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Coshocton (Ohio) Tribune:

CONNALLY BILL

The Senators who passed the Connally antistrike bill, and the Representatives who are strengthening it, must expect to be subjected to bitter attack on the theory that they are enemies of labor, and therefore of the working people.

That may be true of some individuals. But the measure's supporters include a substantial number of labor's truest friends—men who realize that there is no surer way for unions to destroy themselves than to interfere, by strikes, with the winning of this war.

We are not going to lose the war because of the proportion of time lost thus far in strikes, slow-downs, vacations, and other disruptive activities. But already our victory has been delayed by these. Everyday added to the war costs hundreds—perhaps thousands—of American lives. The vast majority of workers who are sticking to their jobs will profit by having the dilatory minority forced to keep at work.

War Cabinet Needed

EXTENSION OF REMARKS

OF

HON. FRED NORMAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, June 28, 1943

Mr. NORMAN. Mr. Speaker, under leave to extend my remarks, I am inserting in the RECORD today an article by Albert Goss, master of the National Grange, which in my opinion points up a crying need of our Government right now, to wit, a war cabinet.

I earnestly urge the Members of the House to read this article, because it not only emphasizes with remarkable clarity the gross mistakes which have been made, before and during this war, by the present powers that be in our Government, but it presents what I consider a most constructive solution for most of the problems which beset us. I have had occasion before, and I repeat it here, to laud the ability and especially the clear thinking of Mr. Goss. I believe he is a man to whom all Members of the Congress, and emphatically of this administration, also, can listen with profit.

The article follows:

WAR CABINET NEEDED TO PREVENT CHAOS IN GOVERNMENT—NATIONAL MASTER GOSS REVEALS THE FACTS

Washington has been aptly called the national center of confusion. During wartimes more or less disorder can be expected, but the confusion has existed since long before the war. Much of it comes from failure to follow well-established administrative procedure.

Our Government is divided into three branches, legislative, executive, and judicial. The legislative establishes the policies and makes the laws. The executive branch administers the law and carries out the policies so established. The judicial interprets the law when the constitutionality is challenged. The executive branch is the largest, for there all the activities of government are centered, under the supervision of the President.

These activities are too many for any man to handle individually, so they are divided into 10 departments, each under the supervision of a Cabinet member. These Cabinet members comprise the President's operating staff or advisory board.

In addition to this machinery of government, experience has shown that some activities are a combination of executive and judicial responsibilities, so certain commissions have been authorized by law, such as the Interstate Commerce Commission, the Tariff Commission, and the Federal Trade Commission.

On the whole, our Government is intended to be a rather clean-cut, not too complicated, organization. The trouble has arisen from failure to follow the pattern. When the Department of Labor failed to function smoothly, instead of correcting the trouble at its source, a commission was set up to take over some of the activities rightfully belonging within the Department. Working under the handicap of divided authority, it was inevitable that the commission would fail, so another was set up, then another. Most of the new agencies have been superimposed upon the others. Now problems of labor are spread among the Department of Labor, the War Manpower Commission, the

National War Labor Board, the Management-Labor Policy Committee, the Agricultural Labor Division of the War Food Administration, the National Labor Relations Board, and how many more it is hard to tell.

So it goes in the other departments. Where one authority begins and another ends is a subject for continual doubt and controversy. Instead of 10 departments, each headed by a responsible Cabinet member, we have some 60 or 80 boards or commissions operating outside of Cabinet departments, most of them responsible directly to the President. We have had 4 reorganizations of Government in as many years, most of them adding to the number of agencies instead of replacing them, but none of them getting back to the basic policy of straight-line authority.

For example, as Chairman of the Food Requirements Committee, Secretary Wickard could issue directives, but many of them had to be carried out by agencies which were not under the Department of Agriculture, and over which he had no supervision. If his orders were not carried out he could do nothing about it, unless possibly complain to the President.

When war came to Europe, the confusion led to the appointment of William S. Knudsen as chief coordinator, or over-all boss, but he was not given full authority. To satisfy labor, Sidney Hillman, president of the Amalgamated Clothing Workers, was given concurrent powers with Knudsen, so in all matters involving labor—which was practically everything—there was divided authority and the President had to decide. Then came Leon Henderson to control prices, and Donald M. Nelson to control production through priorities, not supplanting any existing agencies, but in effect superimposed on them.

For a while Henderson seemed king of the roost. His technique was to run to the President with a program and get a decision before any Cabinet member or head of any independent division had been consulted, so he usually had his case won before the battle opened. This and other activities led to such complete confusion that Justice Byrnes was brought in to head a new over-all organization known as the Office of Economic Stabilization, with authority over almost everyone else.

Thus there have been many men in places of major responsibility but they have failed to coordinate our various activities. It is not their fault, for they have been some of the ablest and most sincere men in the whole Nation. The trouble has been in the limited authority under which they worked.

Divided authority had resulted in placing restrictive price ceilings over foods which the Food Administrator was trying to get produced in abundance. Congress had tried to give the Secretary of Agriculture authority to approve ceilings, but technical rulings prevented such operation, and the Secretary was left with insufficient authority to match his responsibilities. Finally the office of War Food Administration was set up under Chester Davis, to be responsible directly to the President. One of the first basic decisions made in cooperation with the Office of Price Administration Administrator Brown was to use rationing instead of ceilings to control meat supply and prices. The decision had hardly been made when still another reorganization took place, creating the War Mobilization Board under Justice Byrnes, which is another over-all authority board, and the meat decision was reversed.

This last over-all authority has been called a war cabinet. A war cabinet is exactly what is needed, but this is nothing of the sort. The vital industry of food production is not even represented on this board. If the total resources of the Nation are to be mobilized in the most effective way to win the war, all branches of our economy must be represented in a war cabinet, and the decisions must be made as to the merits of conflicting interests. Manpower, materials, food, and transportation must all be used where they will best serve the over-all cause.

Those responsible for the various activities of government (and this should be mostly Cabinet members) should be brought together and their problems worked out jointly. Where conflict cannot be settled otherwise, the President should decide, and when the decision is made, each should adjust his plans to fit. That is a war Cabinet. Unless the President sits in on the final discussions and hears all sides of the question, he is not able to decide intelligently. Without such a Cabinet he hears only one side and makes his decisions without the advantage of seeing all the facts.

That is what a Cabinet is for. That principle is followed in all successful business as well as in governments. It means straight-line authority, with the President as final arbiter, and all responsible heads having an opportunity to present their cases fully.

Lincoln had such a Cabinet. All decisions were discussed with his Cabinet almost daily. Most issues were resolved in the discussions; at times Lincoln took the responsibility, but not without full discussion. The Emancipation Proclamation was such a decision.

Wilson had such a Cabinet. They met every morning during war days. All problems involving the coordination of departmental activities were brought up and decided upon. Where agreement was not reached in discussion, President Wilson decided; then all went to work under the decision.

President Roosevelt needs such a Cabinet. He cannot decide all questions himself. Neither should he try to delegate this responsibility to someone else. It belongs to him. Instead of nearly a hundred agencies with overlapping authority, there should be few, if any, not under the supervision of his Cabinet members, and the Cabinet should be his advisory and operating board. If he feels that his Cabinet members are not qualified to handle the job, he should get men who are qualified. Then, and not until then, will the various departments know what the others are doing, and all our resources be properly coordinated and mobilized to win the war.

Fraternally,

A. S. Goss,
Master, National Grange.

Retention of Japanese in Relocation Centers

EXTENSION OF REMARKS

OF

HON. RICHARD J. WELCH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 28, 1943

Mr. WELCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

"Whereas by reason of the present war between the United States and Japan, all persons of Japanese ancestry have been removed from the area of the Pacific coast and placed in relocation centers distant therefrom; and

"Whereas there has been evidenced in the press a movement in the United States to release certain of said persons of Japanese ancestry from the said relocation centers; and

"Whereas many such persons of Japanese ancestry resided in the Pajaro Valley and near Watsonville, Calif., and by reason of which fact the citizens of this locality have had occasion to deal with and understand the characteristics and nature of such persons: Now, therefore, be it

"*Resolved*, That all persons of Japanese ancestry be retained in relocation centers for the duration of the said war and that none be released during the duration except upon approval of and under the supervision and control of the military authorities of the United States, and only then if such release is deemed to be in the furtherance of our war effort."

This resolution adopted this 25th day of May 1943 by the board of directors of the chamber of commerce of the Pajaro Valley, at Watsonville, Calif.

EARL G. CALLENDER,
President.
FRANKLIN LOWNEY,
Secretary.

Proposed Subsidy and Roll-Back in Food Prices Is Economically Unsound

EXTENSION OF REMARKS

OF

HON. JAMES V. HEIDINGER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 28, 1943

Mr. HEIDINGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include a letter which I recently received from Leo V. Horton, one of the representative businessmen of Mount Vernon, Ill.:

JUNE 11, 1943.

HON. JAMES V. HEIDINGER,
Old House Office Building,
Washington, D. C.

DEAR CONGRESSMAN HEIDINGER: To my mind, a very dangerous trend has started in the Office of Price Administration principally, but signs of this same trend are noticeable in other departments of our Government. I refer to the matter of subsidizing certain businesses and commodities. It is my opinion that 90 percent of the businessmen in America despise the idea of being subsidized by government.

It is further my opinion that a great number of us would rather pay the price necessary to produce our commodities than to pay a price to the retailer or wholesaler, as the case might be, knowing at the time of purchase that part of the cost of this commodity has been paid for indirectly by taxation.

Irrespective of the fact that we have the finest government on earth, it is an indisputable fact that inefficiencies exist. It is absolutely essential for any subsidizing Government agency to collect a greater amount of money from the American people through taxation than the amount of subsidy. Such a practice is absolutely nonsensical and serves no good purpose, in my opinion.

It is far better to pay 45 cents a pound to a grocer for coffee if that is the cost than to pay 35 cents a pound, knowing at the time you pay the 35 cents that your Government has taxed you for the other 10 cents, plus an additional amount to offset the cost of administering the subsidy.

Cordially yours,

LEO V. HORTON.

New Deal Star Gazing and the Food Subsidy Proposal

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 28, 1943

Mr. MUNDT. Mr. Speaker, strangely reminiscent of the late but unlamented Alice-in-Wonderland days when New Dealers were thinking up leaf raking projects and sponsoring the indiscriminate slaughter of little pigs is the latest demonstration of the perpetual unwillingness of President Roosevelt and his galaxy of New Deal star-gazers to face the facts of economic life in these United States. I refer, of course, Mr. Speaker, to the starry-eyed proposal that we meet the food crisis which New Deal bungling has produced in this country by the bland formula of rolling back prices and providing food subsidies in the form of Government checks to producers whom this administration seems unalterably opposed to have receive either the cost of production or fair parity prices for their labor and products. This latest suggestion from the realm of fables and fairyland seems destined to set a new all-time record in New Deal failure to support practical proposals for meeting specific problems in the field of our domestic economy.

Mr. Speaker, reduced to its basic realities, the food-subsidy program is nothing more nor less than a bare-faced and unconscionable attempt to foist upon future generations the cost of feeding ourselves during this war emergency. Even worse, Mr. Speaker, it is a thinly disguised attempt to load upon the servicemen now fighting this war a tremendous additional tax burden caused by the huge subsidies President Roosevelt is asking Congress to provide so that today's civilians can purchase butter, meat, and coffee at a few cents less per pound, while war workers are receiving the highest wages in American history. It is, in fact, a nicely worded but nasty scheme to load upon tomorrow's taxpayers the costs of today's grocery bills, and if it succeeds with butter, meat, and coffee, the New Deal schemers will doubtless call for its extension to clothing, gasoline, flour, and perhaps even cigarettes and liquor. Carried to its logical conclusion—if the word "logic" can conceivably be used in relationship to such a nonsensical policy—it might mean that about the time the fourth-term Juggernaut really begins loading in the votes, it would provide free meal tickets and clothing rations to all citizens with the stipulation that the Government would pay for the purchases out of taxes to be collected in the dim and distant future. Mr. Speaker, it is time we quit kidding ourselves and that we notify those in high places that the honeymoon with the Wizard of Oz is over.

Certainly the very least we can do today on the home front is to pay for our own groceries and our own clothing and not engage in any New Deal hocus-pocus in an endeavor to shift these costs across the years so that the returning veterans of this war will find them added to the colossal tax burdens which they already will be called upon to bear.

Yesterday Chester C. Davis rendered a great public service when he dramatized his opposition to such lack-wisdom proposals as the food-subsidy program by handing in his resignation as America's War Food Administrator. Even the President's own personal appointment, in this case, could not compel himself to support a food-subsidy program which, in an effort to cater to a few vociferous eastern labor leaders, would shave a few cents off their grocery bills by saddling millions of dollars of new debt upon the taxpayers of tomorrow. It is hoped that the patriotic and courageous action of Chester Davis in resigning from the position which he was so well qualified to fill will awaken the New Deal high command from the dreams in which it had been dozing and stimulate the President to cooperate with Congress in discarding the whole food-subsidy witchery for a program of production and price regulation which is more nearly in conformity with American ideals and traditions.

At most, the maximum savings which any individual could enjoy from the President's food subsidy program for butter, coffee, and meat if he bought all of these supplies to which he was entitled would be $3.92 per year. I doubt if there is a single loyal citizen in this country today, Mr. Speaker, who so begrudges this $3.92 to the producers of foodstuffs that he would want to shift that payment to the shoulders of some soldier, sailor, or airman now fighting in north Africa or New Guinea. Furthermore, the history of New Deal bureaus and agencies is such that if the food-subsidy program is continued it will probably mean that another $3.92 per individual would be charged up in the administrative overhead and the innumerable political appointees needed to enforce, audit, regulate, check, counter-check, and supervise the payments of food subsidies, thus actually costing the taxpayers perhaps twice as much in the long run as would be the case if we follow the ancient and honorable practice of paying for what we eat as we eat it.

Mr. Speaker, the food-subsidy program is the most inflationary single proposal yet to come from the classroom economists who now and always hold the key positions in the planning sections of the New Deal political wigwam. If we store up purchasing power now by refusing to pay for our own grocery bills, we store up along with that purchasing power the most dynamic force for inflation that the mind of man has yet conceived, and we do it without rhyme, reason, conscience, conviction, precedent, or principle. The time has come to put a fast and final end to such economic perversions and to get on with the real problem of gearing food production and the costs of living to the other factors involved in our war effort on a basis of genuine parity which will provide equity for all and privilege for none.

In this connection, Mr. Speaker, I wish to call attention to a very sound and sane editorial appearing in the Sioux Falls (S. Dak.) Daily Argus-Leader, and written by Mr. Ralph O. Hillgren, whose political observations are well known to thousands of readers in the Middle West. The editorial is entitled "No Compromise":

NO COMPROMISE

Not for a long time has the Nation been so stirred as it is now over President Roosevelt's plan to compensate food processors for coffee, meat, and butter price reductions by payment of subsidies.

There have been tremendous repercussions in the Farm Belt, where the food processors weren't sure of getting the subsidy and for that reason passed on the price reduction to the farmers. Hit by uncertainty themselves, several packing plants have closed their doors. Farmers' marketings declined and civilian meat supplies in many areas have been sharply reduced.

In connection with consumer supplies, the Government made no provision for payment of subsidies on butter in transit or in warehouses, and when a cry arose that millions would be lost to the wholesalers and processors by the price roll-back, the Government decided to buy up such supplies. It bought butter to the extent of 100,000,000 pounds, according to the American Dairy Association. When this large amount was removed from the domestic market there were many consumers who had to get along without butter.

The subsidy plan is an example of economic bungling that just about takes the cake.

Reasoning of Roosevelt and his followers is that unless the prices were rolled back there would be new demands on the part of labor for wage increases, and with such demands the danger of inflation would be heightened.

As a matter of fact, the Roosevelt subsidy plan represents the real inflation danger. The estimated total of subsidies is $450,000,000, and added to that is another $50,000,000 for administration. The butter-meat-coffee plan, however, was only a starter. Plans were being formed for the expenditure of perhaps a couple billion annually. Labor leaders who campaigned for the subsidy plan mentioned these figures. If you want to know how much a billion dollars is, just recall that all the expenditures of the Federal Government in 1916 were less than this amount.

By the price roll-back, of course, milady would save some money in buying the weekly grocery supplies. How much? Representative AUGUST ANDRESEN of Minnesota has calculated that fullest possible savings per individual, if he bought all the butter, meat, and coffee he were allowed under the ration plan, would be $3.92 per year.

It must be remembered, however, that the Government would have to borrow money to pay the subsidy. Representative ANDRESEN estimates that if the Government bonds are paid off in 50 years, the subsidy plan will cost the average taxpayer approximately three times what he saves, in subsidies, interest, and administrative expense.

The American people can well afford to pay the former prices on coffee, butter, and meat. There is no lack of money in their pockets. The only trouble is that there's too much money. Too much money in consumer's hands, with too little goods to be had, brings rising price trends, which is inflation.

Then there's the inflation danger, too, in excessive Government spending. Remember Germany and her experience after the last war, when issuance of printing press money led to a decline of the mark until it was 1,200,400,000,000 times as valueless as in 1914.

Senator ROBERT TAFT of Ohio proposed a compromise, with less money than the squandering Roosevelt would spend. To our way of thinking, if something's wrong in principle it isn't a subject for compromise.

In Answer to an Editorial in the Wichita Beacon

EXTENSION OF REMARKS

OF

HON. HAMILTON FISH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 28, 1943

Mr. FISH. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include the following letter I sent to Louis Levand, publisher of the Wichita Beacon, Wichita, Kans., in reply to a letter he sent me on April 12, 1943, and an editorial which he printed in the Wichita Beacon.

Mr. Levand made numerous unfair and untrue statements in the columns of his newspaper relative to me and a bill I introduced in Congress, and as far as I have been able to learn has refused to publish my reply setting forth the facts.

It is an established custom of all responsible newspapers to publish replies or retractions when misrepresentations and unfair attacks such as has been made by Mr. Levand are made on a person in public life. Since Mr. Levand has not had the courtesy to print my reply or answer my letter, I feel it is my duty to insert my letter in the CONGRESSIONAL RECORD, so that the facts as set forth will be available to the fair-minded American public.

The letter follows:

HOUSE OF REPRESENTATIVES,
Washington, D. C., April 16, 1943.

Mr. LOUIS LEVAND,
Publisher, the Wichita Beacon,
Wichita, Kans.

DEAR SIR: Replying to your letter in regard to my views, I am opposed to all communistic Americans and their fellow travelers who seek to destroy our American system and constitutional government. I am in favor of placing the interests of America ahead of the British Empire, Soviet Russia, and any and all foreign Nations.

The British and the Soviets always put their interests uppermost, for which I commend them. It is about time for us in this country to place our own welfare first, last, and all the time. If this be treason make the most of it.

I served in the last war and was decorated by our own Government and the French for gallantry on the battlefields of Europe against the Germans. I have no use for Hitler or the Nazis, but that does not mean that I must embrace communism or the New Deal in America or refrain from criticizing both.

I stand with Thomas Jefferson for free speech and a free press, and against peacetime sedition laws that would set up a Gestapo and prevent criticism of the administration, the New Deal bureaucracy, President Roosevelt, communism, or even the conduct of the war. Without free speech a free America ceases to exist.

I am in favor of punishing direct attempts to create disorders and mutiny in our armed forces in peacetime, but only upon substantial evidence of the fact and proof of willful intent, in the district where made. My proposed amendments are merely intended to reassert the Bill of Rights, and to prevent any American citizen from being deprived of his Constitutional rights. My proposal would help to prevent the persecution of all minority groups in peacetime, and has nothing whatever to do with sedition or treasonable acts during war.

I do not know anything about you, but when I receive such an intemperate and hysterical letter as yours I am led to inquire, How long have you been an American citizen, and what nation did you come from?

My family left England over 300 years ago to escape from civil and political persecution, and that is why I oppose its revival here. My ancestors have lived in America ever since, and have served in all our wars, and know no other yardstick except what is best for America.

It would be interesting to know what wars you have fought in, and what right you have to impugn other peoples' motives, who have served their native land loyally in peace and in war.

I voted for war, and have supported all war measures since Pearl Harbor, and have consistently urged a total war of service and sacrifice until final victory.

Very truly yours.

P. S.—I trust, in all fairness, that you will publish this letter in the columns of your newspaper, in view of the misrepresentations contained in your editorial under the title "Proposes Immunity for Our Enemies." My amendments are aimed to safeguard the rights and liberties of American citizens under the Bill of Rights, and do not apply to wartime.

H. F.

Immediate and Positive Action Is Required To Meet the Critical Food Problem in This Country

EXTENSION OF REMARKS

OF

HON. JAMES V. HEIDINGER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 28, 1943

Mr. HEIDINGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit herewith for the consideration of the Congress, the following resolution recently adopted by the Conference of Midwest Farm Bureaus of the American Farm Bureau Federation:

JUNE 24, 1943.

To United States Senators and Representatives from the Midwest States,
Washington, D. C.:

At a conference of Midwest farm bureaus, meeting in Chicago today, the following resolution was adopted:

"Immediate and positive action is required to meet the critical food problem in this country. In order to avert disaster on the food front, it is our considered opinion that all necessary authority over the food problem must be centered in one individual. A clear-cut, understandable, and effective food policy in this country now is an indispensable factor, without which the war cannot be won. We therefore urgently recommend that all control over production and distribution of food, including pricing and rationing policies, be given our capable and courageous Food Administrator, Chester C. Davis. Continuation of the present muddled food policy will jeopardize the food supply and will incur the just condemnation, not only of farmers but of all patriotic Americans."

CONFERENCE OF MIDWEST FARM BUREAUS OF THE AMERICAN FARM BUREAU FEDERATION.

Andrew Jackson Higgins

EXTENSION OF REMARKS

OF

HON. JOSEPH J. O'BRIEN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 28, 1943

Mr. O'BRIEN of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article:

ANDREW JACKSON HIGGINS HONORED—RECEIVES HONORARY DEGREE OF DOCTOR OF LAWS FROM THE CREIGHTON UNIVERSITY

On Thursday morning, May 14, the Creighton University of Omaha, Nebr., conferred upon Andrew Jackson Higgins, president of Higgins Industries, Inc., the honorary degree of doctor of laws.

The citation covering the degree was presented by Dean Walsh, of the College of Commerce. It read:

"Andrew Jackson Higgins, is a native son of Nebraska, an alumnus of the Creighton University, a former officer in the Nebraska National Guard, a naval architect and inventor, a master of industry and mass production of ships to save democracy. Tradition honors the men who go down to the sea in ships. Today we honor a man who sends ships down to the sea. By his daring and courage and inspired leadership in our fight for freedom, he is no longer a citizen of any one city or State but of all America, and merits from his alma mater the degree of Doctor of Laws honoris causa."

This was followed by a special citation presented by the old instructor of Mr. A. J. Higgins, Rev. F. X. Reilly, S. J., A. M., professor of English. This special citation and real tribute to our chief follows:

HONOR TO WHOM HONOR IS DUE

"On the heights of great endeavor,
Where attainment looms forever,
Pass the victors, many gifted,
Where the heavens open wide."

The annals of the race are the record of man's achievements. What man has accomplished is traceable to the vision and leadership of individuals. They are remembered long and favorably because of the service they rendered to their country and their fellow man. Such a man is Andrew Jackson Higgins. His life and his deeds are his eulogy. No words of mine could add a cubit to his stature.

As in the case of other men like him, we find the secret of his success in his readiness to give to his little world the benefit of the acquisitions of fruitful years. These men may have made the opportunity, or they may have seized it; at any rate they recognized it for what it was and made the

most of it. They had prepared themselves efficiently for the task ahead of them and were ready when the time came. In some instances successful careers may look like the workings of chance; in other cases, fortune, family, or favor may seem to be the ready answer, but investigation will show that it was largely a matter of aptitude of mind, plus the requisite knowledge and power. This is as it has always been, for life is what we make it; it is never a thing of chance.

"The boy is father of the man. If in youth he has been a dreamer, he will not fail to catch life's sweetness and richness; if he has projected himself into the future and has been himself accomplishing the things he dreamed of, he may well hope to get out of the future all that he longs to attain. He may be shooting his arrows at the moon, or hitching his wagon to a star, but he will go faster and get farther for all that.

"Men who have done any notable work in the world have felt the consciousness of its importance as fire in their bones. It carried the soul at white heat to the perfection of the work in which it was engaged. We may well marvel at what men have accomplished when they brought enthusiasm to their work; when they would rather be doing that particular job than anything else in the world. Enthusiasm enables a man to accomplish the seeming impossible, because it will not permit him to see anything ahead save success. He aims straight, shoots straight, with no thought of allowing himself to wander, or his purpose to flag. As to ways and means, ingenuity is begotten of enthusiasm, for it makes him equal to any struggle against circumstance."

Like love, it will find out a way and obstacles will melt or vanish. Achievement is the record of enthusiasm. Thus it has been with Andrew Jackson Higgins. The boy was father of the man, in youthful vision, in sincerity, in initiative, and in courage. For these, we honor Andrew Jackson Higgins, the man.

The honorary degree of doctor of laws was also presented to Arthur James Lowman, of the Northwestern Bell Telephone Co.

On completion of the presentation at the commencement exercises, Mr. Higgins together with the graduates recited the Creighton pledge, which is as follows:

THE CREIGHTON PLEDGE

The faculty of the Creighton University are met here today to welcome you into the company of learned men and women.

Throughout your undergraduate years this university has endeavored to inspire you with a zeal for truth, an appreciation of beauty, and a love for virtue in philosophy and letters, in arts and science, in religion and law.

From the ancient groves of Athens and Alexandria, from the medieval halls of Bologna and Paris, Salamanca and Oxford, from all our modern seats of learning your predecessors have gone forth marked by culture, filled with zeal for truth, trained to lead their fellow men.

When you are granted the degrees that admit you to the honor roll of graduates of the Creighton University you are entering that select company of men and women of all ages of all countries who have enjoyed the privilege of university training and who bear before the world the duties and responsibilities of men and women of scholarship and culture.

In their name I charge you to be true to the ideals you have learned and in particular to the supreme principle of your training:

ALL FOR THE GREATER GLORY OF GOD

In this, the hour of your graduation, it is fitting that you declare your purpose in life by repeating this solemn pledge:

I pledge myself:

To hold this degree as a sacred trust.

To keep my honor without stain.

To be loyal to my country and my flag.

To serve God and my fellow men.

To be true until death to the Creighton Ideal.

May the Lord direct you in all your works and further you by His help and grace; that all your actions may begin, continue, and end in Him to the greater glory of His holy name—the name of the Father and of the Son and of the Holy Ghost.

As a youngster, Andrew Jackson Higgins attended The Creighton University. His student days at Creighton influenced his later life. The Creed of Creighton has ever since been the creed of Andrew Jackson Higgins.

The Creighton University refuses to subscribe to the doctrine that academic freedom may be used as a pretext to teach systems which destroy all freedom. We proudly boast that it has always taught and always will teach the following creed:

We believe in God.

We believe in the personal dignity of man.

We believe that man has certain rights which come from God and not from the state.

We, therefore, are opposed to all forms of dictatorship holding that the "total man" (totalitarianism) belongs to the state.

We believe in the sanctity of the home—the basic unit of society.

We believe in the natural right of private property, but likewise that private property has its social obligations.

We believe that labor has not only rights but obligations.

We believe that capital has not only rights but obligations.

We are vigorously opposed to all forms of "racism"—persecution or intolerance because of race.

We believe that liberty is a sacred thing, but the law, which regulates liberty, is a sacred obligation.

We believe in inculcating all the essential liberties of American democracy and take open and frank issue with all brands of spurious democracy.

The Home Guards

EXTENSION OF REMARKS

OF

HON. W. STERLING COLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 28, 1943

Mr. COLE of New York. Mr. Speaker, from time to time anonymous communications reach me from persons in my district but none of them have ever received serious consideration from me until the one which has just arrived from a resident of Corning, N. Y., who sends a poem composed by an American soldier a short time before he was killed in action.

In these days of selfishness and strife by those of us who have stayed home, when we moan and complain about our rationed allowances and the fact that we cannot drive our car to attend a movie, or when we strike on the job that we are doing which will produce the things those boys out on the fronts need to defend themselves and bring victory to our flag, it is well for us to give heed to this expression from the pen of one who died unhonored and nameless in defense of his country and whose lips are forever silenced by the awful hell of war. He was some mother's son, the object of her life and sacrifice and love. He was but one of thousands who are out there suffering unspeakable pains and hardships, all in the name of America, and for us.

It is well for us to give an attentive ear to the innermost thoughts of that boy who volunteered to die for his country.

The poem follows:

THE HOME GUARDS

I'm pulling all my punches, I've flung my "weeks" away.
I think it's been two months at least since I drew my pay.
I'm tired of being a dogface, so help me God, I am,
Of eating molded biscuits, with margarine or Spam,
Of fighting dirty, stinking Japs in the bushes on my own,
When I think of "Dear Old America" and my pals who stayed at home.
I can see them walking down the street, their chests puffed out with pride.
Hear them talking to the girls, as they save their precious hides.
While I'm here in New Guinea, not even safe to show my head,
For fear some skulking Jap might fill it full of lead.
Back when I told the folks at home that I volunteered to fight,
They said, "God bless you, son, and return you home all right."
They called me a chocolate soldier, a $21 tourist too.
They said, "You'll never see the front or even get a view,
What's more, you'll have a picnic across the ocean foam."
But they made damned sure they didn't go—they preferred to stay home.
You know those guys, not bad shots when they trailed a rabbit track.
But, hell, there ain't no danger, see, for a rabbit don't shoot back.
They shine among the "stay at homes" and brag of our United States,
But dance halls, bars, and poolrooms are where they meet their fate.
A cue stick is their rifle, and their beer rich with foam.
They have no bullets there to dodge—my pals who stayed at home.

The Japanese Problem on the Pacific Coast

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, June 28, 1943

Mr. ANGELL. Mr. Speaker, as I have heretofore pointed out to the House, there are thousands of Japanese in the three Pacific Coast States and a large number in my own State of Oregon. Many of these Japanese who were removed from these States and placed in relocation centers have been released. The people of my district are opposed to the releasing of Japanese and permitting them to return to the Coast States.

Portland Post No. 1, American Legion, on June 21, 1943, carefully considered this matter and passed unanimously a resolution setting forth the views of the organization. In accordance with authority heretofore granted, I include as a part of my remarks this resolution, which is as follows:

Whereas a state of war exists between the United States of America and the Japanese Empire; and

Whereas there are at present many thousands of Japanese who are at present domiciled in Relocation Centers in the far Western States which Relocation Centers are at present under the supervision and authority of the War Relocation Authority and are not under the direct control of the Army of the United States; and

Whereas the members of Portland Post are firmly of the belief and opinion that more adequate and effective supervision and control of all Japanese in the country can be had and obtained by placing the responsibility for their control, custody and supervision upon the military authority of the United States; and

Whereas the membership of this post is also of the opinion that the native born loyal Japanese of American citizenship should be given the opportunity of demonstrating their loyalty to the United States and should not be indiscriminately classified as alien enemies, merely because of racial ancestry; and

Whereas in our opinion loyal American citizens of Japanese ancestry by reason of their ancestry and racial characteristics and knowledge of the Japanese language are best qualified and in a position to render unusual and exceptional service to the entire world in the reorganization and rehabilitation of Japan upon the conclusion of hostilities and in the education of native Japanese in the principles, form and procedure of representative government to the end that a democratic form of government be established and perpetuated in Japan: Now, therefore, be it

Resolved:

1. That immediate action be taken and the control, supervision, and maintenance of all relocation center be transferred from the War Relocation Authority to the War Department.

2. That upon such transfer, immediate action be taken to segregate loyal American-born Japanese and that they be transferred and assigned to separate relocation centers outside the States of California, Washington, and Oregon, where under the supervision of competent instructors and in general accordance with the operation of an American Legion boy State they may elect their own officials and organize such center as an American community governed by representative government.

3. That upon the conclusion of hostilities the graduates of these American communities be enlisted or inducted for emigration to Japan and established in positions of authority, according to their qualifications and abilities, to form a nucleus and to pioneer democratic government in Japan and to act as teachers in the schools of that country so that a democracy may be established and perpetuated in Japan and all her possessions.

4. That foreign-born and/or enemy Japanese and such others as investigation may show to be disloyal to, or unsympathetic with a democratic form of government, be confined in concentration camps and there remain under such proper military guards as will adequately confine and control them and protect the lives and properties of American citizens; that at the conclusion of hostilities such enemy aliens shall be deported to some locality where they will not be a handicap, detriment, or obstruction to the rehabilitation of Japan proper, or impair the establishment of a democracy in Japan; and be it further

Resolved, That copies of this resolution be sent forthwith to our Senators and Representatives at the Nation's Capitol so that their support be enlisted and they may exercise their best efforts to secure the immediate passage of such legislation as is necessary to accomplish the intent of this resolution, to wit, to provide for the eventual elimination of all Japanese residents in the United States by due and orderly process of law.

PORTLAND POST, No. 1,
THE AMERICAN LEGION,
Portland, Oreg.

Congress Revolts

EXTENSION OF REMARKS
OF
HON. EARL C. MICHENER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, June 28, 1943

Mr. MICHENER. Mr. Speaker, if the comment of the press throughout the country is indicative of the general feeling of the people, then the recent action of the Congress in asserting its prerogatives is most timely.

During the last 10 years most of the important legislation passed by the Congress has been based on emergency requirements. Much legislation has been enacted that would not be given passing consideration by the Congress were it not for these alleged emergency necessities. The people are perfectly willing to meet emergencies, yet they are very much opposed to this type of legislation becoming a habit on the part of the Congress. Little by little more power has been concentrated in the administration and its administrative bureaus in Washington; indeed, this practice has gone so far that the daily lives of our people everywhere throughout the land are regulated and controlled to some extent from Washington. The country is now demanding that we return to constitutional government at the earliest possible date and Congress is charged with the responsibility of bringing this about.

A typical editorial giving expression to these views appears in the Monroe (Mich.) Evening News, and I am including it herewith. It is as follows:

CONGRESS REVOLTS

The issue is growing ever more sharply drawn between bureaucracy and representative government. It has been a long time coming. This Congress, which took office in January, was elected with a fresh mandate from the people to reduce government by edict and administration by theorists. It fumbled around for a while, not knowing how to use its new power. Republican and Democratic Members could get together on no common ground from which they could strike at entrenched bureaucracy or lessen the power of administration pressure groups. It looked as though Congress was going to get sidetracked indefinitely on a financial issue that became a partisan issue and widened the previously narrowing gap between Republican and Democratic concepts of how the war should be won.

But with the tax question at last out of the way, Congress has begun to find itself, and is sniping shrewdly at the aspects of government the people wanted brought within bounds. At first it only pecked away ineffectually at appropriations for feeble, run-of-mine bureaus such as the Farm Security Administration, and at individual bureaucrats in a few agencies who had incurred its displeasure. These took on an appearance of merely spite work, the kind of political backlashing that does Congress no good and certainly was contributing less than nothing toward the major issue which the people had directed Congress to attack.

But in the last few weeks the Congressional machine has begun hitting on all six. In the course of a few days it enacted a strike-control bill which marked the first turn in the tide since 1933 in labor legislation by imposing restrictions on union activities. This is evidenced in the violence of union reaction to the bill, but neutral observers see in the measure an opportunity for labor to redeem itself from its pitifully feeble attempt to curb spontaneous and undisciplined strikes and find nothing in the bill harmful to sound labor practice.

Next the House took it upon itself to write some exceedingly shrewd manifestations of the people's will into appropriation bills for the Office of Price Administration and the Office of War Information. No one expects all these restrictions on the two bureaus to travel intact the long road to enactment, but in their first full impact they certainly gave pause to the bureaucrats in all agencies and some features of them are bound to be written into law.

One of the shrewdest, and one that must appeal for popular support is that written into the Office of Price Administration appropriation requiring any administrator to qualify for his position by at least 5 years' experience in the field which he is assigned to regulate. This cuts the ground out from under the theorist and if it can be made to work restores government regulation to the hands of men competent to deal with practical problems.

Office of War Information probably not be vivisected as the House bill now stands. Elmer Davis says that cutting the domestic division off means no Office of War Information will be left. There is also a question as to which phase of Office of War Information's activity has been more mismanaged, its domestic or foreign branches. But certainly the fourth term zeal of Office of War Information's bureaucrats will have less chance for free play at Government expense when Congress gets through with the appropriation.

These are hopeful signs. They indicate that Congress has at last got its feet on the ground and is not suffering from the same Washington complex that animates the bureaucrats. It is beginning to think, and to act in some measure of unison. It has taken a long time, but at last the people's representatives seem to be on the right track.

Congress of Industrial Organizations Investigation of Absence of Members From Vote on Antistrike Bill Veto

REMARKS
OF
HON. PAUL STEWART
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 28, 1943

Mr. STEWART. Mr. Speaker, on Sunday the Washington Post carried an Associated Press story with a New York date line that stated that the C. I. O. is sending 500 representatives here to query Members of Congress and investigate the absence of certain Members last Friday.

I want to say to my colleagues who were not present, "I would not have any fears." I wish they would send their whole delegation to see me. I would like to entertain them and tell them what their greed and unfairness have done to them. I would not be alarmed over that at all because I think the trend of the country is that the leaders of the C. I. O., the A. F. of L., and the United Mine Workers are going to take a back seat henceforth. The people are going to run the Government. High pressure and threats are going to make it possible for us to return to constitutional government, and this country is wide open and begging for it.

Congress has shown its steel in calling William Green's bluff and the issues are made up and we predict that this Congress will follow the will of the people and the people are for cleaning up all this racketeering and the unlawful charging of fees to work on a Government project and all-out against strikes. Americans are more hopeful today than they have been at any time since the convening of this Congress; they have more faith in their legislative branch of government. After all the greatest sacrifices we might make are but secondary to what our brave boys are doing in battle and it makes me sick when these labor leaders and news commentators try to leave the impression that the workers of America, especially the organized labor groups, are the only ones that are making possible our successes. We farmers, sawmill workers, cattlemen, small businessmen, many times greater in majority, never come in for favorable consideration. Possibly I have been more outspoken in my opposition to the disloyal acts of some labor leaders than the most of you. May I add, aside from passing good and wholesome laws we must look into the administration of these laws and see that they are properly executed and obeyed.

The majority of the people are entitled to a majority representation on each and every board and commission created, and we must demand such recognition. When the truth is known we will learn, in my opinion, that in a majority of cases the unions will or have had the final word in the making of decisions and promulgating policies. The unions should account for their many millions of dollars acquired by the wrongful charging of exorbitant fees for the right to work for our Government and made pay an income tax. It is indeed a bad day when our Government employees reach the point where they feel they have to join a union in order to receive favorable consideration. I am all out against such practices and shall not cease to let it be known. A new day is at hand, and we must call the enemies' hand upon the least intimidation, and encourage our soldiers and their loved ones at home. I propose to bring to your attention every threat of unfair play. The union leaders should not be self-appointed and self-styled; we are a democracy and should let the majority speak. We are prone to believe that the farmer, unorganized worker, and the businessmen are going to be on the alert in 1944, and every move on the part of these strike callers will be open for public discussion. When any group is given more power than is guaranteed under the Constitution, it is time to change the laws. A few more threats and a few more attacks will make us all conscious, and we can meet the enemy face to face. Remember this: You can go along with organized labor a thousand times, but if you have one thought contrary to their demands you are everlastingly branded as an enemy, and since the most of us have been thus branded, now is the time to legislate for the great masses and remove the yoke of oppression. The article in the Washington Post is as follows:

CONGRESS OF INDUSTRIAL ORGANIZATIONS SENDING 500 TO QUERY LEGISLATORS

NEW YORK, June 26.—The Greater New York Congress of Industrial Organizations Council announced today it would send a 500-man delegation to Washington Tuesday to demand "full explanations" from 13 New York City Congressmen who were absent from the House when the anti-strike bill veto was overridden.

The Congress of Industrial Organizations group said its delegation also would demand:

1. Immediate enactment of President Roosevelt's price roll-back and subsidy program.

2. Restoration of cuts in appropriations for the Office of Price Administration, Office of War Information, and other agencies.

3. The outlawing of "all forms of racial discrimination."

Given out with the announcement was a joint statement in which the Congress of Industrial Organizations Council's secretary, Saul Mills, and Joseph Curran, president of the National Maritime Union and national Congress of Industrial Organizations vice president, called overriding of President Roosevelt's veto of the Smith-Connally anti-strike bill yesterday "ill-tempered and insulting."

The Tulsa (Okla.) Chamber of Commerce Favors Repeal of the Chinese Exclusion Law

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 28, 1943

Mr. CURTIS. Mr. Speaker, I wish to extend my remarks by inserting a letter that I have received from the Tulsa (Okla.) Chamber of Commerce, bearing date of June 22, 1943, which letter is as follows:

TULSA CHAMBER OF COMMERCE,
Tulsa, Okla., June 22, 1943.

Hon. CARL T. CURTIS,
Member, House Immigration and Naturalization Committee,
Washington, D. C.

DEAR CONGRESSMAN: The board of directors of the Tulsa Chamber of Commerce in regular session today, Tuesday, June 22, by unanimous vote expressed themselves in favor of grant of quota to Chinese nationals, qualifying 105 of them as immigrants annually to become naturalized United States citizens.

As one of our directors expressed it, "One of the greatest crimes ever committed by a so-called Christian nation was the Chinese Exclusion Act." The Chinese have proved themselves loyal and valuable American citizens and are entitled to admission to this country under a fair ratio or quota system. The figure 105, of course, is over and above those now excepted from exclusions: students, merchants, professions, and a few other classes.

When this measure comes before you, either as a committee member or as a Member of Congress, we respectfully request your favorable consideration and your vote in favor of it.

Very truly yours.

R. K. LANE,
President.

The Young Democratic Club of Multnomah County, Oreg., Urges Continuation of the National Resources Planning Board

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, June 28, 1943

Mr. ANGELL. Mr. Speaker, I have just received from Geraldine Judge, Secretary of the Young Democratic Club of Multnomah County, a resolution adopted by that organization on June 23, 1943, urging continuation of the National Resources Planning Board. I include the resolution as a part of my remarks, which is as follows:

"Whereas the Young Democratic Club of Multnomah County has a sincere and continuing interest in the welfare of absent young people of this State and Nation engaged in military service; and

"Whereas it is the purpose of said organization to instill and promote in the young people of Oregon an interest in government and governmental affairs; and

"Whereas it is our conviction that continuation of the functions of the National Resources Planning Board is essential in the formation of governmental plans concerning the welfare of all of the people of this State and Nation: Now, therefore, be it hereby

"*Resolved*, That we petition the duly elected representatives of the people of the State of Oregon serving in the Nation's Capital for immediate action effective toward the continuation of the National Resources Planning Board for the accomplishment of the purposes here and above stated."

This will certify that the foregoing resolution was duly adopted at the regular meeting the Young Democratic Club of Multnomah County, held in Portland, Oreg., on June 23, 1943.

WILLIAM BARTHOLOMEW,
President.

GERALDINE JUDGE,
Secretary.

Gen. C. S. Adams Makes Interesting Address on Army Postal Service

EXTENSION OF REMARKS

OF

HON. W. R. POAGE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 29, 1943

Mr. POAGE. Mr. Speaker, Brig. Gen. C. S. Adams, Director of the Army Postal Service, recently delivered a very interesting address at the Officer Candidate School of the Army at Fargo, S. Dak.

This address contains some information that will be of interest to every Member of Congress. I am inserting this address in the RECORD, Mr. Speaker, in the hope that it will be widely read both by Members of Congress and others.

The Army Postal Service is performing an outstanding job in the enormous task of handling the Army mails all over the world.

The huge volume of mail to be transported and delivered to all corners of the earth makes the work of the Army Postal Service one of the most difficult in the entire Army. General Adams and his associates are meeting this responsibility with an ever-increasing efficiency.

The address of General Adams referred to follows:

It is a genuine pleasure for me to have this opportunity of talking to you on the subject of the Army Postal Service.

While used by every man in the Army in varying degrees, both officers and enlisted men alike, it is amazing to find how few there are, even within the Army, who have any conception of the functions and operations of the Army Postal Service.

I do not believe it an overstatement to say that the morale of the Army, particularly those men in overseas and combat areas, is to a large degree dependent on the success of the Army Postal Service and the manner in which it discharges its obligations to the individual soldier.

In considering the Army Postal Service we must not overlook the fact that the Army of the United States is primarily a citizen's Army. It is composed for the most part of plain, everyday citizens who have taken up arms in the defense of their country. It is not in any sense a professional Army.

The Army of the United States is therefore comprised for the most part of men who will one day again return to civilian life—to their old jobs, to their families and their friends.

For this reason it is only natural that they desire to maintain the closest possible link with these home ties until that day following complete and total victory when they receive their honorable discharges from the Army.

This is true in your cases here as individuals. It is equally true with the American soldier in the southwest Pacific, in Iceland, in north Africa, in England, in India, in fact, everywhere where American troops are serving.

Recognizing this fact from the very outset of the war, the Army activated its own Army Postal Service immediately following our entry into the war.

The pattern and plan of operations for the conducting of this Postal Service by the Army exclusively for Army personnel was set back in 1940 when a joint operating plan was drawn up by the War and Post Office Departments to which the Secretary of War and the Postmaster General respectively were signatories.

This plan was developed out of the experience gained by the civilian postal establishment in handling the Army mails during the first large-scale maneuvers in 1939 and 1940, following the rapid expansion in the size of the Army which was taking place at that time.

With the movement overseas of the first contingents of American troops shortly after our entrance into the war in the winter of 1941–42 the Army Postal Service immediately set about the task of setting up an overseas Postal System to serve these overseas forces.

From that small beginning the Army Postal Service has expanded to the point where it is now operating several hundred Army post offices in all overseas theaters in addition to handling the Army mails at domestic posts, camps, and stations within the continental United States.

To give you some idea of the enormity of the task involved in handling the overseas mails alone, it may interest you to know that we are now handling some 20,000,000 individual pieces of mail a week through the several ports of embarkation.

This mail is destined to the far corners of the earth, for the proudest boast of the Army Postal Service is that no American soldier is out of reach of an Army post office. In many instances American soldiers are today receiving mail regularly in areas which never before had postal service of any kind.

In providing this mail service to our overseas troops, the Army Postal Service is utilizing every transportation method employed by the Army, both surface and air, including the latest and most modern of postal facilities, the V-mail service.

Complete postal units of the Army Postal Service have accompanied our combat troops to and within all theaters of operations, and the goal of the Army Postal Service—the providing of mail service right up to the front-line combat troops—has been attained in every active theater thus far. Plans have been made to operate a similar front-line service in every theater throughout the war.

From the very outset, the Army Postal Service has been confronted with two major problems, problems which will be present in varying degrees throughout the war. One of these relates to a factor over which you and I have no control, but the other is one which we definitely can alleviate to a great degree by exercising more care in using the Army Postal Service facilities.

The first of these problems, and the one over which we have no control, is that which relates to the loss of mail on the high seas through ship sinkings. The second pertains to the vast volume of incorrectly and insufficiently addressed mail which is causing the Army Postal Service great difficulty at ports of embarkation and also at overseas Army post offices.

This latter factor can be attributed in many instances to carelessness on the part of the soldier in supplying his folks back home with his latest and proper address.

The man-hours lost at ports of embarkation in giving directory service to this misaddressed mail is appalling, and despite urgent pleas by the War Department the public and the soldiers are still guilty of laxity in addressing overseas mail. At the present time some 13 percent of all overseas mail must receive directory service owing to improper or insufficient addresses. This, naturally, seriously delays these letters as delays in any mail service are cumulative and this is particularly true in the case of the overseas Army mails.

Overseas Army mail should always include the soldier's full name, rank, Army serial number, unit and service organization, and Army post office number, together with the proper port of embarkation postmaster

Recently I returned from a 35,000-mile overseas inspection trip of Army postal installations in the north African, Middle East, and Indian-Burman-China theaters. Everywhere I went, at the front, behind the lines, in hospitals and in areas far removed from active fronts, the one thing I heard was the importance of mail. All the general officers I talked with, all the commanding officers down the line and the enlisted men to a man stressed the importance of mail to them. To those men, mail is as vital as food and I regret to say that it is not until some men actually get oversas that they realize the vital necessity and importance of the mission of the Army Postal Service.

I had battle-hardened American troops at the north African front tell me in April that they would gladly forego a mess call for a letter from home; I had company commanders tell me that their men's spirit was at a peak immediately following the arrival of mail from home.

It is with these thoughts constantly in mind that we in the Army Postal Service are today exerting every effort to see that these men get the best possible mail service under any and all circumstances.

We have made available to American troops overseas the same postal facilities with which they were accustomed back in their own home to us prior to their entrance into the Army. We are according them surface, air, and V-mail service in addition to complete money order facilities both to and from every theater.

While the Army Postal Service never does publicize relative time schedules in the movement of the mails to and from the various overseas theaters in an effort not to mislead the public into believing that there are regular schedules, it is a fact nevertheless, that 8-day mail service from the southwest Pacific and 1-week service from the north African theaters are not uncommon, services which are several weeks faster than the civilian-mail schedules between these points prior to the outbreak of the war.

In closing, I want to say that I have enjoyed this opportunity of meeting with you and I wish you continued success in your Army careers.

O. P. A. and the Food Program

REMARKS

OF

HON. DAN R. McGEHEE

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 29, 1943

Mr. McGEHEE. Mr. Speaker, of course the uppermost thing in the minds of the people of this country today is the winning of the war. The battle is raging on the far-flung fronts of the

world. There is a battle also raging on the home front. In that battle on the home front there is a diversified opinion as to its solution; I have reference principally to the functions of the O. P. A. and that phase of our economy that it is supposed to control.

The O. P. A. started off out of step. Of course, we could expect nothing else when, initially, it was headed by one Leon Henderson, who I now understand is back on another job with his hand in the taxpayers' pockets. Henderson will muddle anything he is connected with because his ideologies are un-American. Prentiss Brown, the present O. P. A. Administrator, is no doubt trying to straighten out the difficulties under which he accepted the place, but the entire set-up is infested with a bunch of people in key positions who have had no practical experience in the line of endeavor they are now trying to control. Mr. Speaker, until there is a cleaning of house and people with some common sense backed by practical experience head the different divisions of the O. P. A., the fight on the home front will continue until it reaches such proportions it may be more disastrous than the loss of two or three battles on the battle front.

I just want to call attention of the Congress to one or two phases of it. We know how they have bungled the situation relative to the price of logs, and so forth, to the extent that about 33 percent of the sawmills have closed down. Of course, there are other contributing factors in this—the Wage and Hour Division of the Department of Labor and its bungling also.

The matter I want to specifically call the Congress' attention to is this, that is, relative to the handling of the meat situation. According to statistics as given by our Government on June 1, 1943, there were 78,170,000 cattle on the ranges of the country, an increase of 3,000,000 head over January 1, 1942, and it is estimated by January 1, 1944, there will be 82,400,000 head. This represents a population of 8,000,000 head more cattle than the pre-war record of 74,000,000 reached in 1934 when our theorists and Utopia boys launched their slaughter program.

Before the war the average cattle population was around 67,000,000 head, and now, with the war on, furnishing our Army, our lend-lease demands, and our allies, there will be, on January 1, 1944, 15,400,000 more cattle on the ranges than our pre-war average. It is said this represents a surplus of 7,000,000 cattle.

Mr. Speaker, this same situation exists in practically all other of our livestock. Hogs increased in 1942 by 13,000,000 head. The Bureau of Agricultural Economics estimated in 1943 the pig crop at 125,000,000 head; the 1942 crop at only 105,000,000, or an increase of 20,000,000 head this year. It further estimated the weights of hogs running 10 percent above normal. This Bureau further states at the beginning of this year there were 55,890,000 sheep in the pastures and 540,000,000 chickens on the farms, or 14 percent above the 1938 record.

The alarming thing to me is that the O. P. A., by reason of their manner of fixing price ceilings, restricting production, the manner in which they have handled the meat situation, has caused literally hundreds of small meat packers and slaughterhouses to close, and the people of the cities cannot secure meat. It is rationed to the extent of a small piece a week, and yet, in the livestock and fowl named, there is being a gradual increase of each.

What does this mean? It means in the event of the cessation of hostilities, if there remained on the farms 82,000,000 head of cattle and the number of hogs there is today, the market would break to the extent it would bankrupt practically every cattle and hog raiser. Yet the people of this country, especially the wage earners who are receiving the highest wages at any period in the history of the country, with curtailment of production of civilian needs, have the money to purchase food, yet are being deprived of it by the bungling of the O. P. A.

How can we expect anything else when we are told that our price roll-back on meats was the work of Edward Prichard, 27 years of age, a former aide to Justice Frankfurter. The United States News says that he is the "final word on many of the Nation's wage policies. He is supreme court on who can and who cannot get a raise." This subsidy plan that the Congress has turned down so many times we are informed is the work of one Richard Gilbert, and that he consults Mr. Prichard and one Mr. Cohen of the Corcoran-Cohen team. It is also said that Mr. Cohen is the adviser to Mr. Gilbert and Mr. Prichard and that this group work closely together.

Mr. Speaker, we know what Mr. Corcoran and Mr. Cohen have done to the people in legislation prepared by them and passed by the Congress in the early days of this administration. They are both young upstarts, they have no practical experience in any line of endeavor, and I take it that Gilbert's only practical experience has been a Government job, with his hands in the taxpayers' pockets for his sustenance. How can we expect any more than that which is happening today to bring on turmoil and strife on the home front when the policies are formed and all the orders regimenting the life of the American people are formulated by those with a background of those gentlemen I have named?

Mr. Speaker, if there is not a cleaning out of the personnel of a lot of these departments and some sensible recommendations made by the administration that the Congress can follow, how can the people of the country continue to bare their breasts on the home-front line so to give every aid to their sons who are on every battle front of the world?

The Growing of Food and Feed Should Not Be Restricted

EXTENSION OF REMARKS

OF

HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 29, 1943

Mr. BECKWORTH. Mr. Speaker, I have great confidence in the ability of Judge Marvin Jones to handle successfully the many food and feed problems which he now faces as a result of his appointment yesterday to the position of Director of War Food Administration; he has the needed experience and background to do this important job. However, it is my sincere belief that this country cannot feed its population and take care of its other far-reaching food and feed commitments as long as a program of restriction, particularly as the program relates to the small family size farmers, is in effect. The program of restriction of the efforts of farmers to produce feed and food not only precludes maximum production on the part of those farmers who remain on the farm, but such a program has been conducive to the exodus of many farmers from the farms to the cities where they seek, obtain, and engage in work other than farming. The plow of an unrestricted farmer is to successful agriculture what the fire of a free man is to successful military engagements. My contention is that no farmer—especially the small farmer—who will grow food and feed in this serious day of food and feed shortages should be deterred by restrictions on his efforts.

To one very important segment of our agricultural population not enough credit for producing food and feed has been given, in my opinion. I refer, of course, to our small family-size farmers. These families usually have several children in them. These children must be fed and they likewise constitute an effective farm labor supply if unhampered. When this type of farmer has fed his family, he has done a rather good job, but when given freedom to pursue his work to the fullest extent he will do much more. I can illustrate this by an example with which many of you are familiar. When one sees a large truckload of chicken coops filled with chickens headed for one of the larger cities, it is a mistake to assume that the chickens came from some one large chicken farm. The chickens came ordinarily not from one large poultry farm but from many small farms. The farmer himself or his wife sold the slight surplus of chickens found on the given farm to obtain money with which to buy cloth, coffee, kerosene, or some other necessary commodity needed for the home. What is true of chickens is true of every other commodity grown on our small farms—even cotton. How fallacious a policy it is to restrict our small

cotton farmers in the growing of cotton. If permitted to grow a little more of this, their money crop, they would do it without additional hired labor. They would, because of the money incentive, work a little harder. With the surplus money, if perchance there were a few surplus dollars in the farm home, the farm family, being highly patriotic, and in 99 cases out of 100, having one or more of its members in the armed forces, bonds and stamps would be bought or overdue financial obligations would be taken care of. We know there would be none of the money wasted. As I see it, there is or will be a genuine need for all the lint cotton and still more need—yes; a very immediate need—for all the products obtainable from cottonseed, for from cottonseed cow feed of several types and vegetable oil of a fine type are procured. Nothing of a nonutilizable nature comes from cotton.

It is obvious that the dangers of this unwise policy of restriction of farmers are being daily recognized. At this juncture I wish to include a short excerpt from an article which appeared in the Washington Post Sunday, June 27, 1943:

ALL-OUT FOOD OUTPUT MAPPED FOR NEXT YEAR

(By Ovid A. Martin)

Food Administrator Chester C. Davis is expected to announce soon the general outline of an all-out food-production program for 1944 removing virtually all acreage and marketing restrictions, even perhaps abolishing Agricultural Adjustment Administration allotments.

Few pieces of legislation have conferred on bureaucracy more complete and total power than that conferred by the Agricultural Adjustment Administration Act. In the name of conservation of one character or another, the authorities of the Department of Agriculture have felt they have the power to promulgate any type of regulation the theorists might contrive. We all are in favor of soil conservation and other types of conservation, but there is much difference in conservation and regimentation.

Lately I have been serving on the subcommittee of the Interstate and Foreign Commerce Committee investigating the effects and probable results of certain rules and regulations of the O. P. A. on businesses and businessmen. It is my candid opinion that the rules and regulations promulgated by the O. P. A. applicable to business are little more binding and restrictive, if any, than those under which the small family size farmers of our country have been compelled to work since the passage of the Agricultural Adjustment Act.

In a democracy it is a backward step to fix the economic status of a great number of people who are on the ground floor of our economic structure as are our small family size farmers. The American way is to give a man who is down a chance to get up. It is my firm belief our family size farmers work harder than, and have the least, of any other group in our society. As I have heretofore pointed out, according to the enclosed tables, in the case of the cotton farmers one-eighth of the cotton farmers receive approximately 50 percent of the income from cotton and the other seven-eighths of the cotton farmers receive the other 50 percent of the income. I submit such inequity is not conducive to good government and ultimately will not endure. The smaller farmers must unquestionably have a square deal.

The tables referred to follow:

TABLE III.—*Farms reporting cotton harvested—percent distribution of farms, acres harvested, quantity produced, and value of farm products; yield per acre; value of farm products per farm; and percentage of value of farm products; by States; census of 1940*

[All items are for 1939 from census of 1940 taken as of Apr. 1]

State and number of bales produced	Percent distribution of—								Yield per acre (bales of lint cotton)	Average value of farm products sold, traded, or used by households (dollars)	Percentage of total value of farm products in each bale group represented by value of—

Not Power, Not Pelf, But Purpose!

EXTENSION OF REMARKS
OF

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 29, 1943

Mr. HORAN. Mr. Speaker, on January 19, 1918, the following address was delivered by a Mr. E. W. J. Hearty, who was in charge of perishable fruits and vegetables in the Food Administration under Mr. Hoover, in the First World War. The speech was delivered at Houston, Tex. At that time, as is so well known, our Food Administration had a single responsible head who realized the basic patriotism of productive America.

This speech, in the light of our present confusion, is so full of food for thought that I am having it reprinted in the RECORD at this time:

I was very much pleased to note from your program that your convention was to be essentially patriotic. Were I gifted with the ability to coin new phrases, I doubt if they would serve to kindle in you any new sparks of patriotism. Response to the inborn impulses within you has already developed a fervor which words of mine could not intensify; yet we must not pass over lightly that as individuals following our daily pursuits, we are apt in a crisis like this to temporarily forget what we owe to the citizens of the world, temporarily forget that war necessitates great sacrifices and unusual consideration of others. At such a time as this, institutions like yours serve us well in that they do not have the distraction of the individual, and are sure not to overlook the big and the fine things of life.

Self-denial and sacrifice for the benefit of others, due regard for life and health in the distribution of the products you handle, are the two things that should engage your daily thoughts and determine your course.

It is well within the range of probability that food will be the determining factor in winning this war. The United States Food Administration believes that the great international emergency problem confronting this country is to give to our Allies an adequate supply of nonperishable foods, our stores of which are not sufficient to give them what they need, and also to take care of our own normal consumption of them. It is imperative that we feed our soldiers in Europe, the soldiers of our Allies, and also contribtue to the civil population of Europe. What would be the effect on the morale of the fighting forces in Europe if they were underfed, with the added realization that their loved ones at home were suffering for lack of proper nourishment? Logically, therefore, the solution lies in America consuming less of the nonperishable foods, and more of the perishables of which there is greater relative supply.

As one of the important factors it is your duty to assist in this Nation-wide obligation. It is your duty to free the channels of distribution from needless motion. It is your duty to eliminate waste in the products themselves from inefficient handling and wasteful methods. It is your duty to protect the products that you handle into the homes of your own fellow citizens without creating hardship, without causing distress, and without provoking social unrest. The Food Administration asks you to do this, not gratuitously, but for compensation compatible with services rendered.

The creation of the Food Administration should stand in the history of all food-product industries as an important event in the relation of producer, distributor, and consumer. What will it mean? An over-reaching of one by the other, or an honest understanding based on good will and bound by good faith? The Food Administration stands as a big umpire. Rules and regulations have been created governing the gain of business. The Food Administration wants to be helpful to all industries, and does not want to do anything that will develop industrial structures.

This is evidenced through its appeal to the various trades for interpretation of trade problems, and further emphasized by its selection from industry's ranks of men who it believed were capable of handing the problems and situations as they arise. The attitude of the Food Administration toward the fruit and vegetable industry was reflected through a document which was published in all the trade papers, and which I believe every member of your organization has seen. That document was a public one, which could be defended by anyone at any time and at any place. It not only conveyed a message to you as distributors, but to producers and consumers as well. The message that document conveyed to you is, that the Food Administration understands your problems and recognizes that they are different from practically all other lines of business. It realizes the impracticability of fixing prices on perishable commodities or attempting to define what is a fair and reasonable profit on any individual transaction.

I do not have to tell you the various conditions that would militate against any other course than the broad one adopted by the

Food Administration; but the Food Administration does require that you aim to make only a reasonable profit on your year's business. The Food Administration grants the reasonableness of storing a season's requirements. To oppose such a means of conservation would be an economic tragedy. On the other hand the Food Administration will oppose with all of its might hoarding, manipulation, harmful speculation, wasteful and unfair practices. The message to the producer is that through its rules and regulations, he is afforded all protection within the power of the Administration to grant, on shipments that he might take on consignment, and what is more, the Food Administration seeks to keep the channels of trade open and unobstructed so that the producer may receive for his product the natural market. The message to the consumer is perhaps less understood by them than by all other classes, and is this not natural? The public has not the time to study the problems in their fullness, and I am sorry to say that some individuals are not inclined to do so. If I were to make one statement to the consumer and ask him to accept it as gospel truth, it would be that what is good for the producer, and good for the distributor, is good for him, and percontra, that which works a hardship on the producer and the distributor would be a mighty unfortunate condition for the consumer.

I sometimes feel like putting two hypothetical cases before the consumers. In one case, where the consumer pays a price that compensates the producer, what is the result? He is encouraged to continue production and even to plant a heavier acreage, all of which reacts to the benefit of the consumer, inasmuch as it more nearly insures a sufficient supply for his table. In the second case it would be a reversal of the first. The producers do not receive adequate compensation. All the patriotism in the world will not stimulate production at a loss, and what would be the result? It would mean the curtailing of the tree of production, and then what would face the country? The consumer would be staring into famine's face. What the Food Administration seeks is a union of forces. But it is desirable that all forces should have some understanding of the problems of production, distribution, and conservation. I am really very hopeful that the creation of the Food Administration will make a truer and more wholesome and clearer understanding between producers, distributors, and consumers. Distrust and suspicion should now find their graves. Strict obedience to the rules and regulations will bury distrust and suspicion quicker than any other method I know of.

I sometimes feel that if we could view all these problems that arise from the basis of economics that much of the cloud that sometimes envelops us would disappear. The accepted theory from time immemorial is that value depends entirely upon final utility. In other words, the only thing that gives rise to value is a concrete want for a commodity or service. Value attaches because of the presence of two things—demand and the limitation of supply. The ratio between the two makes the high and low price, and price, which is the measure of value, varies with the ratio between demand and the limitation of supply. This is true of labor as well as merchandise. As the demand for labor increases or the supply decreases, wages advance. If there is no work for labor to do, labor has no value. So, as demand rises, prices rise. But I might go even further and say that if there is no artificial interference with supply, supply also tends to expand. Man's unconquerable mind finds some way of meeting the demand, even if it is a substitute for the thing in demand. So supply spreads and instead of a shrinking we have a growth and expansion. Demand has a double power and a double function. It not only touches value, but it carries within itself a creative power, the power to call for supply as it goes along. Supply, or increased consumption, springs up to meet demand. I find I am getting into the fields of economics but to prove up what I have just said, have you not found in your experience that in instances where values have reached certain levels, supplies are forthcoming from sources that you little realized? And have not substitutes appeared to take the place of the article in demand?

As a concrete illustration, last year under the heavy demand for onions there was shipped from Spain 150,000,000 more pounds of onions than were imported the previous year, a striking illustration of what demand will do in calling forth supplies, and is it not also invariably true that increased production follows a season of high values?

I bring up all these points to bring out forcibly what I think we are all seeking, which is abundance, material expansion, and creation as opposed to scarcity, sterilization, and contraction.

Rights of the Foreign-Born

EXTENSION OF REMARKS

OF

HON. WILLIAM A. ROWAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 29, 1943

Mr. ROWAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Sun of June 23, 1943:

RIGHTS OF THE FOREIGN-BORN

Seven million naturalized citizens of the United States are more secure in their rights, and the principles of the Constitution are more firmly established, because of a decision handed down this week by the United States Supreme Court. Dividing 5 to 3, the Court held that the naturalization of William Schneiderman, of California, could not be revoked because he was a member of the Communist Party when he became a citizen in 1927.

The law on revocation of citizenship says it may be taken away from a foreign-born citizen who attempts to overthrow the Government. That law was not even invoked. Instead, the Department of Justice attempted to convert the naturalization law itself into a sweeping denaturalization law by charging fraud and insincerity in Schneiderman's application for citizenship.

This fraud charge, based on the claim that he concealed his Communist beliefs from the naturalization officer, faded away when it was brought out that he had not been asked about them. That left the charge that the naturalization was invalid because Schneiderman belonged to a party which advocated the violent overthrow of the Government, such persons not being eligible to naturalization. Also, it was said, since he belonged to such a party he could not have sworn in good faith that he was "attached to the Constitution."

Justice Murphy replied for the Court that the platform of the Communist Party in 1927 could be interpreted either as advocating or opposing violent constitutional change, depending on remote and hypothetical future conditions. It was neither just nor lawful, he contended, to condemn a man without evidence that he supported a policy of violence, or that he had ever done anything which created "a clear and present danger" of it.

Justices Rutledge and Douglas, in a concurring opinion written by the former, emphasized the tremendous importance of this case to the general security or foreign-born citizens. Had the Court ruled that citizenship could be torn away from a man because of doctrines ascribed to political parties of which he was a member, there would be no limit to the excesses that might be perpetrated in periods of emotional unbalance. There is something grotesque, anyway, in this legal action against a man who has lived in the United States since he was 3 years old, and whose political activities would be unchallenged if he had been born 3 years later and therefore in America. Wendell Willkie performed a notable public service in twice arguing Schneiderman's case, without pay, before the Supreme Court.

Are We To Educate the Children for Future Rationing?

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 29, 1943

Mr. MURRAY of Wisconsin. Mr. Speaker, under leave to extend my remarks, I wish to include a letter from the O. P. A. and a list of the staff of the Educational Service Branch, Department of Information of the O. P. A.

Dairy firms in Iowa have recently protested the O. P. A. educational program in regard to butter and oleomargarine. The O. P. A. has made enough senseless rulings without holding them to account for anything they did not do or are not doing. For that reason I include the following answer to my inquiry by Mr. George J. Burke, general counsel of the O. P. A., as well as the list of the staff of the Educational Branch:

JUNE 25, 1943.

Hon. REID F. MURRAY,
United States House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN MURRAY: In reply to your letter of June 19, I have very carefully checked again and find that our Mr. Edward L. Sard has not made any speeches in Des Moines or elsewhere on the subject of oleomargarine or related topics. Your informants did not have correct information or Mr. Sard has been confused with someone else.

Permit me to say again as I did in my letter of June 9 that the Office of Price Administration has no program concerning the relative merits of butter and oleomargarine. Neither Mr. Sard or any other employee of the Office of Price Administration has ever been assigned or will be so assigned to teaching children the superiority of oleomargarine over butter.

I am attaching as per your request a list of the staff of the Educational Services Branch.

Sincerely yours,

GEORGE J. BURKE,
General Counsel.

STAFF OF THE EDUCATIONAL SERVICES BRANCH, DEPARTMENT OF INFORMATION, OFFICE OF PRICE ADMINISTRATION

Walter D. Cocking, chief of the branch, $6,500; James E. Mendenhall, principal research specialist, $5,600; Marcus Rosenbaum,

assistant research specialist, $3,800; Julia Teasley, junior research specialist, $2,600; Roy W. Morrison, principal higher educational specialist, $4,600; Clarence Schettler, associate higher educational specialist, $3,800; William B. Brown, head secondary educational specialist, $5,600; William H. Morris, secondary educational specialist, $3,800; Edward L. Sard, secondary educational specialist, $3,800; J. Cecil Parker, liaison officer, $5,600; J. Brewton Berry, principal adult educational specialist, $4,600.

The staff of this branch work with the 48 State departments of education, 122,000 school districts, 1,850 colleges, 28,000 secondary schools, 250,000 elementary schools, adult classes of many kinds. These various schools and colleges are taught by more than 1,000,000 teachers and enroll more than 30,000,000 students who come from homes in every neighborhood of America. The branch also works with National and State educational associations. The job of the branch is to assist in bringing about understanding of wartime price control and rationing.

Dannelly Field

EXTENSION OF REMARKS

OF

HON. GEORGE M. GRANT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 29, 1943

Mr. GRANT of Alabama. Mr. Speaker, on Thursday, July 1, the city of Montgomery, Ala., will dedicate its municipal airport and honor it with the name of Dannelly Field in memory of Ensign Clarence M. Dannelly, Jr., United States Navy.

This field will stand forever as a memorial to this intrepid young flyer who, even before his country entered this present conflict, had the vision to see this global catastrophe in its terrible, all-engulfing proportions and who courageously entered the Nation's service to be prepared to do his full duty when the call came. He lost his life while in service as a naval pilot.

Dannelly Field was sponsored by the Board of Revenue of Montgomery County, the City Commission of Montgomery, the Chamber of Commerce of Montgomery. The city of Montgomery possessed one of the finest municipal airports in the Nation at the time we entered the war, Gunter Field, named in honor of Montgomery's beloved long-time mayor. It was offered to the Government to be used as a training field. This offer was accepted and today Gunter Field is an important unit of the Southeastern Air Training Corps. This field, with Maxwell Field, which is headquarters for the Southeastern Air Corps, serves to make Montgomery one of the leading air training centers of the Nation.

When the city turned Gunter Field over to the Government, plans were made to establish another municipal airport, with the result that on July 1, Dannelly Field is being dedicated. No more appropriate name could have been selected for it than Dannelly Field Ensign Dannelly's father, Dr. Clarence M. Dannelly, is superintendent of the Montgomery city and county schools. His paternal grandfather, the late Dr. J. M. Dannelly, was a beloved Methodist minister.

What greater love can one have than to give his life for his country.

As I think of gallant Ensign Dannelly and the gift laid by him upon his country's sacred altar—his life—I am reminded of that lovely poem by Dr. George M. Maxwell, commemorating a similar sacrifice by another fine American youth, the doctor's son. So in tribute to Ensign Dannelly, I give you Dr. Maxwell's poem entitled "Our Sky Pilot":

They say that he's gone;
But I know that he swings
On up to God's throne
On his heavenly wings.
And I hear his clear call
To the station up there
To give him the beam
That his landing be fair.

They say that he's dead,
But I know that he's not,
For the words that he said
I have never forgot.
"If I crash in my plane
Do not sorrow for me,
For I'll fly on again
Through the heavens," said he.

"When you're crying down here
(Maybe doubting God's love),
I'll be laughing up there
In the heavens above;
And some day, when you come
In your plane, soon or late,
I'll be laughing up there
At the heavenly gate."

So I feel every night
As I look at the stars
That I see him in flight
Around Venus and Mars,
And on out into space
Through the Pleiades (seven),
With a smile on his face—
A sky pilot of heaven.

Avery and Lewis

EXTENSION OF REMARKS

OF

HON. WILLIAM A. ROWAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 29, 1943

Mr. ROWAN. Mr. Speaker, under unanimous consent to revise and extend my remarks in the Appendix, I include excerpts from an editorial in the Washington Daily News, issue of Friday, June 25, 1943:

AVERY AND LEWIS

Sewell Avery, president of Montgomery Ward and chairman of United States Gypsum, seems determined to play the role of industry's John L. Lewis. He is again defying the War Labor Board.

The Board has ordered a Congress of Industrial Organizations maintenance of membership contract at Gypsum's plant in Warren, Ohio. Mr. Avery refuses. He contends that maintenance of membership is a long step toward the closed shop by Government compulsion, that the Board had no authority to order such a contract, that only Congress has constitutional power to impose anything of the kind. Other industrialists have raised the same objections, but the War Labor Board has undertaken to make maintenance of membership a wartime labor policy of the Government, and other industrialists have accepted it.

We think Mr. Avery is wrong—just as wrong as John L. Lewis. However, it seems to us, there is one distinction. There is a way to compel Mr. Avery's compliance with the Board's order. When maintenance of membership was ordered in a Montgomery Ward case, Mr. Avery finally complied—grudgingly, to be sure—after being twice commanded to do so by President Roosevelt. Presumably he will comply in the United States Gypsum case, if the President commands. Or, if he still refuses, the President can seize the gypsum plant and even, as War Labor Board member Morse has suggested, "put the company out of business, if that is necessary to protect the no-strike policy."

Congress and the President

EXTENSION OF REMARKS

OF

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 29, 1943

Mr. KENNEDY. Mr. Speaker, in view of the grave and growing confusion created by jealous authority and blind partisanship, it is necessary for each and every one of us to redefine our responsibilities and rededicate our energies to the single-minded conception of our task—the welfare of the Nation and the winning of the war. I call the earnest attention of Congress to the leading editorial in the New York Times of June 29, because I consider this editorial an admirable statement of the dilemma and a sound clarification of our duty in resolving it:

CONGRESS AND THE PRESIDENT

The lightning vote by which Congress overrode the President's veto of the antistrike bill last week was merely the culmination of a congressional rebellion against the President's domestic policies. It had been preceded, all within recent months, by a vote to nullify the President's $25,000 salary limitation, a vote for a pay-as-you-go income-tax plan originally opposed by the President, a vote for a bill to force senatorial approval of minor as well as major officials, a vote to cut the appropriations for the domestic branch of the Office of War Information, as well as to eliminate entirely several administration agencies, and by votes to prevent the administration from carrying out its food roll-back subsidies.

A few short-sighted persons, long opponents of the President and his domestic policies, have greeted this situation with transports of joy. But thoughtful Americans, even if they strongly disapprove some of the President's policies, can hardly be happy about it. It cannot be a matter of rejoicing to any patriotic man if the President of the United States is "put in a hole." For he is not only the Commander in Chief in wartime but he remains also the Chief Executive on the home front. No one else can be the Executive in his place. If he cannot act, the Government cannot act. If he is in a hole, so far as the ability to put domestic policies into effect is concerned, then the whole country is in a hole.

But this is only one horn of the dilemma that now confronts us. The second is one to which some of the bitter-end supporters of the President are as blind as those who

welcome his embarrassment are to the first. They talk as if the sole duty and function of Congress was to act as a Presidential rubber stamp. They denounce Congress for every failure to see eye-to-eye with the President, for every refusal to do exactly as he suggests. Some of the labor leaders, for example, have been reckless in their discussions of Congress. Philip Murray, the head of the Congress of Industrial Organizations, denounces the vote of Congress overriding the President's veto as a "treacherous sneak attack upon the administration." This is to treat an explicit constitutional right of Congress as if its exercise were not merely illegal but equivalent to sabotage. This is to talk as if Congress were a self-constituted body, instead of the direct representatives of the people. This is to forget that part of the Senate and the whole of the House was elected less than 8 months ago, and that its mandate from the people is 2 years fresher than that of the President. This is to ignore, above all, that the public itself—by the overwhelming majority of 81 percent, according to the most recent Gallup survey—has been in favor of banning strikes in all war industries. What is treacherous, what is sneak, about Congress' action?

We seem to be confronted here with an insoluble dilemma. Under our constitutional system of division of powers the President cannot force Congress to adopt a policy that he considers vital. Congress, on its side, can prevent the President from doing what he wishes but cannot make him do what it wishes. Congress can pass a law, but cannot compel the Executive to put it into effect in the manner in which Congress thinks it should be. The President, for example, has the power of making the Connally-Smith antistrike law seem better or worse than it is by the manner in which he enforces it. Congress can pass a law saying that the President must appoint a food administrator with such-and-such powers; but it cannot force him to appoint a good, a strong, or an independent administrator. Congress can block an administration policy, good or bad, by voting against one element of it. But in exchange for preventing the President from having his way, Congress also furnishes him with an alibi. Thus administration spokesmen are already saying that if Congress kills the roll-back subsidies they cannot enforce any effective price control. Under such conditions it becomes impossible for the public to fix responsibility for the situation which results.

The grave possibility that we now face is a country divided between blind partisans of Congress and blind partisans of the President. Those who boast that Congress is now "in the saddle" forgot that Congress can block plans but cannot execute plans. It cannot exercise executive power. It is not even remotely organized to do so. Blind partisans of Congress forgot that in wartime, when prompt action is vital, executive power must necessarily be enlarged. The blind partisans of the President, on the other hand, including many organs of the left, deprecate any independence whatever on the part of Congress. They seem to think that the President should be treated as a dictator, with the right to act without consulting Congress; or that, what is the same thing, it is the duty of Congress to approve everything he proposes.

In a parliamentary government of the British type, the kind of stalemate, the kind of dilemma, that seems to confront America today could not exist. A Prime Minister like Mr. Churchill has great executive powers; but he must submit major policies to Parliament. Parliament must either accept or reject those policies. If it rejects a major policy, one of two things must happen. Either the Prime Minister must resign, in which case Parliament can then proceed to choose an executive to carry out its wishes; or the Prime Minister can dissolve Parliament and force it to go before the country for a new election, to decide whether the people themselves support the policy of the parliamentary majority or the policy of the Prime Minister.

Each of these outcomes has already occurred among our allies who have the parliamentary system. Because he did not get a sufficient vote of confidence, Mr. Chamberlain was forced to resign in May, 1940, at the very height of England's peril. As a result of a vote of confidence a few days ago, in which Prime Minister Curtin of Australia was supported by a margin of only one vote, he has announced that he will seek dissolution of the Australian Parliament, probably this week, and submit the issue of confidence to the country in a general election in August.

It is obvious that under a system of this sort the executive and the legislature cannot remain long at loggerheads. The resolution of differences of opinion between them need very seldom be resolved by the ultimate dramatic alternative of resignation or dissolution. The mere fact that these reciprocal weapons exist keeps executive and legislature in agreement. If these weapons had existed in our own case, the President would not have been so cavalier in his disregard of the opinion of Congress on leading issues. Congress, on its side, would not have opposed the President's labor or subsidy policies without considering, first, whether it thought enough of the President's record as a whole to be willing to accept with it some policies that it would otherwise object to. Both Congress and the President, in short, would have had weapons to force each other toward agreement on every point not considered vital enough to risk their political futures on.

The very absence of such a system under our Constitution requires a greater self-restraint and a greater self-imposed responsibility on the part of both the President and Congress if we are to avert a stalemate or a bitter domestic struggle in the midst of the greatest war in our history. The President must take Congress (or at least a group of its recognized leaders) much more into his confidence than he has in the past. He must constantly aim to secure its advice and consent. His domestic policies must be the result of consultation and compromise. Congress, on its side, cannot continue wantonly to kick over the traces. It cannot afford an attitude that is merely negative. It must invite Executive initiative on leading issues. It must compromise wherever compromise is reasonably possible. Finally, it must reorganize itself internally if it is to have any coherent or unified policy to propose to the President when it cannot accept a policy proposed by him.

Both the President and Congress, in brief, must put aside mere partisanship and political maneuver and rise to the unparalleled responsibilities of the present crisis. Such a course is the only alternative to a political tragedy of incalculable dimensions.

Prevention of Strikes in Defense Industries

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, June 29 (legislative day of Monday, May 24), 1943

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial which appeared in the Daily Reporter, of Independence, Kans., entitled "A Salute to Congress." This editorial expresses approval of the action of the Congress in passing the Connally-Smith antistrike bill over the President's veto.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A SALUTE TO CONGRESS

An aroused, indignant Congress, surfeited with the continuous knee bending by the Executive to unpatriotic labor leaderships and responsive to the insistent demands of an overwhelming majority of the people, rallied to the cause of American democracy yesterday.

In a surge of patriotic fervor it courageously overrode the President's veto of the Connally-Smith bill to outlaw Government-operated war plant strikes and put a damper on strikes in all war industries.

By this forthright action Congress demonstrated that the will of the people is stronger than the will of one man, and sent a heartening message to the boys on all the battle fronts who are facing machine guns or torpedoes in defense of liberty for ourselves and the nations of the world that we have not forgotten them.

A grateful nation salutes its national representatives for this lift which it has given to the people's will to victory.

Fear Expressed Nationalization of Coal Industry Is Contemplated; Secretary Ickes Denies Plan; Representative Randolph States View

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 29, 1943

Mr. RANDOLPH. Mr. Speaker, according to news stories, Secretary Ickes told the House Ways and Means Committee yesterday that the Federal Government has "no desire and no plans for the nationalization" of the coal industry. He further stated that it was hoped the mines could be returned to private ownership as quickly as possible.

In connection with this controversy, I set forth my feeling on this subject, as contained in a letter replying to a telegram from coal operator James D. Francis. This correspondence follows:

HUNTINGTON, W. VA., *June 22, 1943.*

Hon. JENNINGS RANDOLPH,

House Office Building:

Papers indicate movement on part of Ickes to permanently take over the coal industry for the duration of the war. As you know, no industry has done a better job in the war effort than the coal industry. It has cooperated with the Government 100 percent in every direction. The Government has not had to either finance or subsidize this industry. It is not to blame for failure to have wage agreement. It acted within the rules set out by the Government. I hope you and group of your associates who are interested in private enterprise will do everything possible to see that the coal industry is not shackled and destroyed as a result of its effort. Our

State is a key State, and you and your associates from this State can do a tremendous amount with Congressmen from other States to protect not only the coal industry but protect America's supply of coal by preventing it from getting in the same position American railroads were in during the First World War. Your assistance will be greatly appreciated.

JAMES D. FRANCIS.

JUNE 25, 1943.

Mr. JAMES D. FRANCIS,
President, Island Creek Coal Co.,
Huntington, W. Va.

DEAR MR. FRANCIS: I appreciate your telegram of June 22. I am in agreement with you that the Federal Government should not attempt, under the impact of war, to take over the coal mines. This, in my considered opinion, would be another wedge driven into the philosophy which is held by some persons that we should have nationalization of the industry. It would be just as sensible to say that our petroleum business should be taken over by Federal officials, and it would follow that soon the mineral resources of this Nation would be a part of the over-all plans for governmental operation and control.

It is difficult to ascertain just what is contemplated by Secretary Ickes in connection with his statement on policy. I am fearful that there may be a real threat to private industry if certain developments are allowed to go unchallenged. I can assure you of my interest in this matter and of my opposition to policy of Government ownership.

Corrective action must be forthcoming to prevent the strangling of private enterprise in the United States. We cannot tolerate a permanent saddling of unwarranted bureaucracy and unnecessary regimentation of legitimate and patriotic business. Under guise of an emergency we must ever be alert against the invasion by Government of the rightful field of private enterprise. Americans do not subscribe to the theory of socialized and corporate government.

Sincerely yours,

JENNINGS RANDOLPH.

Marvin Jones

REMARKS

OF

HON. HAROLD D. COOLEY

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 29, 1943

Mr. COOLEY. Mr. Speaker, I take the floor at this time for the purpose of paying a brief tribute to our former colleague and my esteemed friend, Hon. Marvin Jones. It has been my pleasure to have been closely associated with this distinguished gentleman since I came to Congress in 1934. He was at that time chairman of the House Committee on Agriculture to which committee I was assigned as a humble member.

I know of no man in America who is better qualified to discharge the complex duties of the job of War Food Administrator than our friend and former colleague. Very few men in the public life of America have had the well-rounded experience that Marvin Jones has had. He served for a great number of years as a Member of the House of Representatives in the Legislative Branch of the Government. He served here with great distinction and he left here with a splendid record. While serving as a Member of this House he was appointed to a judgeship and immediately entered upon the discharge of his duties as a member of the Court of Claims, and upon the bench he has served with great dignity and great learning. Even before he came to Congress, back in the horse-and-buggy days, he was one of the superior court judges of the State of Texas. By background, education, training, and experience he is extraordinarily well qualified for the position to which he was on yesterday appointed. Everyone who knows him, and certainly all of us know him well, knows that he is basically and fundamentally sound. He was a just and a fearless judge. His background is founded in American agriculture. He loves the good earth and those who till the soil and, with his great and wide experience, his grand character and true integrity, and with loyalty and devotion to the ideals of this Republic, he will do a splendid job in his present assignment.

Marvin Jones was a soldier in the last World War and he is no less a soldier today. He knows the life of the buck private in the United States Army, for he served as a buck private during the last war. He knows the hardships and the problems of being a good soldier. I believe that I am safe in saying that no man in America has done more to make the farm homes of our country a healthier and a happier place in which to live than the new War Food Administrator, Marvin Jones.

He has initiated and sponsored more valuable farm legislation than any man living in America today and the farmers of America never had a truer friend. He was born on a farm and he was once, himself, a tenant farmer. He knows what it is to dig a living out of dirt. He learned his lessons in the fields of toil and he learned them well. He knows the problems of the cotton farmer and of the wheat farmer and of the cattle farmer, and of the farmers of every section of this country. For more than a quarter of a century he has devoted his time and his talents to the problems of agriculture. I know of no man in America who is more devoted to American agriculture than Marvin Jones. If the Congress and the country do not have faith and confidence in the ability and in the integrity of Marvin Jones, pray tell me where on God's earth could the President find a better man?

Agriculture has not in America a more loyal friend or a more gallant champion than Marvin Jones. Had I been charged with the responsibility of appointing a War Food Administrator in this emergency I would have on yesterday named Marvin Jones. He may not be able to discharge the duties of his new position in a manner which will be acceptable and satisfying to all of the people but, certainly, no one who knows him will question the sincerity of his purpose. I congratulate the President and I extend to the new War Food Administrator my best and cordial good wishes.

[Here the gavel fell.]

Korean Cherry Trees

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, June 28, 1943

Mr. RANKIN. Mr. Speaker, some time ago I introduced a resolution to change the name of the so-called Japanese cherry trees in this city to that of Korean cherry trees on the grounds that these trees originated in Korea.

In support of that contention I am inserting the address of Dr. Syngman Rhee, chairman of the Korean commission here in Washington, delivered at the American University on April 8, 1943, during the celebration commemorating the twenty-fourth anniversary of the Korean Republic.

The address follows:

Dr. Douglass, distinguished guests, ladies, and gentlemen, on behalf of the people of Korea, whom you are honoring today, I wish to thank Dr. Douglass, the president of American University, for the privilege he has accorded me by inviting me to be present and to plant these Korean cherry trees.

This historic occasion to me and the 23,000,000 Koreans who are my fellow countrymen will forever coincide with another anniversary enshrined in the hearts of Koreans.

For it was 24 years ago at this time that the Provisional Government of the Republic of Korea, born of the blood of patriots in our March 1919 revolution against the Japanese, came into being. That Government still endures. It is the oldest government-in-exile in the world. It functions now in the wartime capital of China, the bombed and battered but unbeaten city of Chungking. And from Chungking, as well as other parts of China, have gone tens of thousands of Korean men to fight side by side with the Chinese and to help in the defeat of the scourge of Asia—the Japanese.

We have seen, since December 7 of 1941, the spread of the scourge of Asia. Your fellow nation-to-be, the Philippines, has fallen within that cancerous area. So, too, have the proud outposts of the British Empire in Malaya and elsewhere. So, too, have the fabulous Dutch East Indies. So, too, has North American soil—the island of Kiska in the Alaskan Aleutians

I do not wish to say in any recriminatory way that we Koreans—the first victims of Japan's insane march of conquest—told you so, but we did.

And these very cherry trees today represent, in some measure, our efforts to warn you of the beast of the Pacific and his designs on civilization. For years, you have called them Japanese cherry trees. We knew they originated in our country. We knew, like many another treasure robbed from us by the Japanese, they were our rightful property. And when Pearl Harbor happened, a group of our American friends—the members of the Korean-American Council—asked if they might use the proof we had.

The proof of the origin of these trees may be found in the great Japanese encyclopaedia. Our American friends submitted this proof to the Secretary of the Interior. That gentlemen, in turn, submitted it to a recognized horticultural society, and that society—after having accepted silently for some 30 years the name Japanese cherry trees—solemnly considered our evidence * * *

evidence from the great Japanese encyclopaedia that these very trees had originated in Korea.

The society then thought it might take action. It did. It produced a new name. Americans now are supposed to call these Oriental flowering cherry trees.

My dear friends, this would be trivial were it not symptomatic of the manner in which Japanese propaganda influences continue in this great country. You do not know the Jap. We Koreans do. Our murdered men, our raped women, our mistreated children, call out to us.

Will you forgive me, when I turn the first spadeful of dirt for the planting of these Korean cherry trees, if I say: "Truth, crushed to earth, shall rise again." I thank you.

The Food Problem

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 29, 1943

Mr. SABATH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram and my reply thereto:

JUNE 24, 1943.

To United States Senators and Representatives from the Midwest States, Washington, D. C.:

At a conference of Midwest farm bureaus, meeting in Chicago today, the following resolution was adopted: Immediate and positive action is required to meet the critical food problem in this country. In order to avert disaster on the food front, it is our considered opinion that all necessary authority over the food problem must be centered in one individual. A clear-cut, understandable and effective food policy in this country now is an indispensable factor, without which the war cannot be won. We therefore urgently recommend that all control over production and distribution of food, including pricing and rationing policies, be given our capable and courageous food administrator, Chester C. Davis. Continuation of the present muddled food policy will jeopardize the food supply and will incur the just condemnation, not only of farmers but of all patriotic Americans.

CONFERENCE OF MIDWEST FARM BUREAUS OF THE AMERICAN FARM BUREAU FEDERATION.

JUNE 28, 1943.

AMERICAN FARM BUREAU FEDERATION,
Munsey Building, Washington, D. C.

GENTLEMEN: This is in acknowledgment of your telegram of June 24, and I presume that the Farm Bureau Federation is promoting its own interests, and is seeking to have men placed in charge of agriculture who are friendly to it.

While I feel that it is the duty of everyone, including organizations to safeguard and protect their respective interests, it is to be regretted that you and other leaders of agricultural organizations refuse to see or take into consideration the position of the consumer and, especially, the 21,000,000 of those persons whose wages or salaries have not been increasing, notwithstanding that the prices of agricultural products have been increased in the last 3 years alone by 110 percent.

Very truly yours,

ADOLPH J. SABATH.

The Part the Farm Women of Iowa Are Taking in the Food-Production Program

EXTENSION OF REMARKS

OF

HON. THOMAS E. MARTIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 29, 1943

Mr. MARTIN of Iowa. Mr. Speaker, in the Columbus Gazette, published at Columbus Junction, Iowa, Thursday, June 17, 1943, there appeared an article written by one of the outstanding farm women of my congressional district, Mrs. Marie Wheeler Cornic, of Morning Sun, Iowa. In this article Mrs. Cornic very clearly and effectively describes the part the farm women of Iowa are taking in our great food-production program. I know that the Members of Congress will appreciate having an opportunity to read this splendid description, and to learn or to add to their information of the great spirit of cooperation, sacrifice, and service of the farm women of America. Mrs. Cornic's article follows:

YOURS TRULY

(By a Louisa Farm Woman, Marie Wheeler Cornic, of Morning Sun, Iowa)

There were a couple of weeds in the garden last week and I stopped to pull them and missed the mailman. It beats all how 1 hour of sunshine will give you courage anew and how extremely low you go with every morning shower. There are just seven acres of beans left to plant here at Green Pastures and said ground has been prepared three times but the beans are still in the sack.

The alfalfa needs cutting, part of the corn has been plowed and the potatoes need spraying The truck patch needs a thorough working and we want to put in a patch of late potatoes and sweet corn this week. The new strawberry bed is yelling for help and the brooder house should be moved—Dad enumerated those all for me at the breakfast table this morning as if I didn't know them as well as he did. I refrained from mentioning my jobs, but they would double that list.

But the housework can go when the crops need attention and any farm woman I know worth a fig will agree with me. Our immediate job at all times is to produce what is needed. There have been times when there was little needed here at home or for world trade. Now everything we can raise will be used and even more than we can raise could be used. We have taken off the brakes and are stepping on the gas. The results are not in the hands of farmers.

Yet, with our best efforts and the hardest kind of work, there are plenty who sit in air-cooled offices and who have never been nearer to a farm than an air-conditioned train or a car, that will condemn us, our farm program, and everything else in general. How thoroughly I would enjoy putting one of them on a tractor at 5:30 in the morning and keeping him there until 8:30 at night. Time off for meals. Chores before and after.

As our greatest teacher said: "Forgive them, they know not what they do." Neither do they understand or know. They know nothing about our ever-normal granary above the soil or the granary we have built up below the soil by conservation. They little stop to think that it was that reserve of grains ready to convert into much-needed meat, milk, and eggs that make possible the feeding of our Nation and Army today. They little consider that the farm program was farsighted enough to go into high gear on hog production almost a whole year before Pearl Harbor. Could be the farmers looked at the sky and foretold a storm.

They yelled about our idle acres. Little did they think that they were being rested, built up, had they not been they could never have produced the record-breaking crops that we have been producing the past 5 years.

They said much about us plowing under crops. Don't they know that from such death comes life? And maybe it's high time we plowed under some of their loose talk about our farm program. The farm program can adjust for more or less and does so as we need it. Just like any other factory, what is the use of producing when there is no market? When we have that market we'll try, God willing, to meet it.

They need to know too that we farmers are planning for tomorrow. We are taking into consideration the kind of farms our youngsters are going to have 50 years from now. We have a forward looking aspect on the whole thing. We are striving for security through a sensibly planned conservation program—the pity that I can't say this to such people's faces rather than scribbling away on paper.

Notice that our paper says Louisa is low on junk. As you ride along the road, or poke around alleys, or are on various farms, look! I just ask you to look. We've got it but in our rush with other things we haven't really got to the junk. It might pay us farmers to give a little thought to it these rainy mornings or we may not have any new farm machinery next year. We can't fool ourselves—no scrap to the mills of our country means no new machinery, and how we do need a hay loader.

I have made it my duty to save the little pigs this year. So far I have five that are going good. It's a worth-while job when you consider what every pig raised to marketing age means in the way of saved feed and food for the world. Figure say that a farrowed dead pig means the loss of 140 pounds of feed, if he dies at weaning time add on 120 pounds more, and if he dies at say 4 months add on another 100 pounds. There goes 360 pounds of feed—and no hog to show for it. They are messy things to care for but once started not half the work that chickens are.

I see a little blue sky in the west. Good. Perchance by noon I can mow the yard, work in the garden, and trim the shrubbery.

That A Gasoline Rationing

EXTENSION OF REMARKS

OF

HON. WILLIAM J. MILLER

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, June 28, 1943

Mr. MILLER of Connecticut. Mr. Speaker, under permission granted me I am inserting two editorials—one from the Hartford Courant of June 23 and the other from the Hartford Times of June 22, both dealing with the A gasoline ration.

Last Friday I conferred with representatives of the O. P. A. and P. A. W., and I have been assured that they will hand down a decision, not later than next Wednesday, on the question of using A gasoline rationing for one vacation trip. For the life of me I cannot

see why a citizen should not be allowed to decide just how, when, and where he will use his one and one-third gallons of gasoline per week that is now available to him, as a holder of an A book.

A reasonable liberalization of the O. P. A.'s restriction will help a lot toward improving the morale of the thousands of citizens who are upset because of the recent restrictive regulations.

The editorials follow:

[From the Hartford Courant of June 23, 1943]

THAT A GASOLINE RATION

Secretary Ickes, who among many other things is Petroleum Administrator for War, informs the Governors' Conference that the East can expect "only essential requirements of petroleum products for the duration of the war." If the East were assured of having all its essential requirements met, the situation would not be too bad.

The Washington authorities differ widely among themselves as to what is and what is not essential. They rule one way today and another tomorrow. They reduce the value of the basic A ration from 6 gallons to 4, to 3 and finally on a weekly basis to what they call a gallon and a half, although actually it figures out a gallon and a third. Then they undertake to restrict the use that may be made of that limited quantity, as if any restriction were needed beyond what the amount itself provides. When they talk about "pleasure driving" in such circumstances they simply talk nonsense. Yet the Office of Price Administration sends its snoopers about to report all who seem not to be observing the edicts of the bureaucrats. Such violations as are found pertain chiefly to those who have been granted supplemental B and C rations for occupational driving, but the A drivers are also picked up.

Whatever course may seem to be required toward the B's and the C's, the A's should be left free to use what little gasoline they are allowed in any way they see fit. If they want to save their gallon and a third a week until they have accumulated enough for some special purpose, such in Connecticut as driving to the shore, that should be their privilege and they should not be molested in their exercise of it. This is beginning to dawn on Prentiss M. Brown, the high factotum of the Office of Price Administration, who has announced that he expects to review the order banning use of gasoline to and from summer cottages. If he finally sees the folly of telling the rationed consumer—and we are now talking about the A's exclusively—how he shall use his pitiably small allotment he will remove a source of wholly unnecessary irritation.

It contributes nothing to the winning of the war to grant everyone a basic gasoline ration and then lay down hard, fast, and even idiotic rules governing its use. There is no getting away from the fact that the individual feels that this gasoline, however little the quantity may be, is his, that its ownership has passed to him, and that it is no longer the business of Government to say what he may or may not do with it. The general resentment at this Office of Price Administration ban on pleasure driving, as applied to the A's is well expressed in a letter we have just received from one of our readers. From it we quote:

"Few Americans are so blind as not to see that the tyrannies of the 'new order' are put over on them in the name of patriotism. Step by step the people are persuaded to give up their little freedoms to be patriotic. The technique seems to be as well understood by our bureaucrats as by Hitler, but it doesn't inspire anybody to fight Hitler.

"I have a son piloting a torpedo bomber off the Pacific coast. I have another son who is a torpedo man on a destroyer on the African convoy route. I have a daughter who is wife of an Army flyer in Texas. I have another daughter employed in the Philadelphia Navy Yard. I want to back up those kids, but I resent being told that I can do it by giving up free use of the last gallon and a half a week. And strange to say, they resent it too.

"Everyone knows that somebody has blundered. A lot of somebodies have blundered in gasoline distribution. We know we are asked to pay for their blunders with the last gallon and a half of our gas."

Does Mr. Ickes, does Mr. Brown, does anyone else in a seat of authority at Washington suppose that the wirter of that letter is not just as patriotic as any one of them; is not just as desirous of winning the war in the shortest possible time as the best of them? His patriotism actually seems to go deeper than theirs. It is the kind of patriotism that finds expression in our Declaration of Independence. Without the continued maintenance of that independence a victory over Hitler and the other dictators will prove pretty empty. There is little use in fighting for liberty and freedom on the battlefronts only to lose it on the home front.

[From the Hartford Times of June 22, 1943]

OFFICE OF PRICE ADMINISTRATION POLICY IS WRONG

There is good reason for the indignation which so many autoists are expressing with reference to the Office of Price Administration's procedure regarding pleasure driving. Holders of A cards, in particular, forbidden to do any so-called pleasure driving, loudly complain, and rightly, against what verges on a campaign of petty persecution.

The A card holder is the average citizen, a decent person whose sons are in the Army, the Navy, and the Marine Corps, and who is buying War bonds. He wants the war to be ended in the quickest possible time. He is willing to make any sacrifice to that end. If his Government were to say flatly that the demands of the American forces overseas are such that absolutely no gasoline can be spared for civilian use at home, other than to provide for transportation of men and materials to keep the stream of war supplies moving toward the scenes of fighting, he would be willing to let his car stay in the garage until the end of the war.

But his Government does not say that. It does not declare there is no gasoline to be had by the average citizen. It lets him buy an average of 1½ gallons a week. Few are the cars that can make more than 30 miles an a gallon and a half. Little is the pleasure driving the A card holder can indulge in. For the Office of Price Administration to insist that the A card holder shall not go to his cottage at the shore, shall not make use of his property in the hills, except to make repairs or to close it, is a ridiculous and unnecessary bureaucratic interference with the inalienable rights of Americans to life, liberty, and the pursuit of happiness proclaimed in the Declaration of Independence.

Not 1 gallon of gasoline which the Government wants will be diverted from military use if the Office of Price Administration were to forget its silly drive against A card holders. Few indeed are the A card holders who have any coupons left for use before July 22. Why persecute those who save their coupons, legitimately, to use on trips to the shore or country? In the case of the A card holder the Office of Price Administration antipleasure driving crusade is not intelligent.

If holders of B and C cards (who also have basic A cards) can be convicted of misusing their B and C rations, that is a different matter. Gasoline allotted for driving between homes and war plants should be used only for that purpose. Human nature being what it is, there may be need to check B and C holders' use of their rations. But there is not the slightest justification of denying the A card holder the privilege—yes, the right—to use his pitifully small allowance as he sees fit.

Chester Davis

REMARKS

OF

HON. CHESTER H. GROSS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 29, 1943

Mr. GROSS. Mr. Speaker, back in the early thirties I met Chester Davis for the first time in an agricultural convention in Chicago. I liked him then, and I like him yet. He is sympathetic to the agricultural interests of the country. He is just as good an executive as I know of in the Government anywhere. He understands the food situation. He has resigned because it was his job to do an impossible thing at the direction of the Chief Executive. I have a very high regard for Marvin Jones, but feel sorry for him, because he, too, is going to be sacrificed on the altar of the New Deal. I think Mr. Davis was showing good sportsmanship in not walking out on the President when he found that the program he was expected to put across was not only impossible but impracticable, and, what is more, the country did not want it.

I feel sure that the President owed him the courtesy of permitting him to come to the White House and discuss the matter as he had requested. After all, Mr. Davis had served long and well and did enjoy a great deal of confidence throughout the country, and knew that subsidies were being opposed by farm organizations and individual farmers throughout the country. As a matter of fact, I know of no one individual who wants food subsidy. Mr. Davis recognized clearly the fact that the food situation was becoming more serious daily, and was very fearful that the crops produced this year were going to be short of our needs. He also knew that so far as producing was concerned there was nothing that could be done to boost it during the present season, that we would have to do with the crops planted and the harvest we are going to reap, which, at this moment, are not too promising. It was this information which prompted him recently to declare that unless we save every scrap of our food we are likely to get hungry before another crop season comes around.

I recently outlined to the House the many agencies dealing with the food program. It appears to me that the President by this time should see clearly that there is only one way to handle our food problem and that is to accept the program laid down by Herbert Hoover, who knows more about it and how it should be handled than any other one man in America.

It is just too bad that so far this season there has been so much waste in gathering the crops which have matured because the administration would not heed the advice of farm leaders who understand this problem, if anyone does.

Robbing Peter To Pay Paul

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 29, 1943

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Raymond Moley, from the Wall Street Journal of June 28, 1943:

ROBBING PETER TO PAY PAUL—THE PRESIDENT WOULD PUNISH THE WORKERS FOR WHAT HE SAYS IS THE UNION LEADERS' OFFENSE

(By Raymond Moley)

If the President intended his work-or-be-drafted policy to be a substitute for the anti-strike legislation, he overlooked a number of essential differences. Or did he?

The threat to draft men who strike is not an attack on the union which starts the trouble. The President's proposal bypasses the union. It is a proposal to attack individual strikers. It does not contemplate putting the heads and employees of unions in the Army. Lewis, to take a conspicuous example, will not be subject to the draft because he has not quit work. He is working long hours every day as a union leader. The President's statement says the action of the "leaders" of the mine workers has been intolerable. But then it goes on to threaten not the leaders, but the men.

That brings us to another inconsistency in the President's plan. The workers have not promised individually not to strike. So far as this reporter knows, they made no such personal pledge. Green, Murray and the leaders made that promise. So the President would crack down on individuals for doing something they have not promised to refrain from doing, while he does nothing whatever to those who did make the promise. Apparently he does not want Congress to hold those leaders responsible either, whether for their promises or for anything else.

The President's proposal, as many have pointed out, would permit him to use the power to draft for something quite unlike its original purpose. It makes punitive something which the Government has said is an honor. It is no tribute to military service.

But more ominous still, if the power should be given to the President in terms that would allow him to discriminate in drafting without reference to an organized body of which the offenders are members (and it goes without saying that the draft properly cannot take note of men's union memberships), the granted power would be almost limitless. He might use it for all sorts of purposes beyond coercing striking mine workers. Certainly, that would be said if Congress tried to give him power over the leaders under such a plan. Any attempt to translate his scheme into legislation might even give him the power to draft all kinds of offenders against his own notions of what is essential to the war effort, such as critics and dissenters generally.

Under Government operation, the Government will presumably take the union dues from workers' pay envelopes and give them to the leaders. Thus, after saying that the leaders, not the miners, are to blame, the Government takes the miners' money and gives it to the leaders. This is merely a further extension of the absurd predicament into which the Government has got itself.

Obviously, the President is determined to do anything except to recognize that the unions themselves, as distinguished from their dues-paying members, should be held responsible for their acts. Apparently, he is willing, for example, to have the union leaders take the dues money which the Government takes from the men and gives to the union contributed by the leaders to political campaigns—even his own. What kind of self-government is that? It would mean that the beneficiaries of governmental power exact tribute from workers, pass it through the union treasury, and then use it to elect themselves to office.

More Meat—More Copper

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 28, 1943

Mr. MANSFIELD of Montana. Mr. Speaker, in keeping with my campaign to raise the ration of meat for the miners of Butte, I am inserting in the RECORD more communications from my constituents. To date I have received in excess of 5,000 letters and cards from Butte on this subject. More meat—more copper. Truer words were never spoken or written. These soldiers of production are entitled to every consideration and the least we can do is supply them with the energy to produce:

DEAR MIKE: Suggest every employee of the people—that is, officeholders and their aides—give up their meat allowance so that the miners can get enough energy to continue digging out the copper for the war effort.

BILL HAKALA.

More meat for more copper.

Mrs. E. J. GILBERT,
Butte, Mont.

The Butte miners are fully behind their Government. Let's have more meat ration, because, after all, they need guts, too.

JOE KANE,
Butte, Mont.

BUTTE, MONT., *June 23, 1943.*

MIKE MANSFIELD.

DEAR SIR: Do we need more meat? Yes; we have to do real labor ir these mines, as you know. Can't do it on hay.

J. H. JACOBSON.

BUTTE, MONT., *June 23, 1943.*

DEAR CONGRESSMAN: We must and should have more meat to produce the vital metals so urgently needed on the home front.

A miner from Butte.

MATT FLANICK,
Butte, Mont.

BUTTE, MONT., *June 19, 1943.*

MR. MANSFIELD: This card is a request that you use your utmost influence to obtain additional meat supplies for the miners and other working people of this community. This is very vital.

Yours very truly,

J. J. MCNAMARA,
Justice of the Peace,
Courthouse, Butte, Mont.

GENTLEMEN: For a speedy victory give the miners more meat.

MRS. J. BOYLE,
Butte, Mont.

BUTTE, MONT.

Congressman MIKE MANSFIELD,
Washington, D. C.

DEAR SIR: Your help in obtaining more meat for the Butte miners will be greatly appreciated by me.

Yours truly,

MAYME KELLY.

DEAR CONGRESSMAN: The meat situation in Butte is serious and has a tendency to undermine morale of miners. I trust some relief will be possible.

CHAS. W. GARDNER,
Butte, Mont.

MEADEVILLE, MONT., *June 23, 1943.*

Congressman MIKE MANSFIELD,
Washington, D. C.

DEAR SIR: The miners are our first line of defense. Without the metals they produce, war effort would be useless. The present allowance is not substantial for such hard workers.

Sincerely,

FRED BUTORI.

BUTTE MONT., *June 17, 1943.*

DEAR MIKE: We need more meat for the miners of Butte. We are counting on your help to get it for them.

Yours ever,

GLENN D. MYERS.

DEAR SIR: I have two sons working in the mines, and it sure hurts me when after a hard day's work they come home and I haven't the meat or enough of it to feed them. Please can we have more meat for our men?

MRS. ELIZABETH PAJNICH.

BUTTE, MONT.

Butte miners can't work without meat to produce copper. We've got to have more meat or we can't work steady. Four thousand feet underground is hard work.

JACK L. HEINZ.

WALKERVILLE, MONT.

DEAR MIKE: If any worker in the world is entitled to a meat diet it is the miners in the hot mines in Butte.

Sincerely yours,

J. J. HARRINGTON.

BUTTE, MONT.

DEAR MIKE: Please add my endorsement to the "more meat for production workers of Butte" campaign. I do appreciate your past effort but urge you to demand insistently that heed be given to this appeal.

W. J. MCMAHON.

BUTTE, MONT.

SIR: Do your utmost in the matter of getnig more meat to the men who go down into the mines. To them it is a vital necessity.

Yours very truly,

MRS. EVELYN M. BALKOVETZ.

BUTTE, MONT., *June 23, 1943.*

Linnea Lodge, No. 174, Order of Vasa, is lending her wholehearted support to "more meat for miners" campaign, and we sincerely hope something may be done to give us more points or more meat for points.

Sincerely yours,

MRS. ANNA T. JOHNSON, *Secretary.*

BUTTE, MONT., *June 22, 1943.*

Please use whatever influence you command to get enough meat for underground workers in Butte.

Yours truly,

MILAN FOLJAN.

BUTTE, MONT., *June 24, 1943.*

DEAR MR. MANSFIELD: My husband is a miner and has been working for the Anaconda Copper Mine 27 years. Don't you think that the miners should have more meat? Please try and see what you can do for us. Thank you.

MRS. GEORGE MIKICH.

Please do all you can to obtain more meat for copper miners.

CATHERINE DONOVAN,
Butte, Mont.

BUTTE, MONT., *June 23, 1943.*

Hon. MIKE MANSFIELD,
Washington, D. C.

DEAR SIR: As a white-collar worker, asking nothing for himself, I appreciate what you are doing in trying to secure more meat for our miners, and feel that you will need no urging to continue your efforts.

Yours truly,

P. J. DRISCOLL.

More meat for the miners of Butte, Mont.

MRS. S. SHEEHAN.

JUNE 22, 1943.

DEAR MIKE: Now is the time to do something for the miners. The Government needs more rock in the box and the miners need more meat in the solar plexis. Their cause is just and it should prevail. Best regards.

Yours truly,

HARLOW PEASE,
Butte, Mont.

We need more meat.

JOE LYNCH,
Butte, Mont

Get more meat for the Butte copper miners.

EMIL HERMANSON,
Butte, Mont.

BUTTE, MONT., *June 18, 1943.*

Please help the miners to get more meat. They need it to be able to produce more copper.

Respectfully,

MRS. EMMA TONKIN.

Keep him working. The miner must have more meat.

J. J. TANSEY,
Butte, Mont.

BUTTE, MONT.

I believe that any man working in the copper mines not only needs, but is entitled to, more meat.

FRED HARVEY.

BUTTE, MONT.

I want more meat.

GLEN BARDEEL.

BUTTE, MONT., *June 18, 1943.*

DEAR CONGRESSMAN: Our country needs copper for victory and must have it. Our miners want to get it out of our mines as loyal citizens should. All of us on the home front want them to work hard to this end. They must have meat for strength to enable them to produce this much needed metal. Our miners need more meat. Please see that they get it.

Yours respectfully,

HENRY F. PISSOT.

BUTTE, MONT.

DEAR FRIEND MIKE: Would gladly appreciate if you could get us Butte miners more meat rationing.

EDWARD TYVI.

BUTTE, MONT.

Get more meat for copper miners for more copper production.

ROSE M. BROZOVICH.

BUTTE, MONT.

More meat for copper miners for production.

MRS. TOM GERGURICH.

BUTTE, MONT., *June 18, 1943.*

DEAR MIKE: Please do all you can toward getting a larger allotment of meat for the copper producing miner of Montana.

The best of luck to you and success in this especially.

Thank you.

Sincerely yours,

MR. and MRS. ARTHUR RASOR.

MEADERVILLE, MONT., *June 23, 1943.*

Congressman MIKE MANSFIELD,
Washington, D. C.

DEAR MR. CONGRESSMAN: The miners are entitled to same amount of meat as our soldier boys as they are the first line of defense. No war can be won without the miners' production.

Sincerely,

TONY SUTEY.

BUTTE, MONT., *June 22, 1943.*

DEAR SIR: Being an ex-miner yourself you should realize that peanut butter and jelly sandwiches do not stick to a miner's ribs. Therefore I wish you would do all in your power to get the miners more meat.

MRS. JOHN HARRINGTON.

BUTTE, MONT., *June 23, 1943.*

DEAR MIKE: Keep up the good work. We heartily endorse the movement for increased meat for our miners. Good luck, good health, and kindest personal regards.

BILL RILEY.

BUTTE, MONT.

Please lend your efforts in helping to secure more meat for the Butte miners.

TOM CONNELLY.

DEAR SIR: It is necessary that the miners have more meat. If we are expected to do the work that is asked of us here in the mines. And copper is sure needed these days.

ROY E. MCKINNEY,
A Copper Miner.

JUNE 23, 1943.

DEAR MIKE: We want extra meat for the miners, please.

HELEN AND TOM TOBIN.

BUTTE, MONT., *June 24, 1943.*

DEAR MIKE: With my fellow townsmen I am writing this note to ask you to do all in your power to effect some change in the meat rationing regulations as they affect Butte and Silver Bow County.

Help our war workers maintain production. Enough meat is the answer and the only answer.

D. F. MCGONIGLE.

MEADERVILLE, BUTTE, MONT, *June 22, 1943.*

Hon. CONGRESSMAN MANSFIELD:

Miners slowing down on production, visibly, undoubtedly due to lack of meat. Urge you to do your best in procuring more meat for the miners. Thanks.

Your constituent,

AL GIECEK,
Member, Editorial Staff, Miners' Voice.

BUTTE, MONT.

More meat for the Butte miners.

H. SCANNELL.

DEAR MIKE: I hope that you will do all in your power to secure more meat for the miners in Butte.

This is a worthy request, as the miners must have meat in order to mine the copper which is essential to win this war.

Yours truly,

WILL TIDDY,
Butte, Mont.

BUTTE, *June 18, 1943.*

A Government man can get along on a light diet, but digging out copper is a man's job, and he needs plenty of meat.

SAM COCKELL,
Butte, Mont.

BUTTE, MONT.

MR. CONGRESSMAN: My husband is a miner and there's just the two of us, which allows us only 32 points a week. That doesn't allow us enough meat for meals and his lunches, too, besides butter and such things we need. There aren't many substitutes that can be put in a pail for meat. I think the miners should be given more points for meat.

MRS. CHARLES MCFARLAND.

The work is heavy and hot.

SIDNEY A. DONEY.

MR. MANSFIELD: Miners need more meat in order to produce more copper.

TED CAVANAUGH,
Butte, Mont.

DEAR SIR: I think that the miners here in Butte should be entitled to more meat. I have fed many a miner and I know only too well what they can eat after a hard day's work.

Mrs. B. MCNULTY.

BUTTE, MONT., *June 19, 1943.*

HONORABLE SIR: Kindly accept this as a plea for more meat for miners in the Butte district to further the war effort.

MR. AND MRS. RICHARD STODDEN.

BUTTE, MONT., *June 19, 1943.*

Congressman MIKE MANSFIELD,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN MANSFIELD: Please consider our Butte miners. We all know how necessary meat is to a copper producer. More meat for the Butte miners.

Very truly yours,

MARY E. MICHELOTTE.

I am a miner in the Butte mines, and I need more meat.

LORENZO ROLANDO,
Meaderville.

Auto Use Tax

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 29, 1943

Mr. CANFIELD. Mr. Speaker, the A. A. A. Club of New Jersey presents a timely and just appeal in the telegram below. Those who have been denied the use of their cars for almost every purpose are at a loss to understand the imposition of a new use tax at this time.

TRENTON, N. J., *June 28, 1943.*

Hon. GORDON CANFIELD,
Washington, D. C.:

We urge the adoption of joint congressional resolution extending validity of present $5

Federal auto use stamp by 4 to 6 months, or until gasoline situation permits greater car use. Current Federal use stamp expires June 30. Therefore quick action necessary if car owners now limited by restriction are to receive benefit of this measure. We urge your support of this resolution.

A. A. A. AUTOMOBILE CLUB OF NEW JERSEY,
K. D. SULLIVAN, *Secretary.*

Floods in War and in Peace

EXTENSION OF REMARKS

OF

HON. WILL M. WHITTINGTON

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 29, 1943

Mr. WHITTINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address which I delivered before the Mississippi Valley Association, St. Louis, Mo., Monday, June 28, 1943, as follows:

Floods have harassed man in all ages and in all countries in both war and peace. The Chinese found it necessary to control the floods along the great rivers of the Celestial Empire from the earliest times. The records of floods in China extend over a period of 4,000 years. The levees along Chinese rivers were first constructed while Europe was still a wilderness. Some of China's greatest legendary heroes are her engineers. One of them is Li Ping. A beautiful temple has been erected to his memory. There is inscribd in letters of gold at the entrance of the temple his command: "Dig the bed deep and keep the banks low."

As civilization in all countries advanced, man attempted to improve and control rivers. Sometimes he undertook to control the ravages of disastrous floods by keeping the high waters within the banks and between the levees supplementing the banks. Again he utilized diversions and constructed floodways. At other times he stored the excess waters in rainy seasons for use in times of scarcity. Dams were constructed to detain the flood waters to prevent the overflow of the valleys.

Floods are not more frequent than formerly. There were floods long before De Soto discovered the Mississippi, and long before the Ohio Valley was settled. Deforestation has little to do with the frequency of floods. Soil erosion has been going on through the ages; it is responsible for the alluvial valleys of the United States.

Rivers and seas are among nature's best contributions to the progress of man. But man must supplement nature. Impediments to navigation must be removed. Canals must be constructed, channels must be deepened, harbors must be kept open, and barriers must be removed. Transportation by water is the cheapest form of transportation, and the denser the population the greater the need for cheap transportation.

Rivers have always contributed to the advancement of mankind. The lack of navigable rivers has hindered the development of many countries. Cities in ancient and modern times located along the great rivers have grown and prospered. What would London be without the Thames? What would New York be without the Hudson? What would St. Louis be without the Mississippi? While rivers are among nature's greatest contributions, they must be improved, they must be controlled.

"And the waters prevailed and increased greatly upon the earth; and the Ark went upon the face of the waters."

In this passage from the Book of Genesis we have the oldest record of the relationship of floods and navigation.

I know of no history that does not deal much with rivers. I know of no legend or fable that does not include rivers. There is a charm and majesty about rivers. As the ocean awes with its resistless power, so the river thrills and delights. The river is the most human and the most companionable of all inanimate objects; it has a voice of its own; it is full of good fellowship and of delightful companionship. It can be friendly and helpful or it can be threatening and destructive; it can be gay or it can be grave.

A drop of water could tell a wonderful story. It has made the long journey from the river to the ocean millions and millions of times. It has been lifted by the blazing sun from the sea or gulf, carried by wind and storm across the plains, the hills, the valleys, and the mountains to fall as rain or snow and to join other billions of drops of water to form the little brook that ultimately finds its way into the great river that flows ever onward to the sea.

In his attempt to improve and control rivers, what can man do about them? He cannot prevent floods, but he can control them. He cannot prevent, nor can he change the amount of rainfall, but he can alter the rate at which it will run off. He cannot prevent or change the amount of snowfall, but he can delay the snow by dense foliage and by other means from reaching the ground, and he can hinder the snow when it has reached the ground from being converted into rapid run-off. He can check the ravages of disastrous floods by keeping high waters within the banks and between levees supplementing the banks. He can hold back the rains and the snows by dams along the tributaries of the headwaters. He can detain the floods by larger dams below the headwaters. He can supplement the levees by diversions and floodways. He can straighten the channels and thus hasten the discharge.

Flood control prevents rivers from being destructive enemies and makes them useful friends. It is only a few years ago that flood control was adopted as a national policy by the United States. The first act was passed in 1936. It was followed by the acts of 1937, 1938, 1939, and 1941.

All of the principal rivers of the United States have been surveyed and studied by the Corps of Engineers of the United States Army. Reports have been submitted to Congress. Levees, flood walls, and reservoirs have been constructed in all of the principal river basins of the country. Local protective works along the Connecticut and reservoirs along the tributaries of the Connecticut have been constructed in New England. Flood walls have been constructed along the Ohio, and reservoirs along the tributaries of the Ohio. The levees along the lower Mississippi River are the strongest, highest, and most massive earth structures ever constructed in any country. Authorized flood control works have been constructed by the Corps of Engineers from New England to California and from Seattle to Jacksonville. No country in the world has made more rapid progress in the control of floods than the United States.

CORPS OF ENGINEERS

There is a reason for the unparalleled progress in flood control in the United States. The Corps of Engineers of the United States Army is entitled to the credit. Congress authorizes no projects unless recommended by the Corps of Engineers. No projects are recommended unless the benefits exceed the costs of the improvements. Both theory and experience are essential in the construction of the works. The highest type of engineering is required. The improvements must be sound. They must be justified. All of the Flood Control Acts provide that the planning and the execution of flood control and river and harbor projects is the function of, and shall be under the supervision of, the Corps of Engineers. By common consent, they are the most accomplished flood-control engineers in the world.

ESSENTIAL IN WAR

Flood control is essential in peace; it is more essential in war. River transportation is important in peace. It is more important in war. Inland waterways are needed in peace. With coastal and coastwise traffic eliminated by the submarines, they are imperative in war. The English, Russians, and Germans utilized their rivers in peace, but they are utilizing them more in war. The more fierce the war, the more widespread the use of inland waterways. The great battles between the Russians and the Germans have been fought along the rivers of Russia. We should profit by the example of the English, the Russians and the Germans. We should remember that during the First World War it was necessary for the United States to use everything that would float, as has been said, from a bateau to a battleship. Ships are important, barges are necessary, but improved waterways are fundamental. Flood control and navigation are as essential to the war in the New World as they are in the Old World.

FLOOD CONTROL ACT OF 1941

A sound program of national flood control requires annual authorizations and appropriations The fall of France in 1940 and the necessity for national defense delayed and prevented the consideration and passage of a flood-control bill. However, after exhaustive hearings the Flood Control Act of August 19, 1941, authorizing approximately $275,000,000, in addition to previous authorizations, was passed. This act is outstanding among the flood-control acts. It authorizes projects in all the principal drainage basins of the United States It provides for multiple use projects, especially in Arkansas and along the Missouri River. The policy adopted in 1936 was continued and expanded. Only projects that had been carefully studied and favorably reported by the Chief of Engineers were included in the bill.

THE FLOODS OF 1943

On the home front 1943 will be remembered for excessive floods along the Wabash and the Sangamon Rivers and for record floods along the Illinois River. There have been two maximum and successive floods along the Arkansas River One of them was a record flood. There have been three successive floods along the Missouri, one of them being a record flood. There has been a record flood in the upper Mississippi, the flood heights at St. Louis were only about 2 feet lower than the previous record gage. Large areas have been inundated. Many deaths have occurred. The Corps of Engineers estimate that along the Wabash, the Illinois, the Sangamon, the Arkansas, the White, the St. Francis, the Missouri, and the Upper Mississippi Rivers approximately 9,029,000 acres were inundated with estimated damages aggregating $96,234,000 in the floods of 1943. Sixty-two deaths were reported. Food and feed crops were destroyed. The floods came later than usual, and replanting is hazardous.

FLOOD-CONTROL HEARINGS

The Committee on Flood Control during the present month conducted exhaustive hearings for 2 weeks. The program was to provide for emergency authorizations for the repair and restoration of flood-control works damaged or threatened by the floods of 1943 and to report a bill to provide for additional flood-control works for post-war construction on which favorable reports have been submitted by the Chief of Engineers since the Flood Control Act of August 19, 1941.

Congress has previously adopted in the major flood control acts of 1936, 1938, and 1941 projects on which favorable reports have been submitted but authorized only a part of the funds required for the construction of the projects. Additional authorizations to provide for projects previously approved are planned in the flood control act under consideration for post-war construction.

The Committee on Flood Control has reported favorably an allocation of $10,000,000 to provide for emergency repair and restoration work necessary as a result of the damages of the floods of 1943. The committee plans to report later a bill to provide for flood-control works in all the principal basins of the United States so that there may be available sound projects to protect the lives and property of the people of the United States from disastrous floods following the conclusion of the war.

AUTHORIZATIONS AND APPROPRIATIONS

The total authorizations for general flood control amount to about $930,400,000. There have been appropriated for construction a total of $526,300,000. In order to complete the works already under construction or definitely planned for construction, additional appropriations will be required in the amount of about $243,000,000. The appropriations to date plus those required to complete the present construction program amount to about $770,000,000. This would leave an apparent backlog of projects yet to be considered amounting to $160,000,000.

These amounts are based largely upon prewar estimates. It is probable that the amounts to complete the present program after the war will be increased. The estimates do not contain full allowance for the cost of suspending work on many projects in accordance with the recent War Production Board stop order.

The total cost of projects which have been authorized by Congress but which have not yet received any appropriations for construction amounts to $288,000,000. It will be noted that this amount exceeds the backlog of $160,000,000. This is due to the fact that our present construction program includes projects falling within the comprehensive basin plans for which only partial money authorizations have been provided. As I have indicated, the authorizations for those basins will have to be increased in order to provide for the completion of those particular projects.

In addition to the authorizations and appropriations for general flood control, Congress has appropriated for the lower Mississippi Valley, including the St. Francis and the Yazoo, approximately $472,153,424 under the acts of 1928, 1936, and 1938.

While there was devastation along the upper Mississippi River and tributaries, the floodwaters moved placidly from Cairo to the Gulf. Old Man River has been harnessed by the Army engineers. Massive levees, floodways, and cut-offs enabled the floods of 1943 to be carried along the lower Mississippi River with a stage slightly in excess of flood stage. Cut-offs have shortened the river by a distance of 137 miles. Diversions have been eliminated. Flood heights as a result of cut-offs have been reduced some 10 feet at Arkansas City, 8 feet at Greenville, and 5 feet at Vicksburg. The project flood, which is 25 percent in excess of the flood of 1927, has been provided for.

If enough dirt is put into levees they can be made safe. Levees can be made as strong as Fort Peck Dam or the Gatun Dam in the Panama Canal. Levees for flood control are feasible if they are strong, constructed of proper material, and high and broad enough. They are the most economical and efficient means of flood protection. Soils are to be taken into consideration. Berms are to be constructed. Foundations are to be made secure.

ADDITIONAL LEGISLATION

It is evident that many important projects for which comprehensive plans have been approved by Congress cannot be constructed without additional authorizations. Other important measures recommended by the Chief of Engineers cannot be begun. Appropriations for new works for general flood control have not been made for the next fiscal year. Such appropriations should be renewed at the earliest practicable opportunity. Often projects must be constructed consecutively. Works should be coordinated and they should be prosecuted at reasonable rates to prevent damages and to prevent calamities and overflows. Reservoirs require long periods to construct Authorizations should be made in advance. Benefits do not accrue until the reservoirs are completed. It took 6 years to build Fort Peck Dam. Projects should be initiated years ahead of expected completion, and authorizations should be made early, as delays in construction due to high waters make river improvements slow.

The demand for electric power in the war effort is growing. Authorizations for reservoirs for multiple purposes are in order. While I believe in multiple-purpose reservoirs, it must always be kept in mind that full reservoirs are essential for the generation of power and that empty reservoirs are imperative for the storing of flood waters.

The floods of 1943 have demonstrated that the Corps of Engineers are sound in their recommendation to the Congress of the United States that ample provision must be made for flood control before additional provision is made for the generation of power in multiple-purpose reservoirs. The people must not be deceived. They have relied for flood protection as a result of the construction of dams and reservoirs, but when such dams and reservoirs are used entirely for power, there is no space for the storage of flood waters when the floods come. It must be kept in mind always that dams unless made high and large enough for power and for flood control are incompatible.

THE WAR EFFORT

Destructive floods can easily jeopardize the war effort. They can halt industrial production by shutting down power plants, by crippling railroads, by destroying highways, and by interrupting communications.

Food is essential in war. The United States is being called upon to feed and clothe the Allied Nations. It has become apparent as a result of the floods of 1943 that food and feed can be destroyed by floods and that the war effort can be hindered by destructive floods. Floods not only jeopardize communications and war plants, but they jeopardize the bread-basket of the Nation. A partial overflow may not only interrupt postal services and interstate commerce, but it may seriously reduce the production of feed and food. The Mississippi River divides the continent. Economy will be promoted and great floods prevented and controlled by the immediate completion of the adopted projects in the lower Mississippi River and by the completion of the adopted projects along the upper Mississippi and tributaries. Authorizations therefore must be followed by appropriations in war, for projects what are essential to the prosecution of the war.

MULTIPLE-USE PROJECTS

Plans for controlling devastating flood waters should wherever practicable provide for their use and for their conservation for the benefit of the people. Water is probably the most valuable of natural resources. It should not be polluted. It should be conserved and not wasted. Power should be generated where practicable in connection with flood control. Multiple-purpose dams wherever feasible, and with adequate flood storage, should be constructed. Both firm and secondary power are needed and should be generated. Water power is not only valuable, but it contributes to needed public improvements that might not otherwise be constructed for flood control, navigation and irrigation. The best possible multiple-use projects should be authorized now so that they can be prosecuted in an orderly manner to meet urgent needs for flood control, irrigation, and navigation and to satisfy the growing demands for electric power.

NAVIGATION

The Mississippi River and its tributaries have been carrying during the war more freight than ever before in their history. Gasoline, oils, and sulphur are transported to industrial centers in the Chicago area, the Ohio Valley, and the Pittsburgh district. Steel and coal are shipped from the Pittsburgh and Kentucky areas. It is estimated, however, that the Mississippi River will carry less tonnage in 1943 than in 1942. I trust that the greatest of all navigable rivers will be utilized more and more during the war.

An ever increasing number of vessels which are being constructed on the Great Lakes for war use are traversing the Lower Mississippi River, and shipments from the Port of New Orleans are increasing in importance in the national war effort. Coastal and intercoastal waterways have been almost eliminated by the menace of submarines during the war. Navigation on the Mississippi, the Ohio, and the Missouri Rivers thus assumes a more important part in the war effort. Railways and highways are being overtaxed. Greater use should be made of navigable inland waterways in war transportation.

BACKLOG

We recall the depression following World War No. 1. We are apprehensive of another debacle following the present World War. It is difficult to arm; it is more difficult to disarm. Post-war employment will be a major national problem. While we are defending our freedom and our way of life, we must not fail to take stock of the problem of full employment which we must face again when the war is over.

We must profit by the experience of 1920, and we must profit by the experience of 1930. A reservoir of projects should be adopted. Backlogs should be provided, and they should be real backlogs. Many wasteful and extravagant activities to provide employment were adopted in 1933. Haste and speed were imperative. There was hunger in the land. Unemployment was widespread. There must be no repetition of waste and extravagance. There are Federal activities and there are public works that will promote the general welfare. Flood control is among the most satisfactory of public works. I know it is essential to win the war before we win the peace, but we must plan for peace and the problems of peace as we win the war. I shall therefore continue to advocate flood-control authorizations to increase the backlog of sound projects and to enlarge the reservoir of useful public works following the World War.

After all, the real problems of war never come until the war is over. Peace is really more difficult than war. Jobs must be provided for those now in the armed forces. Sound planning and scientific research are involved. Only worthy and sound projects should be promoted. Post-war planning must not be too theoretical. It must not be extravagant; it must be practical; it must provide for public works where the benefits exceed the cost. I know of no more satisfactory public works for the peace that must follow the war than flood-control improvements.

REDUCED EXPENDITURES

We are at war. I favor the reduction of nondefense expenditures. I advocate the curtailment of the normal expenditures of the Government, but I maintain that flood-con-

trol works which are vital to national defense or to the production of food and feed cannot be eliminated. I assert that improvements imperatively needed to control floods that interrupt communications and disrupt transportation, delay the manufacture of munitions, interfere with the manufacture of war materials, and destroy food and feed crops should be completed not only as a matter of economy but to aid in providing the supplies and equipment urgently needed for the prosecution of the war.

I know that war comes first. I am for all-out war. While generally flood-control works and other public improvements must stand aside to provide for the war effort, there are flood-control projects that are essential to the war effort. These projects are entitled to priorities.

I have advocated the abolition of depression agencies, including the Civilian Conservation Corps and the Work Projects Administration. I have insisted upon the elimination of all social experiments. I have advocated the reduction of all appropriations not essential to the prosecution of the war. I have insisted upon the reduction of Federal employees heretofore engaged in nonessential activities. I have advocated taxes and more taxes. I have urged the support of war measures. I have insisted from the beginning that it is impossible to win the war on a 40-hour week. I have urged a suspension of the 40-hour week for the duration. I have opposed the war profiteer and the labor racketeer. I have resented the administration coddling labor while using the whip and spur upon the farmers of the country. I have supported legislation for the liberalization of the National Labor Relations Act to provide for better cooperation between employers and employees. I have opposed profiteering in labor and in industry. I have insisted that there must be no strikes in war plants and munition plants.

Following Pearl Harbor I was among those who congratulated the representatives of the American Federation of Labor and the Congress of Industrial Organizations upon their promise that there would be no strikes for the duration. I have repeatedly condemned strikes in violation of the solemn pledge of the labor organizations. One jurisdictional strike has followed another. The situation has gone from bad to worse. Production is being delayed. As a result of one coal strike after another the manufacture of steel that is imperative for war has been halted. It is easy to denounce. The time for name calling has passed. We have had enough of coddling. We have had enough of shadow boxing. It is time for a showdown.

The Smith-Connally bill is intended to prevent strikes in defense plants and to prohibit strikes in plants taken over for operation by the Government. I believe in collective bargaining. I believe in the rights of labor. We might as well face the issue. When the coal miners' strike was called and the President, as Commander in Chief of the Army and the Navy, took over the operation of the coal mines, John L. Lewis contemptuously and insultingly said to the American people, "Now, we will bargain with our new employer, the United States of America." What is the issue involved? It transcends the rights of labor. The issue is the right to strike against the flag. The issue is the right to strike against the Government of the United States.

If men are to be drafted to go overseas, if men are to be conscripted to die for their country, I know of no good reason why labor should not be drafted if necessary. I know of no good reason why capital should not be drafted if necessary. Man is more important than property. We are either for our Government or against our Government.

When the Smith-Connally bill was before the House the president of the American Federation of Labor threatened to defeat Members of Congress if they voted for the bill. It is time for dictatorial labor leaders who demand that Members of Congress vote as they are ordered, or else, to be emphatically rebuked. It is time for the Congress of the United States to pass, and for the Commander in Chief of the Army and the Navy to enforce, legislation that will prevent dictatorial labor leaders from promoting or calling strikes in war plants and from aiding or abetting strikes in any plants under the operation of the Government.

It is said that the proper solution of our labor problems is voluntary cooperation, but labor has heretofore admitted that voluntary cooperation was ineffective. The labor organizations appealed to Congress to enact labor legislation. Labor itself abandoned voluntary cooperation in asking for the passage of the National Labor Relations Act and the Fair Labor Standards Act. If statutes are necessary and essential to protect labor in its rights, statutes are essential to restrict and to prevent strikes in war plants during the war. It is time for action. It is time to either work or fight.

SACRIFICES

The people are willing to make sacrifices. They know they cannot do business as usual. They know that increased powers in the executive department of the Government are essential in the war. They are willing to be taxed and taxed to the bone, but they resent unnecessary burdens that are imposed upon citizens in business, often by those who are theorists without any practical business or commercial experience. We are fighting for freedom. We are not slaves. The people knew there was no reason for the multiplied questionnaires and reports with respect to rationing. They were glad when Congress curtailed such activities.

The problems of war are difficult. Selfishness crops out. It is often evident. Tried and true leaders are essential in executive places. It is imperative that the people have confidence in those who are vested with war powers. The people know that increased powers in the hands of a good and a great man make him humble, but they know that such powers in the hands of a little man lead to impositions. Vast powers in a Robert E. Lee or a U. S. Grant inspire them to serve, to fight, to sacrifice, to deny, and not merely to rule. While dictatorial powers are essential to the prosecution of the war, the people resent little dictators in Washington. They resent autocratic bureaucracy. While being taxed and while they are being called upon to deny, while they are asked to buy bonds, the people insist that the normal functions of government be not impaired. They insist that waste and extravagance be eliminated. They bitterly resent the policy of the Administration in coddling special groups, whether they be labor groups or social planners. They insist that America be saved before America is reformed.

The people know that they live in the greatest hour in history. These are greater days and greater nights than when Washington with his ragged men was at Valley Forge. Washington had courage. Lincoln had courage. Washington and Lincoln both had faith, but life today is greater. The world will never forget the Torpedo Squadron Eight which destroyed the Jap carrier at Midway. War always means sacrifie. The people are willing to cooperate. They are willing to endure. They want their sacrifices to count. They are asking that only the true and tried leadership of the Nation be placed in charge of the vast war powers in all of the departments in Washington. War means crises. Every crisis means an opportunity. The people need faith and they need thrift. So does the Government. It was faith and thrift that built America. America can only be rebuilt with faith and thrift. Faith has sailed the uncharted seas. Only faith can rebuild what war has destroyed.

MORALE

Morale is essential on the battle front. It is equally essential on the home front. We have evidences every day of the heroism of our soldiers on land, of our sailors on the seas, and of our men in the air. There is morale on the battle front, but morale on the home front is essential to sustain morale on the battle front. The boys in the hellholes of Guadalcanal, on the burning sands or in the mudholes of Africa are not howling and complaining of the sacrifices they are called upon to make. They are not continually complaining and grouching. They are not salting down everybody who will listen to them with their tears and with their complaints What about the morale of the home front? Often it is the fathers, sometimes it is the mothers and sisters, who speak by the hour about the mistakes of the Army and the Navy and about the mismanagement of the war effort at Washington. The boys at the front are not grouching. The tragic part of it is that the people who complain without cause do not realize the harm they are doing. Optimism is essential on the battle front. It is essential on the home front. Pessimism on either front is just as catching as the measles, and when it becomes an epidemic it is as fatal as any plague. It is just as patriotic for women to be cheerful as it is for them to knit sweaters. It is just as patriotic for fathers not to be selfish, not to complain without cause, as it is for their sons to fight on the battle fronts. It is equally as important for men and for women not only to endure, but to cooperate and to be unselfish. It is time for all to deny and to sacrifice.

EMERGENCY WAR FLOOD CONTROL APPROPRIATIONS

As I have indicated, no appropriations are being made for general flood control for the next fiscal year, but there are emergency works and these works should be constructed. There will be other emergency works during the progress of the war. Heretofore emergency works have been confined to war plants and to protect war munitions, but food and clothing are as essential as guns. Cotton, corn, wheat, and sugar must be produced. Cattle and hogs must be grown. The United States is being called upon to feed and clothe the armies of the United Nations. Munitions, tanks, and guns are needed during the war, but food and feed are essential.

I emphasize another thought. Following the war with its hunger and desolation, food will be more essential in all probability than during the war, and by food I mean American food. It is therefore imperative that sound projects to provide for greater flood protection for the valleys that produce the foods of America should be adopted now, and that plans should be made for their prompt construction with the coming of peace. The farmers of the United States are being called upon to produce more for the war effort than ever before, but after the war the demands upon the farmers of America will be greater. The productive areas of America are in the valleys. There must be control of devastating floods to provide for the protection of the bread baskets of the United States.

CONCLUSION

We are engaged in the greatest war in history. As I have said, war means sacrifices. It means sacrifices that hurt. It means taxes and more taxes. It means deaths and more deaths. The fate of the Republic is at stake. No nation ever fought for a nobler cause. We face the gravest hour our country has ever known. America is the last hope of democracy. As Abraham Lincoln said, "We shall nobly save or meanly lose the last great hope of earth."

Freedom is not something to be handed down from father to son or from generation to generation. Every citizen is the architect of his own freedom. Freedom must be achieved. Freedom is not in retreat. Democracy is on the march. Justice and righteousness will prevail. Victory is assured.

Neither Hitler nor Japan can stop the march of freedom or the victory of democracy. The road may be long and rough, but whether long or short, whether rough or smooth, we mean to go all the way, and we know that the road to victory will lead to a better United States and a better world.

Government Operation of the Coal Mines

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 29, 1943

Mr. SABATH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram and my reply thereto:

CHICAGO, ILL., *June 25, 1943.*

HON. ADOLPH J. SABATH, M. C.,
Washington, D. C.:

Press reports that National Fuel Administrator Ickes contemplates Government operation of coal mines for the duration are most disturbing.

The disastrous experience in last war of Government operation of railroads is sufficient reason for urging continued private operation of coal mines. Consider railway private operation this war for proof. We feel that coal industry under private operation has done outstanding job to date by serving private and public needs without Government subsidy.

In our opinion act of taking over and operating mines under Government control would so disrupt coal output as to seriously impair war production of entire Nation for prolonged period. Also would establish precedent whereby union heads in many industries could seek Government control in order to improve economic condition at expense of the Nation.

We seek and urge your active help in investigating situation and in advocating continued private operation of coal mines.

SIMMONS BOARDMAN PUBLISHING CORPORATION,
Publishers of Railroad Age and American Builder.

JUNE 28, 1943.

SIMMONS BOARDMAN PUBLISHING CORPORATION,
Publishers of Railway Age and American Builder, Chicago Ill.

GENTLEMEN: Your telegram stating that the contemplated Government operation of the coal mines is most disturbing, received.

You state that the disastrous experience of the Government in the last war in its operation of the railroads is sufficient reason for the continued private operation of the coal mines. While I am generally opposed to Government operation of the coal mines I feel that your statement is unjustifiable and unwarranted. You are well aware of the fact that the railroads were on their knees to the Government to take them over because of the shortage of rolling stock, labor, and their inability to handle the increase in freight.

You should also know that within 3 months after the Government had taken the railroads over conditions changed for the better. Due to the interchange-of-car plan between the railroads, and the Government's ability in obtaining more engines, cars, as well as labor, which cost the Government nearly $2,000,000,000, the railroads were tremendously improved and were put on a paying basis. After this and immediately after the war the same gentlemen who clamored and pleaded for the Government to take them over started a campaign for their return, charging inefficiency, improper administration, and every other conceivable charge which they propagandized in every form of publicity.

Notwithstanding this past experience I am not for Government operation of the coal mines. However, in view of what the Govment has done for the mining industry the operators should be more helpful in eliminating strikes and refrain from forcing strikes and unloading controversies on John L. Lewis, as the operators have been doing. By this I do not mean to defend Mr. Lewis.

Sincerely yours,

ADOLPH J. SABATH.

World Peace

EXTENSION OF REMARKS

OF

HON. BARTEL J. JONKMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 29, 1943

Mr. JONKMAN. Mr. Speaker, the Fulbright resolution, reported out by the Committee on Foreign Affairs, is unfortunately accorded a broader scope by a great many people than its plain phraseology indicates or permits. The construction and interpretation seems to cover a wide latitude and ranges all the way from a recommendation of a league of nations to a federation of world governments.

Its brevity and simplicity of language was intended to be, and should have been, a guaranty against just such misinterpretation. It reads as follows:

Resolved by the House of Representatives (the Senate concurring), That the Congress hereby expresses itself as favoring the creation of appropriate international machinery with power adequate to establish and to maintain a just and lasting peace among the nations of the world, and as favoring participation by the United States therein.

It is not an expression which recommends, commits, or pledges the Congress to any particular kind of machinery whatsoever, nor is it even an expression which recommends, commits, or pledges the Congress to finding the machinery most appropriate and most adapted to the establishment and maintenance of a just and lasting peace among the nations of the world. Congress merely expresses itself as favoring the creation of appropriate machinery.

In other words, the resolution, if passed, in no way encroaches upon the treaty-making powers of the President by and with the advice and consent of the Senate; it in no way indicates what kind of machinery may be appropriate for the attainment of the desired ends, and it in no way binds the American people to any course of action whatsoever. It perhaps would be no violation of the rules pertaining to an executive session, and would at the same time clarify this point, to say, that an amendment favoring the creation of appropriate international machinery "by the United Nations and such nations as might become associated with them" was, by a close vote, rejected in the committee as a step beyond the appropriate scope of action by the House on the subject or objective of a just and lasting peace between the nations of the world.

Or, to drive home this idea from a negative viewpoint, a Member of Congress, to vote "no" on this resolution, would thereby say that he did not favor a just and lasting peace between the nations of the world; that he did not favor the creation of appropriate international machinery with power to effect that objective, and that he did not favor the participation of the United States therein, even though it could be done without impairment of our national sovereignty and without violating the prerogatives of the Senate in the making of treaties by and with its advice and consent.

On the other hand, the resolution is something more than the mere restatement of an ideal, something more than the voicing of a sentiment, something more than the expression of wishful thinking. It is a first and necessary step toward the goal of world peace. That step is the conviction and principle that collective action among the nations of the world is necessary in future international relations for protection from criminal nations, just as we have learned that in community life collective action is necessary for protection against criminals and gangsters. It constitutes the crystallization of this unanimity of thought, as a basis, without which no intelligent and organized effort would be possible.

If approved by the American people and by other nations of the world, it crystallizes this concept in antithesis to the confused and conflicting theories which heretofore have negatived it in practice at least. The mere establishment of this principle in lieu of and as against the hereto prevailing differences of thought and opinion on the efficacy of independent power of so-called isolationism, bilateral treaties, balance of power, and group alliances for protection against attack, will be a long step in the right direction.

It is also true, that inasmuch as it forms the first step or basis necessary for a just and lasting peace between nations under any plan, it furnishes the first step for undesirable plans as well as for those which are feasible; for a World Federation of Nations as well as for a League of Nations. On the other hand, it is equally true that it does not necessarily or even by implication mean that it is adopted for or adapted only to the former of these, any more or less than to the latter, or to any intermediate plan between the two. This basis is just as necessary for the building of whatever peace plan may be evolved as a piece of land is necessary for the erection of any building of whatever design, although in neither case need that underlying support determine the nature of the structure to be built thereon.

There is a well-grounded apprehension that in the administration are forces primarily seeking world power and position; that, therefore, this step or any step toward world cooperation is to play into their hands for their grandiose plans. The conclusion is that we must do nothing; must not take this step or any step for fear of being caught in a trap from which there will be no escape. Such reasoning and fear can only lead to complete inaction and paralysis of popular government. It is precisely for this reason that Congress, being most representative of the people, and with faith in their capacity for self-determination, cannot do other than take the first step and explore the possibilities for a just and lasting peace between nations. Congress, as such, has no direct treaty-making power, and therefore cannot say what shall be done for the American people, but it can, as their voice and representative, say what evil shall not be done to them. If we confine ourselves to that objective, seeking the desired end by the simplest means, there might be abundant justification for the opinion by the President, the Congress, and the people that it can be best attained by the United Nations building on a League of Nations plan.

Time and again has it been said by the foremost proponents of world peace that had the United States joined the League of Nations and the World Court we would now have no Hitler and no militant Japan, but world peace. If they are intellectually honest and have the courage of their convictions, why abandon that plan or something similar after the first failure? That first failure was under the most adverse circumstances, with no precedent to guide the nations or their leaders, with little or no analysis or knowledge of the dynamics causing war, and still less attempt to eliminate them.

The times and conditions for the success of a League of Nations are far more propitious than at the conclusion of the last war. Already we have made some of those slow, laborious evolutionary steps which spell real progress. In that war we fought as the allied nations, now we are fighting as the United Nations. In the first war, although the United States sought no territory or indemnity, it was each nation for itself and each holding the other accountable, if not grabbing all it could lay its hands on. Even the United States, although it sought no territory or indemnity, insisted on repayment for its outlay, and little Finland was the only nation observing the Golden Rule. In this war these United Nations have pooled all their resources in the common aim to win the war, and if any Americans think lend-lease is not pure fiction they had better become disillusioned, for we not only do not but cannot expect repayment.

We now are committed to the principle that the United Nations cannot win the peace unless we win the war by a complete victory and by an unconditional surrender of the Axis Powers. In the last war we tried to win the peace without victory and after a stalemate. If this war is won by the United Nations, how can we exclude any of them from participating in winning the peace?

We do not know what simplification of the problem may be affected by regional grouping within the larger group. This especially as concerns the possible necessity of our soldiers remaining overseas after victory. Nor do we know what simplification of the problem may be affected by the use of air power. On February 4, 1941, I said in the well of the House:

> We may well wonder if aviation may not yet prove a factor in the ultimate goal of universal peace. Because, after all, the greatest preventive for a war is sufficient power to discourage or stop the aggressor.

I still believe that to be true.

We have, since the formation of the League of Nations, learned much by bitter experience. We know more about neutrality legislation, reduction of naval power, the failure of economic sanctions, and the weakness of a covenant failing to provide for combined military force to squelch any aggressor or threats of aggression.

We know that the weakness of the League of Nations covenant was that, while it provided nonaggression assurances, it provided little more than sanctions for violation of those covenants. The United Nations covenants could be made to provide that an attack or threatened attack on one nation should be considered an attack on all nations. The covenant could further provide that on complaint that such attack was threatened or that war was threatened by any nation, the other members would immediately call a convention to either acquit or convict such nation, and if convicted, use their collective strength to crush such an outlaw nation. It would seem that in some such manner we could provide the machinery to reasonably insure world peace.

Under the proposed Fulbright resolution, much exploratory work along this line could be accomplished without in the least interfering with an all-out united effort to win the war.

And of prime importance, under this resolution the American people through the Congress can separate the impracticable, disaster-laden schemes from those which have promise of merit and feasibility; can distinguish the impossible dreams of bringing in something in the nature of the millennium from the at least more practical objective of preventing future wars.

In this respect it is high time that just as Prime Minister Churchill, speaking for his people, said, "Think not that I became the King's Prime Minister to liquidate the British Empire," that the Congress, speaking for our people, say, "Think not that we came to Congress to liquidate the United States."

In my opinion the Fulbright resolution is a wholesome measure and should be passed by a unanimous vote of the House.

Address by Major General Cramer, Judge Advocate General of the Army, at Commencement Exercises at Wesleyan University, Middletown, Conn.

EXTENSION OF REMARKS

OF

HON. CLARENCE E. HANCOCK

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 29, 1943

Mr. HANCOCK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a portion of a commencement address delivered by Maj. Gen. Myron C. Cramer, Judge Advocate General of the Army, to the graduating class at Wesleyan University, in Middletown, Conn., on May 30, 1943. Major General Cramer is himself a distinguished alumnus of Wesleyan University and was awarded the honorary degree of doctor of laws during the commencement exercises:

A commencement speaker in 1943 has little difficulty in the selection of a proper theme We are engaged in a grim and devastating war for survival. The full force of world events overshadows our every thought It makes any discussion not in some way related to the war decidedly untimely. To an Army officer who has seen military service during and continually since the First World War, a subject unrelated to the war is wholly unlikely, of not impossible. Quite naturally you are vitally concerned with the present world conflict, its meaning and its aftermath. You are inescapably involved in its significance and purpose and if we must have war, you would not have it otherwise It affects your future, frustrates your personal plans and ambitions that must now be postponed, yet holds for you the challenge of the ages.

It is doubtful whether the finite mind can answer the puzzling questions of the future that well up within you. But one need not be a prophet to observe that your future is inextricably interwoven with the future of our Nation in winning victory and moulding peace in the post-war world. A thoughtful student of international affairs has pointed out that: "The challenge to the United States in the present war is two-fold: On the one hand it is a challenge to our strength; on the other hand to our way of life. The former calls for war, the latter calls for war and something more." This is the challenge confronting you today.

America is successfully meeting the call to its strength. An Army officer is under definite and wise limitations concerning what he may say with propriety concerning the course of our arms. But we have had increasing and abundant public evidence of the prodigious striking power of the armed might of America and its allies which is beginning to overpower our enemies on the far-flung battlefields of the world. A lawyer likes to quote authority and the Army lawyer is no exception. The Commanding General of the Army Service Forces of the United States Army, in an address delivered at the time when our enemies in Tunisia were licking their wounds, had this to say about the future of our arms:

"Let the record speak for itself. In 12 months we have shifted from defense to offense. We have turned the tide of battle. We are pressing the war to our enemies. We

will continue to march forward. We will not stop until we have utterly destroyed Hitler and Hirohito and all they represent."

These are indeed fighting words of well-founded confidence, heart warming to Americans still smarting with memories of Dunkerque, Pearl Harbor, Corregidor, Bataan, and Burma.

We face the future with justified confidence in the ability of American might to meet the threat to our national existence, but we must at the same time beware of the evil effects of a somewhat alarming spirit of exaggerated optimism which must never gain prevalence. Our ranking military leaders have repeatedly warned us that, while there is ample reason for confidence in the ultimate triumph of the cause of the United Nations, there is no room for overconfidence; that rosy predictions of "victory just around the corner" may be the fruit of carefully sown insidious propaganda designed by the cunning of the enemy to snarl the war effort. Just as Hitler originally sought to terrify his enemies by that horrifying phrase "total war," he may now try to lull many of us in the belief that Germany is about to collapse, and it is oftentimes easy to convince men of what they want to believe. Let us not forget how much territory Germany and Japan have conquered and how much food, how much material, and how many workers have come under their dominion. The instinct of self-preservation is strong in the breasts of those totalitarian leaders who would destroy the individuality of men and beat him into an international slavery hitherto unknown to mankind. They realize full well that subjugated peoples who have known the yoke of forced labor, and oppressed minorities who have experienced the horrors of the concentration camp, anxiously wait to repay them in kind. In this knowledge they find reason for sustained determination and we, for our own part, must be constant in our vigilance and unrelenting in our resolve to boldly execute every measure designed by our incomparable leadership for winning the war.

This is no time for smug complacency. We shall win this war, but the road to victory is still long and arduous and will exact heart-rending sacrifices. We may rejoice much in recent successes of our arms and experience satisfaction in the avenging of Dunkerque, but let us all frankly realize that there must be no undermining of the working morale of the American people. We must steel ourselves to persistent work until the last of our enemies has unconditionally surrendered and the challenge to the strength of a strong America has been fulfilled and answered by victories on all the battlefronts of this global war.

At the recent dedication of the Thomas Jefferson Memorial in Washington our Commander in Chief, the President of the United States, said:

"Thomas Jefferson believed, as we believe, in man. He believed, as we believe, that men are capable of their own Government and that no king, no tyrant, no dictator can govern for them as wisely as they can govern for themselves."

Our treacherous enemies would thrust upon us a very different conception of the role of the individual. In Japan the individual is considered of no importance. He is a mere pawn of the state. The religion of the Japanese is distorted to the strengthening of the state. When the Jap makes obeisance at the Shinto shrines, to the Shinto spirit world, composed of national gods and goddesses, former rulers of Japan, all national heroes, he worships no universal God interested in individuals as such, but acknowledges a spiritual world interested only in Japan. He fully accepts the doctrine that as an individual he does not count.

Turning from our oriental enemy to Germany, the insignificance of the individual, and its larger component the family is well engrained when children, with a sort of fanaticism, inform against their parents, when they know that these parents will be taken by the Gestapo and will never be heard of again, although they may have done nothing morally or legally wrong.

In my capacity as The Judge Advocate General of the United States Army it was my responsibility to participate in the prosecution of the eight Nazi saboteurs who last year landed on our soil bent on their mission of death and destruction. I can personally testify to the amazement of the defendants in this case at the fact that such elaborate safeguards were maintained to protect their rights as individuals in the proceedings before the military commission. They were accorded every possible means of defense, including special consideration of certain legal aspects of their case by the highest judicial tribunal in the land, the United States Supreme Court. This was a living example of the ideals for which we fight, of our respect for the rights of the individual.

The American form of government divided into the legislative, executive, and judicial branches was conceived by the founding fathers as the political system most conducive to the perpetuation of the rights of the individual and the preservation of his civil liberties. This in order that man might be made free and that his individuality might find its most effective expression in the political, social, and economic life of the Nation. This ideology is rejected by our enemies.

The challenge to our way of life overflows in opportunities for your generation. Your most cherished opportunity is the task of maintaining that common understanding among men which will come following the reestablishment of peace. It is the challenge to prevent a repetition of this global debacle.

An illiterate boy once gave this definition of education. He said, "To be educated is to be able to read the signs at the crossroads and tell which way to go." Once again, repeating the opportunity that came to our Nation following the First World War, the United States will stand at the crossroads of destiny. In the post-war world two paths will be open to the men of your generation. If the lesson of history has been well learned, your generation will not be permitted to withdraw from a rightful place of participation and leadership in international affairs. But if that lesson has not been learned, you may turn, as those before you turned, to isolation and its ugly twin, unpreparedness, a course that could hardly fail to bring in its train a repetition of the tragic aftermath of World War No. 1. The generation which you represent must struggle to find the answer to these tangled problems of peace. Yours will be the role of discovering ways and means of international economic intercourse so that the principles of our way of life may become a vital influence, accepted by men not only by virtue of our might but also by virtue of our ability to enthrone these ideals in the hearts of men throughout the world. Upon you will fall the task of discovering effective means to avoid the tragic role of a victory without peace; of adapting the knowledge and scientific advancement of this and future generations to the benefit of mankind; of diverting men from the paths of war, death, and destruction; of leading men to a way of life conducive to liberty and happiness. Yours will be the mission of achieving the practical idealism of that former Wesleyan professor who, as President of the United States during the First World War, dreamed the dream of a world peace founded upon justice.

"The future of the world," says Winston Churchill, "is left to the highly educated races who alone can handle the scientific apparatus for preeminence in peace or survival in war. * * *" To which President Conant, of Harvard, wisely adds, "* * * science alone, untempered by other knowledge, can lead not to freedom but to slavery."

The service to be required of your generation will be great. It demands a new era of leadership and an understanding of and genuine good will in international affairs, now and later.

I am confident that you men of Wesleyan will serve these causes in keeping with your abilities and education. It is not our way to bury our talents. You of the class of 1943 are graduating into the battle. Your country needs your ability, the strength of your convictions, and your youthful enthusiasm. We greet you as you come to joint us. We know that you can be relied upon to fight hard, to do your job whatever it may be, in short, so to conduct yourselves that your country and your university will be proud of you.

In closing, I can think of no better advice that the words of Phillips Brooks when he said:

"Do not pray for easier lives—pray to be stronger men; do not pray for tasks equal to your powers—pray for powers equal to your tasks."

Food Production

EXTENSION OF REMARKS

OF

HON. JAMES C. AUCHINCLOSS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 29, 1943

Mr. AUCHINCLOSS. Mr. Speaker, I am in receipt of a most enlightening and what appears to me to be a most constructive and thoughtful letter from Mr. Ralph B. Starkey, chairman, legislative committee, the Cooperative Marketing Associations of New Jersey, Inc., and I am glad to have this opportunity to have it inserted in the CONGRESSIONAL RECORD so my colleagues may read it, and I hope derive some benefit from it:

THE COOPERATIVE MARKETING ASSOCIATIONS IN NEW JERSEY, INC.,
TRENTON, N. J., *June 26, 1943.*

Hon. JAMES C. AUCHINCLOSS,
Member of Congress,
House of Representatives,
Washington, D. C.

DEAR MR. AUCHINCLOSS: The board of directors of this association, representing 14 member associations with over 12,000 farmer members, has just discussed at some length the chaotic conditions in food production that threaten the Nation with an extremely serious food shortage. Production in 1943 will be materially below 1942; 1944 will be less yet, unless a drastic change is made.

The directors have unanimously voted that a letter be sent to every Congressman from New Jersey expressing the universal dissatisfaction of our farmers with administration food policies.

You realize of course that the criticism is not prompted by political motives. We should be just as critical of a Republican administration as we now are of certain policies of the present administration. From your association with New Jersey agriculture you know that we never let politics play any part in our farm organizations.

However, we must express our strong convictions that present policies of the executive branch of the Government will most certainly result in an extremely critical food situation by late 1943 and 1944. It would not appear possible that food shortages in this country can approach those existing in many

European countries. On the other hand it appears that present shortages and rationing will be very mild in comparison with those we shall have to face in the not too distant future.

Lately the Department of Agriculture has released production estimates that have been somewhat pessimistic. This is a distinct stange. The tendency of the Department has been to gloss over true conditions. It is our opinion that the true situation today is even more serious than indicated in these late crop releases. These forecasts stress the unfavorable weather that has seriously reduced the crop prospect this spring. It is true that this has been of importance. Not indicated, however, was the reduction that has been brought about by the inability of farmers to plant normal acreages due to governmental manipulation of the labor market, unfavorable price ceilings, and even more important, the threats of price ceilings and roll-backs that have been hanging over us for months.

You are familiar with the peculiar ability of the Office of Price Administration to select the one wrong way to do anything they attempt. They have driven over 75 percent of our poultry meat business into black markets. If left to their own devices, they will probably do the same with eggs. All policy decisions are made with no knowledge of the business they attempt to regulate. No information or advice is wanted from those who know the business. The whole attitude of the Office of Price Administration is in the words of one official, "it doesn't make any difference whether it works or not, we got it to do and we're going to do it." Needless to say it usually doesn't work.

The troubles of the dairyman and fruit and vegetable grower are no less than the poultryman. The vegetable growers have been threatened with price ceilings and roll-backs for the past 6 months. In the face of enormous increases in production costs and the uncertainty of being able to meet them, growers are not justified in attempting normal production. Such planting are further out of the question on account of the absolute impossibility of getting skilled labor, and the doubt of being able to secure sufficient harvest labor.

None of us doubt the vital need for increased food production. Neither does anyone familiar with conditions, doubt that production will be materially decreased. Moreover, if conditions are not changed, 1944 production will be less than 1943. Farmers are not doing this willingly. We are given no choice. There is no prospect of improvement so long as control of policies is in present hands.

The attempts to institute subsidies look to us like merely an extension of some of their asinine policies. There is no doubt in our opinion that subsidies will discourage production. We do not believe they will prevent inflation. They may do just the opposite. They will increase purchasing power which is inflationary. They are increasing Government debt which is likewise inflationary. If they are put into general effect and the subsidies are large enough to both stimulate production and hold or reduce retail prices the cost will be enormous.

Paying for your food on your tax bill instead of your grocery bill does not make good sense.

There appears to be two ways to remedy the situation. We can let it drift from bad to worse until it gets bad enough to cure itself. That is a very serious procedure in wartime. The other remedy would seem to be strong action by Congress. This action should among other things look to the following:

1. Steps to prevent impractical theorists from playing with the Nation's food supply, particularly in time of national crisis.

2. Placing production and distribution of food under one control in place of various agencies working at cross-purposes.

3. Setting of prices that will meet production costs without resort to subsidies. These can never be less justified than at present. If consumers cannot pay for their food in boom times, how can they do so during average or depression times?

4. Decide on a policy and stick to it. Unfortunately this is one of the principal brakes on farm production today.

We feel certain that we can count on your support for constructive action along these lines.

Respectfully yours,

RALPH B. STARKEY,
Chairman, Legislative Committee.

Some Sound and Solid Thinking

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 29, 1943

Mr. DONDERO. Mr. Speaker, every Member of Congress has been receiving innumerable plans on how to conduct a post-war world and the part which the United States is expected to take in bringing to the world the "four freedoms" and a utopia unknown before.

That we as a nation must take a proper part in obtaining a just peace after the war, we all recognize. That we must surrender our national sovereignty, yield the fundamental principles of our Government, and commit ourselves to furnishing the rest of the world with what it has never had before is a program to which no sensible American will subscribe.

I offer for the RECORD the following editorial from the Pontiac Daily Press, of Pontiac, Mich., which exhibits a sound and sensible approach to the problem facing us when this war is over. Let every citizen ask himself whether or not 6 percent of the population of the world can furnish the other 94 percent with the necessities of life. I commend the reading of this editorial to every Member of the House and to every individual who has not lost his power of reasoning:

LET'S GET DOWN TO EARTH

Evidence continues to accumulate showing there is a considerable group in Washington fully convinced that the job of directing the affairs of the world is going to rest squarely and almost exclusively on the shoulders of the American people, after peace has been established.

We are being told that the whole Japanse Empire is going to be dumped in our lap. Untold millions in Asia are going to turn to us for guidance, counsel, assistance, and their daily quart of milk with cherry tarts on Sunday.

It appears that in the minds of certain sophomoric planners who are fairly oozing altruistic aspirations, fashioned in the grand manner, the nations of the earth with one accord will come hopping out on the international stage shouting in one voice:

"Well, Sammy, here we are."

It never seems to occur to these impractical dreamers that we have only a little over 6 percent of the total population of the world in the United States. But what of that in the mind of the royal distributor of favor? Their benevolence is without limit. They appear to look upon the other 94 percent of the people who inhabit this old globe, as incompetent, unfit, and more or less incapable of running their own affairs. They insist with a straight face that the United States must assume charge when the last gun has been fired.

With a philanthropy that is as high as the skies, as deep as the ocean, and as broad as all known dimensions, if we follow the counsel of big league international we are to step into the breach with a horn of plenty. From good old Uncle Sam all blessings flow. At least that is the hope and aspiration of starry-eyed planners who find it a most delightful sensation to peddle out the savings of other men.

The fact that the United States is going to salute the day of peace with a National Treasury so badly dented that it is quite sure to look as if it had been hit with some of the 4-ton block busters does not concern the boys who are getting ready to tap the North American Cornucopia.

Of course, the people of this country want to do their proper share to help put the world back on its feet. They are anxious to give liberally of their wisdom and experience, and to advise and suggest But there will be great need for proper restraint. The first thing that some of the large-bore distributors will need to learn is the simple fact that we are going to have some rather impressive needs at home. We cannot plaster the whole world with a thin dime nor make wine out of water.

In our anxiety to be of service to mankind we shall need to maintain a sane program and to proceed with an intelligent understanding of our own position in the world. We are not the beginning and end of two hemispheres. This is still so in spite of the lofty talk of making over the world after Hitler's pistol has been taken away from him and after we have shown the Japanese people that Hirohito is a mere man, with no divine powers and utterly devoid of transcendent or holy attributes.

To listen to some of the peace planners strut their stuff we might conclude that they intended that no one should sit at the conference table but a group of bank tellers adept in counting out money at high speed. Furthermore, dearly beloved, just keep in mind the rather impressive truth that this money was earned by those who toil and who may have some notion that they are entitled to a word respecting its confiscation, as it is being scattered hither and yon.

Congressional Medal of Honor to Lt. Mitchell Paige

EXTENSION OF REMARKS
OF
HON. SAMUEL A. WEISS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 29, 1943

Mr. WEISS. Mr. Speaker, the Congressional Medal of Honor, the Nation's highest recognition for military achievement, has been awarded to a McKeesport district marine lieutenant for one of the most heroic deeds recorded in the present war. Lt. Mitchell Paige, age 27, a former McKeesport High School student, received his temporary citation in

the name of the President from Admiral Chester W. Nimitz at Guadalcanal. His home is in Morton Plan, Mifflin Township.

The award is one that has been bestowed upon but a select few since its authorization by Congress in 1862. It recognizes an act of valor outside the limits of mere obedience to duty. It is for bravery outside the regular call of duty, an act no one expected him to do or no officer would have commanded him to do. The deed of Lieutenant Paige as described in the editorial of the McKeesport (Pa.) Daily News, which I am happy to include as a part of my remarks, is one that will be recorded among the deeds of the great heroes in American history. America salutes Lt. Mitchell Paige.

The editorial follows:

LIEUTENANT PAICE

The McKeesport district has produced one of the greatest heroes of the war in the person of Lt. Mitchell Paige, who yesterday was revealed as the recipient of the Congressional Medal of Honor, the highest recognition of military achievement within the gift of the United States Government.

According to the citation, Paige won his high honor by a feat in battle that can stand with those of the Yorks, Morelocks, Hobsons, and the other American fighting men who through exceptional courage have brightened the pages of our military history.

The feat, as described in the citation, is in the cold, terse words of Admiral Chester W. Nimitz. Paige was in command of a machine-gun section on Guadalcanal. The Japs attacked, killing or wounding every man in the section except Paige. Alone, he moved from gun to gun under continuous heavy enemy fire. As one gun was destroyed he moved to another and kept up the retaliatory fire until reinforcements arrived.

When help came Paige organized a counter charge. This he led, with bayonet fixed, and drove the enemy back. And as the citation concludes:

"He prevented the enemy from breaking through the marine lines and contributed greatly to the success of the operation."

In other words, one man, alone on a blood-stained field, saved the day on Guadalcanal. No war has produced a more inspiring demonstration of sheer personal bravery or a greater individual contribution, on the part of the man on the line, to his nation's cause.

Guadalcanal, one of the most difficult military conquests so far recorded in this war, has produced several heroes. Many of them have received columns of praise in the American press, praise based principally upon the number of Japs they killed. But here at this late date emerges the story of a McKeesport district youth, another Sergeant York or Sterling Morelock, to capture the gratitude of his country.

Somewhere out across the broad Pacific, Paige spends today in a rest camp, probably unaware that the time has come when the folks at home know of what he has done and of the exceptional honor that he has won. He, like so many men who have earned glory in battle, may have hoped that he could be overlooked, that his recognition could rest unnoticed except by himself as a souvenir of his greatest day.

He apparently is that kind of young man. He sent his citation home, for safekeeping, and it wasn't until his father, unaware of the greatness of the honor, came to The Daily News with "an item" for publication that the news came out. We are glad indeed that we served as the medium through which the district and the Nation learned of what appears to be a leading story of individual courage in the heroic battle of Guadalcanal and that Lieutenant Paige now takes his place in public acclaim with those heroes who have achieved their nation's highest honor by valor above the call of duty and beyond the commands and expectations of their superiors.

"Listen, Son"—A Veteran Speaks

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 29, 1943

Mr. LANE. Mr. Speaker, an article, entitled, "Listen, Son," appeared in Columbia magazine of June 1943. The article is a direct, frank, and realistic talk by a father, a veteran of World War No. 1 to his son, soon to be a veteran of World War No. 2. It is an excellent talk drawn from experience and realistic understanding. But the article is of greater interest to me, to my constituents, and to all Members of Congress who remember my well-beloved and admired predecessors, Billy and Larry Connery. For the veteran who speaks in these pages recalls these fellow veterans of his in France and with their example demonstrates not only how the war can be won but the peace thereafter. He says "You have heard those brothers' names. In the years after, we vets and our neighbors sent them to Congress. That did not change them. They stood up for the veterans, for labor, for a decent United States. They are dead now, those two. Not the work they did, not their memories. Men like me still brag we knew them. Those are just two of the Yankee Division."

I know of no better example a father could choose in urging his son to be a good soldier and to come back ready to build constructively than this veteran has chosen in Billy and Larry Connery. The article to which I refer follows:

LISTEN, SON—A VETERAN SPEAKS

Good for you, son. You looked all right up there on the platform. And you got a big hand, going up for your diploma. Your grandma said right out loud, "That's our boy." And your Ma was clapping and crying. Kind of embarrassed me. Not that I blame her. It's no fun for the mothers, this June.

Yes, sir. A big day. That commencement speaker was smooth, too. A nice talker. The "four freedoms" and no more wars, and the bright new world that's coming up. Beautiful, like poetry, sort of.

But now 'till dinner's ready it's my turn to talk. Your dad's commencement address. If your Ma don't come in. Grin all you like. But listen, son.

The war's what we're thinking about this June, all of us, mothers and fathers and you boys who must fight it. How long?

I heard a man just the other day, at the lunchroom down at the plant. Ten to ten he was offering, that the war would be over by Christmas. Not my ten. The more I read, the less I know.

But one thing is sure—the Axis is licked. After Dunkerque they had a chance. Maybe after Pearl Harbor. Not now. It may take a long time, all we've got, but their number is up. We all know that. O. K. The United States, the United Nations will win this war. What's bothering me is—will you?

No, I don't mean will you live. No use worrying about that. I tell your mother, from day to da: no one knows. All it takes any day is a blowout, or a germ too small to see. There'll be men killed at the plant this year. Any time, anywhere, asking how long you'll live is the weeds. Say your prayers and forget it. That's all you can do. But what I do mean is up to you. You can win in this war, but there's others who won't.

THE KID AT THE PLANT

I mean—well, look. There was a kid at the plant last year, in my department. A nice kid and smart. Not a good mixer. The boys used to ride him some, till I made them lay off. After that we ate lunch together, but he never talked much. Till one noon—I don't know, it just came up—I happened to mention I had a son, and I showed him that clipping about you winning the debate. This kid, Ernest, he opened up after that. The next noon he brought a paper to show me. A night school exam he'd taken, 90 percent it was marked. One of those university extension courses, theory of gas engines, or something like that. I told him when he got to be a big boss, remember me, and you ought to have seen him grin. But I was only half joking. He was going places, that kid. He had it all figured out, what he wanted and how to get it. He was started up, too. In 6 weeks he got a raise, and they took him into the drafting department. I didn't see him then for awhile. Last week I did.

Over at the South Station, when I went to meet your grandma. The train was an hour late, so I went into the lunchroom for a coffee and hamburger. I'd have had me a beer, but you know your grandma. I sat next to a soldier. Took another look, and it was this lad, Ernest, from the plant. The place was jammed with sailors and soldiers, but he was by himself, and—well—the look on his face wouldn't go to sell War bonds. But glad to see me. Kind of lonesome, I guess. We chinned of the plant, and this and that; and going out, nothing would do but he'd take both checks.

"Nothing doing," I told him. "Save your dough, kid. It'll come in handy. It'll cost you jack to get your schooling."

"What schooling?" he said. And smiling wise, "There's a war on, Mister."

"And so what?" I says. "You have to live, too, when it's over."

"The Government can worry about that," he said. "They took us off our jobs. They'll have to see that we eat."

"And they will," I told him. "But what's happened to you? You wanted more. You were going places, remember?"

He thought that over, watching the crowd, and his mouth like he'd tasted something he didn't like. Then—"Don't get me wrong," he said, "I didn't try to duck out. We've got to do this job. I know it. I'm not crying." It was hard to hear him there in the noise of the station. He went on. "But not kidding myself. Any private life I had, any personal ambition is gone, out. In a war like this one, only a fool would plan his own future." Two M. P.'s came along, and he stopped till they passed. "I've got me a future," he said, "till Monday morning, till I get back to camp. Then I'm a dog tag again, a service record. A buck private," he said, "like a pebble on Revere Beach." He grinned his wry grin. "Till the tide goes out. Any day now."

Your grandma's train was coming in. All I could say was, "Keep your chin up, kid. Stay in there pitching." But all the way home on the streetcar, listening to your grandma, I was thinking, too. If he doesn't snap out of it, that boy is licked. He can never see action, never have a day's sickness, and come home washed up, disabled inside.

And I wondered, too, was there many like him? Young lads down deep feeling lost and helpless, thinking the war is the end of their personal living. Maybe not. Maybe this Ernest is just one in a million. I hope.

Listen, son. I'm a veteran. And I'd go again if they'd take me. Your ma knows that. What I can do, I will, and no kicking. This black market now—I don't want any part of it. Nor your ma. We'll take beans.

There's a kind of black market of talk, too. Rumors and complaining. Like a guy was telling me down at the plant, how pretty the Canadians were sitting, how nice they were having it at our expense. Then after that bad business at Dieppe, the same lad was wisecracking, "The British will fight to the last Canadian." Know what I told him? "Listen, mister. All this talk that Hitler would love to hear, I don't want any part of it." And I don't, son. But there's other talk I'm fed up with, too. We won't win the war with pipe dreams either.

Talks like that college professor was making today to you graduates. No more wars any more, freedom for all from want and fear. Oh, it's noble all right. It just ain't true. It can't be, till human nature changes, till greed is licked, and hate, and all men keep the Ten Commandments.

Look, son. You could say that professor today had a vision; a well-meaning man, I'll grant you that, but there can be dangers in visions. Hitler had one, too. And so did Marx. Trouble is, men get drunk on that kind of thinking. Their visions so big, they get to feeling so big, and everyone else so little. Pretty soon they're saying, "You take my vision—I'll save the world or else." Trouble is, no vision of a better world can come true till greed is licked and meanness and hate. And greed and hate aren't geographic. They're things that live in single people. That brings us right back to me, Bill Murphy. You and me and the corner grocer, we're where a better world starts, if any.

Honest, I sometimes think one good cop on his beat, keeping his one street safe and decent; one little mother keeping her babies clean and fed, is getting more done for a better world than all these profs rearranging the hemispheres now.

WHAT GOVERNMENT CAN'T GIVE

There'll be no heaven on earth, son, not in your day nor mine. There'll be no global peace nor hemisphere happiness. After the war, like before the war, there'll be good men and bad. And you, son, you'll have to work out your own salvation. Our Government will give you hospital care, the best, if you need it, work if you'll take it. I'm a hundred percent for our Veterans' Bureau. But, son, no Government bureau ever has, or ever will, give 10,000,000 men the things that matter, that make men happy. What makes a man like you or me happy? Fame? Big money? We'd sure be out of luck. No, sir. Not to be scared of your next confession, nor the cop on the corner, nor your boss on the job. To wake up in the morning and smell the food you've earned cooking; to hear your own kids laughing, and your own wife scolding them not to wake dad. That's enough. But you'll have to get it. No government has it to give. Wars can protect that kind of happiness, but they can't make it.

Honest. Sometimes I think these radio statesmen and college prophets, they're getting a kind of elephantiasis. I guess it's what that man today called the "time spirit." I guess it affects us all. We're talking of men now by millions, of dollars by billions, of hemisphere defense and global strategy, till Ernest thinks he's a pebble on Revere Beach. But each single pebble is what is important. Communism will pass, and fascism, and all the nations. But not one pebble. Once a human soul is, it is for keeps. That's what I should have told Ernest that day in the station. But I don't think quick. Likely some chaplain will tell him. Better, too.

What makes it hard, son, is this—these great visions and plans, they're not all false; there's truth in them, too. It's good that we're finding out now that the world is one place. Like one living body, if it gets sick in one part, it gets sick all over. We're finding out now in blood and tears that men must be brothers, or fighting enemies. Like Cain said, "Am I my brother's keeper?" Yes, sir. You are. That's the new wisdom they're coming to now. And it's all in your catechism. But too simple. No $5 words.

I don't know. It's a cockeyed world. Me, too; I'm getting this globitis. I start with you going into the service, and here I'm having my say on civilization. Like in any bar today, the boys at the end of the bar getting loud, are maybe settling India, and giving China a few more billions. Two beers and around the world! And I'm as bad.

Look, son. What I want to get over is simple enough. War or no war, your first job is you. There may be 10,000,000 American soldiers, but no other you. Buck private or not, you're important. St. Peter won't ask, "Was this man commissioned?" Nor let the boys in by Army divisions. One by one.

So don't get that feeling it's so easy to get these days, that you're a grain of sand on the beach, that you're not in the driver's seat. A shingle off the roof in a hurricane, just carried. You're no more helpless in the Army than down at the corner. Both places you can do what would please your Ma, or the gang. Marching in the biggest United States Army, you're walking alone, too, to your own winning or losing.

Don't get impatient, son. Let me get this told, and when you're away I'll feel better. I can't put it in $5 words. But I know it. I lived it. I've bunked in one tent with the winners, and the losers.

You know me, I'm not talking of beer or penny ante. I never was strong myself for group singing and ping-pong. In a camp in Africa or down at the corner, nothing is wrong but meanness, real sin.

What I'm trying to get at is deeper. It's that letting go. Thinking all bets are off now. Standards are down till the war is over. The War Department and the generals will take care of today, and the future will take care of itself. Don't you believe it. There are just two numbers coming out, son. Look at them both. You'll live—or you won't. If you're not coming home, you've got to be ready. You can't be sure of confession after the shell hits. If you're going to live, and please God you will, how you live in the Army, that's how you'll live after. A good lad, on the level and pulling your weight. Or else. You know. On every corner there's one. Not you. Not your Ma's son.

Here's what I mean. There was a lad in my tent, on the border that was, in 1916. A tall rookie, soft-spoken, with a bony and sensitive face. And an awkward soldier. That made us pals. And something else, there was a gentleness in him, a kind of shy kindness Set in his ways though. No wisecracks could make him do anything, go places he didn't want to. He lived in Texas in an Army tent as he lived in his home. At home, down at the corner, he liked the corner gang, played ball with them, and shared their jokes, but not their pints. At home on Sundays he went to communion. He'd be there on the border, under the cottonwoods, every Sunday the chaplain's altar boy, kneeling nervous, with one eye for scorpions.

No saint, my pal. I've seen him duck under the back of the tent when the top kick came for a work detail. I've seen him mad, but not often. Pay day nights he'd be the one to get the battlers quiet, and lights out at taps. And the week before pay day, if he had a buck, you had four bits. He was a company clerk for a while, then sergeant, bossing men who could have licked him and didn't want to.

When we sailed to France, his brother came with us, an older brother and married. Skinny, too. In a high wind you'd put a brick in his pocket to keep him down. But game. Canned willy and cooties, gas, and the ashcans exploding; he took it all smiling. I knew both those brothers well. And I know in those days they weren't planning shrewdly their future. No one did that in the boxcars jolting up to the Argonne. Those brothers just took the boxcar as if it was home. Said their prayers to themselves, and sang to us. My pal was best with the ballads, the hearts and flowers; but Bill had songs to make an M. P. laugh. And all the regiment knew them, colonel to cooks.

That was a war, too, while it lasted. But we stayed in there pitching, as you will. We came home, most of us And the brothers sang on the troopship, two years older, their bodies weakened, their hearts unchanged. Good lads, undefeated.

You've heard those brothers' names. In the years after, we vets and our neighbors sent them to Congress. That didn't change them. They stood up for the veterans, for labor, for a decent United States. They're dead now, those two. Not the work they did, not their memories. Men like me still brag we knew them.

Those are just two of the Yankee Division. I could sit here and tell you all night of others. A few big names, and in the money; most of them not. But good men. They won that world war, and the other one, the war you've got to fight for yourself. And you know how. You've got your heads.

Take the car tonight, son, and the rest of the coupons. Take your girl to the movies. You know at that—your Ma and you and you and your kid sisters—I won, too. O. K. son, I won't talk no more.

The Alaska Military Highway

EXTENSION OF REMARKS

OF

HON. ANTHONY J. DIMOND

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 29, 1943

Mr. DIMOND. Mr. Speaker, since most Alaskans join in the opinion that the name "Alcan" given to the highway to Alaska is completely inappropriate, it gives me pleasure to quote below the order and accompanying statement announcing that the highway, by instructions of Brig. Gen. James A. O'Connor, commander of the Northwest Service Command, will be designated as "Alaska Military Highway." General O'Connor, whose energy, capacity, and foresight have contributed so largely to the building of the highway, is to be commended for having given it a suitable name.

HEADQUARTERS, NORTHWEST SERVICE COMMAND,
Whitehorse, Yukon Territory, Canada, June 10, 1943.

GENERAL ORDERS, No. 24

I. ALASKA MILITARY HIGHWAY

1. The official name of the military road now known as the Alcan Military Highway is announced as the Alaska Military Highway.

2. All previous instructions to the contrary are rescinded.

II. COMMAND JURISDICTION FOUR HUNDRED AND SEVENTY-SEVENTH QUARTERMASTER REGIMENT (TRUCK)

The Four Hundred and Seventy-seventh Quartermaster Regiment (truck) is assigned to the Alaska Military Highway.

By command of Brigadier General O'Connor.

K. B. BUSH,
Colonel, G. S. C., Chief of Staff.

Official:
J. W. FRASER,
Lieutenant Colonel, A. G. D.,
Adjutant General.

WHITEHORSE, YUKON TERRITORY.—The 1,630-mile highway from Dawson Creek, British Columbia, to Fairbanks, Alaska, henceforth will be known officially as the "Alaska Military Highway," Brig. Gen. James A. O'Connor announced here today.

General O'Connor said that the name "Alcan," as the famous road originally was called, had never gained wide acceptance.

"We called it the 'Alcan' Highway," General O'Connor explained, "because we wanted to include in the name of the road some mention of our Canadian allies, on whose land much of the highway was constructed. Yet the Canadians themselves took the lead in urging us to name the road the 'Alaskan Highway.' From members of Parliament, from Canadian newspaper editors, from average citizens of Canada, I have received letters advocating that the road be simply named the 'Alaska Military Highway.'"

General O'Connor pointed out that Delegate DIMOND, of Alaska, and many newspapers in both the United States and Canada had urged that the name "Alaska" be substituted for "Alcan."

"Public opinion in this respect seemed to be nearly unanimous in both countries," he said, "so from now on the highway will be officially known as the 'Alaska Military Highway.'"

The Housewives of America Should Know That the O. P. A. Is Not Their Friend

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 29, 1943

Mr. CURTIS. Mr. Speaker, the happenings of recent months leave no doubt in the minds of any thoughtful person that various Government agencies, including the O. P. A., are infiltrated with enthusiasts for economic reform, who are setting prices, making rules and regulations under the guise of war measures, but which in fact are economic reforms and steps toward state socialism.

The housewives of America should know that the Office of Price Administration has permitted new brands of pancake flour to be put on the market which retail from 17 cents to 20 cents per 20-ounce package, and have denied other processors a 12-cent ceiling for the same article. In other words, in their tangle of rules and regulations, they have refused to raise the ceiling to 12 cents on an article for some processors, thereby closing those plants, and they have at the same time permitted other processors making a similar, but inferior, product to sell for as high as 20 cents for the same size package.

It is very important that the housewives of America realize that the O. P. A. is not their friend.

I wish to extend my remarks by including a letter which a mill in my district has sent to Mr. Prentiss Brown, of the Office of Price Administration. The letter is as follows:

JUNE 22, 1943.

Mr. PRENTISS BROWN,
Office of Price Administration,
Washington, D. C.

DEAR SIR: What further action has been taken in regard to the new pancake flour price ceiling order now on file in your office?

With replacement costs of materials and supplies 25 to 30 percent above our present ceiling basis we have been forced to close our plant entirely until relief is secured.

We understand the intent and purpose of the Office of Price Administration is to make essential commodities available to the consuming public and prevent, as much as possible, any increase in the cost of those commodities. Now, while the delay in releasing the new pancake price order has forced practically all competitively priced pancake flours off the market, the Office of Price Administration has permitted new brands of pancake flour to be put on the market which retail at 17 to 20 cents per 20-ounce package. If the Office of Price Administration would give the established pancake flour manufacturers the relief for which we are asking, we could immediately provide high quality pancake flour to retail at 8 to 12 cents for the same size carton. The Office of Price Administration would therefore effect a saving of 5 to 12 cents per package. Since competitive pancake flour cannot and will not be produced without relief, this surely would not establish an unfavorable precedent for other important commodities.

It all seems most inconsistent to us to let this practice continue, when, by allowing the requested price increase, the Office of Price Administration, could provide the consuming public with such a tremendous saving on pancake flour products.

Furthermore it is necessary to work several months in advance in the pancake flour business. Sales of pancake flour for early fall delivery should be made in June and July. With June gone by it is most imperative that the pancake order be approved and released without further delay.

For the benefit of all concerned, isn't there some way in which immediate action can be secured?

Yours very truly.

Muscle Shoals

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 29, 1943

Mr. SPARKMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Max Hall:

MUSCLE SHOALS PLANT, 1918 FAILURE, MAKES GOOD ON SECOND WAR

(By Max Hall)

WILSON DAM, ALA., June 26.—Here in the Muscle Shoals area of northern Alabama is the war plant that got a second chance—and made good.

Most people remember Muscle Shoals, the immense chemical plant built by the Government to produce nitrates for explosives in the first World War; few recall that the plant never produced a spoonful of chemicals for use in that war.

After 1918, the plant lay idle for 15 years, sprawled like a mile-long white elephant near the south bank of the Tennessee River, until the Tennessee Valley Authority took it over and began making fertilizer.

Now, in the second World War, the plant has vindicated itself. Its ammonium nitrate, mixed with TNT to form deadly amatol, has gone into shells and bombs in vast quantities, and, now that the Army doesn't need any more ammonium nitrate from Muscle Shoals for a while, the compound is being shipped out as fertilizer to increase food production.

Ammonium nitrate is only part of the story. The Muscle Shoals plant today is turning out phosphorus for incendiary bombs, highly-concentrated phosphatic fertilizer for lend-lease shipment to England, and calcium carbide for making synthetic rubber.

THE STORY OF AN OLD PLANT

Recently, I went through the smoky, smelly conglomeration of buildings connected by black pipes curving like great snakes over the Alabama landscape. I stood cringing in front of a row of electric furnaces a third of a mile long, out of which roared satanic masses of flame and yellow smoke.

I heard the story of this old plant that made a comeback, from a couple of cool, precise young chemists, Dr. R. L. Copson, chief of the Research and Development Division of Tennessee Valley Authority's Department of Chemical Engineering, and Dr. Grady Tarbutton, senior chemist of the division.

The plant, still known by its original name of "United States Nitrate Plant No. 2," is managed by Arthur Miller, chief chemical engineer of Tennessee Valley Authority. Copson and Tarbutton are two of his lieutenants.

The story goes back, they said, to 1914, when a German named Fritz Haber, helped by two others named Nernst and Bosch, developed a process for "fixing" nitrogen.

Nitrogen exists in limitless quantities in the air, but it can't be used in explosives unless "fixed," or forced into a compound with certain other elements.

Nitrogen isn't a good mixer, but Haber "fixed" it, and they say his ghost screams every time a bomb packed with explosives made by his process crashes on a German war factory.

FIRST PLANT WAS A FAILURE

Haber's work is supposed to have made World War No. 1 possible for Germany. The United States at that time was making its explosives from sodium nitrate shipped from Chile, where it was found in natural form. in 1916 German submarines and raiders were interfering seriously with those shipments, so the United States decided to develop a nitrogen fixation industry.

The first plant begun was "Nitrate Plant No. 1," near Sheffield, Ala. It was a failure, the Tennessee Valley Authority chemists relate, because "we in this country just didn't know enough about the Haber process at that time." This plant, or its shell, still stands idle.

Meantime the Government, not wanting to risk all on the new process, had authorized nitrate plant No. 2, the present Tennessee Valley Authority plant. This was to use the old, complicated, expensive and unsatisfactory cyanamide process of making ammonium nitrate. The Armistice was signed before the plant was ready. A tiny amount was produced after the Armistice, just to show it would work. Then the doors swung shut.

POWER MADE AVAILABLE IN 1933

Wilson Dam nearby had been started during the war in connection with the plans for

the nitrate plants. It was not completed until 1925. Power from Wilson Dam first poured into the great electric furnaces of nitrate plant No. 2 in 1933, when Tennessee Valley Authority was created.

Tennessee Valley Authority decided the greatest fertilizer need of the region was phosphates. The old type of phosphatic fertilizer, Dr. Copson said, was only 16 percent plant food. Tennessee Valley Authority, he said, produced two types of phosphatic fertilizer: Triple superphosphate (now going to England under lend-lease), which is 48 percent plant food, and calcium metaphosphate, a brand new product, which is 64 percent plant food.

He explained that Tennessee Valley Authority makes these fertilizers by first producing elemental phosphorus through the electric furnace method. It was not the first time phosphorus had been produced in this way but it was considered an expensive process, and it had never been used as an intermediate step in phosphate fertilizer production, Copson said.

"It was a good thing this method was adopted," he remarked, "because Tennessee Valley Authority happened to be in a position to produce phosphorus for incendiary bombs, when the war broke out."

AMERICANS LEARN GERMAN'S PROCESS

As for ammonium nitrate—the original reason for the Muscle Shoals plant—by the time World War No. 2 arrived, American chemical engineers knew a great deal more about the Haber process than they did in 1916. Tennessee Valley Authority was able to make ammonium nitrate in great quantities, using the original equipment plus a brand new synthetic ammonia plant.

The first step in making ammonium nitrate under the Haber process is to make ammonia by forcing nitrogen and hydrogen together at high pressure. The Tennessee Valley Authority then makes ammonia into nitric acid, combines this with more ammonia and ammonium nitrate is the result.

In both phosphorus and nitrogen there are terrible powers of destruction and at the same time beneficial powers of soil building. There is only a delicate shading between.

Ammonium nitrate, the Tennessee Valley Authority chemists say, never before had been used as fertilizer in this country except in solution. Starting a couple of weeks ago, shipments went out to farmers for application as top dressing in powdered form.

Cattle and Beef Situation

EXTENSION OF REMARKS

OF

HON. PAUL J. KILDAY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 29, 1943

Mr. KILDAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert the following information with reference to the cattle and beef situation in the United States. Following is a statement made on the march of time program of the National Broadcasting Co. on Thursday, June 24, by Joe G. Montague, Esq., attorney for the Texas and Southwestern Cattle Raisers' Association. No one in the United States is better informed on the cattle industry than Mr. Montague. His views on this all-important subject are worthy of the attention of all:

This opportunity is welcomed to tell the American people a few pertinent facts concerning the cattle and beef industry.

Everything that will be said is supplemental to the primary idea that the armed forces will be adequately supplied with beef. The statements referring to civilian supplies presuppose and allow for that first requirement, which is also the desire of all Americans.

We have a most incomprehensible situation in the cattle and beef business. While, under Government regulations and restrictions, we can get little beef for our tables—and I literally mean "we" because this applies to producers as well as other consumers—the herds of cattle running on the ranges have been increasing at an astoundingly dangerous rate. During this emergency the number of cattle in the country has grown from a normal of 67,000,000 head to 79,000,000, and the Government estimate shows this will further increase to 82,400,000 by the end of this year.

Then why can't the civilians get meat to eat? There is only one answer. The answer is supplied by the unintelligent impositions of poorly conceived theories in the form of restrictive regulations on slaughter, distribution, and prices. There was no shortage of beef before the Government stepped in and built an unnatural restraint on the industry. Since these regulations have been imposed we have developed an excessively high surplus of live cattle and a deficiency of meat for civilians. The anomaly will be aggravated with another experiment now being tried out in the form of a so-called roll-back and subsidy.

Cattle producers are worried. We know that we have more cattle than we can economically carry on our ranges. We just don't know what to do with bureaucratic control exercised by theorists and with a maze of regulations to comply with. A drought would get rid of our cattle, but you people would not have the meat to eat. The buzzards and coyotes would get fat.

The situation would solve itself if only Government officials would let the unrepealable law of supply and demand work without regulatory interference. There is little hope for such ideal solution. Then, next best, the Government should adopt fully the plan recommended by the entire industry—and not impose on that plan the impediment of the subsidy. No one in the industry wants it, neither producers nor processors.

The excuse for the subsidy is silly. It is supposed to reduce living costs, but when interpreted in terms of beef, the maximum saving would be less than 10 cents per month per person. Government officials plan to effect the saving by spending over $300,000,000 annually. In addition there would be a substantial administrative cost.

Truly, all the loco weed does not grow in the West. Fields of it flourish and are consumed on the banks of the Potomac.

Congress Calls a Halt

EXTENSION OF REMARKS

OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 29, 1943

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I am inserting an editorial taken from the Coshocton Tribune of Coschocton, Ohio, which is the county seat in which I live. I firmly believe this editorial speaks the sentiment of the people I represent:

CONGRESS CALLS A HALT

Congress took a vigorous step toward restoring the majesty and dignity of the United States Government Friday night when it enacted the antistrike law over President Roosevelt's veto.

We don't like the law. It should never have been necessary and it casts an unwarranted slur on the patriotism of American working men and women, the great majority of whom are supporting the war effort 100 percent.

But the shameful fact remains that such a law has become necessary in recent weeks, with John L. Lewis and his powerful mine workers' union openly flouting the authority of the Government and jeopardizing the Nation's fighting forces.

Most labor unions have kept their pledge that there would be no strikes in war industries for the duration. Lewis and a few other union leaders have broken the promise whenever they saw fit.

President Roosevelt, with his eye on a fourth term, seems to have had his own political ambitions uppermost in mind, rather than the welfare of his country in a desperate war, when he vetoed the antistrike bill.

His proposal that strikers up to the age of 65 be drafted was a distressing alternative. Is the draft a means of punishing traitors? We had understood that it was a democratic method of selecting men for the great privilege of defending their country—that, and nothing more.

The millions of men in our fighting forces whose very lives depend on the uninterrupted flow of war materials—these men, their parents, wives, and other relatives—will note well how their Congressmen and their Senators voted on this measure.

Legislators who in time of national crisis are willing to play politics at the expense of their country's safety are likely to realize next year that such tactics were shortsighted indeed. Mark well the record of these men in this grave situation on the home front.

General MacArthur Praises General Brereton and Small American Air Force in Philippines

EXTENSION OF REMARKS

OF

HON. HAMILTON FISH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday June 28, 1943

Mr. FISH. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include the following statement from the Washington Times-Herald of June 25, 1943, by Gen. Douglas MacArthur defending the conduct of Maj. Gen. Lewis H. Brereton, in command of the Air Forces in the Philippines, and the use of that small Air Force of 107 planes until virtually destroyed by overwhelming Japanese air attacks.

It is very apparent that an attempt is being made to belittle and smear General MacArthur in an effort to place the blame and responsibility upon him for the loss of our airplanes in the Philippines and to ignore the fact that there

were only a handful of American planes there. The fact is that the small Air Force under General Brereton continued to fight, although vastly outnumbered, until the remnants were ordered to Australia. The record of our Air Force in the Philippines, although small in number, is a heroic one, and upholds the finest traditions of American bravery and of our gallant air forces in this war.

The article follows:

M'ARTHUR LAUDS GENERAL BRERETON, PRAISES HANDLING OF PHILIPPINE AIR FORCE

ALLIED HEADQUARTERS, AUSTRALIA, June 25.—Gen. Douglas MacArthur, defending Maj. Gen. Lewis H. Brereton's handling of American air forces in the Philippines, revealed tonight that United States combat forces in the islands totaled only 107 planes when the Japanese attacked in December 1941.

In a formal statement issued to counter what he called allegations that Brereton had been guilty of neglect and faulty judgment in the Philippine campaign, MacArthur declared that only 35 bombers and 72 fighters were available at the outbreak of the war.

"This tiny force," he said, "was crushed by sheer weight of numbers. Its combat crews fought valiantly but were hopelessly outnumbered." MacArthur said part of Brereton's small combat force was destroyed on the ground while the planes were landing to refuel and be serviced. "But it was never the result of negligence on the part of Brereton or his subordinates," he said. "* * * The air forces in the Philippines planned carefully and executed valiantly, and any attempt to decry their record can spring only from a complete lack of knowledge of the facts involved."

MacArthur also revealed that the entire command in the Philippines "was placed on a full war basis 2 weeks before the break of the war and had taken up defensive positions" when the Japanese launched their attack

The 53-year-old Brereton, now commanding general of the United States forces in the Middle East and commander of the Nineteenth Air Force, was commander of the Army's Far Eastern Air Force, with headquarters in Manila when the war began.

He directed the operations of his little air squadron over the island of Luzon until Christmas 1941, when he was ordered to take the remnants of his force to Australia.

En route to Australia he took command of American planes on the island of Java in a vain attempt to halt the Japanese invasion tide. Shortly before the fall of Java he was transferred to New Delhi, as commander of Army air forces in India.

Last summer he was ordered to Cairo to take over the Middle Eastern command, replacing the late Lt. Gen. Frank M. Andrews, subsequently killed in an Iceland plane crash.

Food Subsidies

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 29, 1943

Mr. MASON. Mr. Speaker, the program of subsidy payments the President has inaugurated in his effort to roll back prices is, in my opinion, unsound, ill-advised, and inflationary. It is not sanctioned by any of the provisions of the price control bill. Its effect will be to reduce rather than to increase our production of food. The President issued his Executive order for subsidy payments against the advice of such men as Chester Davis and Jesse Jones.

In considering the program of subsidy payments we should first ask, "Where is the money coming from to make these payments?"

When President Roosevelt promised the miners he would roll back prices, did he mean that he had a subsidy program ready to accomplish that objective? If so, how does he expect to by-pass a Congress that has definitely turned thumbs down on further subsidy payments of any kind? If the President's "hold-the-line" order is based upon a subsidy program of price control, it will cost at least $5,000,000,000 per year to operate it. The President can get this money only through an appropriation passed by the Congress, and it must come out of the taxpayers' pockets. Subsidies are inflationary, because by artificially holding down the cost of living they increase the excess purchasing power of the public. The law of supply and demand cannot be circumvented so easily.

Herbert Hoover says we need one strong man to handle the food problem and that the food director should logically have charge of the Department of Agriculture. At present there are 14 different agencies of the Federal Government dealing with various angles of the food problem, with much duplication, overlapping, contradictions, rivalries, and confusion as a result. Congressman JENKINS, of Ohio, has introduced a bill that would carry out the consolidation of these various food activities under one head, the Secretary of Agriculture. If the present Secretary of Agriculture, Mr. Wickard, is not big enough—and no one seems to think he is—the President should select a man who is big enough. Herbert Hoover would make an excellent man for the job. The trouble has been that this Administration has from the first sought to restrict farm production and now it is trying to make a right about face. It cannot be done overnight. You cannot get 20,000,000 farms changed over night from an economy of scarcity to an economy of plenty. Because of the difficulty of making this change, millions of people are going to be short of food both here and abroad.

New Deal planners count that day lost in which their fertile minds do not bring forth some new plan for making over our economy. One of the latest brain childs is the so-called roll-back, which, in effect, is a subsidy to the consumer. Numerous agricultural products are scheduled for treatment under the scheme, including butter. The city consumer will get the benefit of this subsidy and the country producer will have to help pay for it. The Illinois delegation in Congress, assisted by the delegations from other dairy States, has vigorously protested the new program, but without success. The long-haired boys are going right ahead willy-nilly, and if it does not work they will try something else. They have all kinds of plans up their sleeves for future use. In the meantime, the 125,000,000 guinea pigs will be expected to pay and pay for the privilege of being experimented upon.

The administration seems determined to pay food subsidies regardless of the opposition of Congress. It seems determined to use the funds of the Commodity Credit Corporation and the funds of the R. F. C. to carry the subsidy program until next fall when it is hoped the program will be so firmly fixed in our economy that there will be no way to remove it. If food subsidies would stimulate production, there might be some argument in favor of paying out such subsidies, but the producers, processors, and feeders are unanimous in their testimony that food subsidies will reduce rather than increase our food production. Why then does the administration insist upon the payment of food subsidies? The answer, in all probability, was given by a Congressman who formerly opposed subsidies but who now favors them. His answer was, "There are more consumers than farmers, so subsidies will bring in more votes."

O. W. I.

EXTENSION OF REMARKS

OF

HON. HUBERT S. ELLIS

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 29, 1943

Mr. ELLIS. Mr. Speaker, it is evident from the reports back home that a vast majority of our people are well pleased with the action of this House in reducing the appropriation and limiting domestic activities of the O. W. I. I am of the opinion that the time has come to investigate its foreign policies and stop its political activities overseas. The veil has been lifted from this so-called information agency and the people see it in its true light—a New Deal propaganda machine.

I submit to you a statement on this subject by Hon. Robert H. C. Kay, of Charleston, W. Va.

CHARLESTON, June 18.—The people of this country, and especially the fathers and mothers of America, have never been more callously insulted by New Deal bureaucrats than by the proposal of Propaganda Minister Elmer Davis, of the Office of War Information, to send a batch of assorted new dealers to England to convince the British that Americans are not what books and the movies sometimes paint them, a plan revealed in a news dispatch of the United Press published in a local newspaper," declared Robert H. C. Kay, Republican State chairman, here today.

"We have several hundred thousand American fighting men in Great Britain right now. They are the pride and pick and flower of American youth and young manhood. They are a true cross-section of this Nation. In their character and conduct, they portray the real American. In their boastless bravery, they typify the finest this country of ours has produced.

"THEY'LL NEVER KNOW

"They show by day and by night, in action against the enemy and in arduous preparation for that action, the traits of character on which this Nation has been built and has

grown great—honor, courage, honesty, faith, fidelity to ideal, love of home and country and freedom.

"They show the strength and hardiness of their pioneer forefathers, the sympathetic understanding of their mothers, the skill and ability of democratic education.

"Neither Mr. Elmer Davis nor his anointed New Deal ambassador can gild that lilly. If the British don't know what Americans are like now, they never will know. Our young men and women in the uniformed services are the finest crops of national salesmen ever assembled anywhere. It is an insult to suggest that a few new dealers blest of the brass hats in Washington could do better the job these boys and girls of ours are doing."

HAS FAILED IN JOB

"Mr. Davis was given a specific job to do in Washington—that was to keep the American public informed about the progress of the war, truthfully, factually, nonpartisanly. He has failed in that job," Kay asserted, "probably because he has constituted himself a propaganda minister for the New Deal and devotes too much of his time and our money to the fourth term, to New Deal bureaucracy which he vigorously defends, to the scourging of Washington newspaper men and women who don't bow down and worship blindly at the Roosevelt altar, and to trying to hide or gloss over the tragic confusion and conflict in the National Capital which jeopardizes needlessly the lives of American men and women on the fighting fronts.

"Mr Davis had better keep his New Deal propagandists at home. The real, typical Americans abroad in uniform today will do the selling job just as effectively as they are doing the fighting job without any help from Mr. Davis' emissaries.

"This is certainly one time when the fathers and mothers, the sisters and brothers of men and women on the firing line in defense of America should rise up in their wrath and write their Congressmen exactly what they think of this proposed political junket."

Big Ten Official Approves Sports During War

EXTENSION OF REMARKS

OF

HON. SAMUEL A. WEISS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 29, 1943

Mr. WEISS. Mr. Speaker, leaders in all walks of life have joined the parade endorsing sports in wartime. The British Government saw fit to declare a wartime sports program for the sake of morale and to develop the physical fitness of everyone within the Commonwealth. American sports leaders favor the same kind of a sports program in America.

Recently on the floor of Congress my distinguished colleague from Wisconsin, the Honorable LA VERN DILWEG, former all-American football player at Marquette University and later all-time professional end for the Green Bay Packers football team, gave a most intelligent presentation of the sports picture in America and its relation to the war effort. Mr. DILWEG, an able young attorney, presented a strong argument to the American people. I dare anyone to challenge its logic. Sports editors and leaders throughout the Nation have endorsed his address, Sports in War, as a masterpiece. This week, H. G. Hedges, better known as Cap Hedges, outstanding football official in the Big Ten Conference, and the father of three sons in the service of Uncle Sam, endorsed DILWEG's address. I am happy to include as a part of my remarks Cap Hedges' letter to Congressman DILWEG:

THE HEDGES CO.,
Cedar Rapids, Iowa, June 26, 1943.

Mr. LA VERN DILWEG,
Member of Congress from Wisconsin, Washington, D. C.

DEAR LAVVIE: I read your article, Sports in the War, in the Athletic Journal and was very much interested in what you told Congress. I think you are absolutely right, and I am glad that there is someone in Congress to uphold the principles to which the American youth has been accustomed, and which has built him into such a sturdy young man and a good citizen. You, HAM FISH, and others, are to be commended for your fight for athletics. No one knows better than we men who have continued our interest in athletics that both interscholastic and intercollegiate athletics in all forms are as necessary in these wartimes as is the training which young men receive in the Army camps, in the Navy preflight schools, and others. Again I say, I am glad that you are there to represent and champion the interests of the young people of America.

I presume that being in Congress may prevent you from officiating next fall. Of course, being in Congress is more important than any football game in these wartimes, and the rest of us left to do the job will do the best we can It must be a very interesting experience, and being in Congress at the most critical time in the history of our country is a service and experience that only a few men have the opportunity to take part in.

I have three sons in the service, two in the Navy and one in the Army. One boy was on a destroyer and took part in the invasion of the African coast last November and has been back and forth to Africa several times.

My convictions as expressed herein are not my own prejudiced emotions but are formulated by what my own boys tell me and what dozens of other boys have confided in me, boys who have been in athletics and who are now in the armed forces.

With every good wish and many kindest regards, I am,

Sincerely yours,

CAP HEDGES.

Radio Address of Mr. Raymond Gram Swing

EXTENSION OF REMARKS

OF

HON. W. O. BURGIN

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 29, 1943

Mr. BURGIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following radio address delivered by Mr. Raymond Gram Swing on June 22, 1943:

It may be helpful, and it certainly should be interesting, to discuss the crisis of the American home front, not as one American to another, but as an American to an imaginary ally. How would any one of us go about telling an Englishman, or a Brazilian, or a Russian, or a Chinese, what really is happening in this country and why? For the ally, reading headlines in American newspapers, is sure to be both frightened and perplexed. The race riots in Detroit, the coal crisis, the fight in Congress over subsidies, the gas shortage, the food problem—they seem to point to approaching disaster. And then there are the speeches of American leaders telling about decline in production, about complacency, and overconfidence. If a frightened and perplexed ally sat in your home, and asked you what it all meant, and whether, as seemed probable, America is disintegrating, and might lose the war and the peace on the home front, lose it for him as well as America, you would, I believe, try to reassure him But you could only do so by explaining first of all what is being done well, and then by explaining something about the nature of this America, which always hitches forward by a progress of extemporization, and makes a habit of letting things become bad before producing the effort to make them better.

American affairs are like an iceberg in that only a fraction of them are visible, and that fraction is usually unsatisfactory. The things that go well are out of sight. But an estimate of the iceberg must be of the whole of it. Thus the American war effort, its planning and its performance, is a stupendous achievement. The Army, Navy and Air Force have been created and shaped into might in incredibly short time, and with consummate ability. Production for the armed forces flows to them in phenomenal volume. The industrial apparatus of America has been transformed with miraculous speed, and is functioning in gigantic measure. Behind the armed forces, American opinion about the war is firm. The rank and file American, the Nation as a whole, understands the issues of the war, is ready to make any and every contribution necessary to win it, and ready, too, for America to bear its full share in the peace. That is the unseen part of the iceberg. There is a great war achievement and it is motivated by sound public feeling and thinking. No ally need feel fear about America. This country is not going to let itself down on the battle fronts, or in the post-war world, and let down its allies in the process.

Then what is the meaning of the home front? The Englishman, or Russian, or Chinese with whom you may be talking, will have to be told that he needn't be frightened, but he has every right to be perplexed. Never since the Civil War was there such a perplexing spectacle as the American home scene today.

Several statements must be made to help an outsider begin to come to grips with American affairs, though they won't explain much. For one thing, this country is the only one in the world—and perhaps in any war on a large scale—which has actually improved its standard of living in wartime. However much the talk of sacrifice, or indeed the genuine readiness to sacrifice, there is mighty little sacrifice of living standards by the majority. That is not a reproach. If there were need for sacrifice, undoubtedly it would be made. But the physical peril, the impoverishment and stresses of other nations, simply don't operate on thinking and living here. One can't understand America in terms of Britain or Russia or China. It is something apart.

And then one must understand too that America is approaching an election. This election affects everything, for everything, in the last analysis is politics. The tone of the country is set in Washington. That is where unity would have to be expressed first of all, and where the impetus to unity would have to begin, if we were to settle the home-front

problems with unity. But Washington is dedicated to the coming election. An outsider might wonder about that, and he would have to be told, never mind whether or not this is reasonable or wise, it is the way America behaves. The tone of factionalism is set in Washington. It is highly respectable, indeed highly patriotic, to be disunited, to turn and twist issues into partisan shapes. Congress itself is the center of this factionalism. There is plenty of it in most Washington bureaus. The newspapers are full of it. And the spirit of party strife reaches out to every nook and corner of the land. This is America before an election. Most other countries cannot afford an election now, they cannot risk the heat and friction and falsifications of extreme partisanship. The outsider must understand that America thinks it can afford it.

Then the outsider would need to have it explained that what America is going through just now is a great, fundamental, and obscure economic struggle, of which the coal strike, and the battles over the Office of Price Administration and subsidies are only evidences. This economic struggle is quite rightly ascribed to a want in firm decision at the top. The failure in keeping the economy of America stable is due in part to the President not having used the powers he possesses himself, or not delegating them to someone else. The outsider may be startled at this. For listening to partisan conversation, he may assume that the President clings to power for the sake of exercising it, whereas he now is shown as not exercising it, and not passing it on for someone else to exercise. The outsider should be given to understand that one reason so much power can be entrusted to our Chief Executive is that traditionally the man in that office is circumspect about using it, for that is the tradition of American statesmanship.

But it would be hard to clarify to the outsider the complexities of the economic problem we now are wrestling with, which is to stabilize prices, there is a struggle for and against subsidies. The one alternative to subsidies is to let prices rise. That would automatically reduce the American incomes. That would hurt almost everyone, but hurt most of all those with fixed incomes, though the white-collar people don't seem to realize their urgent interest. The outsider should know that one reason for the objection to subsidies is their political effect.

People who receive subsidy money in theory are influenced in casting their votes at election time. So there is bound to be political opposition. Besides, subsidies need to be most skillfully used, if they are not to become extravagant, and ineffectual. The British regulate the price level by subsidies, but exert control back at the beginning. The Government buys most of the essential products from the producer, and resells to the processor, if need be, at a loss. It is easier for the British to do this than for us, for so many of their essentials come from overseas. In this country, for the Government to buy direct from the producers on a large scale would be a colossal operation. Even so, that would be the safer way to handle subsidies. In that way the producer could receive his incentive to increase production, and the price level could be stabilized for the general benefit at the minimum cost. But it is easier said than done. It takes a monumental effort. And Americans don't have much experience in genuinely controlling their economy. It is the kind of recourse that is not accepted unless and until things get pretty serious. Just now they are getting serious. Presumably, an effort will be evoked that measures to the need. But if not, things will get still worse, then there will be a still greater effort. That is the way things get done in this country. Too much planning means using too much authority to suit most people. We prefer to solve our crisis the messy way.

It is going to be difficult, too, to explain the coal crisis to an outsider. He won't be able to see that unless and until the price level is stabilized, wage rates can't be stabilized. If the outsider is an Englishman he will know that the coal industry is the stepchild of modern industrialism. It always seems to be living on the borderline of poverty, it never pays satisfactory wages, and the coal miners as a group have to fight hard for concessions, and in fighting for them, have to challenge the community more directly than any other union. But he should see that John L. Lewis is one man, and the miners number half a million. To lash out at the half million to express passions against the one man might reduce the economic power of many more millions of workers.

The case against the behavior of John L. Lewis may be strong. But the democracy of America would be weakened if the rights of workers were clipped in the process of putting Mr. Lewis in his place. The outsider, if he has been about much in America, will be sure that the great majority of Americans ardently wish Mr. Lewis put in his place. But if he can get a glimpse of the submerged part of the American iceberg, he will see, too, that the American war achievement has had the contribution of American workers given with both spirit and restraint.

As to the riots in Detroit, they will be a riddle to most outsiders, and if one is put to giving an explanation he can quote the editorial in today's New York Times. "Local conditions," it says, "brought to the breaking point a tension which exists in many other communities. Detroit is desperately short of housing. Thousands of new residents have congested all the public facilities. Opportunities for wholesome recreation have been deficient, as they are likely to be in a community trying to cope with a temporary population. Gangs of hoodlums, both white and colored, have grown up, as they always will under such circumstances. Sinister individuals and organizations, doing the work of the Axis, if not actually allied with it, have taken advantage of the situation." It is serious. Indeed, it is. But it is not the collapse of a nation. It is a painful sore, and no fatal disease.

All told, America is indeed a perplexing land. Washington is a perplexing capital. Congress is perplexing. The President is perplexing. But the truth remains that the American war effort, the American Nation loyally behind it, is the paramount need, and it is being met. It is the submerged, unseen part of the iceberg. And it is the dominating part. The coal strike has been called off tonight. That reveals the real motive center of the country. One can hope that now the problem of economic stability will be solved in our eleventh-hour American way. The solution will have to come from the top, for the problem is too complex to be solved by a plebiscite. But one can believe that this leadership will be produced both by the President and by Congress.

Strikes From a Soldier's Viewpoint

EXTENSION OF REMARKS

OF

HON. J. ROLAND KINZER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 29, 1943

Mr. KINZER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a letter to Mr. J. I. Hoffman, secretary of the Young Men's Christian Association of Coatesville, Pa., from a soldier serving in the armed forces of the United States, expressing their reaction on the subject of strikes back home while they are giving their all on the battle front:

A. P. O. 7, CARE OF
POSTMASTER, NEW YORK,
June 6, 1943.

DEAR MR. HOFFMAN: Sir, I have something on my mind, and I would like to get it off so I thought of writing to you.

It is about those coal miners back home, the men that call themselves Americans.

I was a healthy man when I came into the Army. Now I can't walk right. My feet are in bad shape from long hikes with heavy loads. My eyes are bad from so much night fighting. I am run down physically from living in insect-infested foxholes, from lying in muddy trenches, going without hot food and plenty of water for days. This campaign here is over, but it certainly left its mark on us fellows. Every one of us is somewhat shell shocked. We can hear still the screams of shells and the dying screams of our buddies who got their heads, arms, and legs blown off, who gave their lives for their country.

Yes; we have been through a living hell and aren't finished yet. And we went through everything for $60 per month. So for my buddies and myself please tell those coal miners that we will gladly trade places with them any time and work for nothing just to be in the country we love, near the ones we love.

I know there are two sides to every story, and if the coal miners have a better one than this it will surprise me, but I will be glad to listen to it.

Nothing would give me more pleasure than to make a speech to these men that are always striking. I could tell of something to strike for. My outfit landed at ———— November 8, 1942, and we have fought from there to Tunis. Myself and several other Yanks were captured by the Germans. But we took that all in the day's work. Coal mining might be tough, but what we call 88 fever is 10 times worse. The machine-gun jitters is also another bad ailment.

Life is mighty sweet when you expect to die any minute. We have stared death in the face many times; that is our duty as United States soldiers, but it is very disheartening to receive news of strikes back home when we would give anything just to be there, to have a bed to sleep in that wasn't full of ants, to sit down to a table, to see our loved ones smiling at us.

The war doesn't look so bad in print, but to a front-line soldier it is a living nightmare of hell that never seems to end. One attack is over, you get ready for another one; one battle over, you get ready for another one; one campaign over, you get ready for another one.

Well, I guess I have eased myself sufficiently so I will bring this letter to a close. I have been receiving your letters pretty regularly and thanks again. Best wishes to you and all my friends in and near Coatesville.

Sincerely yours,

JOHNNY REA.

Discontinuance of National Youth Administration

EXTENSION OF REMARKS

OF

HON. H. CARL ANDERSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 29, 1943

Mr. H. CARL ANDERSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by Mr. Alan C. McIntosh,

publisher of the Rock County Star-Herald, of Luverne, Minn. The Rock County Star-Herald is one of the outstanding newspapers of southwestern Minnesota. Mr. McIntosh, its publisher, reflects the feeling of most of the people of Minnesota toward continuance of N. Y. A.:

A DEAD BRANCH ON THE NEW DEAL TREE

Just as regular as the appearance of the robins and the grasshoppers you can periodically expect some representative of the National Youth Administration to drop into the office seeking a "publicity plug" urging student enrollment in the National Youth Administration training centers.

None have appeared in print and none will because personally we are a bit hostile to the National Youth Administration. Not because we always thought that the National Youth Administration from its inception was headed and manned by mostly "left wingers," the "let's make over America" brigade. And not because we think a much better job of vocational training is being performed by the public schools in their various, in school and out of school, programs.

OUTLIVED ITS USEFULNESS

Our opposition to National Youth Administration results from our belief that here is a Federal agency that has long ago outlived its original, if any, usefulness.

Some of the spending brigade, forgetting that our World War No. 1 debt was only $27,000,000,000—and what an enormous sum that seemed in those old-fashioned days, are now glibly talking about a national debt of $300,000,000,000.

Such a debt means only one horrible aftermath—ruinous inflation. We have to make a start toward debt reduction and that can only be done by ruthlessly chopping off money-wasting agencies. And if ever there was a dead branch on the "New Deal tree" that should be lopped off then that is the National Youth Administration.

There's nothing new about this big front that the National Youth Administration is putting up or its frenzied recruiting. It's the old, old, story all over again that once you get a tax-supported agency set up the bureaucrats will fight to the death to justify their existence on public pay rolls, long after the original need has been served. For the National Youth Administration, which has cost the public over three quarters of a billion dollars, is now in the waste stage.

Critics charge that it is duplicating functions performed by six other Government agencies. The waste of manpower and equipment—and some of that equipment is desperately needed in war factories—is staggering.

ALMOST "INDIVIDUAL INSTRUCTION"

The personal ratio of instructors to students far exceeds that of the most exclusive and costly private finishing schools in the East. On October 28, 1942, the National Youth Administration had 11,806 paid employees and only 53,000 students taking instruction. And of that list of paid employees only 44 percent were actually teaching, the 56 percent remaining were administrative job holders. This is a ratio of one instructor to every four and one-half students. (If a private business was maintained on such a basis it would be broke before the first month's pay roll had been met.)

Because of the war developments in recent months, the demand by the armed services and private employment, enrollment has dwindled to the vanishing point and the National Youth Administration recruiters are even trying to sign up 16-year-olds to bolster enrollment. This is so the agency can present a good "showing" in its reports.

MORE INSTRUCTORS THAN STUDENTS

We have heard of one National Youth Administration center in this area where at times the instructors outnumbered the students. At Clinton, Iowa, the training center equipment (and this didn't include the building) was valued at $275,000. There were 11 students bouncing around there at last report, or an investment of about $27,000 per student. At Newark, N. J., the National Youth Administration was reported to have much idle and unused equipment and 25 supervisors and foremen to 75 students. Down in Coffeyville, Kans., two big 48-passenger buses were used to transport students in luxury, but the regular high-school students found walking most satisfactory. At another spot in Kansas two of these big 48-passenger buses were observed burning gas and rubber on a 30-mile haul of students. Yet each bus carried only five passengers.

If you ask us—and it's a certainty the National Youth Administration won't—we would say that here was one Federal agency overripe for the tax-pruning knife.

Where Are We Headed?

EXTENSION OF REMARKS

OF

HON. THOMAS G. ABERNETHY

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 29, 1943

Mr. ABERNETHY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Memphis Commercial Appeal of June 23, 1943:

WHERE ARE WE HEADED?

On Monday, General Marshall, Chief of Staff of the United States Army, told the Conference of Governors at Columbus, Ohio:

"This is the most critical summer both for us and in the history of the world."

No leader of the military war effort is more qualified to make such a pronouncement. He accompanied it with this warning:

"The way will be far from easy, and the losses heavy."

The American people have patently not prepared themselves for that travail.

On the day that General Marshall addressed the Governors of the 48 States there was going on, in Detroit, hoodlumism and rioting of such proportions that they eventually led, within a few hours, to a declaration by the President of the United States that a "state of insurrection" existed in Detroit, and to the issuance of an order sending Federal troops into that city to restore law and order.

The score was 25 dead, more than 200 injured, more than 1,200 in jail.

This on a day when the United States was engaged in a global war from which it will either emerge victorious or in which it will be destroyed as a free Nation.

A state of domestic insurrection; think of it.

On that same day the soft and hard coal mines of the United States were idle for the third time within a month and a half. Those mines are in the possession of the Government of the United States. A governmental agency had stipulated economic conditions under which the mine work was to continue. Yet the miners walked out.

The President issued no manifesto covering the mine fields, but that, too, was insurrection against the Government and the people of the United States.

When the miners stopped work they became participants in a rebellion.

Here—there—everywhere—throughout the length and breadth of this land there were work stoppages; there is complete confusion over food supplies and food prices; there is complacency; there is a lack of war-needed civilian leadership.

What in the name of heaven has come over us?

Where are we going as a people?

How can we hope to win a total war if this continues?

Only last Saturday Under Secretary of War Patterson, whose job it is to see to it that the fighting land and air forces get whatever is needed by way of supplies, warned that May production had fallen 5½ percent, chiefly because of national complacency, and that if production did not meet planned schedules not even the basic military needs would have been supplied by the year's end.

It is ridiculous and fallacious to accuse foreign enemy agents of instigating the Detroit rioting. The time, place, and circumstance of origin is known.

The underlying causes are, too, known. They do not seem from foreign intervention. The inspirational source is domestic and as subversive as anything which any enemy could conceive.

Nor is the mine stopping the result of enemy-agent activity, although enemy agents will delight in what John L. Lewis and his followers have achieved.

Nor are our enemies ill served by the Government's own lack of forthrightness in dealing with the situation immediately and effectively.

Once again Lewis has called the tune and the miners will go back to work toward another deadline, which again will enable him to continue his role in a drama that is costing a war-torn Nation far too much so that his vanity and ambition might be gratified.

We, as a people, are going to have to come soon to our senses or it is going to be too late. Every participant in the Detroit rioting, white and Negro, struck a blow to this country by his or her hoodlum behavior.

Every idle miner strikes a continuing blow at the country so long as he remains idle, or continues to threaten further interruption of the war effort.

Every packer who closes his plant strikes a blow at country.

And the Government strikes the most grievous of all blows when it fails to face up to all the complex domestic issues with courage and practicality, and with complete absence of partisan political consideration.

This country, domestically, is on no road to victory. It is on the road to anarchy, and it must change its direction.

Gasoline for Driving to Church

EXTENSION OF REMARKS

OF

HON. JOSEPH J. O'BRIEN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 29, 1943

Mr. O'BRIEN of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following articles from the Times-Union

and the Catholic Courier, Rochester, N. Y., of June 24, 1943:

[From the Rochester (N. Y.) Times-Union of June 24, 1943]

BLOCKING THE OIL

Harold Ickes, petroleum administrator, again insists there will probably be no improvement in gas and oil rationing in the East for the duration.

That is a defeatist attitude. It is not an American attitude, for Americans believe their problems can be conquered by effective methods. It is not an attitude to be tolerated by the public. Either Ickes should drop it or else his problem should be entrusted to someone who thinks he can handle it.

Facts and trends challenge Ickes. Other Federal agencies are planning to shift 9,000 tank cars to the eastern runs, raising to 81,000 the number on those lines.

It will be remembered that in 1941 Ickes thought the railroads could not carry eastward 200,000 barrels a day. They are now carrying over 800,000 barrels daily and soon will increase that total.

If 9,000 extra tank cars are dug up for the eastern service, Ickes will be challenged with the question, Where were these cars while we walked and froze all these months?

Mr. Ickes' position is becoming untenable, for Donald Nelson, head of War Production Board, promised Monday in Washington that squabbles of overlapping divisions would be ironed out and that relief would be had in the oil situation.

Nor will the Ickes attitude answer the dynamic letter Governor Dewey has written him, demanding to know why the barge canal is not being utilized.

The Governor recalled that last March the Ickes outfit said more petroleum could be moved through the canal and, on the strength of this promise, the State voted funds and improved the canal to facilitate the traffic. But the waterway is not being used even to the extent of last year.

Mr. Ickes has contended all along that all available means were being used to get oil east, yet the facts and his own associates show this is not so.

Surely his position that improvement cannot be had is untenable in the face of this evidence that more facilities are available than are being used.

Mr. Ickes' attitude does not suit a people who demand action.

[From the Catholic Courier of June 24, 1943]

PERMIT DRIVING CARS TO CHURCH SERVICES HERE

Without fear of inciting the ire of the local Office of Price Administration, holders of A gas ration books may drive their cars to church on Sunday.

Admitting the comfort and inspiration which comes from attendance at religious services, Joseph D. Paterson, district director of the Office of Price Administration, announced that permission had been granted by the regional office for driving to religious services between the hours of 6 a. m. and 1 p. m.

A careful check was made with the other diocesan chancery offices of the State last week to determine if a ban had been placed on the use of private cars to attend church. In every case it was discovered that no such prohibitions had been enacted except in Rochester.

This matter was referred to the attention of Senator JAMES M. MEAD on his visit to Rochester Sunday. He expressed surprise and said that any such order should be immediately rescinded for it was in contradiction of one of the "four freedoms," the freedom of religion.

REASONABLE PLAN

George C. Donahue, secretary of the Rochester Auto Club, has submitted a proposal governing the ration of gasoline which would seem to eliminate many of the disagreeable features as they exist at present. Pointing out that shoes, sugar, and other items are so rationed that the purchaser can use them without fear of policing. Donahue recommends that gas be distributed through regulation of the gallonage value of ration coupons.

In such a plan, copied after that which is being followed in Canada the consumer would know exactly how much gasoline he can have in a given month and its use would be within the discretion of the individual. In any emergency the value of the A, B, or C coupon could be reduced to conform to the needs of our mechanized forces overseas.

Donahue's plan does away with some of the present policing methods of the Office of Price Administration, many of which smacked strongly of Gestapo practices. It puts the matter of conservation of gasoline squarely up to the individual consumer and it is entirely the individual's fault if his supply of gas does not cover his essential needs.

[From the Catholic Courier of June 24, 1943]

DRIVING TO CHURCH

The decision of the Rochester office of the Office of Price Administration to permit driving to church on Sundays between 6 a. m. and 1 p. m., will relieve the minds of thousands of church-goers. The past few Sundays have been a nightmare to them: some undertook walking that was beyond the capacity of their years and physical condition; some sought with varying results to ride the bus; some took a chance and drove to church; some felt they could not face the threats of the Office of Price Administration local officials, and remained away from church.

Now the nightmare is over. Rochester becomes like other cities in the State. Religious people can begin to take advantage of the general rule of the Office of Price Administration that permits driving to church.

But one is bound to ask, why the limitation by the local office to the hours between 6 a. m. and 1 p. m.? The general law makes no such limitation, but permits driving to church. Religious services are not confined to these hours. Earlier hours for mass are scheduled at many churches, the noonday mass may send the congregation away about 1 p. m., and afternoon and evening services should have the same consideration in regard to permission to drive that other services have.

Religious people find great consolation in going to church, in assisting at Holy Mass, in joining with their fellow-parishioners in common supplication for the welfare of our boys in service, for the blessing of God on our President and all who assist him in directing our armed forces on land and sea and in the air, for the souls of those who have died for their country, for God's blessing of timely solace to the sorrowing hearts of their parents. America has been and is the friend of religion, America places no hindrance to its free exercise.

The latest Office of Price Administration pronouncement is a step in the right direction. It will become entirely right when it removes the time limitation. Encourage American people to go to church at any time and in any place their religious faith and devotion may suggest.

What the Folks Back Home Think of O. W. I.

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 29, 1943

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following comments from various newspapers and commentators:

[From the Atlanta (Ga.) Constitution of June 22, 1943]

ONE WORD MORE

(By Ralph McGill)

NATIONAL SICKNESS

Coal strikes and race riots occupy a part of the day's news. Both indicate a national sickness. Both indicate certain national tensions to which it must be admitted we have for years given a mixed attitude of emotionalism, indifference, and lack of understanding.

No one has any sympathy for John L. Lewis. There is some sympathy for the miners themselves, and yet millions of American people have a very grave view of the fact that some 500,000 men feel they owe allegiance to their union greater than that they owe their country.

The miners deny this. They assert they are ready to work for their country on almost any sort of basis within reason. In the same news one reads that in England a number of coal miners went to jail to serve sentences rather than pay fines imposed for work stoppages. It cannot be that miners the world over are unpatriotic. It means there is a sickness in the coal industry's work relations which has not been cured.

The miners state, with some supporting evidence, that some operators are refusing to participate in any settlement because of their opposition to the President. Their attitude is, "This is Roosevelt's baby. Let him sweat it out. His chickens are just now coming home to roost. We will sit tight and let Roosevelt have the headache. At long last we have got him in a corner."

This factor is undoubtedly one reason why settlement has been so difficult. It will be another reason why the Government may be forced to operate the mines for an indefinite period.

Both miners and operators must bear part of the blame.

Neither, I think, realize that the great mass of American people who don't own mines or who don't belong to the United Mine Workers, are shocked and dismayed by the spectacle of the miners and the stoppage of work.

Too few of us are willing to try and study the causes and effects. There is too much jumping up and down and too little thinking. The cry of "lynch him" has about drowned out the plea for common sense.

A TIME TO BE GRIM

It is a time to be grim, all right. But it is not a time to lose tempers or perspectives. I have grown into almost a recluse insofar as conversations are concerned.

It doesn't alarm me too much, because history teaches it always is difficult to restrain emotions in time of war. But it is dismaying to see otherwise calm and intelligent men

grow red of face and pound tables in arguments about the strikes, the race problems, the Roosevelt policies.

It is very obvious, of course, that some few of our anti-Roosevelt men hate Roosevelt so much they put his destruction ahead of the war effort. It is just as obvious they are as unpatriotic and as dangerous as John L. Lewis.

You see some of the same emotions in Congress where the House vents its anger in bills it knows the Senate won't concur in. Yet the House votes them just to ease the tempers and emotions of the House.

You see them, for example, strike out the domestic features of the Office of War Information. They should have been busy urging that enough money be given the Office of War Information to carry on a national selling job on the new withholding taxes which are to go into effect next week and the week following.

The job could have been done. It was to show to each man drawing a salary that this was his contribution to the cost of the war; that it was paying each week what he otherwise would owe at the end of the year. You will see great discontent in July and August. The domestic job for Office of War Information is almost as important as the propaganda job it must do abroad. Even that job had its appropriation halved. The domestic job is to be abolished altogether if the House has its angry way.

The House voted against all subsidy payments to roll-back prices, yet failed to submit a substitute plan.

It is plain that the House is merely letting off steam instead of doing a calm, intelligent job. The people look to them for leadership. Instead the House is simply joining in the confused angers of the people.

The House is passing the bills on to the Senate, knowing the Senate will do at least some of the job of maintaining a sane basis. The record of the House is not too good. Americans can thank God for a Senate that is made up of sounder stuff.

THE RACE RIOTS

All the false stories, all the inflammatory agitations, are bringing on troubles between the races. Overcrowded cities, overcrowded working areas, overcrowded transportation lines, lack of housing, lack of recreation, all have their part in it.

It is something which has been going on for a long time. We got by with it because it was stretched thin. Now we have it concentrated in certain areas.

The worst trouble is in Detroit, where there were housing riots some months ago.

It teaches one thing which ought to be a lesson to the agitators who constantly hold up the South as the place where trouble and tensions are worst. The problem is a national problem and can be solved only on a national basis.

There again we see the examples of an old, national sickness for which there is no specific.

Meanwhile, bad as the confusion is in the war and on the domestic war front—these facts remain—we are doing a better job in the war than we did in 1917-18. We are doing a better job holding down prices.

In the race riots we are again doing a better job than in 1917-18.

Don't let emotions so sway you as to make you believe the times are the worst we have ever had and that we are doomed and lost

That isn't true. We are doing a better job in all fields than ever before. The finger points to continued and greater effort.

[From the Birmingham Age-Herald of June 21, 1943]

THE OFFICE OF WAR INFORMATION HOME FRONT

The action of the House of Representatives in voting to abolish domestic operations of the Office of War Information is an evidence of the fact that whereas few persons will admit to being military experts, many of them think they are experts on the propaganda front. Apparently feeling that it is having too little influence upon the conduct of the war, the House has proceeded to vent its spleen upon the Office of War Information.

The Office of War Information probably has run into this situation because it has tried to steer a middle course between the two extremes of Government information—the one extreme being represented by practically all other warring countries, with a ministry of information as the sole authoritative voice of the government, and the other being the extreme attempted first in this country by the Office of Facts and Figures as a mere coordinating agency.

In this middle ground, the Office of War Information has both coordinated news from all governmental agencies and has also served as a central news-issuing agency. Individual governmental departments retained their separate information staffs, but Office of War Information undertook to lay down general policies for their guidance, and to act as a clearing house. At the same time, Office of War Information sought itself to prepare and issue information about the war.

With such a middle ground, no sharp lines could be determined. There was bound to be some overlapping and resultant confusion. This situation appears to have been utilized by some Congressmen as an excuse for a general attack upon the domestic operations of the Office of War Information.

The fundamental error lies in the assumption that the work of the Domestic Division of the Office of War Information is concerned with propaganda and not with the dissemination of news. It overlooks the fact that it can well be the duty of a Government to see that the people are correctly informed and as completely informed as possible, always, of course, with the provision that no restrictions be placed upon the private gathering and publishing of news.

If the effort to abolish the domestic branch of the Office of War Information succeeds, among the functions that will be abolished are several of value and importance to the war. For one thing, the domestic branch is charged with assisting and stimulating campaigns for such public drives as bond sales, scrap-iron collections, blood-bank contributions and the like. It also checks on enemy radio reports, analyzing them and giving to news services anything of public interest. It channels news to weekly paper and specialized papers of various sorts that are not served by regular news agencies.

The Office of War Information Domestic Branch has the duty of informing the American people so that they will be invincible against the lies and distortions of enemy propaganda.

The Germans call their nearest approach to the Office of War Information the Ministry of Propaganda. Upon this they spend, by latest unofficial estimates, $600,000,000 a year. The Office of War Information emphasizes information. The Budget Bureau recommended a total of $47,342,000 for the Office of War Information, an increase of around $12,000,000 over this year's expenditures. The present cuts in the House reduce the appropriation to $28,972,504.

Fundamentally, of course, the issue is whether the Office of War Information is limiting itself to information or is distorting information. Apart from the fact that some mistakes can be expected, the Office of War Information has hewed closely to the line of information. The reputations of Elmer Davis, Director of the Office of War Information, and of Gardner Cowles, Jr., retiring director of the Division of Domestic Operations of the Office of War Information, are sufficient to justify confidence in its work. This is also true of Palmer Hoyt, Cowles' successor. They are men thoroughly imbued with the concept of news as a basis for democratic procedures. In their hands the domestic work of the Office of War Information could not become an agency for distorted propaganda.

This war could be lost on the home propaganda front. It could be lost by the people losing confidence in Washington. The action of the House is gravely disturbing when such realities are considered.

[From the Chattanooga Times of June 20, 1943]

TOO MANY FIELD MARSHALS

The Senate and House should take turn about calming each other down, lest their cumulative efforts place an obstruction on America's war effort which will make that of John L. Lewis seem tame by comparison. The Senate must now do a lot of curbing to counteract the action of the House of Friday when it threw a Mark IV monkey wrench into the Office of Price Administration program and practically sought to sabotage the Office of War Information.

Representative STARNES, of Alabama, led the battle to cut off funds for the entire domestic Office of War Information program, leaving only the appropriation for the foreign service. He appointed himself to speak for the American press in moving the drastic proposal, although the impression of the Chattanooga Times is that the American press thinks highly of Elmer Davis, head of the Office of War Information, and is cooperating wholeheartedly with Mr. Davis.

The reply yesterday of Mr. Davis was characteristic of his forthright frankness. "If the Senate concurs with the opinion of the House, there will be no Office of War Information, and that is that," said Mr. Davis.

As to the statement by Mr. STARNES, echoed yesterday by Senator NYE, that the American people do not need to be "sold" on this war, there may be a difference of opinion. There is a good basis for the belief that the American people and especially many members of Congress do indeed need to be "sold" on the war.

But Mr. Davis made a reply to one section of Mr. STARNES' House speech. Said Mr. Davis in answer to Mr. STARNES' remark that this country needs no Joseph Goebbels or Virginie Gayda: "There is quite a difference between me and Goebbels, as Mr. STARNES would discover if he read the order by which President Roosevelt created the Office of War Information, or followed our activities. For one thing, Dr Goebbels does not have to go to the Reichstag for his appropriation."

JOE STARNES has been a progressive worker for the interests of the Tennessee Valley. He is popular in north Alabama. But Washington seems to do things to some of our southern Congressmen. They don't make good soldiers in Washington, though JOE STARNES made a good soldier in France in 1918. They seem to want to shout back to the Commander in Chief: "Right shoulder arms your own self!"

[From the Star of Anniston (Ala.), June 20, 1943]

CONGRESS RUNS AMUCK

The present Congress of the United States reminds one of the proverbial roaring lion running around seeking whom it might destroy. On last Thursday it had a genuine field day striking out recklessly at the Office of Price Administration, the Office of War Information and the National Resources Planning Board, which likely will be killed completely insofar as the power of the purse which the Congress exercises is concerned.

Congress is supposed to be a deliberative body, but more recently it seems to have been activated more by prejudice than by calm intellectual consideration. It has ignored completely the experience of Canada and of England with respect to the use of the subsidy as a mechanism of inflation control and has denied any further funds for that purpose without proposing any tested alternative.

Moreover, it is made mandatory that the Office of Price Administration cannot employ any policy making official hereafter in even a minor capacity unless he has had at least 5 years of business experience. That, however, may not be a bad precedent, as the same rule of thumb might well be applied to the Congress itself, which now is composed largely of lawyers who could not make a living in private practice. Would it not be equally fair hereafter, therefore, for the people to insist that no man could offer for Congress until he has proved that he could make at least $15,000 a year—about what a Congressman's salary and perquisites amount to annually—in his private business or profession?

As for the Office of War Information, we were sorry to see our good friend Joe Starnes liken the brilliant and patriotic Elmer Davis to Joe Goebbels and Virginio Gayda, the German and Italian propagandists. "I think it's an insult to the intelligence of the American people," roared this young Dietian, "to have foisted upon them the kind of propaganda put out by the Office of War Information. They are trying to tell us, like we were 6-year-old children, why we are at war," stated the Alabamian.

Purist that he is in the use of the English language, Mr. Davis probably will be shocked that so learned a person as a Congressman should use the word "like" in this connection in place of "as"; but the longer he lives in Washington he will learn that Congress is a law unto itself, linguistically and otherwise. Seriously, however, we doubt if there is another man in the United States who could have done a better job as dispenser of public information than has been done by Mr. Davis; nor are there many men in Congress who are making a greater financial sacrifice to serve the people in this great crisis.

It might be stated further that "our Joe" would be enlightened with respect to the people's knowledge of the war issues if he would read a recent article in the New York Times magazine by Drew Middleton, who says that even the boys at the front have no clear idea as to the stakes involved in the war. The English and the Russians are much more enlightened, as they carry their schools to the front and keep their fighting forces informed daily as to the causes and objectives of this titanic struggle for freedom. America would profit by doing likewise—and a few lessons in economics and history might also be of help to "the greatest deliberative body in the world"—our Congress.

But, on the other hand, Congress is not solely to blame for its shortcomings. Constantly beset, as its Members are, by pressure groups, by self-seeking constituents, by forced entertaining of visitors, in addition to a voluminous correspondence, the average Congressman has no time to reflect or to read a book. And when they are forced to stay in session month after month in such circumstances it is no wonder that their nerves get frayed and that they frequently make egregious mistakes.

Be this as it may, however, Mr. Davis says that if the Senate sustains the action of the House in regard to its action respecting his position, abolition of domestic propaganda, he will resign his office and return to his private affairs in New York. That would be a national loss, as Mr. Davis unquestionably is one of the clearest thinkers and speakers ever to appear on the public scene in this country.

[From the Louisville (Ky) Courier-Journal of June 20, 1943]

GOVERNMENT BY WANTON IRRESPONSIBILITY

In light of events in our national House of Representatives as reported yesterday, it does not seem fantastic to think that if the preceding day's menu of the House restaurant were scanned, we might find as one item "the insane root that takes the reason prisoner." No sorrier spectacle of government by passion and irresponsibility, by prejudice linked with partisan intent to destroy for the wanton and self-serving joy of destruction, has come in a long time than that which was presented in the action to punish the Office of Price Administration and the Office of War Information and which cut deep into the vitals of orderly inflation control and general effectiveness of war on the home front.

The fury of political outcry against "bureaucracy," meaning anything which smacks of technical public service and particularly of service by the present administration, reaches its height in the typical action to require "at least 5 years' business experience" for all Office of Price Administration price policy officials (excepting Administrator Prentiss Brown, although he would qualify anyhow). The disservice to consumers, meaning all of us, which has marked most of the attitudes and actions of the House in the matter of price control, is demonstrated in the refusal to support programs involving grade labeling or standardization of foods, clothing, or other civilian commodities. The surrender to the price lobbies which consistently has colored the behavior of the House is seen again in the stipulation that price roll-backs will be denied for foods which have not reached parity figures.

In voting to abolish domestic operations of the Office of War Information and to reduce that agency's appropriation by 40 percent, the thundering House majority vented its spleen on a program which had been instituted at request not only of most newspapers, but also of Congressmen who had themselves inveighed against Government press agents and demanded coordination of public information activities for the sake of clarity and coherent direction in this department.

The day's record of sabotage was accomplished by coalition of almost solid Republican strength generally with rebellious southern Democrats whose spokesmen held forth with distortion, or with downright ignorance of facts in the case. An example was the attack of Representative ALLEN of Louisiana upon the Office of War Information pamphlet on Negroes in war work, which he said had incited race prejudice in the South. Actually, this document, addressed to Negro workers, was an appeal to them to take pride in their efforts, to take glory in the opportunity to serve their Nation in its extremity. That even the most expeditious panderer to inflammable prejudice should cavil at such a word of encouragement for Americans working to help save America is all but incomprehensible at this time. "The ruling passion conquers reason still."

It is hardly credible that the Senate will allow these actions to stand, but in any case it must be in the eyes of reasonable citizens, a great harm has been done to the prestige of Congress as an agency representative of the single-minded ardor of the bulk of American people, the consecration of a people, to hold the line against destructive forces at home and abroad Nothing could be more demoralizing than the spectacle of national leaders betraying the responsibility with which they are vested, fanning discord, playing with disillusionment, indulging a bitterness and an expediency of politics while the clouds hang heavy.

[From the Asheville Citizen of June 21, 1943]

OFFICE OF WAR INFORMATION AT HOME

Elmer Davis believes that the domestic and foreign activities of the Office of War Information are bound indissolubly together. If the Senate persists, as the House has done, in cutting out the appropriation for the Office of War Information's domestic operations, Mr. Davis says he will resign.

As the Office of War Information chief should know by now, this is not the way to win appropriations and influence Congressmen. Nevertheless, we forgive him his personal exasperations. Congress could not very well extinguish the whole Office of War Information program, which is integrated so securely with military operations. To Mr. Davis' credit he has acknowledged that Office of War Information's overseas work is "frankly propaganda." And most everyone knows, or should know, its necessary uses in wartime.

Domestic Office of War Information activities are a different matter. All things considered, The Citizen for one finds much to commend in the way the Office of War Information is gathering and disseminating information about the war. It has provided the nation's newspapers with material beyond the reach of ordinary news gathering facilities. Particularly in the States it has served to channel news of local and regional war measures and regulations into the proper hands for popular consumption.

Mr. Davis' mistake, if indeed he is guilty of error, is in failing to inform Congress of the usefulness and necessity of this type of activity. It is not propaganda. It is information. We have need of more rather than less of it. The Office of War Information's $5,000,000-$8,000,000 expense account is cheap at the price. The Senate should restore it.

RADIO COMMENTATORS

(Edward R. Morrow, Columbia Broadcasting System, June 30, 1943)

Anyone who does a little listening in Washington these days is liable to get the impression that we're fighting two wars. No one who has seen what's happened to Europe, even before the shooting war began, could deplore the continuation of political discussion. But whatever our domestic political differences may be there can be no doubt that the enemy of this people is to be found on foreign soil, not in Washington. That city is a bewildering place all right. There is some border warfare in the unchartered no-man's land between administrative agencies. There are people who will tell you the whole thing is a mess, no clear-cut definition of function or authority, three agencies trying to do the same job, a lot of personal jealousies in high places. Some of those things may be true but they can't all be true. It just isn't possible. For if Congress is stupid and our administrators incompetent then how is it that we've trained and equipped huge armies, whipped the Axis at their favorite game of economic warfare, and geared our whole economy to war production.

I've seen some things we've done abroad—the flood of weapons and supplies pouring into north Africa, the great military establishments in Britain and Iceland and Newfoundland. It is the outpouring of a great, strong Nation and in the end of the day it will produce victory. But that victory may be delayed, its fruits soured if our domestic political war takes precedence over the war against our enemies. The city of Washington is filled with hard-working people. To this reporter it's the hardest working capital in the world. They tell me there are a lot of bureaucrats down there. That's probably true. But bureaus are needed to win a war and men and women are required to man the bureaus. And that's how they become bureaucrats. Whatever name we choose to call them, there are a lot of hard-working Americans down there trying to help win this war.

The House of Representatives has decided to abolish the domestic activities of the Office of War Information. If the Senate concurs that organization will fold up. Maybe it should. But there ought to be a reason and claiming that Elmer Davis is another Goebbels isn't a reason. It's ludicrous. As I understand it, the Office of War Information was established to help win this war. Its success or failure at that job ought to determine its future. No one can be sure just what part propaganda and psychological warfare has played so far but there can be little doubt that the time is coming and soon when the Germans will be vulnerable to a sustained campaign designed to weaken their will to fight. If that job is done well it might shorten the war by months and shortening the war by months means the saving of a great many American lives.

Next winter in Europe will be a terrible winter. As it closes in the German people will be weary and wondering. If we have anything to say to them, that will be the time to say it. Optimism and courage are retty hard to hold on to when you're cold. I'm not competent to speak of the domestic activities of the Office of War Information, but I can tell you that if that organization is wrecked, our campaign of political warfare against the enemy will suffer, and I can report that in the opinion of every competent observer, military and civilian, we are not so near to winning this war as to be justified in discarding anything that might help win it. There are those in Washington who see in this effort to fragmentate the Office of War Information the opening gun in the 1944 campaign, the Presidential campaign. It's difficult, almost impossible, for one recently returned from the fighting fronts to accept that explanation. Healthy political controversy is one of the safeguards of democracy, but it just can't be that any of us are confused about the relative importance of the 1944 campaign and the bloody, bitter campaigns of the winter of 1943. In Britain ministers of information came and went with surprising speed. They once talked of forming a club for exministers of information. But the principle of political warfare was never seriously questioned, because it was agreed that it might help win the war. If the Office of War Information can't do anything to help win the war, then we would all agree that it should be abolished. But if it can, then those who destroy it for reasons of politics or personalities are assuming a considerable responsibility. Yesterday Mr. Robert Patterson, the Under Secretary of War, said that Army production was considerably below schedule for the month of May, and the first 10 days of June weren't much better. Mr Patterson was worried about complacency and overconfidence—the belief the war is as good as won. It's part of the Office of War Information's job to combat such complacency. Maybe what they need is more money and more time to get on with the job, free from threats of liquidation.

VERY HARD TO UNDERSTAND

(Alex Dreier, National Broadcasting Co., June 19, 1942)

Another domestic issue is whether the Office of War Information, handled by Elmer Davis, should continue its work in this country. The House has voted "no." If the Senate concurs with the House, then as far as Davis is concerned his days are over as Office of War Information Director. When Davis took the directorship, he was charged with the task of facilitating the development of an informed and an intelligent understanding of the status and progress of the war effort, of the war policies, activities, and aims of the Government. It was also the function of the Office of War Information to coordinate the war information activities of all Federal departments and agencies. These departments never have liked this delegation of authority. Let alone this, the implication has been made by Representative STARNES of Alabama * * * that Davis was another Goebbels. If that is so, then Davis is a very poor counterfeit. He is neither unscrupulous nor dishonest, he has a passion for the truth. Goebbels has a passion for the lie. Goebbels admittedly tries to mold the thinking of Germans; Davis gives the unvarnished facts. Davis is not beyond control and not safeguarded against contradiction, and as Davis himself expressed it—Goebbels doesn't have to run to the Reichstag to get appropriations. Representative STARNES certainly has every right to criticize the Office of War Information and its Director. We feel, however, that it was unfortunate, to say the least, that he chose to make this superficial and insulting comparison, for that's what it is. If the Senate now upholds the decision of the House denying the Office of War Information domestic funds, few people would blame Davis for resigning. The Nation stands the chance of losing not only a valuable information agency but also a Director whose capabilities are far beyond those which any replacements might have.

(Walter Winchell, Blue Network, June 20, 1943)

The fight in the House of Representatives against the Office of War Information and Mr. Elmer Davis has not been fully told. Stopping of Federal money for the Domestic Branch of Office of War Information will naturally put it out of business, and you—the public—will pay for this very personal vengeance. In the first place, Representative JOE STARNES, who led the fight against Elmer Davis, was peeved at the Office of War Information over a recent pamphlet which showed the Negroes' part in the war. Congressman STARNES is from Alabama. In the second place, if Elmer Davis is ousted with his Office of War Information, every Government agency will have to hire a public-relations man—meaning an additional expense of many millions of dollars per year paid for with new taxes by you—the sucker.

(George Hamilton Combs, Jr., June 17, 1943)

A gentleman whom I am proud to claim as a friend (although that friendship may be unilateral) is having his troubles down in Washington. His name? Elmer Davis. His offense? Frankness and candor. His detractors? Gentlemen who just don't like to be reminded that the "four freedoms" have some validity. Then Senator BRIDGES, of New Hampshire, says the Office of War Information Chief is trying to silence the press to cover "sins of maladministration."

The gray-haired Hoosier, Mr. Davis, has a very nice sense of proportion and knows that the war will not be won by picayune criticism of the occasional delinquencies of some of our Washington bureaus. But the most ludicrous charge ever brought against him is that he was trying to silence the press and radio.

Now I know something about that. Among my other duties, I happen to be the news editor of this station. I get every release, memorandum, and request issued by the Office of War Information. I have never received one single line from the Office of War Information asking me to color, delete, deform, or omit any item of news of either local or international aspect.

Such informal censorship as has been imposed on radio and the newspapers is concerned solely with consideration of military security. Elmer Davis is a decent fellow. He would no more try to tell me what to say on the air than I would try to tell him that we would like him back in radio as one of the finest reporters on the air. Such a request from me would be impertinent and any suggestion of his as to either the quality or import of my news broadcasts would be unthinkable and presumptuous.

For once, we have a real guy doing a public information chore in Washington. Anybody who attacks him is assailing a level-headed and broad-visioned man. The Indiana Hoosier, with his inimitable mid-western twang, comes very close to being the pin-up boy for anyone who has worked in a radio station or a newspaper city-room.

In the words of some forgotten Senator, the criticisms of his work "are about as relevant as a steam whistle on a silo."

(Bob Trout, Columbia Broadcasting System, June 19, 1943)

The United States is a long way from the battle front, and entering the United States from a war zone these days is a little like stepping into a gloom world. The sounds of battle are louder around New York and Washington than they are in London on a night with the full moon only the battles here don't seem to have much to do with the war—disputes over meat, over air-raid warnings, coal miners' wages, the rate of war production, and whether some of the United States Government war agencies should have any funds on which to operate. Some of those disputes are still making the news today, and as we can see reports of what John L. Lewis thinks and how much the war is costing seem to overshadow the reports from the places where the guns are firing and the bombs are exploding. You can bet that today's news looks very different to the people who live in Chungking or London and to the boys who are flying over the South Pacific and the Mediterranean.

In Britain most people I know are talking about the probable length of the war in terms of years, whereas some friends on this side of the Atlantic are talking in terms of months. I hope you are interested in some of these things which the British are thinking. They're interested in what America is thinking. And the British believe that to win the peace all of us will have to get much more interested in what our neighbor countries are thinking. Helping in such an interchange of ideas is only one of the functions of the Office of War Information which Elmer Davis says today will dissolve if the United States Senate follows the House of Representative's lead in abolishing the Office of War Information's domestic branch. It's a little difficult to think of a British comparison for this situation. In Britain, Brenden Bracken, the Minister of Information, is a minister in His Majesty's Government. Members of the House of Commons, the people's representatives, don't try to abolish parts of Mr. Bracken's Ministry of Information by withholding funds. It just isn't done. As a matter of fact, after several false starts, Britain's Ministry of Information is now

working in a quiet, efficient way at its essential job of fighting the war with ideas and words as well as guns. The Germans have given such reluctant testimony to the effectiveness of the British Ministry of Information in this war, and the American correspondents in London could testify that at this point in the war what the Office of War Information needs is a bigger program on a more ambitious scale. Elmer Davis today pointed out for the benefit of Congress a few differences between himself and the German Propaganda Minister Goebbels. One difference Mr. Davis did not point out is that if the Office of War Information disappears, the loudest cheers will come from Joseph Goebbels.

(Jay Franklin, June 21, 1943)
